having a populations of 20 000 will be served by public call offices and telegraph offices will be serving all places with a population of 5 000 or more Direct telegraph, telephone and radio-photo services are also likely to be established with 25 more countries All India Radio has a programme of considerable expansion under the Second Five-Year Plan and a number of additional transmitters are expected to come up within the next few years The advent of television into India is not far off and this new field will offer further opportunities to our young men In the vast field of applied electronics there already exists a wide gap between the need and availability of trained personnel.

Telecommunication Engineers are expected to play a prominent part in all these fields and eventually opportunities are likely to exist for more than 1800 engineers and supervisors against which, at the current rate only about 750 engineers are expected to qualify in this branch of engigneering

For Further Information contacts may be established with —

(i) The principal of some engineering college—for further information on training courses

GUIDANCE AND COUNSELLING OF YOUTH

The third annual meeting of the Educational and Vocational Guidance Association and the Conference on Guidance and Student Personnel Services was held at Jabalpur from April 12 to 15 1958

The All India Educational and Vocational Guidance Association was established in 1955-56 with Shri K G Saiyidain as its President The Association is a national organisation for promoting educational and vocational guidance for Secondary school youth in the country

The guidance services during the past three years have become to be recognised among educationists and school administrations as not only a necessary but an essential school service for helping school youth in planning their school study and preparing for placement after school leaving

The A I E V G Association has so for held two meetings and guidance seminars in 1956 and 1957 at Baroda and Mysore respectively The Association enjoys active co operation of many educational institutions specialists and guidance workers all over the country

The Association also publishes a quarterly journal entitled The Journal of Vocational & Educational Guidance which deals with the special problems of educational and vocational guidance in India

There is today a growing awareness of the useful role of guidance services in schools in turning out better prepared school leavers With the establishment of Central Bureau of Educational & Vocational Guidance in October 1954 many State Bureaux have been opened The Central Bureau has close contacts with a number of Secondary schools as well as Teachers Colleges in all the States in the country This has been possible through field service which is a major item on their programme

The Bureau makes available to the States useful literature aimed at orientating of the pupils parents and teachers in the appreciation of essentials of a school guidance service

* * *

CENTRAL MULTIPURPOSE SCHOOLS

The All India Council for Secondary Education has recommended the setting up of a Central multi purpose school in each State which should provide several courses so that the various aspects of the Multi Purpose School Scheme can be implemented and may serve the other institutions offering certain other diversified courses

The recommendation was made at a meeting of the Council held in New Delhi on March 15, with Shri K G Saiyidain in the Chair

The draft syllabus of graded structures in English for the first three years of the Six Year Course in Secondary Schools was also considered by the Council This draft syllabus it was reported to the Council had already been submitted to the State Governments and the Training Colleges A Committee of Experts would meet shortly to examine the suggestions received and then finalise the syllabus This Committee would also prepare the full scheme for the entire six year period A vocabulary of 2 500 words required for the structural syllabus keeping in view the needs of an Indian student was placed before the Council for consideration

STANDARD OF BASIC EDUCATION

Replying to a question whether any enquiry has recently been held to find out the difference in effect of the General education and that of the Basic education on the minds of students, Dr K. L Shrimali Minister of Education announced in the Rajya Sabha on April 29 that it had been decided after prolonged consideration that the pattern of education at the elementary stage should be Basic and the Government of India did not consider it necessary to have any such enquiry at this stage

The Government has taken a number of steps to raise the standard of Basic schools including the following schemes

1 Scheme for Production of Literature on Basic Education
2 National Institute of Basic Education
3 Organization of regional seminars and conferences in Basic Education

4 Teacher Training on Basic Education lines,
5 Financial Assistance to Voluntary Basic Educational Organisations
6 Development of Post Basic Schools, and
7 Assessment Committee on Basic Education

ROLE OF EDUCATIONAL ADMINISTRATION

The main principles which should govern the educational administration in the country were explained to the District Social Education Organisers from various States who are attending a five-month in-service training course at the National Fundamental Education Centre by Dr P D Shukla Deputy Educational Adviser in an address to the trainees in New Delhi on April 24, 1958

The main objective of an educational administrator Dr Shukla said was to maintain a high level of educational endeavour The success of the educational administration depended on a number of factors The foremost among them was a spirit of sympathy and understanding and sense of justice and fairplay

The educational administrator, he said, should always keep in view the human aspect of the administration and try to win affection and love of his subordinates He must understand the psycholology of both his superiors and subordinates He should also recognise the importance of the smallest person in his organisation

Firmness in decisions was another important factor which contributed towards the success of educational administration The educational administrator should also keep in view the advantages of decentralisation of administrative and even financial powers Another important function of the educational administrator is to give guidance and encouragement to his subordinates rather than only find faults with them

Referring to the importance of in service training course for social education officers Dr Shukla said that the educational administrator like any other modern administrator in a welfare State required refresher and orientation courses to keep himself in touch with the modern techniques of his profession.

Trainees from Madras West Bengal, Rajasthan Punjab Manipur Tripura and Delhi are attending the present in service training course arranged by the National Fundamental Education Centre

The trainees are employees of the State Governments and are working as District Social Education Organisers in their States. A distinguishing feature of the present course from other training courses is that it attempts to relate the training to the specific duties which the officer has to perform and aims at increasing his efficiency In other words the training is job-oriented The approach to the subject is provided by the problems which arise in the performance of the role assigned to these officers

The main duties and responsibilities of a District Social Education Organiser are to act as an administrative head for all the social education work in a district to supervise the work of the social education organisers and other social education workers in the district to advise and guide social education organisers and generally to improve the social education work in his district

The present training programme includes lectures by the academic staff of the Centre and by other specialists individual work group work and group discussions seminars, demonstrations visits for observations and field work and practical training programmes

The National Fundamental Education Centre was established by the Government of India on May 15 1956 at New Delhi to meet the needs of trained personnel for higher administrative jobs in the field of social education

The object of the Centre is to serve as National Centre for training research and evaluation and to provide leadership in the field of social education

The idea of establishing a National Centre of Fundamental Education in India arose out of the plan adopted at the sixth General Conference of UNESCO for the establishment of a net work of Fundamental Education Centres as a part of the world-drive against ignorance and low living standards One of the Centres was to be set up in India.

Later however as sufficient funds were not forthcoming the UNESCO gave up the project but the Ministry of Education continued to implement it as a national project The Scheme has accordingly been included in the Second Five Year Plan to meet the need of trained District Social Education Officers and research in the field of Social Education and evaluation ••••

SCIENCE & INVENTION

NEW TRANSLATING MACHINE

An electronic machine which translates Russian into English has been devised by a Russian born woman philology expert at the Georgetown University Institute of Languages and Linguistics in Washington D C

Miss Ariadne Lukjanow claimed the machine which operates on the basis of substituting mathematical symbols for grammar can translate 30 000 words within five hours She revealed that the machine operates through a code which establishes an equal sign between the two languages and thus provides bilingual grammar

SOUND WAVES IMPROVE CHROMIUM PLATING

Chromium plating which is extensively used on metal parts for automobiles and in many other fields is improved by sending sound waves through the plating solution it has been reported by the National Carbon Company of Parma, Ohio in the United States

The sound waves make the chromium plating harder and brighter, and make it adhere better to the base metal In addition it make the plated surface less porous Both sonic and ultrasonic sound waves have been used, and both produced essentially the same effect

The company believes that the sound wave vibrations have the effect of agitating, or stirring the plating solution at the surface to be plated.

UNMINED COAL TURNED INTO GAS

By using a new process the U S Bureau of Mines is turning underground coal into fuel gases without first mining the coal This is done by passing heat created by high voltage electrical currents through the coal and thus carbonising it After carbonisation the coal is porous enough to permit the passage through it of air, pure oxygen or steam A chemical reaction then takes place which turns the coal into combustible gases and these are piped to the surface for use There they may be used to provide power for electrical generators or in the production of synthetic liquid fuels or chemicals

The Bureau of Mines has made a considerable quantity of gas in this way, and is now endeavouring to make the process cheap enough for routine commercial use

• • •

METALLIC CONFETTI

U S Army scientists recently reported that tests are being conducted using rockets which release metallic confetti more than 50 miles above the earth to plot winds in the upper atmosphere

The scientists hope to obtain accurate information on wind behavior at high altitudes and develop new weather forecasting theories

The new method employs small Loki rockets carrying packets of confetti like aluminium chaff which is released at a pre timed altitude and tracked by radar to produce a fast and accurate wind profile

The Loki rockets have reached about 54 miles in height and the chaff has been swept along at some 200 miles per hour by the high altitude winds Continuous measurements have been made from the maximum altitude down to levels less than 100 000 feet

The tests have revealed that winds within the test zone are generally easterly at about the same speed as the westerly jet streams found at altitudes of 30 000 to 40 000 feet

COLOUR PICTURES IN ONE MINUTE

Full colour photographs can be taken and printed in one minute by use of a new film perfected by the Polaroid Corporation in the United States The company has been marketing for a number of years a camera and film that produce black and white photographs in a minute

Like the present black and white film rolls, the colour film rolls will consist of two parts— a roll of negative and a roll of self processing positive paper It has not yet been reported when the new colour film will be ready for marketing Preparing for its production is a "major undertaking involving several stages " the Polaroid company says

IONS USED TO TREAT BURNS

Severely burned persons can be better

treated with electrically charged ions than with pain easing narcotics according to Dr Theodore A D vid of Philadelphia

Dr David who has used negatively ionised air in treating about 75 patients for the past two years says th t after two 20 minute treatments with the air the injured person doesn t require narcotics

Negatively ionised air is air whose molecules have been negatively charged in an electrostatic generato

This procedure is now routine treatment for ordinary burns However the treatment is not so successful when applied for injuries cau ed by chemical burns

• • •

DEVICE SENSITIVE TO TEMPERATURES

The Kiev Physics Institute has designed an infrared spectrometre sensitive to temperature changes of one millionth of a degree centigrade

Infrared spectrometre is intended to determine the content of oil or paraffin in petroleum products It is based on a highly sensitive receiver of infrared invisible thermal rays

FRESH WATER FROM ANTARCTIC SUNPOWER

Antarctic sun energy is being used to operate a solar still for transforming salt water into fresh by the Australian Expedition at Davis base in Antarctica The still manufactured by an Australian firm in Victoria is of extremely simple compact design and can produce small quantities of purified water in any climate or conditions at very low cost.

It consists of a salt water tank with a capacity of 17 gallons which automatically feeds salt water into a shallow tray of black plastic material, over which is placed a conical glass dome As the water evaporates globules form on the inside of the dome into a catchment gutter leading to an outlet tube into th fresh water container About two gallons of purified drinking water are being produced daily by this method at the Australian Antarctic base

Th apparatus can be erected and set in operation in 30 minutes and can be packed for dropping by parachute Once erected, the solar still n eds no maintenance except occasional cleaning It can be used in all climates since normal daylight is all that is needed to set the process in motion.

ELECTRONIC DEVICE "THINKS" IN TEN LANGUAGES

An electronic machine which can operate quickly and be programmed in ten different languages and produce historical data on outstanding events from 4 B C to 1958 A D is one of the top mechanical attractions at the U S Pavilion of the Brussels World Fa r

Known as Random Access Method of Accounting and Control (RAMAC) is a product of the International Business Machines Corporation (IBM) of New York It is used chiefly in business to check inventories print invoices and determine credit ratings

When a typist records a question on the machine s built in IBM electric typewriter a record arm is activated and finds its way to the appropriate record among a stack of discs which make 1 200 revolutions a minute picks up the answer and quickly transmits it to the electric typewriter

• • • •

TREE CRUSHER

The firm of R G LeTourneau Inc. big American manufacturers of land clearing and earth moving equipment has invented and is producing a new 150 ton machine called a tree crusher " The machine is designed for use in clearing African and South American jungles and operated by a single man, will clear an acre of wooded land in 15 minutes

The machine pushes over tree trunks and then axe like teeth on its rollers dig into the trees and crush them to firewood-size pieces A diesel drives a s t of generators that power electric motors eight inside each roller, to operate the huge machines The newest LeTourneau machine is expected to turn thousands of square miles of jungle into productive land

• • • •

"WELCOME MATS" BAR TERMITES

United States scientists have devised poisoned welcome mats for termites to protect homes. The mats made of asphalt, are placed beneath the houses The asphalt has insecticides mixed into it and where either slab-on-ground or conventional concrete foundations are to be laid a thin layer of the mixture is sprayed over the earth and that adjoining Besides barring termites the layer provides a vapour barrier that prevents damage to flooring from moisture rising out of the ground

• • • •

ROCKETS FOR WEATHER RESEARCH

Meteorological rockets which mount to a height of roughly 60 miles descend by parachute and can be used again, are being launched by Soviet scientists from Kheis Island in the Arctic and from the Soviet research vessel Ob in Antarctic waters during the International Geophysical Year

The rocket 23 feet in length is fired to a height of about 45 miles where a separating mortar blows the nose and body apart Parachutes then open on the two sections the nose continues upwards for a distance of some 10 miles the parachute acting as a stabiliser and slowing it down as it descends to a speed of about 13 feet per second Bayonet like blades dig into the ground as it lands holding the container with its load of instruments upright The rocket body is also recovered and can be used again

Several of these rockets have already been launched and have provided Soviet scientists with valuable information on the distribution of air temperatures and pressures in the medium stratosphere A special concentration of rocket firings will be made during June and July this year as planned at the rocket conference held in Washington last Autumn

NEW METHOD OF PHOTOGRAPHY

A photographic system known as the Digital Data Recording Device which takes pictures and records its own caption on the same film has been produced for use by the U S Air Force

Developed by the Federal Telecommunication Laboratories of the International Telephone and Telegraph Corporation the device prints in code the place speed altitude and other pertinent information on the film as the camera travels along

* * *

FOAMED CONCRETE FOR SCULPTURE

Artists are known to be restless people ever experimenting with new forms and materials An instance of how scientists can help them in their searches comes from the Central Building Research Institute at Roorkee where they have developed a low density foamed concrete which can be successfully used for making articles of sculpture A novel aspect of this development is that in the foaming process for the first time an indigenous foaming agent has been successfully employed

Foam concrete is amenable to fine carving retains good shape has a pleasant colour and, on the whole gives the finishing work an appearance of true stone sculpture Above all, the cost of foamed concrete compares favourably with the other materials conventionally used in sculpturing

* * *

AGE OF THE EARTH

Our earth is considerably older than 5 000 million years For life on earth to have evolved to its present state the globe must have taken shape no less than 10,000 million years ago That is the conclusion arrived at by Lev Zenkevich a well known Soviet oceanologist This he declares is proved by a study of the benthos It has been calculated that upto 0 12 inches of sediments of flora and fauna origin settle on the ocean bottom every millenium This biological clock is in some respects more precise than the uranium clock which indicates that the earth is 5 000 million years old In the next few years the ocean bottom is to be studied in detail at great depths Today when scientists penetrate some 98 to 114 feet of the benthos they go back hundreds of millions of years in the history of the earth

Now the scientists are making a device which could penetrate the ocean bottom upto 325 feet. It will help to study geological epochs embracing a period from 3 000 to 4,000 million years

In the near future, Prof Zenkevich revealed Soviet scientists will have at their disposal a device to drill the ocean floor practically to any depth

PEOPLE IN THE NEWS

DR KHAN SAHEB

Dr Khan Saheb Chief of the Republican Party of Pakistan was stabbed to death in Lahore on May 9 1958

Dr Khan Saheb was born in 1883 After matriculating from Punjab University he joined the Grant Medical College Bombay but after a year proceeded to England to finish his course During World War I he joined the Indian Medical Service and served in Europe.

After the war when the Rowlatt Bills were enacted the entire family of Dr Khan Saheb joined in the agitation launched by Gandhiji After great difficulty he returned to India in 1920 resigned from service and settled down to private practice But the call of duty for national freedom made him plunge in 1930 into the struggle and like his younger brother Khan Abdul Ghaffar Khan, he too courted imprisonment He was arrested in 1931 and remained in jail, detained under the notorious Regulations III of Bengal enacted in 1818 He was released in September 1934 but was not allowed to enter his home province and Punjab.

He was elected to the old Central Legislative Assembly in 1935 He formed the first Congress Ministry in the North West Frontier Province in 1937, but at the outbreak of World War II resigned in response to the call of the Congress After the war when the Congress again accepted office he headed the popular provincial ministry for the second time in 1945 and after the general elections in 1946 he formed the Ministry again

Even after the N-WFP opted to join Pakistan in 1947 Dr Khan Saheb continued to be in office until his dismissal a few days after the birth of Pakistan by Mr Jinnah.

The reason for his removal from Chief Ministership was that he continued to maintain the Congress character of his ministry" His successor in office Khan Abdul Quaiyum Khan, one time deputy leader of the Congress Party in the old Central Legislative Assembly could not brook the strong influence of the brothers and promptly gaoled him.

Much water had flowed down the Indus and the Sukkur and on January 5 1954 general amnesty was declared and the two brothers were released With all sorts of alliances being tried to get a stable Government to rule over Pakistan he was invited to join the Pakistan Central Cabinet on October 23 1954 as Communications Minister Shortly thereafter Dr Khan Saheb paid a brief visit to India and was accorded a warm reception.

The United Province of West Pakistan, integrating the erstwhile Sind West Punjab, the N WFP and Bhawalpur State designed to obtain parity in the matter of heads with East Bengal was formed in October 1955 with Mr M A Gurmani as Governor and Dr Khan Saheb as Chief Minister The decision to make him Chief Minister of the one unit West Pakistan was understood to be with the object of making it more acceptable to the redoubtable Pathans who had all along, under the guidance of Khan Abdul Ghaffar Khan vehemently opposed integration. Dr Khan Saheb s tenure of office as Chief Minister of West Pakistan however was no bed of roses Pakistan declared herself a Republic in March 1956 and immediately thereafter the Muslim League in West Pakistan tried to oust him Dr Khan Saheb countered this move by forming the Republican Party which was able to command a narrow majority in the provincial legislature The formation of the new party, however, upset the balance of political forces at Karachi and many of the followers of the Muslim League Prime Minister Chaudhri Mohammed Ali, crossed over to the Republican Party Till the formation of the new party Dr Khan Saheb declared himself to be a non party man

In the game of politics Dr Khan Saheb had to sacrifice some of his earlier principles A firm believer in joint electorates and despite the fact that both the National Assembly of Pakistan and the East Pakistan legislature had plumped for the same, Dr Khan Saheb sponsored a resolution in the West Pakistan Assembly proposing separate electorates for that wing of Pakistan He had to do this much against his conscience in order to stem the signs of disintegration which threatened to make his Republican Party short lived He also put his younger brother

into jail because he opposed the one unit scheme of West Pakistan

Pakistani politics being what they are, Dr Khan Saheb could not hold together his party and after his Ministry had lost the confidence of the Assembly, on March 21 1957, President Mirza took over the administration of West Pakistan On July 7, 1957 Dr Khan Saheb formally tendered his resignation and advised President Mirza to name Sardar Abdur Rashid Khan, Finance Minister in his erstwhile Cabinet as the next Chief Minister

It was under Dr Khan Saheb s leadership that the N W F P embarked upon an era of industrial development programme and sugar mills at Mardan and Takhatbhai and hydro-electric projects were started He abolished forced labour and freed the tenants of the N W F P from tyranny of the big landlords

Gandhiji wrote in 1935 about the Khan brothers I was struck by their transparent sincerity frankness and utmost simplicity I observed too that they had come to believe in truth and non violence not as a policy but as a creed

* * *

MRS ARUNA ASAF ALI

Mrs Aruna Asaf Ali a legendary figure in the national struggle for freedom became the first citizen of the Metropolis on April 14 1958 when she was elected Mayor of the newly formed Delhi Municipal Corporation Born in 1909, she married Mr Asaf Ali a prominent Congress leader in 1928 She has since been in the vanguard of political as well as social life of Delhi and is one of the pioneers of the movement of the emancipation of women in the capital

She had her baptism of sacrifice in 1930 when she was sentenced to one year s imprisonment for sedition The Government did not release her despite the Gandhi Irwin Pact and she served the full term of the sentence

She courted arrest again in the satyagraha of 1932 launched by Mahatma Gandhi and was awarded six months imprisonment In 1941 she was again sentenced to one years rigorous imprisonment in connection with the individual civil disobedience movement started by Mahatma Gandhi as a protest against India being drawn into the war

The Quit India movement of 1942 sent her underground and she became an outlaw successfully defying the British authority throughout the period that the Congress was in wilderness She remained underground and helped organize a country wide movement against the British rule Delhi was the centre of her activities till 1943 Later when the scene of underground activity shifted to Calcutta and Bombay she remained the moving spirit behind the resistence struggle It was during this period that she collaborated with Jaya Prakash Narain Dr Ram Manohar Lohia and Mr Achyut Patwardhan who, after independence emerged as the Socialist leaders of the country

Mr Achyut Patwardhan and Aruna came out into the open when the warrants against them were cancelled in the beginning of 1946 soon after Gandhiji wrote a moving letter to her

After her reappearance she was again in the forefront of the political life in Delhi and was elected President of the Delhi Pradesh Congress Committee in 1947 She had however to leave for the U S A to join her husband the late Mr Asaf Ali, who was India s Ambassador there.

On her return from America Mrs Asaf Ali joined the Socialist Party for the Socialists had by now seceded from the Congress and formed themselves into a new party She soon got into the Central Executive of the party In 1952, she joined the Communist Party and became a member of its Central Committee By 1954 however, she had ceased to be its member Since then she has been devoting most of her time to social work through the Bharat Sewak Samaj

Mrs Asaf Ali has been a tireless worker in promoting the cause of Indian womanhood and the great awakening among women is largely due to her efforts She was secretary of the Delhi Women s League for a long time

* * *

Mr RAM CHARAN AGGARWAL

Mr Ram Charan Aggarwal (Independent) was elected Deputy Mayor of the Delhi Municipal Corporation on April 14 1958

Born in 1916 in a well known business family of Delhi Mr Ram Charan Aggarwal has been associated with the struggle for freedom since 1932 when he joined the Congress He held for some time the office of the treasurer of the Delhi Pradesh Congress Though a business man Mr Aggarwal s interest extended to journalism and he started an evening daily Naya Hindustan

He was first elected to the Delhi Municipal Committee on Congress ticket in 1951 He has been actively connected with various

social and business organizations including the United Chamber of Trade Associations and the Hindustani Mercantile Association. He has long been a member of the executive of the two bodies.

Before the municipal elections of 1954 Mr Aggarwal left the Congress along with several other old workers contested as an Independent and won by a big margin. In the Municipal Committee he was elected to a number of important sub-committees. Mr Aggarwal has also been a member of the Delhi Improvement Trust.

PROF JEAN VOGEL

According to information received in New Delhi Prof Jean Philippe Vogel a Dutch Scholar and a renowned Archaeologist died on April 10 1958 at his village Oegstgeest near Leyden in Holland. He was 88.

Prof Vogel had close associations with India. Even in the nursing home he was giving finishing touches to a book entitled HAMSA MOTIF IN INDIAN ART. This is likely to be published now posthumously.

Jean Philippe Vogel was born on January 9, 1871. He took his Doctorate in 1897 at the University of Amsterdam his thesis being a Dutch translation of Sudraka's *Mrichchhakatika* a well known drama in classical Sanskrit. In 1901 he joined the Archaeological Survey of India and worked in close association with Sir John Marshall till 1912, when he went home on leave. In *1914* he was appointed Professor of Sanskrit and Indian Archaeology at the State University of Leyden which post he held till 1939. Even after retirement until the last day his life he remained busy pursuing his cherished studies in the field of Indology inspiring younger generations by his shining example of profound scholarship.

His works, in Dutch English and French on Indian art, epigraphy history and archaeology are models of precision and thoroughness. In recognition of his manifold contributions governments and learned societies vied with one another in showering distinctions on him.

The Kern Institute at Leyden which has been doing a singular service to India by conducting research and training scholars in ancient Indian history and culture owes its origin and growth to Prof Vogel himself.

The many scholars who were privileged to study at his feet and take their Doctorate under his guidance include quite few Indians too.

Prof Vogel all along maintained a close contact with India in general and with the Department of Archaeology in India in particular.

DR MOHAMMED IQBAL

The twentieth anniversary of the death of Dr Sir Mohammed Iqbal great Urdu poet and scholar of undivided India was observed on the 21st April 1958.

Iqbal—the Poet Philosopher and visualiser of the idea of Pakistan—was born in 1873 at Sialkot (Punjab) and died in 1938 at Lahore where he passed the greater part of his life. Soon after graduation he was appointed Professor of Philosophy at the Government College Lahore. In 1905 he went to Europe. He got his Doctorate in philosophy from Munich. After his return to the Indo-Pakistan sub continent in 1908 he practised as a Barrister at Law for which he had *qualified himself in London. He became* a Member of the Punjab Legislative Assembly (1927 39) and in 1930 he was elected President of the All India Muslim League. In 1930 he attended the London Round Table Conference on Indian Constitution. In 1933 he visited Afghanistan at the invitation of King Amanullah to advise his Government on educational reforms.

At an early age he was looked upon as a great poet of the future. His thoughtful and stirring poems and his delectable manner of reciting them, made him a popular figure at all public gatherings.

He has left eleven volumes of poems—four of which are in Urdu and seven in Persian, and a book in English prose comprising his seven lectures at the University of Madras on "The Reconstruction of Religious Thought in Islam." There is also a large body of his public speeches statements and letters in English and in *Urdu*. His most popular poem *Asrar Khudi* (Secrets of Self) has been translated into English by Professor Nicholson of Cambridge. Professor A.J. Arberry has similarly translated two volumes of his poems under the title "Tulip of Sinai" and "Persian Psalms". His *Javid Namah* has been translated by Dr A. Bausani—an Italian Orientalist under the title "Poema Celeste" and a large number of his other poems by Professor Kiernan. Some of his poems have been translated into Turkish by the Turkish poet Akif.

—o—

PARLIAMENTARY AFFAIRS

Community Development Programme Winding up the discussion on the Demands for Grants of his Ministry on April 5 the Minister of Community Development Shri S K Dey said that the Community Development Programme had ceased to be purely Indian It had become global A large number of countries had decided to introduce community development Their representatives had been visiting this country to study the programme Besides some Indian experts were now functioning in those countries to assist them in implementing the programme Shri Dey said it had therefore become all the more necessary for India to make the programme a success not merely for her own sake but for the sake of half the population of the world represented by countries like Indonesia the Philippines Burma Iraq Iran Ethiopia and Egypt

Rehabilitation Ministry's Demands The Rehabilitation Minister Shri Mehar Chand Khanna stated in the Lok Sabha on April 11 that by and large the refugees in the eastern region were contented That was why only the camp population took part in the demonstrations and agitations and not the other refugees who formed the greater majority of the refugee population Shri Khanna was replying to the debate on the Ministry's Demands for Grants amounting to Rs 38 crores

The Rehabilitation Minister also stated that the Government of India felt that the time had now arrived when the displaced persons in the western region could be integrated into the economy of the country Accordingly the work of the Rehabilitation Ministry in the western region was being gradually transferred to other Departments of the Government of India Shri Khanna assured the House that the work was not being abandoned as a result of such transfer

First Atomic Power Station by 1962 Speaking on the budget demands of the Department of Atomic Energy the Prime Minister said in the Lok Sabha on April 10 that production of cheap power from the proposition for India If a start was made soon our Atomic Power Station might come into operation in 1962

The Prime Minister said it was expected that the cost of power from atomic stations would be nearabout 2 6 naye paise per unit of electricity This would be lower than the generating cost of electricity from Thermal stations in most parts of the country which were not close to coal mines If India were to take part in the development of atomic power it was necessary to set up at least one station working on natural uranium After that the country could go on to the other processes Government has already decided to construct an Atomic Power Station though its location and feasibility will be considered in terms of other factors

Grants for I & B Ministry The Minister for Information and Broadcasting Dr Keskar declared in the Lok Sabha on April 7 that there was no case now for making All India Radio a public Corporation There could be no greater misconception than that if A I R was taken away from the hands of the Government it would be run objectively and impartially After all if there was a Corporation it would be run and controlled by the Government but Parliament would not have much to do with it On the other hand said Dr Keskar A I R as a Government Department was directly under Government's control and the chances of its misuse were less because the Parliament could always bring the Government to book Dr Keskar was replying to the debate on the budget demands of his Ministry totalling just less than nine crores of rupees

Referring to the suggestion that a Parliamentary Commission should go into the working of broadcasting Dr Keskar said he did not think it was necessary to have a Commission A I R was a Government department and its working was looked into regularly by Parliament. Besides the Central Programme Advisory Committee had more than seven members of Parliament on it

More Wage Boards to be set up Replying

Demands for Grants of his Ministry amounting to more than 8½ crores of rupees the Minister for Labour and Employment Shri Gulzarilal Nanda, opposed the demand for an immediate 25 per cent wage increase for all workers This was one of the points in a Charter of Demands presented by some trade unions to the Prime Minister and Chief Ministers of States The Government wanted real wages to increase progressively for larger and larger number of people and not for a few persons

In his reply to the debate the Minister also dealt with the problem of unemployment and said he himself did not feel quite happy about it Shri Nanda also dealt with the question of trade unions He said if these unions were not exploited for political ends it would be possible to reduce numerous difficulties which beset the path of workers But the difficulty was that political parties would like to push their power through the trade unions

Bilingual Bombay State Replying to the debate on the budget demand of his Ministry the Home Minister, Shri Pant made an appeal in the Lok Sabha on April 15 that the reorganised bilingual Bombay State should be given a fair trial. He pointed out that the formation of the present State of Bombay was the result of a spontaneous decision taken by members of Parliament belonging to all parties except one The country welcomed that decision as the best that could be arrived at to solve a difficult and complicated question In India every person had an opportunity of going to the polls every five years if not earlier It was open to the people to express their considered views after they had given a fair trial to the arrangement

Reorganisation of the Services Turning to the reorganisation of the services Mr Pant said Government proposed to set up a National Academy of Training for persons recruited to the senior grades of Service Apart from raising the strength of the Indian Administrative Service Government were now setting up a Managerial Service, an Industrial Service and an Economic Service On the whole, the administrative and other services had acquitted themselves well

India's Defence Policy The Defence Minister Shri Krishna Menon, replying on April 16 to the debate on the budget demands of his Ministry said in the Lok Sabha that at the present rate of progress Gnat fighter planes made in the Hindustan Aircraft Factory in Bangalore would take to the air by the scheduled date or even before that About the Hunter fighter planes supplied by Britain and Myster planes bought from France the Minister said they were of the latest type and contained modifications to meet India's special requirements.

Shri Krishna Menon underlined the threefold objectives of India's defence policy : (1) to safeguard India's frontiers against anyone so ill advised as to wish to violate our sovereignty (2) to go to the aid of the civil power either in times of natural disasters or in situations like those which obtain in the Naga Hills, and (3) to place our forces at the disposal of the international community, that is the United Nations for maintaining peace India has sent her forces abroad only to serve others, not to police anyone nor to covet anybody's territory

Second Stage of the Budget Debate The Lok Sabha on April 17 completed the second stage of the budget discussion by voting the Finance Ministry's demands totalling a little over Rs 223 crores It also voted without discussion the grants for the Ministry of Law the Department of Parliamentary Affairs the two Houses of Parliament and the Secretariat of the Vice President

Earlier replying to the seven-hour discussion on the demands of his Ministry including those of the Planning Commission the Finance Minister, Shri Morarji Desai said that there was no scope for an economic recession in India unless this country failed to pull together India's economy was a developing economy

Referring to the Second Plan, he said, its aim stood at 4 800 crores of rupees It has been stated that cost of the Plan might go up because of the increase in prices The Planning Commission was assessing exactly how far the country could go and the House would be told about it.

Appropriation Bill The third round of discussion on the Central budget began in the Lok Sabha on April 18 with the introduction by Shri Morarji Desai of Appropriation Bill in respect of the Central Budget for 1958—59 The Bill authorises the appropriation of Rs 71,24 57 07 000 from the Consolidated Funds of India for meeting the expenditure of the Central Government during the budget year

Record Life Insurance Business : The total amount of new life insurance business completed by the Life Insurance Corporation of India during 1957 58 was about Rs. 300

crores a record so far the Deputy Finance Minister, Shri B R Bhagat, said in the Lok Sabha on April 15. In reply to another question the Finance Minister Shri Morarji Desai said in the Lok Sabha on April 18 that the total number of Janta Life Insurance Policies issued by the Life Insurance Corporation of India from May 26 1957 to March 17, 1958 was 24 411 The value of such policies was Rs 1,39 21 551

Lok Sabha Passes Finance Bill The Lok Sabha passed the Finance Bill on April 23 which seeks to give effect to this year s budget proposals During the clause by clause consideration the House accepted by 95 votes to 23 a Government amendment incorporating the new concessions announced in regard to the development rabate to companies Replying to the debate the Finance Minister, Shri Morarji Desai, said the development rebate was being given because ours was an under developed economy It should not be imagined he said that our industrialists worked under easy circumstances

Earlier on April 22, replying to the general debate on the Finance Bill Shri Morarji Desai said in the Lok Sabha that by and large whatever deficit financing had been resorted to it had not led to any inflation worth the name The rise in prices in India was not much compared with the other countries He pointed out that in a developing economy prices were bound to rise If the standard of living had increased the level of income was also going up If the entire increase was not absorbed in savings there was bound to be an increase in the consumption of goods resulting in a rise in prices to some extent Government were trying to keep the prices in check to the best of their ability The prices of foodgrains which were rising last year had come down and were falling to the proper level

The Finance Minister said that in the first two years of the Plan the deficit financing resorted to was just over seven hundred crores It was not possible for him to say that Government would confine themselves to only nine hundred crores of deficit financing for the Plan The Plan envisaged deficit financing to the extent of twelve hundred crores and it would be Government s endeavour to keep within that limit In taking to deficit financing the Government would like to see that it did not result in inflation and also that it helped the economy and did not retard it

Foreign Investments The Deputy Minister for Economic Affairs Mrs Tarkeshwari Sinha who also spoke in the debate said because of India s stable economic system and her deep faith in the democratic traditions foreign investments rose from two hundred and eighty eight crores in the middle of 1948 to four hundred and eighty one crores by the end of 1955 She hoped that by creating goodwill and by keeping our economy stable, we should be able to attract further investments,

Gift Tax Bill and Estate Duty (Amendment) Bill The Lok Sabha accepted on April 24 the official motions to refer the Gift Tax Bill and Estate Duty (Amendment) Bill to two Select Committees

Replying to the debate on the motion concerning the Gift Tax Bill the Finance Minister Shri Mororji Desai said on April 24 that there was no intention that the Bhoodan and Sampatti Dan movements should be hurt in any way or hampered by the Bill Referring to the exemption sought for gifts to religious institutions the Finance Minister said that *prima facie* it might appear that this demand should be supported But when they were concerned with the finances of the whole country they have to see that no sectarian movement got any advantage from the tax system If a person was liberal enough to make a gift of fifty thousand rupees to a religious institution he could also be liberal to pay a Gift Tax of two thousand rupees to the temple of Government

Justifying the Estate Duty (Amendment) Bill the Finance Minister said in the Lok Sabha on April 24 that the annual yield from Estate Duty had been only two crores By reducing the exemption limit to fifty thousand rupees the Government were making the tax more broad based The attempt was to spread the burden of taxation as widely as possible

Rajya Sabha s 21st Session Commences The Rajya Sabha which reassembled on April 22 for its 21st session discussed the report of the University Grants Commission In his reply to the debate the Minister of Education Shri K L Shrimali said on April 23 that while there could be no arbitrary limit on the number of students the Universities could not be allowed to expand indiscriminately Only those who could benefit by higher education should join colleges and it was for the Universities and the Grants Commission to devise some method of selecting suitable students At the same time lack of financial resources could not be allowed to stand in the way of students joining colleges

Home Affairs

Indianization Of The Navy

On April 22 the Indian Navy had an Indian as Chief of Naval Staff Rear Admiral Ram Dass Katari who was promoted Vice Admiral when he assumed his new appointment took over on that day from Vice Admiral Sir Stephen Carlill.

This completed the process of Indianization of the top commands of the three Services

Admiral Carlill who took over the command in July 1955 is the ninth British officer to hold this high appointment since the Navy in its present form came into being in 1934 and the fourth since its reorganization after independence His predecessors in the post independence period were Rear Admiral J T S. Hall Admiral Sir Edward Parry and Admiral Sir Mark Pizey

The seniormost Indian officer of the Navy, Rear Admiral Katari has many "firsts" to his credit both in his professional as well as academic careers

He was the first Indian to become an Admiral on October 2 1956 when he took over command of the Fleet from the last of the British officers to hold that appointment

The Indian Navy has now introduced a new Admiral's flag which in future will be flown by all Flag Officers of the Navy Very much similar to the one now in use it has Dharma Chakra superimposed in the centre of the flag The flags flown by the Commodores and commissioning pennants will also have the the Dharma Chakra superimposed on them

It was in the beginning of the 17th century that the present Indian Navy was "born" as the Indian Marine in 1613 After being taken over by the British Crown from the East India Company in 1858 the Service operated as an adjunct to the Royal Navy

On passing of the first Indian Navy Discipline Act by the Indian Legislature in 1934 the Service came to be known as the Royal Indian Navy and its command was then vested in the Flag Officer commanding the Royal Indian Navy (FOC RIN) but the supreme command of the Navy (as well as of the other two Services) was given to the Commander-in-Chief who was also a member of the Governor General's Executive Council

With the formation of the first national (interim) Government in 1946 an important change occurred in the evolution of the naval command The Commander in Chief then ceased to be the War Member of the Executive Council but continued to exercise his command of the Royal Indian Navy through the FOC RIN

After independence the head of the Service became independent of the other Services and his designation was also changed first as Commander in Chief and later as Chief of Naval Staff

The supreme command of this Service is now vested in the President

The Navy has made rapid strides especially after independence What was once known as a "small ship" flotilla has now blossomed into a Fleet with an aircraft carrier cruisers and destroyers Some of the most modern frigates and minesweepers have been added to this force The Fleet is being modernized and expanded

In the matter of training the Navy especially during the last three years has made good progress. It has almost achieved selfsufficiency in this respect The training of officers and men except for certain highly specialized courses is undertaken in this country

The latest type of equipment is being installed at all the shore training establishments Many advance courses and a new college for engineers have been started. Some of these training facilities have also been made available to the personnel of a few foreign navies

The "youngest" and a very vital branch of the Navy which has recently witnessed notable progress — that of naval aviation The acquisition of an aircraft carrier—HMS Hercules now being modernized in the U K —has given a further fillip to its development and to the growth of the naval air station Garuda at Cochin

Yet another branch which has directed its energies to the work of national importance is the Hydrographic Branch with its survey ships charting the Indian seas

The naval headquarters and other naval commands have also been reorganized to enable them to shoulder the new responsibilities following the all round expansion of the Navy

Ships of the Indian Navy have since independence paid good will visits to 25 countries

The National Productivity Council

The National Productivity Council at its first meeting in New Delhi on April 5 1958, formulated an eight point programme for launching a productivity drive in the country

It decided to stimulate and facilitate the establishment of local productivity councils, which will be the main vehicles for propagating productivity It also decided to set up a committee to conduct a comprehensive survey of the available productivity personnel in different fields and future requirements

The main features of the eight point programme are dissemination of information relating to productivity training in productivity organisation of productvity services at important industrial centres promotion of inter plant visits sponsoring of visits of productivity teams to advanced countries training of personnel abroad and invitation to foreign technicians and specialists in productivity

The Union Minister for Industry, Mr Manubhai Shah who is the President of the Council, presided.

During 1958-59 15 local productivity councils are proposed to be set up Already two local councils have been set up at Bangalore and Coimbatore The local councils will have among their members individuals and organisations of industries, employers and workers

While the productivity drive will cover eventually all economic activities in the country, initially the Council decided that its activities and those of the local councils should be limited to the industrial field In this field the drive will be launched in large medium as well as small scale industries, both in the public and private sectors All factors and tools of productivity like management, production, personnel plant and physical facilities will be covered

The Council as at present constituted, consists of 36 members, including the President the Chairman Dr P S Lokanathan, and the executive director-designate Mr H D Shourie Two Vice Chairmen were elected at the meeting They are Mr G P Kapadia Vice President of the Federation of Indian Chambers of Commerce and Industry and Mr Michael John Vice President of the Indian National Trade Union Congress A governing body was also elected Twenty-four members representing techinicians, technical experts consultants consumers, scholars and small industrialists could be co-opted ro the Council by the governing body

Under the programme broadly approved a technical inquiry service and technical digest service is proposed to be organised to answer technical inquiries from industries and to disseminate information collected from different sources This will propagate productivity consciousness in the country

Pamphlets reports, exhibitions lectures and seminars will be the other media for disseminating information Training at all levels of management in the technique and process of productivity including scientific management human relations, job valuation wage incentives industrial designs work measurement and methods analysis is proposed to be organised.

The productivity service to be provided will be organised through regional productivity units of specialists at different places Their services will be provided through the local productivity councils or industrial units wherever there is demand from employers and Labour In the first stage these productivity units may be set up in Bombay Caclcutta, Madras Kanpur and Delhi

C, P I amends its Constitution

The Communist Party of India at its extraordinary Congress held at Amritsar adopted the 1200 word amended preamble to the Party s Draft Constitution on April 8

The most important amendment to the preamble guarantees the right of political organisation to all opposition parties so long as they abide by the Constitution of the country No other Communist Party in the world except the British Communist Party has permitted such rights to the opposition

The preamble describes the Communist Party as a party of the Indian working class and the achievement of power by the working

Indianization Of The Navy

On April 22 the Indian Navy had an Indian as Chief of Naval Staff Rear Admiral Ram Dass Katari who was promoted Vice Admiral when he assumed his new appointment took over on that day from Vice Admiral Sir Stephen Carlill.

This completed the process of Indianization of the top commands of the three Services

Admiral Carlill who took over the command in July 1955 is the ninth British officer to hold this high appointment since the Navy in its present form came into being in 1934 and the fourth since its reorganization after independence His predecessors in the post independence period were Rear Admiral I T S Hall Admiral Sir Edward Parry and Admiral Sir Mark Pizey

C, P I amends its Constitution

The Communist Party of India at its extraordinary Congress held at Amritsar adopted the 1200 word amended preamble to the Party s Draft Constitution on April 8

The most important amendment to the preamble guarantees the right of political organisation to all opposition parties ' so long as they abide by the Constitution of the country No other Communist Party in the world except the British Communist Party has permitted such rights to the opposition

The preamble describes the Communist Party as a party of the Indian working class and the achievement of power by the working

States Shri Gulzarilal Nanda said that the objective was to utilise trained manpower rendered surplus on the completion of projects in new projects in the same State or in other States He said that arrangements made by the, Centre to provide employment to such personnel engaged in projects like D V C and Hirakud had proved successful and urged the need for the States also to make similar arrangements Collection of necessary data and adequate machinery to deal with such problems would be necessary, he added The Council approved of the scheme. In this connection, the Planning Minister said that the additional employment opportunities outside agriculture which were estimated to be of the order of 8 million at the time the Second Plan was formulated in 1956 was now expected to be 6 5 million

C D Programme The Council considered proposals for the revolution of the community development programme According to the revised programme no distinction will be made between the National Extension Service and Community Projects The Community Development Programme is divided into two stages, each lasting five years During the first stage the schematic block budget allots Rs 12 lakhs and during the second Rs 5 lakhs Before the first stage commences in the block there will be a pre-extension period of one year primarily for commencing agricultural production programmes The revised programme contemplates that instead of covering the entire rural area by the end of the Second Plan the last set of blocks will be allotted in October 1963 During the remaining period of the Second Plan, only 900 blocks instead of 2 475 originally contemplated will be allotted The Council accepted the proposals for the revised programme of community development

The Council reviewed the steps taken by State Governments to implement the programme of democratic decentralisation. By and large, almost the whole country is expected to be covered by panchayats by the end of the Second Plan. In regard to the establishment of democratic organisations above the village level that is above block, taluka or district level in recent months the State Governments have taken a number of stopes like the establishment of block panchayat samities introduction of legislation and appointment of special committees for working out detailed proposals

Earlier, the Prime Minister, addressing the meeting of the National Development Council, said that they could not maintain the Plan at Rs 4 800 crores unless all the States and the Centre were prepared to raise their resources considerably He wanted the Council to consider the limits upto which they could go

All India Co-operative Congress

The All India co operative Congress was held in New Delhi on April 12 and 13 1958 The Prime Minister Mr Nehru, inaugurated the session, and Mr K D Malaviya presided.

In his speech Mr Nehru criticized some of the decisions of the Rural Credit Survey Committee's report and said that the report had caused "infinite harm" to the co operative movement and that it offended against the whole philosophy underlying that movement

He said 'The Government was quite wrong in accepting some of the decisions of that Committe The Committe has tended to push co-operative movement in the wrong direction Its tendency to distrust our common people—thinking that they are not competent enough and therefore, Government officials and Government money must be given to push them—is bad We should try to get out of this situation as quickly as we can and aim at small co-operatives without official interference '

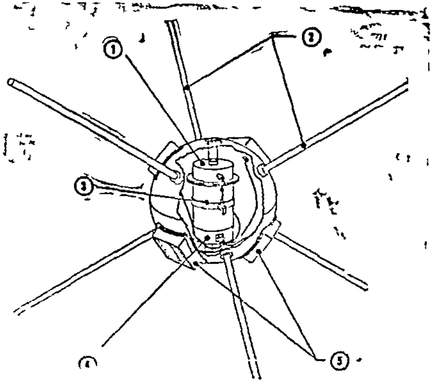
In his presidential address Mr K D Malaviya, President of the All India Co-operative Union said that he felt disconcerted about the "growing official influence and domination over the co-operative movement in the country

He declared "The co-operative movement will no longer remain a co-operative movement if it is to be run by officials because the most essential characteristic of a co-operative is its democratic and self reliant character

He further said The methods of organization of co-operatives and providing financial and other assistance would not come about so long as these functions continu[illegible] performed by Government dep[illegible] officials The responsibility for [illegible]d organizing new co-operatives [illegible] way should be borne by the movement itself

On April 13 the Congress adopted several resolutions on the co-operative movement One of the resolutions urged the Government

(*Continued on page 497*)



AMERICA LAUNCHES MORE EARTH SATELLITES

The second American earth satellite to orbit the earth was successfully launched by a Navy *Vanguard* rocket from Cape Canaveral (Florida) at 7 16 a m local time on March 17 The satel lite (a 6 inch sphere the size of a grape-fruit) weighed 3¼ lb and contained two miniature radio transmitters It was at first given the name *Vanguard I* but it was subrequently an nounced that it would be called *Bita 1958*—the name g ven to it by officials connected with the International Geophysi cal Year programmes

Dr John P Hagen director of the Vanguard project, said in a press statement that both the satellite and the third stage of the launching vehicle (a rocket 4 ft long and nearly 100 lb in weight which eject ed the sphere from its nose when it reached the required height) were circling the earth at between 18 000 and 19 000 m p.h , the rocket orbiting about a mile from the satellite According to early calcula tions the satellite s farthest point from the earth (apogee) was 2,500 miles—i e farther than the Army's *Explorer* or either of the Russian *Suptniks* —and its minimum height 400 miles It took about 135 minutes to circle the earth Dr Hagen said that it would be ' a very long life satellite and would probably remain in orbit from five to ten years

The *Vanguard* rocket—a much more advanced rocket than the Army s Jupiter C used to launch the Explorer—consisted of three stages The first stage carried the satellite to an altitude of about 35 miles at 3 700 m p h the second stage carried up to 138 miles at 9 000 m p h before coasting to the orbit point 300 miles up and the third stage of the rocket took over when the satel lite was in orbit

Of the two transmitters in the satellite, one is powered by solar batteries (d awing their power from the rays of the sun and ope rating only in sunlight) and sends out signals on a frequency of 108 3 megacycles, it is

VANGUARD I —This is a cutaway drawing of Vanguard I the 6 4 inch test satellite placed in orbit by the United States Navy from Cape Canaveral, Florida Weighing only 3¼ pounds the test sphere is carrying two radios o e powered by solar cells designed to draw their energy from the sun and the other by conventional batteries The numbers on the drawing identify the following parts of the rocket

(1) Battety powered transmitter (2) Antennas (3) Batte ries (4) Solar powered transmitter (5) Solar cells

SOVIET UNION ELECTIONS AND NEW CABINET

Elections to the two Houses of the Supreme Soviet took place throughout the U.S.S.R. on March 16 a total of 1,378 candidates being elected—738 to the Soviet of the Union and 640 to the Soviet of Nationalities (It had previously been announced that the membership of the Soviet of the Union would be increased from 700 to 731, and that of the Soviet of Nationalities from 600 to 633) In accordance with the usual practice, only one candidate was put forward for each seat the list of candidates being officially described as 'the Communist and non party bloc

The following description of the method of selection of candidates was given by the Moscow Correspondent of *The Times* (March 11) Nominations may be made by any industrial, agricultural social or party group About two months before election day nomination meetings are held at which various nominees are openly and sometimes even hotly discussed Nominations from various meetings in a district go to an election board composed of leading individuals of the area, who correlate and select nominees The final list of candidates is compiled by a central board, and carries only one name for each district on election day' Electors voted for the official candidates by dropping their unmarked ballot papers into a box without entering the polling booths Those wishing to vote against a candidate had to cross out his name or write in another name either publicly or in a polling booth.

The newly elected Supreme Soviet of the U.S.S.R. held its first session in Moscow from March 27 31 The most important developments during this session were (1) the replacement of Marshal Bulganin as Prime Minister by M. Nikita Khrushchev who retained the post of First Secretary of the Communist Party concurrently with the Premiership (2) the appointment of a new Government in which the principal portfolios (i e those of Foreign Affairs and Defence) remained unchanged and in which Marshal Bulganin took the relatively minor post of chairman of the State Bank; and (3) the announcement by M Gromyko (the Foreign Minister) that the Soviet Government had decided to suspend nuclear tests

After the Supreme Soviet had re-elected Marshal Voroshilov as President of the U.S.S.R. Marshal Bulganin formally tendered his resignation as required under the Constitution following the election of a new Supreme Soviet President Voroshilov then proposed that M Khrushchev should be appointed Chairman of the U.S.S.R. Council of Ministers (i e Prime Minister) and should retain the post of First Secretary of the Soviet Communist Party In proposing N Khrushchev for the Premiership President Voroshilov described him as an outstanding personality of the party and Government,' a "staunch fighter for peace and peaceful co-existence" and a man whose 'indefatigable labours in this field visits to East and west and interviews with politicians and newspapermen from various countries have added considerably to the circle of our friends and raised the international prestige of the Soviet Union to new heights' After the Supreme Soviet had unanimously adopted President Voroshilov's proposal M Khrushchev thanked the deputies for the honour and great confidence shown in him and declared that he would spare neither health strength nor even life' to justify that confidence

Marshal Bulganin (62) had been Prime Minister since the beginning of 1955, when he replaced M Malenkov during his Premiership he accompanied M Khrushhev on many foreign visits including the one to Britain in 1956 Since that year he had been engaged in prolonged and lengthy correspondence with Western Heads of Government culminating in the recent proposals for a summit conference It was believed—though never officially confirmed—that he had given only lukewarm support to M Khrushhev at the time of the expulsion of the Molotov-Malenkov-Kaganovich 'anti-party group in July 1957 and that his political influence had diminished since that time Marshal Bulganin received only a small number of nominations in the recent Supreme Soviet elections whereas M Khrushchev was nominated in about 100 constituencies

M Khrushchev (63) became First Secretary of the Soviet Communist Party in March 1953, shortly after the Malenkov Cabinet was formed following Stalin's death His retention of the party secretaryship concurrently with the Premiership was widely commented on abroad as an apparent reversal of the post Stalinist policy of ensuring that the two offices were not filled by the same individual Moreover, it was conjectured abroad that M Khrushchev's assumption of the two posts might represent the abandonment of the policy of "collective leadership,' of which M Khrushchev himself had been a leading exponent since the death of Stalin

Marshal Stalin combined the post of Prime Minister and party secretary throughout the Second World War and until his death in 1953 His successor M Malenkov held the two posts for only a few days before relinquishing the party secretaryship to M Khrushchev

New Federation of the West Indies

Elections were held on March 25 on the basis of universal adult suffrage in the ten constitutent territories of the West Indian Federation to elect the first Federal House of Representatives They were contested by two main parties (a) the Federal Labour Party whose leaders include Mr Norman Manley Q C (Chief Minister of Jamaica and leader of the Jamaican people s National Party) Dr Eric Williams (Chief Minister of Trinidad and leader of the Trinidad People s National Movement) and Sir Grantley Adams, Q C (Premier of Barbados and leader of the Barbados Labour Party) and (b) the Democratic Labour Party which is anti socialist and whose leaders include Sir Alexander Bustamante and Mr Albert Gomes respective leaders of the Opposition parties in Jamaica and Trinidad

The elections resulted in the Federal Labour Party winning 25 seats the Democratic Labour Party 19, and the Barbados National Party one the final position of the parties however will not be definitely known pending the result in two recounts in Jamaican constituencies and an election petition in St Vincent Although the elections were held in a festive atmosphere and amidst much popular enthusiasm, only some 26 per cent of the electrorate of about 1,500 000 went to the polls

Under the Constitution of the West Indies the 45 member House of Representatives comprises 17 from Jamaica 10 from Trinidad and Tobago, 5 from Barbados and two each from the other six islands of the Federation except Montserrat, which returns one member There were 111 candidates for the 45 seats As simultaneous membership of the Federal Legislature and a Territorial Legislature is prohibited under the Constitution several West Indian political leaders—including Mr Manley and Dr Williams—did not contest the Federal elections in order to retain their membership of their respective Territorial Legislatures

Sir Grantley Adams was elected the first Prime Minister of the West Indian Federation by 25 votes to 19 when the new Federal House of [illegible]presentatives met on [illegible] 18 at Port of Spain, Trinidad He received all the votes of the 24 Federal Labour members present and the vote of the Barbados National Party member (Mrs Florence Daysh) and was opposed by the Democratic Labour Party Mr Erskine Ward formerly Chief Justice of British Honduras, was elected Speaker of the House of Representatives while Mr Allen M Lewis, Q C, of St Lucia, was elected President of the Senate, which also met on the same day

Sir Grantley Adams (60) was born in Barbados the son of a headmaster Graduating in Classics at Oxford, he was called to the English Bar in 1924 knighted in 1952 and took silk in the following year One of the leading politicians and lawyers in the West Indies he has been a strong advocate of Federation for many years He was a members of the British delegation to the U N General Assembly in Paris in 1948

The 10-member Council of State—the executive organ of the Federation—was appointed by the Governor General of the West Indies (Lord Hailes) on April 20 on the advice of Sir Grantley Adams

The Council of State comprises Mr R L Bradshaw (St Kitts) as Minister of Finance Mr C D Lacorbiniere (St Lucia) Minister of Trade and Industries Mr F B Ricketts (Jamaica) Minister of Natural Resources Mr W A Rose (Trinidad), Minister of Communications and Works Mrs Phyllis Allfrey (Dominica), Minister of Social Affairs two Ministers without portfolio (Mr V B Vaughan of Barbados, and Mr N H Richards of Antigua) and three senators—Mr A G Byfield (Jamaica) Mr J L Charles (St Lucia) and Mr J W Liburd (Nevis) Defence and foreign relations remain responsibilities of the British Government under the Federal Constitution.

The first Parliament of the West Indian Federation was officially inaugurated at Port of Spain on Apirl 20 by Princess Margaret, repersenting H M the Queen The Princess, who was received with great enthusiasm, read a message from her Majesty expressing "warmest greetings to the West Indian people and congratulating them on 'the achievement of closer association with each other on which they have decided and which holds so much promise for the future. In reply, Sir Grantley Adams reaffirmed the loyalty of the West Indian people to the Throne and stressed that the Federation would need the help and encouragement of

DISMAL CHAPTER IN FRENCH HISTORY

In answer to a question by a French newsman "Why is all the world against France?" Robert Lacoste ex Minister Resident of France in Algeria said he believed "it is because we are not in the current of history" Two weeks after this the Fourth Republic of France was swept off by the current of historic events which resulted in bringing back the war time hero Gen de Gaulle, as the twenty sixth post war premier of France with dictatorial powers to rule for six months and amend the *Constitution of France*

Trouble in Algeria

Insurrection broke out in Algeria on May 13 when 50 000 French *colons* fearful that new French Government of M Pierre Pflimlin might abandon Algeria, rioted in the streets sacked the Government Building and the U S I S Office and pillaged the office of Journal d Alger' accused of being too liberal to Algerian nationals rebellion General Jacques Massu, who took power in Algiers and his followers formed a Committee of Public Safety which occupied the Government Building in Algiers and captured the Algiers Radio Station It called on President Rene Coty to form a National Union Government headed by the war time hero Gen de Gaulle. In Paris a mob of 6 000 right wingers, led by ex Poujadist Jean Marie Le Pen demonstrated with cries of 'Algeria is French' M Pflimlin placed all troops in Metropolitan France on the alert and banned demonstrations throughout the country He instructed General Raoul Salan Commander of French forces in Algeria to deal with the crisis and maintain law and order in Algeria The French National Assembly gave the M Pflimlin Government emergency powers to fight a plot against the Republic.'

In the meantime the revolt had gathered momentum in Algeria Gen Massu who had fought in World War II Indo-China and Suez, denounced the surrender government of M Pflimlin and appealed to Gen. de Gaulle to 'break his silence and form a government of public safety The French naval C-in C in the Mediterranean Adm Auboyneau announced his support to Algiers junta The French Military command and the European population in Algeria formed an extra legal government pledged to aid the return of Gen de Gaulle to power in France Gen de Gaulle broke his ominous silence and in a press conference on May 19 declared his readiness to head the Government of the French Republic and gave out his own terms

On May 24 nearly 4 000 soldiers from Metropolitan France reached Algeria in two troopships and joined the rebels On the same day mass pro-de Gaulle demonstrations led by Corsican Deputy M Pascal Arrighi began in Ajaccio capital of Corsica where mobs captured public buildings and installed a Committee of Public Safety

Forced by the events in Algeria and Corsica

For over three years now a war without rules has been waging in Algeria and the French who have not been able to subdue the Nationalists want to save their face by grand iloquent declaration of Algeria being the part of one and indivisible French Republic. Gen de Gaulle has to face the ugly reality of the Algerian situation As an immediate policy declaration, the General announced municipal elections within a month in Algeria by the '10 million Frenchmen of Algeria without distinction without difference 'on the same voters list In Algiers Gen de Gaulle reiterated his approval for the integration of the Muslim and European population in Algeria 'There is no longer any place for the privileged in Algeria he said There are only 10 million Frenchmen who have absolutely the same rights and duties. The All Algeria Committee of Public Safety did not agree with de Gaulle s plan for municipal elections, declaring they would be premature and dangerous. The committee demanded the abolition of Algeria s existing constitution and the complete integration of the territory with France

The Algerian F L N have rejected the first tentative plans of Gen de Gaulle for the solution of Algerian problem. Mr Ferhat Abbas, a leader of the Nationalists said 'No Algerian would abandon his weapon in order to become a French citizen. From the point of the French whether in France or in Algeria, there is nothing to lose in integrating Algeria with France What political equality the Algerians get will be practically nullified by reducing them to a minority status permanently The only danger in this integration from the French point of view will be in Algerians holding the balance of power when the French quarrel among themselves. The Algerian nationalists have seen through the French game and are not lured by de Gaulle s proposal of French citizenship and equal rights for all Algeria belongs to Arab world by race, language religion culture and customs. There is much force in the argument of Algerian National Front leader Farhat Abbas that 'rather than Algerians become French, the French who immigrated into Algeria and colonised it, should become citizens of the Algerian Republic. The Algerians would never merge their nationality and independence with France

The main fault of the Fourth Republic been its failure to solve the problem of A, on which passions are aroused

Hope in Gen de Gaulle

Will General de Gaulle be able to this problem ? One of the obsessions of C ral de Gaulle is what he calls deur and prestige 'of France' Does mean that colonial people should be kept to France against their will ? Nothing harm the prestige of the General more an attempt on his part to subjugate the of Algeria by force The present war called off and negotiations entered the Arabs. Perhaps, a solution could found which would enable Europeans Africans to live together as friends and Once General de Gaulle himself though welding the French Colonial Empire in N Africa in a new Commonwealth But Morocco and Tunisia are already out of 'family and they are not likely to even on the most attractive terms. A too, will soon have to be independent, independent as other countries are in sent days of inter independence But ever the future political set up in Al it would need French brains and its development and progress Thus F need not lose anything by the liberation Algeria In fact, a new friendship may formed on a more enduring basis But thing is absolutely necessary F must agree to live on terms of equal the Arabs The Colonials who have all years enjoyed special position of power prestige, would resist the new order General de Gaulle can bring them round, would render service not only to France to humanity General de Gaulle once that a leader must be a man who is enough to compel clever enough to and great enough to carry through a gr task He will have to exercise all these in solving the Algerian problem And succeeds, he might be forgiven the sin strangulating the Fourth Republic Out the ashes of the Fourth Republic may arise a more vigorous, a more virtuous Republic. France is losing her own too largely because she has tried to deny dom to Algeria

LEARNING TO READ FASTER

By MARJORIE BOULTON M A

THE art of rapid and effective reading may save weeks of valuable time in a very few years

Anyone can skim the pages of a book and pretend he has read it Reading that is too rapid to take in whatever the reader needs is of no value This we must bear in mind all the time when we are trying to speed up our rate of reading

Fast reading is very largely a matter of *taking in what we see in sufficiently large units* Learning to read, there is a stage when even letters are mysterious things Later good students and other avid readers take in almost a paragraph at a time Our aim should be then, *to increase the amount we perceive as one* unit

If we begin to learn a foreign language such as Russian, Greek or Hindi, in which the alphabet is not the same as ours, we have to go back to the situation of early childhood reading First we painfully spell out the words letter by letter, stumbling over them most of the time Later we learn to recognise words and perhaps wonder how we ever thought it difficult to do so Considerably later we find we can take in whole phrases and perhaps sentences without stopping to disentangle them bit by bit

We have to go through the same process in English We have forgotten the earliest stages But there is no logical reason why, as we practise the unit should not grow bigger There are rare cases of brilliant scholars who could see a page at a time memorising its contents at one glance

Most of us neither need nor wish to achieve quite so much Our immediate aim is to extend the unit we take in How should we set about this reading practice, this time and motion study for our studies ?

1 Check physical conditions In reading the eye is all important So the student should make sure that the eyes are in perfect order If there is any doubt visit an oculist. A feeling of strain may mean that the student needs new glasses

It should not be necessary to say that any student who has been advised by a competent professional person to wear glasses for reading is very foolish if he is careless about this, but it may be necessary to remind some p ople

Reading should be done if possible in a good light (preferably with the source of light behind the reader coming over the shoulder) and in conditions of proper venti lation, freedom from needless distraction, and reasonable comfort

The really good student can study on a jolting train or in a room full of noise and movement but there is no sense in making things difficult for ourselves if it lies in our power to make them easy

2 *Stop moving those lips* I was able to read fluently at three When, at five, I went to school I was puzzled to see the children moving their lips and reading aloud in a whisper when they were allowed to read by themselves Having completely forgotten this stage in my own development but having all a small child s fear of being different from the crowd, I began to move my lips, thinking this must be what we were supposed to do I found this a great effort, as it made the reading very slow and dull

People who move their lips even silently when reading, will never read fast until they abandon this infantile habit The reason for this is simple we can take things in with our eyes very much faster than our lips will shape all the sounds involved

When I am casting a play for a play read ing I can read the play in thirty minutes But when people are reading it aloud it will provide two hours of entertainment

The student must stop moving the lips He may for a few days find it necessary to put a finger on the lips to remind him.

He must also break any habit of unneces sary head movements which are usually an indication that he is reading only line by line —too slow a pace for the serious student

3 Learn not to look backwards Slow readers tend to dawdle along the lines of a page and to keep going back over what they have just read Some of this is a kind of mental laziness and lack of concentration; some is based on a fear of having missed something important

When we catch ourselves wandering in two directions, instead of reading straight ahead, we must check ourselves "Get on with it" we can say to ourselves "There is nothing in the way Full speed ahead !

There are times when we have to look back at what we have just read When we are reading something unfamiliar and fairly difficult it is very likely that we shall not understand it properly at the first time Then we have to read the material again possibly several times thinking hard about it before we have mastered it. This is quite another activity

When we dawdle in reading we are just indulging in a purposeless and hindering habit In the *process of re reading for clear understanding* we read the difficult sentences again, then—moving forward once more, reading systematically again.

4 Try to think about ideas not words "The lean fierce eyed, rag eared black and white cat sidled suspiciously up to the stout red faced man in the butcher's apron, who was offering it a bit of gristly meat"

To the slow reader this sentence consists of twenty eight words that require twenty-eight separate mental efforts to take them in The quick reader perceives this sentence as three ideas for each of the three ideas is a unified picture

"The lean fierce-eyed rag-eared black and white cat sidled suspiciously up to" is really all one picture isn't it ? One picture of one creature that can be visualised as one

Then "the stout red faced man in the butcher's apron is a *coherent picture of one* person.

Last comes a single action that we can easily visualise as one action "who-was-offering it a bit of gristly meat

A really good reader does not even see this sentence as three units, he sees the situation, the two creatures performing the action.

The more we can avoid separating sentences into words the faster we can read.

5 Practise—using easy material at first It is always difficult to learn something new so the slow reader need not be discouraged if at first he finds it hard to improve his reading speed What matters is that it should [illegible] day by day

Anyone who is about to go to college [illegible] find it a worthwhile investment to spend some part of the summer holiday trying to read faster

Practise at first on something fairly easy to read and grasp popular magazine articles novels travel books and the like Later when you have gained confidence go on to more difficult and less inviting material.

How can the student check his reading speed ?

First he must find out how many words there are in the passage he is going to read. This is tiresome but perfectly simple He takes in a book or magazine which has the same size print throughout. He takes an average page that is not the one he plans to practise on and carefully counts the words on this It may be wise to count the words in another two or three pages and average the counts

Now he knows approximately how many words there are to a page It does not matter if a particular page has ten less or more, though the reader must use his common sense in the matter The beginning of a chapter with a space at the top of the page or a page of short sentence dialogue naturally contains fewer words than a complete page of packed description

Now the reader is ready to practise for some days using this book or magazine He reads a portion (say about four or five hundred words) and times himself carefully (using a watch with a second hand or a stop-watch)

Then he tests himself to make sure that he understands the passage, or better still gets an obliging friend to ask him a few testing questions *If he does not understand* the passage he is reading too fast If he does understand then he is at present reading at right speed for him but must learn to increase it

A little simple arithmetic will soon show the speed of reading (with comprehension) in words per minute A good reader can read perhaps 600 words a minute of easy material (a story or a light article) and some 200 300 words a minute of more difficult material—a text book or a serious article

If you read much more slowly than this, start doing reading exercises

6 Keep a progress chart Suppose our slow reader finds that he can read 100 w p m with good understanding That is slow But it is nothing to worry about, for it can be improved with practice

Let him try again tomorrow with another passage from the same book. If tomorrow he manages to read and understand 105 w p m, he is doing well. Indeed if he makes no progress at all for a few days until he has grown used to the effort, there is no cause for anxiety. All these techniques have to be learnt.

Once the diary or the chart on the wall begins to show new figures 105 110, 115, then perhaps 130 150 180—for our skills increase rapidly as we begin to make progress—the reader will feel encouraged and realise that he is on the way to solving his study problem.

When he gets up to 200 w p m although this is not at all a record speed he has the very gratifying idea that he can now do twice as much study in the time that he could when he started. Surely that is worth achieving?

Regular practice is important. Ten minutes a day are far more useful than an hour at the week end. But meanwhile, whenever the student is working on his actual study material he can be consciously trying to practise the same technique of faster reading.

Experts have calculated after research experiments that most students can increase their speed of reading 50 100 per cent. If we calculate what this means in a two or three years course in work done time saved and worry avoided it is clear that a little effort given to fast reading is well worth making.

I should perhaps just mention that even today fast readers are often made to feel inferior in childhood. I was myself. The fast reader is a nuisance to the stupid teacher because he goes through the reading material the school can supply faster than the teacher has planned.

The wise teacher will, of couse encourage this skill in reading and provide new tasks to challenge the bright child.

Many people who in childhood were rebuked for reading too fast find in student days that they still cannot read as fast as they would find convenient. So any slow reader who feels particularly unhappy about his slow reading may be wise to look back into childhood see if once he was hum hated for reading fast and then say to the image of the teacher who was so ignorant

You silly know nothing person! I'll show you!

Study courses are naturally geared to the expected speed of the average student. This means that a student who can read and understand much faster than the average will have with a clear conscience and a good result far more time for other things. He will also get more sleep commodity of which some students become chronically short.

The student who reads slowly is always behind with work or else has to work so long that study becomes a drudgery.

The good news psychological research now tells us is that every ordinary student can speed up his reading to nearly double its present speed.

(From *The Psychologist Magazine*)

NATIONAL WATER SUPPLY AND SANITATION PROGRAMME

The National Water Supply and Sanitation Scheme for urban and rural areas was sanctioned by the Ministry of Health in August/September 1954.

Under the Programme 255 urban and 133 rural schemes of various States were approved and a sum of Rs 829 465 lakhs as loan and Rs 280 067 lakhs as grants-in aid were paid to States during the First Five Year Plan period.

In the Second Five Year Plan Rs 40 crores (including Rs 10 crores for water supply and drainage schemes for Corporations) have been set apart in the Central Plan for distribution as loans to the States for their urban water supply and drainage schemes.

In addition the State Plans include a provision of approximately Rs 21 crores for urban water supply and drainage schemes. The Second Five Year Plan also contains a provision of approximately Rs 28 crores for rural water supply schemes in the State Plans.

Under the Indo-U S Operational Agreement No 25 a sum of $ 6 425 million has been made available by the U S Government for the purchase and transport to India of equipment and material required for the National Water Supply and Sanitation Programme. A further sum of $ 12 000 has been made available by the U.S Government for the procurement of stores for the Central Public Health Engineering Organisation.

SARVODAYA AND REVOLUTION

By ACHARIYA VINOBA BHAVE

ALL men of goodwill desire ardently that the coming generation should grow in happiness But it is necessary to be very clear about what we mean by happiness Soft and easy going life of *sensuous pleasure* cannot make for happiness A person who is self reliant and has developed his physical body and has learnt the art of self control may experience happiness The senses are the *instruments they are like weapons or they* are like horses One has to keep them in complete control and learn to drive them diligently if one is to experience happiness In the school of life one has to acquire mastery over one s senses. People crave for ownership of land and wealth *But they rarely desire to* become masters of their senses They make no effort to achieve self control

If one has acquired mastery over one s mind there will be no sorrow or unhappiness One will not be worried and riddled with conflicting desires The mind is our slave *and the senses are the slaves of the mind* I am amused when I hear young men say, I am not going to listen to anyone I will not be persuaded even by my friends I do as I please. That shows that they are slaves of their mind but they do not know it If a man has acquired mastery over the mind, he will stand up fearlessly against the whole world The essence of education is to acquire the art of conquering the mind. Men of self control who have conquered the mind can alone know happiness and fulfilment

Our country has achieved political freedom New peaks of social and educational achievements have now come on the horizon and they are beaconing to us Life has a meaning when the call of the Infinite reaches our ears and we respond to it with enthusiasm We have hundreds of men and women who responded to the call of national freedom They gave their all to the cause They suffered joyfully It made their lives worth while and brought happiness to them It is a boon to have an opportunity to offer oneself to something that one recognises as the time spirit The four fold division of the *Varnashram* that our ancients had laid down was meant to remain alive instead of stagnating and petrifying It unfolded a new peak of achievement at every stage of life so that life was a drama and an adventure of zest, tireless striving and deep happiness

People sometime ask me to rest They say you are old and weak. You have earned your rest Why are you burning yourself up like a candle ? They do not know that the Maker will be happy when he sees me drop down one day while walking like this He is not worried if an old man exerts himself like this He, in fact, gives me the inspiration and strength. *Every day I have a new house to live in* and a new host to feed me and a new set of men and women to meet I walk in rain and sun. Where is the trouble ? It is a joyful adventure The body may suffer but one should be as little worried with the wear and tear of the body as one is with one s clothes One should throw the body away as one throws off one s cloth s when they are old and worn out The ancient *rishis* were full of deep insight and compassion They showed a way of life in which *there* was no room for dejection or inaction Life was an absorbing adventure of joy and fulfilment

Life Of Service

I am not asking people to give up their family life and take up sack cloth and ashes and retire to some hermitage in a jungle I would ask even those who are in a jungle to come out and live with the people All that I am asking you is to learn to live in happy co-operation with all around you without casting a shadow on the face of another In other words lead lives of service Did not Gandhi ji exemplify this in his life ? His was a long *life of strenuous struggle and adventure of ser vice* He was one of the architects of freedom but when the country was celebrating its freedom on the 15 h of August this old man was trekking in Noakhali and putting out the flames of communal hatred

This is Life ! This ought to be a living inspiration to our younger generations They ought to come out and join the new adventure This is the way to fulfilment and happiness I feel that the tradition of selfless service is *fading out. There is* a lack of faith and zest. What we call living is mostly a conditioned reflex The throb of deep feeling and joyful

activity is not there. We need outside incentives for any effort. This is a sign of immaturity. A person who has faith does not need any incentive and is not affected by results. The *Gita* has exhorted men to achieve a state of detachment and action.

New Adventure

It is our good fortune that we have an ideal like *Sarvodaya* to work for immediately after Swaraj. Young men must come out and dedicate themselves to it. We have to end the idea of ownership. Young men should have little difficulty in understanding its relevance and urgency. I have said often that old generation should be the bow and the younger generation the arrow and together they should work to bring about a social change. I would ask men of older generation to bless the younger generation and help them in the new adventure. I would like to have one Sarvodaya worker for every 5,000 of our population. People must make provisions for the training and maintenance of those who enlist themselves in a service corps. The workers will have to take the vow of truth, non violence, non possession and exemplify these values in their lives. They must not have a trace of the feeling of caste, race or religion. They must be engaged fully in public service.

I am trying to propagate the teachings of the *Gita* because I am keen that our younger generations should acquire the capacity of detached service or passionate dispassion.

A New Way

Modern Governments are not really bothered about the well being of the people in the deepest sense of the word. People all over the world are thirsting for peace. So they are willing to listen to anyone who shows them *a peaceful way of establishing peace*.

Note the words I have used. I have said a peaceful way of achieving strength. Our statesmen are thinking of international concord at the governmental level. They are fabians when it comes to social change, while those who are social revolutionaries have not given up their faith in violence. Thus peace and revolution have become contradictory. *Sarvodaya* is pointing out a new way by which one can achieve social transformation and peace through peaceful methods. We have to convince people that the way of peace can be one of strength and its consequence. We must demonstrate that a radical social change can be brought about by voluntary peaceful methods. People have begun to feel that *Sarvodaya* may be the way out and so they are showing more interest in the *Bhoodan* movement and have begun to think about it more seriously.

Sarvodaya aims at abolishing private ownership. It says that the present society is based on untruth. It must be changed radically. It has to be changed through non violence. *Nay, non-violence is the only way in which it can be radically changed, never by violence.* Violence may change the outer shape, but it will be an illusion of change.

End And Means

Capitalists believe in private ownership. *Sarvodaya* aims at abolishing it. Thus our end is different. The capitalist hopes to preserve ownership through violence, that is, through armed strength. If *Sarvodaya* tries to end ownership by the same means, that is by violence, it will mean that it has failed to revolutionise the means and will therefore fail in its ultimate object. A worth while end can never be achieved by unworthy means. A real revolution can come about when ends and means are harmonious. *Sarvodaya* is proclaiming once more the inescapable necessity of revolutionizing the means. People in India seem to understand this intuitively.

Our society is fragmented by innumerable divisions of race, caste, colour, religion and political ideologies. We need social integration if Swaraj is to survive.—(From *Bhoodan*)

BETTER THAN ADVICE

When Robert Louis Stevenson was in his lonely exile in San Francisco skirting the edge of death, he wrote to a friend: "Why does everyone send me sermons? Why doesn't someone send me gossip?" In that reproachful question Stevenson was speaking for the human race. For news is usually a better boon than advice. There are many times when our minds turn eagerly not to the issues of civilization but to the question, "What on earth are the Joneses going to do next?"

Gossip has a bad name because so much malice is associated with it. But gossip in the true and undefiled sense is nourishment from the good earth of the doings of people. Christian love and gossip stem from the same root; an interest is lacking much of the saving salt of life is gone. —*Halford Luccock*

He has not patience with people with a pessimistic attitude on life and can hardly contain his own optimistic outbursts

I am satisfied—I see, dance, laugh, sing

Leaves of Grass also reflects Whitman's views on society, religion and politics His attack on slavery, the dominant issue of his days, is vitriollic. In high excitement he asks the protagonists of slavery

"Your father—where is your father?
Your mother—is she living? have you been much with her?
and has she been much with you?
Do you not see that these are exactly the same to all,
in all nations and times all over the earth?

Spirit of Bhagvad Gita

There are also instances where the verses speak of the transient nature of worldly happiness and sorrow

"People I meet—the effect on me of my early life or the ward and city I live in or the nations,
The latest dates, discoveries inventions societies, authors old and new,
My dinner, dress, associates looks, compliments dues,
The real or fancied indifference of some man or woman I love
The sickness of one of my folks, or of myself, or ill doing or loss or lack of money, or depressions or exaltations;
Battles, the horror of fratricidal war, the fever of doubtful news, the fitful events;
These come to me days and nights, and go from me again,
But they are not me myself

Verses such as these show his realization of the falseness of worldly existence and the destined salvation of the human soul. In this, Whitman's philosophy closely resembles the philosophy of the *Bhagvad Gita*. These verses also tell of the extensive study of ancient Hindu theologians by Whitman

Towards the close of his life Whitman was rewarded with recognition and fame by his countrymen On March 26 1892 he left this transient world," leaving a void in the literary world

In one of his earlier poems he speaks of philosophy which he left for future poets to justify "

"Poets to come! Orators, singers musicians to come!
Not today is to justify me, and answer what I am for,
I myself but write one or two indicative words for the future
I am a man who sauntering along, without fully stopping,
Turns a casual look upon you and then averts his face,
Leaving it to you to prove and define it,
Expecting the main things from you"

Silenced forever was his sincere, resonant voice singing

"I am of old and young, of the foolish as much as the wise;
Regardless of others, ever regardless of others
Maternal as well as paternal a child as well as a man"

Whitman left this world for his journey beyond But he left a message, a greeting for Asians for human beings everywhere

'All you continentals of Asia Africa, Europe, Australia, indifferent of place!
All you on the numberless islands of the archipelagos of the sea!
And you of centuries hence when you listen to me!
And you each and everywhere, whom I specify not but include just the same!
Health to you! Good will to you all—from me and America sent

(*Continued from page 518*)

to vary the intensity of the light to concentrate whole 'winters in a few short weeks or years in a few months

The experiments will continue until the Spring of 1959 when the Gif sur Yvette phytotron will be opened to botanist from all countries "We want it to be a laboratory on a European scale, Professor Chouard commented

And how long would my hypothetic study of the ten new varieties of wheat take in your phytotron?" I asked

A fortnight to draw up the research programme four or five months to conduct the experiments; and a few more days to collate the results Say six months at the outside But we would really have studied the problem from every conceivable angle, and we would know exactly what influence each individual factor exerts independently from all the others, on each of the new wheat varieties"

So meet the phytotron—the machine that creates climate and can change the seasons.

Foundations Of India's Foreign Policy

By PROF N G. RANGA
Member of Parliament

INDIA is to-day in the fortunate position that there is almost complete unity among all her political parties over her foreign policy The Panch Sheel approach towards international affairs is accepted by all

It has not always been so certainly for the first six or seven years after the achievement of our national freedom It used to be then urged by those who were sincere democrats that unless India differentiated herself clearly from the Soviet moves and displayed her leanings more clearly towards the prosperous powerful and friendly Western Powers she could not serve effectively either herself or the world cause of democracy Even more vehemently and with greater intolerance, communists used to warn her against her continued hesitation to lean towards the communist powers But, all these sections have come to recognise the success of India's non involvement policy They know now that it has not done us any harm and on the other hand, it has succeeded in placing India in an enviable position of being the friend of all and enemy of none

Gandhian Policy

This consummation has been due also to the realisation by both the United States and the USSR that India could not be frightened or victimised or bamboozled into deflecting her foreign policy and that she was determined to pursue sincerely and steadfastly the Gandhian policy of hating none being friends with all and working honestly for world peace. India paid a heavy price, to achieve this universal recognition of her sincere devotion to these principles of international brotherhood which came to be embodied in the Panch Sheel, and the resolution of the Bandung Conference. For well over six years after becoming free she could not get any substantial economic and other assistance from these great powers towards her heroic effort at national development.

The Bandung Conference and Nehru's world tours during the following two years i.e., 1955-57 have turned the scales in India's favour. Ever since both the USA and USSR have begun to display clear and growing friendship towards India and to offer increasing quantum of aid by way of extending Know How and financial and material assistance Thus to-day India is witness to a rising tempo of healthy display of aid to her in material and moral terms by these two great powers

National Reconstruction

It is but natural for India to be preoccupied with the reconstruction of her national economy and developing the basic socio and economic infra structure and primary industrial equipment, so badly needed for the commencement of the liquidation of poverty of her vast underfed and otherwise under privileged masses Her need for continued world peace is specially insistent if her efforts at national economic development are to bear fullest fruits Hence her passion for world peace

In this genuine passion for peace she has not been alone Every one of the Asian and African nations which have gained their political freedom from Indonesia Indo-china, Malaya Burma Ceylon and Pakistan to the lattest United Arab Republic Ghana Sudan Tunisia Morocco is similarly keen on peaceful atmosphere and rapid economic and social development which could be possible only if there is peace and assurance of continued world peace

So far as India is concerned her devotion for democratic ideals and human values and rights has been as strong and deep-rooted as her passion for peace She has not been content to enshrine this devotion in her Constitution She has loyally been trying to translate it into her practical support to all democratic peoples and their institutions all over the world even through her foreign policy

Some have long been wondering what she would do if ever there arose a world wide conflict between the totalitarian and democratic ideals and their votaries the people of different countries

India's Prime Minister has made no secret where his own affection would be and so

many of us who had been schooled in the Gandhian era have openly ranged ourselves on the side of democratic peoples Yet we are all so anxious that such a show down and conflict between these peoples avowing rival social approaches and systems of administration, should not take place Hence our continous efforts to persuade these rival forces to agree to co-existence Hence also our risky tolerance with the parliamentary passage of power in Kerala State into hands of the Communist Party

None need then wonder at India's comradeship with Egypt Syria, on the Middle West Asia and Viet Nam on South East Asia which are said to be nearer to the Soviets Ceylon is willing to have a coalition ministry with the Communist Party as one of the partners This has become possible if not inevitable because of the irresistible and genuine zeal of their peoples to achieve the liquidation of their biting poverty which is growing with cumulative intensity by whatever honourable means that offer themselves under the present world condition.

Economic Aid

No sooner than the Marshall Plan was announced some of us made bold to demand that it should be extended in equal measure to Asia Africa and South East Europe We were misunderstood by some of the greatest of our national leaders as risking too great a dependence upon the West but we persisted in our efforts as we knew the inescapable and cataclysmic urges of our peoples for economic salvation from age long poverty But the United States statesmen were too slow to realise the then opportunity of world democracy and failed in their duty It took them ten long years to comprehend the revolutionary significance of the peaceful and simultaneous urges of the people of the East towards both social democracy and economic opportunities

In the meanwhile the totalitarian countries and peoples have had time and opportunity to see the potency of lessons of the Marshal Plan which inaugurated the post war idea of the rich nations going to the rescue of poor nations as a matter of duty in place of the pre war practice of the former exploiting the latter They have adopted similar economic policies towards one-another and developed their mutual comradeship on this non colonial and the unity of 'one world" basis. They have advanced to the state of mobilising their surplus resources and offering them to non Soviet countries and peoples Thus we find today the growing competition with the democratic powers in this economic sphere also The post war underdeveloped peoples of the world are only too glad to welcome this new rivalry at once unique, inspiring and progressive

The wealthy Western nations were genuinely keen on devoting some of their surplus wealth to relieve the peoples of the under developed countries from their growing poverty But their statesmen were too slow to translate their ideals into practical schemes of effective and timely aid Some of them proved to be truant to these new post war noble ideals and tried to trade in pre-war methods of undisguised power politics How else could the scandal of Abadan oil wells and refineries have arisen and dragged on for so long? How else could the statesmen of the United States and United Kingdom have thought of stifling Egypt over her great Aswan Dam irrigation project? How could the British and the French governments have indulged in the repetition of their pre-war colonial tantrums through their infamous invasion of Egypt in October 1956? Is there any wonder, that all the erstwhile colonial peoples of the world have found themselves so spontaneously on the side of the victims of their open as well as disguised aggression?

Indian Governmental leadership was nearly as slow as that of USA to appreciate the revolutionary significance of the Marshall Plan for the East, because of their fears of colonial-mindedness of the Western statesmanship But when the same offer of friendly economic assistance was proferred through the Colombo Conference, India agreed to come into this mutually inspiring democratic partnership. That has paved the way for the later full fledged co operative relation between India and the United States through the TCA etc. Gradually all other Asian and African free nations have entered this new stream of life

But by that time (1955 56) the Soviet Powers too had grown powerful, wealthy and conscious of their world responsibilities irrespective of political ideologies and divisions

So there has thus arisen the post Bandung competition between the two blocs in offering aid and economic comradeship to the underdeveloped peoples and nations of the world. Is this an unhealthy portent? I do not think so anyhow, the West has lost her great and unrivalled opportunity of helping all our

peoples to associate such badly needed assistance with democratic ideals and comradeship alone by her inordinate delay and painful wrestling with her pre war capitalistic colonialism

Are the peoples of the underdeveloped countries especially of the East opportunistic in being indifferent as to who would give them the directly needed economic assistance? For any Western or Eastern power to entertain such a thought can only smack of colonial attitudes

No genuine democrat can expect these undernourished, disease ravaged peoples who had been exploited for ages by feudal and capitalistic forces of the world to refuse to accept aid from Soviet countries even while the Western powers are so hesitant niggardly and colonial minded as to how to what extent they should devote their surplus resources for the building up of the most elementary socio economic infra structure of their national economies

The lesson of Soviet Russia's failure to prevent Yugoslavia in 1948 and Poland in 1957 58 from grasping the extended hand of friendship of United States in this realm of economic comradeship should be enough to make the Western democracies realise the inevitability and progressive nature of this post Bandung world wide competition between the great blocs in proferring economic aid and technical Know How to the under privileged sections of world's peoples and undeveloped parts of the world

Pactomania of the West

A singular and interesting development of great significance for the future is emerging in this post Bandung era Yugoslavia, which broke away from the Stalin's Sovietism accepted Marshal aid She was accused of having allied herself with the democratic West But she remained independent of the pactomania of the West She has regained her friendship with the Soviet World while retaining her comradeship of the West The Communist Poland which had struck so successfully for her national freedom of action from Soviet over all hegemony (1956) has agreed to receive American economic aid This tendency towards the blurring of the political horizons and economic boundaries needs to be watched carefully It is in this direction that the Bandung approach to world politics is likely to work more and more in years to come

Again, India and so many other countries of the East have been dependent for so long upon the Western Powers for their arms supplies and the latter have made full use of this strategic power and privilege But Egypt and Syria have tried, with success, to break away from this dependence How long will the other countries be content to remain in this far from convenient relationship with the West?

The Baghdad and SEATO Pacts have driven a wedge among the Bandung peoples of Asia and Africa Arab nationalism is being challenged by the pre-war diplomacy of the West Soviet intervention was made inevitable by the inapt and reactionary leadership of England and France Pakistan is indirectly encouraged in her intransigence and hate campaign against India by whatever use she hopes to make of the American bases, arms and ammunition coming to her through the Pactorama Indonesia is reaping the evil effect of baiting the United States and her Atlantic allies through her unilateral confiscation of Dutch investments Hence the present wasting civil war in Indonesia The United States statesmanship is looking aghast while her SEATO arms supplied to Formosa are being used by the Rebels against Indonesian national integrity It was to obviate such evil developments and unsavoury portents that Bandung concord was evolved But the West has not been happy over it It did not have the wisdom of responding to it in the only way it could have that is by not proceeding with the SEATO which had not taken any final shape by that time and by welcoming that non-diplomatic and uncommitted and no man's era around the U N, where co-operative relations between People's China and the United States could have been built up The failure of the West is as serious as that of the Soviet peoples when Marshal Plan was opposed by them

Gandhiji's Leadership

Where is India's place in all this? What is her contribution in this growing sphere of life? Thanks to Gandhiji's leadership the statesmen of the National Congress the van guard of India's struggle for freedom had been pursuing a consistent line of foreign policy ever since 1930 that is since her declaration of independence India was opposed to all powers of colonialism and Fascism and Nazism and Soviet totalitarianism When she became free she avowed her complete faith in Democracy Human

Rights and Freedoms When the cold war took shape, she refused to align herself with any side Ever since the wretched atomic bomb era has dawned, she has seen in it the greatest threat not only to her freedom and progress but also to those of all other peoples more especially the Afro-Asian peoples because, the great powers which possessed and controlled the use of the hydrogen bomb could stifle their hard won freedom in a fiffy When therefore, the USSR has boldly declared her readiness to unilaterally stop all tests of the hydrogen bomb, India hails it as a rainbow on the world political horizon darkened by the heavy coulds of atom bombs Because she has pursued this policy of strict non-involvement and genuine passion for democracy and sincere faith in the Bandung concord so many other countries similarly placed in this world find in her a surer guide and friend than in the statesmen of the rival power blocs

If this Panch Sheel code of conduct alone were to be pursued by India and all other countries which accept it, how can Algeria, Kenya and other African countries the captive South-East and European nations become free ? It can be argued equally well that when the USSR could be as imperialistic and aggressive as she was so unashamedly in 1956 in suppressing the heroic uprising of the peoples of Hungary, what is the use of this Bandung spirit ? The latest truculent and balatant 'Touch not the Soviet Brood We are indivisible and inviolable" attitude of the USSR Prime Minister is a challenge for which Bandung has no answer Similarly Bandung has no solution to offer to South Africa's colour mania.

But the Gandhian way has a solution Just as India and other countries have won freedom through self-sacrifice and Satyagraha so also can all these peoples. It can be argued by others however that the Second World War helped India and hastened the incubation period of the freedom of other countries and so why should not the captive colonial peoples hanker after and work for the next war Neither the Gandhian nor the Bandung approach can prevent the growth and prevalence of such a desperate attitude of the suffering peoples. But the partial triumph of Poland in loosening the iron embrace of U.S.S.R seems to indicate an alternative to the new suicidal prayer for another world war Human spirit has triumphed in the past over many more insuperable strangleholds and the 1956 Hungarian uprising and the six year long struggle of Indo-China and Algeria are the invincible and irrepressible instances of that ebullient human spirit of freedom and we pitch our faith in that And where is the bar to the gradual or sudden resurgence of an international brigade of freedom fighters who may surmount all diplomatic obstacles of their countries and go to the aid of the suffering peoples, whoever they be and salvage them from the tyranny of their local rulers the imperialist masters and other survivals of or heirs to historical obstacles placed by morbid or well intentioned dogmas or doctrines. India which has won her freedom despite all such obstacles and in the absence of any such international aid lives in faith and hope for the freedom and progress of all other peoples

(From *Indian Foreign Affairs*)

TEMPLE ENTRY MOVEMENT

The Indian National Congress adopted at its Cocanada Session in 1923 a resolution in favour of temple entry by Harijans and set up a committee to implement it

The movement did not however receive the necessary impetus till after Gandhiji's fast and the Poona Pact of 1932.

Closely following this historic occasion all public temples in the former States of Baroda Kolhapur, Sandur Gwalior Indore, Jammu and Kashmir and Aundh were thrown open to Harijans The most significant development during this period was, however the throwing open of 1,526 State temples to Harijans in the former State of Travancore in 1936

On the assumption of office by popular ministries in the Provinces the earliest opportunity was taken to implement the 1923 resolution of the Indian National Congress such as the enactment of Malabar Temple Entry Act 1938 and the Madras Temple Entry Authorisation and Indemnity Act 1939

Following the attainment of independence a separate article (17) was inserted in Part III of the Constitution dealing with Fundamental Rights abolishing untouchability and forbidding its practice in any form It also provided that disabilities arising out of untouchability would be punishable in accordance with law

In pursuance of this provision an Act known as the Untouchability (offences) Act 1955 was enacted which came into force on June 1, 1955 It imposes penalties for obstructing a Hindu from entering a place of public worship open to Hindus

—o—

Your Chances Of Success

By JOHN EPPINGHAM

WHAT are the factors which determine how successful you are going to be? Let's take this subject out of the realm of conjecture and speculation. Let's concern ourselves with the latest practical, down to earth findings of the top-flight research scientists. These gentlemen, who burned the midnight oil in universities and research foundations, have scientifically explored the whys and wherefores of success. Let's examine some of their most significant findings.

Q. *How can you increase your chances for success?*

Ans. By engaging in the type of work that you most enjoy doing, which means that you will choose the vocation that brings you the greatest sense of personal satisfaction and which provides for the fullest expression of both your abilities and personality. It may take some experimenting to find this vocation. But no matter how much trouble and effort it takes, it's more than worth it—for sociological studies show that it is likely to mean the difference between success and failure. A nation wide survey has shown that of men who have distinguished themselves in their fields over 94 per cent were doing the type of work they liked best. On the other hand, studies show that a man who doesn't particularly enjoy his work seldom excels in it, no matter how hard he tries. A mass of evidence indicates that most failures are simply misfits.

Q. *What about the matter of changing jobs—is it true that a "rolling stone" gathers the least moss?*

Ans. At Columbia University a survey was made to determine whether it is best for a young man to remain with one concern for a long time and work his way up or change about from one firm to another as better opportunities present themselves. They made a careful study of the vocational histories of hundreds of promising young men between the ages of 20 and 31. Conclusion of the investigators: The popular idea that the young man who remains longer with a given firm will outdistance the one who changes more frequently finds no support from our investigation.

And a wide-scale study conducted at a university showed that eminent men have shown a marked tendency to change jobs more frequently than their less successful colleagues. Indeed, it was found that men who had achieved top ranking in their respective fields tended to keep shifting until they found positions which offered the maximum opportunity for the expression of their talents and abilities.

Q. *What one quality do all successful men have in common?*

Ans. It is not a high I.Q. (Intelligence Quotient)—many men of achievement have only average intelligence. It is not outstanding talent and ability. You can be successful and possess these qualities to a lesser extent than the average ne'er do-well. The trait that men of accomplishment have in common is a very special quality called persistence. This quality has been found so important to achievement that psychologists have been at some pains to define it and analyse its relationship to success. It is the greater willingness to spend time in accomplishing a task; it is the willingness to withstand discomfort, and the ability to persevere in the face of seemingly impossible odds; it is also the willingness to resign oneself to patient plodding when the load is heavy and the road is steep.

Scientists made a psychological study of the relationship of persistence to success. They found, after exhaustive tests on all types of persons, that there is a very positive relationship between an individual's ability to accomplish any task and the time he is willing to spend on it. If you have this quality of persistence or can cultivate it, the odds are very great not only that you will find the vocation you're best suited for but that you will distinguish yourself in it.

Q. *If you're not as successful as you feel you ought to be, what can you do about it?*

Ans. Try to put your finger on the trouble spot. More often than not, the thing that holds a man back is pure laziness.

If there's any doubt in your mind about how you rate in this department, here's a fast, fool-proof, scientifically tested method of finding out. This test was developed as a result of exhaustive studies conducted by psychologists at the Institute of Technology

They have found that whenever a person has a good vocabulary, plus a low achievement record it is a positive indication of laziness A good vocabulary indicates that you're well endowed so far as I Q and ability are concerned If you aren't making good with such fine equipment, it's simply because you're not applying yourself to it

Q *Is it important to get started on your career as early in life as possible?*

A Yes Aside from the fact that it may take appreciable time before you find the occupational groove that best fits your abilities there is another even more important factor Science has found that the man who gets an early start on his career is far more likely to distinguish himself in his vocation.

Q *Are you more likely to be successful if your father was?*

Ans Yes University investigators studied a representative cross section of successful people who had distinguished themselves in their various fields. They found that the parents of these men tended to have specific traits in common They were characterised by (1) mental alertness (2) ambition (0) energy (4) a strong desire to improve their lot and to give their children better opportunities

The survey showed that the great majority of the most successful men come from better-than-average homes and have fathers who attained some distinction in their profession or occupation

Findings of the investigation showed that only a comparative minority of eminently successful men have unfavourable background Thus contrary to what many people think it would appear that being born with a silver spoon in your mouth—culturally and economically—tends to spur rather than sap ambition and initiative

At any rate the study showed that those families who had to struggle the hardest to make both ends meet produced the fewest successful men

Q *At what age are you likely to be the most successful?*

Exhaustive studies show that in terms of productivity and creative ability, you're likely to turn in the highest batting average between the ages of 30 and 40 This was found particularly true of men engaged in professional fields such as science medicine research psychology and kindred callings. The survey showed however that most business executives don't reach their top stride until appreciably later in life—between 50 and 60 and so far as earning power alone is concerned a survey of all age-groups showed that most of the highest paid men are in their middle 50's

Q *Do happiness and financial success tend to go hand in-hand?*

Ans *Only to a certain extent People with* extremely low or high incomes tend to be the least happy The happiest are those who have achieved a moderate degree of financial success

Indeed evidence all up and down the line indicates that an income sufficient to provide *for economic security is most conducive to* happiness (Enough to make ends meet comfortably with some left-over to add to the nest egg but enough to put you in the wealthy class.)

Studies conducted by sociologist Judson T Landis show incidentally that most people tend to be happier during that period of their lives when they have reached the top

Q *Is the man who grumbles about his work less likely to succeed at it?*

Ans. If he's disposed towards grumbling he'll always find things to complain about—even though his job fits him like a glove. This attitude used to be regarded as a liability but science's latest findings indicate that it may well be an asset

A university for Social Research did a four year survey of the personnel of some leading companies They found that the man who grumbles about his boss or his company is more likely to succeed than the man who either has no grumbles or keeps them to himself

A man may grumble because he's a perfectionist or because he envisions some better way of doing things and does not yet have the authority to put his ideas into practice

But regardless of the motivation the survey showed that the personality characteristics that dispose a man to grumbling also make him a better and more efficient worker "While this type" say the investigators, "will often spend a lunch hour denouncing his job and criticising things in general, the driving urge to succeed will send this same subject back to work fired with more productive energy

A spokesman for one of the country's largest insurance companies—whose employees were included in the survey—believes the investigation may produce startling results 'On the basis of the study' he observed " it may be that instead of sacking a man who threatens to punch his boss in the nose, we should promote him.

Q *Is it true that the price of success is often a mental or emotional breakdown?*

A It sometimes happens, but far more often that is the price of failure It is certainly possible, for example, for the rising executive to be caught in such a maelstrom of frictions and pressures in his climb towards the top that he develops neurotic tendencies or even suffers a full scale emotional crack-up There are few psychiatrists who haven t numbered highly successful men among their clients But—and this is very significant studies show that the incidence of neurosis and nervous disorders is a great deal higher among men who fail to succeed or whose success is only mediocre

Wide-scale studies at leading research centres have shown that the more successful you are the less apt you are to be subject to mental and emotional disturbances These studies which surveyed over 12 000 persons showed that the lowest rates for mental break down are among those who have achieved high prestige and high income and the highest rates were found for those who had low prestige and low income.

Other investigations bear out the fact that successful endeavour the achievement of personal goals tends to have a beneficial effect on mental health while failure and frustration are apt to have the opposite effect.

Q *Is it true that you're likely to live longer if you're successful?*

A Yes Despite the oft-cited cases of successful men who overtax themselves to the point where they die in their prime evidence indicates that success in most cases tends to lengthen your life while failure and frustration shorten it

A study of the life-spans of 10 000 persons conducted at Westminister College showed that those who had distinguished themselves in their field of endeavour averaged appreciably longer lives than those who had not

As to why this should be psychologists point out that morale is an important factor so far as our physical well-being is concerned And our morale is strongly influenced by the degree to which our efforts are crowned with success Medical studies all bear out the fact that, all other factors being equal the more a man has to live for, the longer he s likely to live

Q *Is it true that success tends to make people materialistic and forgetful of spiritual considerations?*

A This has frequently been the charge But impartial evidence strongly suggests that the opposite is true Four nation wide surveys have been undertaken to settle this point Each was conducted by a leading public opinion research organisation. All of them reported identical findings that the percentage of church members is highest among that group of people who are the most successful, and that the lowest percentage is found among those who are the least successful.

That man cannot live by bread alone seems to be far more obvious to the man who has made his mark in the world than to the one who hasn t

(From the *Psychology*)

THINGS THEY SAY

The good is one thing the pleasant is another These two differing in their ends both prompt in action Blessed are they that choose the good they that choose the pleasant miss the goal —*Kothopanishad.*

• • • •

The people, in its highest idea is difficult to find in the people. When I observe it here or there it is not the people itself but some class, some partial form of the people, ephemeral and deformed. It is authentic form at its highest power, it is seen only in the man of genius in him the great soul resides —*J Michelet*

• • • •

Life is no brief candle to *me* It is a sort of splendid torch which I have got hold of for the moment, and I want to make it burn as brightly as possible before handing it on to future generations —*G B Shaw*

• • • •

A good many young writers make the mistake of enclosing a stamped self addressed envelope, big enough for the manuscript to come back in This is too much of a temptation to the editor —*Ring Lardner*

••••

OUR FOOD PROBLEM

By VISHNU DUTT

A fair amount of success in increasing food production during the First Five-Year Plan and the prospects of having a greatly extended area of irrigation as a result of the completion of various Major River Valley Projects during the Second Five-Year Plan period had induced a strong hope that the country's food problem would be solved. However, our hopes have been falsified and we are as far from our goal of self sufficiency in food production as before. It has been estimated that we are still short of 2.5 million tons of foodgrains every year thus necessitating the import thereof. This places a great drain on our already depleted foreign exchange position.

Recently efforts were made to pinpoint the factors that have held up the food production. The whole issue looked somewhat baffling in as much as the official records showed that as a result of extension in irrigated area and adoption of better farming methods such as the use of improved seeds and fertilisers the increase in food production was estimated to have reached the target of self-sufficiency, yet in practice things remained at a stand still and did not improve at all. Where was the lacuna?

A deeper probe into the problem revealed that it is the unutilised waters of the dams or the tube-wells that have accounted for most of the trouble. It had been estimated that as a result of various irrigation schemes the irrigated area would be extended by 16 million acres by the end of the First Five-Year Plan and further 21 million acres by the end of Second Five-Year Plan. No doubt the various irrigation projects were pushed ahead and completed as scheduled for example the Tungabhadra the Mayurakshi the Hirakud and parts of D V C and Bhakra Nangal. But not all the waters that the various projects had made available were fully utilised by the farmers. In fact only one fourth of the total stored waters have been used. At least 40 lakh acres of additional lands could have been irrigated and self sufficiency of foodgrains achieved.

It sounds rather strange that these big projects raised at enormous cost with the sweat and toil of millions of workers should go abegging for their full utilisation. Such are, however, the hard realities which we must face. "There are many a slip between the lip and the cup" runs an old saying. A close examination will reveal several factors responsible for the non utilisation of the irrigation benefits offered by these Projects. If we are to profit from our experience, we should see that these causes which prevent or postpone the extension of irrigation benefits should be removed as early as possible.

First Lesson

The first lesson that has been driven home to us is that the canal system should be completed in anticipation of the Main Dam. The extension of irrigation benefits from the Hirakud and the Tungabhadra had to be postponed because the Canals were not ready in time. The construction of Bhakra Nangal Project is an object lesson in proper planning. A network of about 3000 miles of canals and their branches has been dug out and is in operation since 1954. The surplus flood waters let into the canals have provided irrigation to nearly 3 million acres every year. This has helped not only to raise a bumper Kharif crop but has provided an opportunity to the cultivators to level their fields and to dig their water courses so that they are not found wanting when the full torrent of irrigation benefits comes to them. A further step has been taken at Bhakra and that is to start the partial storage of the river while the main dam is under construction, so that additional irrigation supplies are made available for the Rabi crop in the winter also two years before the dam is scheduled to be completed in 1960. This pre-Bhakra irrigation would never have been possible had the canal system not been completed earlier. It will be of interest to point out here that by the time the Bhakra Dam is completed its entire cost being Rs 65 crores would have been recovered through these trickling irrigation benefits alone.

From the dam to the cultivator's field is a long way off. The waters stored behind the Dam are carried by Main Canals and their branches. The branches taper into distributaries major as well as minor. It is the minor distributary that passes along the fields of the cultivator and from where the latter is required to draw from a sanctioned outlet the water needed for irrigating his fields. The outlets are designed to carry a discharge of

water varying from one cusec to 3 cusecs It is possible to irrigate about 200 acres from an outlet of 1 cusec discharge The decision about the location of outlets is taken after taking into consideration what is called 'the culturable commanded area, that is to say, the adjoining area in which irrigation can be extended Not all the land is necessarily irrigated but only a part of it known as permissible irrigated area The permissible area commanded by one outlet is known as a Chak

Co-operative Endeavour

It is the duty of the cultivator to carry the water from the outlet to his fields The extension of irrigation benefits to the farms is a sort of co-operative endeavour in which the farmer himself no less than the government plays an important part Without the willing and intelligent co-operation of the cultivator the irrigation benefits cannot be fully exploited He has to dig water courses sometimes extending to one or two miles before water can be brought from the outlet to his fields It is the absence of these essential water courses passing through the fields of the cultivator that have held up extension of irrigation benefits and the full utilisation of the stored waters on some of the Projects like the Hirakud the Mayurakshi and the Tungabhadra Without providing these missing links irrigation facilities cannot be improved nor food production increased

The first and foremost task therefore is to get these missing liks provided immediately There are two ways open to achieve this In case where the waste lands belong to the Government and are to be sold to the people after reclamation, the water courses may be dug by the Government and the cost thereof charged from the prospective purchasers Where lands are already owned by individua cultivators the best way is to induce the owners themselves to undertake digging of these water courses This has been the practice in the Punjab where ten or fifteen persons whose lands are to be irrigated from one outlet join hands together and dig out miles of water courses meandering through their fields The Comunity Projects may very well take up this work as one of the items of voluntary labour or Shram Dan Some initial resistance from the cultivators will no doubt be in evidence in areas where canal irrigation is being introduced for the first time They will have to be convinced of the irrigation benefits Demonstration Farms showing the advantages of irrigation may be organised by the Government on a large scale basis If necessary, irrigation supplies from the canals or the Tube wells may be given free or at a comparatively lower rate in the initial stage

With all thes persuasive measures it seems that the Government should have powers to get the water courses dug out and to acquire the land for the purpose and legislation like the Northern India Canal and Drainage Act ' providing for the utilisation of canal water for irrigation the water rates and the settlement of disputes between cultivators on the use of irrigation water and other related matters may have to be passed by states that have already not done so.

Economic Use

The next issue is to ensure an efficient and economic utilisation of the irrigation supplies Here again the government and the individual cultivators have to play a joint role In the first place the water courses should be dug out according to a set pattern that is conducive to least wastage of water The best system is the one in which after proper rectangulation the water courses run down along square lines giving out branches at right angles Under this arrangement the length of the water courses employed is the shortest and thus wastage of water is minimum The zig zag and irregular shaped water courses crossed by village cart tracks result in wastage of water and should be avoided Besides the cultivators should completely level their fields and subdivide an acre into at least eight Kiaras to use water more economically

A smooth and efficient functioning of the outlet is a prerequisite of good irrigation There are two types of outlets One is the Piped outlet system in which the bore of the Pipe is so designed as to permit only the required discharge of water This has however one defect and that is when the water course gets silted it draws less and less water Continual desilting of the watercourses is therefore essential for its smooth working The other type is known as the Adjustable Proportional Modules— A P M —in which water is drawn irrespective of the level of water in watercourse and the discharge depends only on the existing water level in the distributary This is now replacing the old Piped out let system since it ensures a more regular supply However complaints of inadequate discharge of water from the outlet are sometimes received from the cultivators,

particularly at the tail end of the Distributaries. It is the duty of the Canal Department to investigate into the complaints and take remedial measures without loss of time. It may be that the tail end of the distributary is silted which causes reduction in the discharge of the outlets. Desilting therefore has to be undertaken to improve the functioning of the outlets. For further investigation a hydraulic survey of the channel has to be carried out and data about the working of other outlets, bridges, falls and regulators etc. has to be collected and the defective outlets remodelled so that these receive their authorised discharge.

Irrigation from the same outlet is carried out by ten, fifteen or even more persons jointly by turns. In consultation with each other they fix up their irrigation time table called Warabandi, keeping in view the proportion of land owned by each. Water rates are charged on the basis of crops grown and acreage brought under irrigation by an individual farmer.

Need For Publicity

It will be admitted on all hands that there is an urgent necessity for informing and educating the farmers about methods of irrigated cultivation so that the stored waters of the dams are fully and properly used for the desired purpose. Even in areas where canal irrigation has been in operation for some time past, there is ample scope for introducing more scientific and efficient techniques. Thus for example farmers would stand to gain a lot if on the basis of Soil examination and agronomic tests they are given proper advice about the nature of crops to be grown in a particular area. They also need advice about the optimum moisture necessary for a particular crop in a specific area so that they get the exact supplies of irrigation eliminating conditions of wastage or scarcity. This, of course, presupposes that gauges will be installed on each outlet from where the farmer draws water. This will also provide a more accurate basis for calculating the volume of water supplied to a particular individual than is in vogue at present which is more or less a guess work.

There is not the least doubt that if the farmers all over the country become conscious of their duty to utilise in an intelligent manner every drop of the water so far stored by the Dams, it is possible to attain self sufficiency in foodgrains during the next two years. (From. *The Tribune*)

DID YOU KNOW

Although official dogma insists it is impossible, wide-spread unemployment is one of the Kremlin's chief problems and its satellite states. Remedies include sending unemployed youths to Soviet "new lands" in Siberia.

Nutrition experts declare that if a child ate as much comparatively as a growing bird, it would consume three lambs and a calf per day.

Gold is the most malleable, or ductile, of metals. One ounce of gold (avoirdupois) can be drawn in the form of a continuous wire thread to a length of 51 miles.

STUDENTS' EMPORIUM

FAMOUS MEN WERE DULL IN SCHOOL

Are you looked upon as a dunce at school? Then don't be discouraged by it, for many who were considered blockheads, never-do-wells and misfits have in later years become great and left an indelible mark in history

Albert Einstein was not a remarkable child in the Munich school where he had his early education. He was aloof and shy and his parents thought him to be an abnormal child

He was slow to learn to talk. At school the teachers considered him as a misfit, dull and indifferent to studies in general

He was pursuing an independent study of mathematics and science, but that did him no good when he went to Switzerland where he was a miserable failure in the entrance examination to the polytechnical college in Zurich. It was only at the second try that he could make the grade

Yet, at the age of 26 he propounded the equation e—mc2 and thus became the architect of our nuclear age

A parallel case is Isaac Newton whose conception of the universe Einstein was to demolish. Though Newton was not as dull as Einstein he was considered poor in mathematics

At school he pursued his own diversions. So pre-occupied was he with kites water wheels and wooden clocks that he passed for an indifferent pupil if not exactly a dunce

Charles Darwin was also among the great men who were considered dunces. As a youngster he went about studying nature and neglected his studies in school. All his teachers looked upon him as the dullest boy of the year

Among literary men there is Oliver Goldsmith who never took his degree from Trinity College Dublin. As a boy he was dull and stupid shy and unimpressive. Though he was sent to study physics in Edinburgh law in London and medicine at Leyden in Holland he never made good in any of these

He was more interested in all sorts of social convivialities writing songs for beggars and leading a wayward and thoughtless life, but finally he became immortal in English literature

Edward Gibbon the famous historian, was not very good at school because of his poor health. His aunt nursed him and, during intervals of improved health tried to educate him

His tutors found him poor in Arithmetic, English and Latin and when he was admitted to school at nine his progress was very slow. He was recalled from school and given intermittent instruction at home by tutors

The title 'King of Blockheads' was reserved for Sir Walter Scott who has written countless stories that are the delight of all who can read English. Yet that was the title he was a dunce and that he would never become anything else

Thomas Chatterton was a dunce of similar distinction and was dismissed from school because he was thought unfit for study

An interesting sidelight on famous dunces is provided by Lord Keynes who distinguished himself in the very subject in which he was considered to be poor. He passed the civil service examination with the lowest marks in economics only to become the greatest economist of his times and a director of the World Bank

Friedrich Wilhelm Froebel became an educational reformer in spite of the fact that he was a prize dunce at school. He was sent to the university but he chose to become a forester's apprentice. Later he was sent to the University of Jena but he ended up ignominiously in prison for debt

Strangely enough during all those years he was learning things in his own way to become of all things a great teacher! He founded a model school at Verdun and is counted among the greatest educationists of all times

The most interesting example of a dunce who later became great is Sir Winston Churchill. As a child he set himself against learning. He had a fixed enmity towards mathematics

'These figures' he said 'got into debt with one another; you had to borrow one or

carry one and afterwards you had to pay the one you had borrowed

At the Ascot school, he made frequent pilgrimage to the caning room and even planned a revenge upon the headmaster who caned him

Then he was taken to a Brighton school conducted by two elderly ladies Here he was so great a dunce and so religious a pupil that when he left the school the ladies declared a half holiday to celebrate their relief !

At Harrow when the boys stood in order of merit Churchill was the last in the rank When he proceeded to Sandhurst military college he was an ignoble failure in the entrance examination

He appeared again for th examination, not only to fail but to g t less marks than pre viously He appeared for a third time to pass with the lowest marks possible. But all these ignominies gave him an insatiab'e urge to rise and became a towering personality

It seems that being considered a dunce at school may even be an indication of the great ness that is awaiting all dunces—if only they do not give up the battle

VOLUNTARY WORK CAMPS

Young people who wish to *visit a foreign* country during their summer vacation and at the same time take part in voluntary com munity work will find a wide choice of opportunities in the list just published of international work camps for the 1958 season

The list published by the Co-ordination Committee for International Voluntary work Camps contains brief details of camp projects in 65 countries in all world areas The jobs to be undertaken range from helping to rebuild an Eskimo community in Alaska to renovating a girls s hool in Hawaii, from road constru- tion in Ghana to well digging at Khadigram in India from archaeolog cal work in Portugal to levelling a childrens playground in Hong Kong

This year for the first time, the Soviet Union is organizing a voluntary work camp on a collective farm between Moscow and Stalingrad Opportunities to help in harvesting crops exist in many European countries

The projects are grouped by geographical location and the ... on responsible for each camp is ... volunteers are required to pay ... the camp after which they receive lodging free The list, and further general information, can be obtained from the Co-ordination *Committee for International Voluntary* Work Camps at Unesco House, 19 Avenue Kleber, Paris 16e

INDIA'S ADMINISTRATIVE STAFF COLLEGE

"By their fruits ye shall know them" this is a test that may justly be applied to institutions as well as individuals Judged by the results obtained within a few months of its inception India's Administrative Staff College, Hyderabad—the only one of its kind in Asia and modelled on a similar institution at Henley England—has more than measured up to the expectations of its founders the Central Government and the country s industrial and commercial establishments

The initial session was inaugurated on December 6 1957, by Dr John Matthai Chairman of the Court of Governors Less than three months later, on February 28 the first batch of thirty participants drawn from the Central and State Governments and from various industrial and commercial organisations completed the course with distinction

Such success was almost inevitable considering the care and foresight with which the College was planned and launched for promoting higher standards of efficiency and leadership among persons who are holding or have been earmarked for senior positions in their respective fields of work It is also attributable to the calibre of the training staff, headed by General Shrinagesh former Chief of the Army Staff Perhaps no happier choice could have been made for the post of Principal of an institution destined to play a dynamic role in the changed set up of the country on the verge of a new social order The 54 year old General who has a long period of distinguished military service behind him besides British Public School background has the energy and enthusiasm of a youth

As Dr Matthai pointed out at the inaugural function the interests of the country s development demand closer relationship between private enterprise and public services and this is one of the objectives of ... ege

... idea of the founders was the ... the College in Hyderabad which has ... v called 'the heart of ... also the additional ... climate The

College is housed in the spacious Bella Vista Palace—until recently the residence of the Prince of Berar—and stands in the midst of a park like expanse with wide lawns, overlooking the Hussain Sagar Lake It not only provides a peaceful setting for the pursuit of one's studies, but also offers excellent facilities for a number of outdoor games The College is fully residential with comfortably furnished living quarters to which new additions are being made in order to accommodate the larger batches of participants expected to join the ensuing sessions Besides recreational facilities it has a well maintained library, discussion rooms a dining hall lounge canteen and dispensary All these amenities—plus boarding and periodical tours to important industrial areas, aimed at enabling the trainees to study at first hand the various projects and development schemes—are covered by a fee of Rs 2 400 Only candidates nominated by their employers, and to whose service they will return are eligible for admission—they are selected after an interview The choice is made so as to constitute a cross section of the working life of the country

Run by an independent educational society, registered under the Societies Registration Act, the College has no political or social bias The administration of its affairs is vested in a Court of Governors representative of its members Among them are men who have distinguished themselves in public administration Experts from all over India are invited to speak or report on specific topics during the initial session Mr J. W L. Adams of the Henley College served as a member of the staff under the Colombo Plan His place is now being filled by an Indian

The training aims at developing some of the skills which are required in senior administrators such as adequate delegation and controls making appropriate use of specialised knowledge getting the best out of a team; handling expert witnesses briefing representative summarising and drafting the result of a group discussion getting a job done in the time and with the resources available and speaking for a team of colleagues and leading them in conference with other groups

These objectives are sought to be achieved by carrying out work in syndicates of ten members each One member of each syndicate is appointed chairman for each subject and he is solely responsible with guidance from the directing staff and the help of a well equipped library for the effective and timely accomplishment of the study

The College has three classes of membership patrons ordinary and associate members The last class was recently created to make it possible for smaller industrial and business concerns to participate in the scheme and sponsor their executives for training Patrons and ordinary members are those covenanting to subscribe a sum of Rs 20 000 and Rs 2 000 respectively each year for a period of five years and agreeing to renew their subscriptions thereafter at the same rate Associate members subscribe Rs 600/- each for the official year in which they are admitted While ptarons and ordinary members are entitled to all rights of membership and to sponsor as many candidates as they desire to the three annual sessions associate members have no right to vote and can each sponsor only one candidate in each official year At *present* there are 8 *patrons* 48 *ordinary* members and 32 associate members

As regards finance the Central Government has agreed to bear 50 per cent of the annual recurring expenditure estimated at Rs 6 lakhs for the first three years. At the end of this period the College is expected to become self supporting General Shrinagesh revealed that the Central Boad of Revenue has agreed to recognise the annual membership subscriptions and the course fees as allowable items for assessment of incomtax provided candidates accepted by the College are nominated by the firms and organisations which are its members

The institution is now getting ready for the next session which will begin on June 13 It bids fair to emulate the achievement of the Henley College which has contributed in a large measure to the financial stability and administrative efficiency of business and other organisations in the United Kingdom (Theo W La Touche in *the Illustrated Weekly of India*)

* * *

CHOOSE YOUR CAREER

Young persons looking for a career should know not only what they want but also where they are wanted They should know something about the world of work

A recent all India survey carried out by the Employment Exchanges revealed that whereas the white-collar jobs are over crowded,

trained technicians are greatly in demand There is a widespread shortage in the country of trained craftsmen and technical personnel like engineers, overseers tool makers mechanics nurses and trained teachers With the rapid pace of industrialisation and expansion of social welfare schemes, the demand in the country for such personcel is likely to increase

Employment Market To assess immediate requirments of personnel in a particular area, Employment Market Study is being conducted in big cities by the local Employment Exchanges to ascertain vacancies in various occupations This not only helps in securing suitable jobs for the unemployed but also enables the aspirants to know the employment market

Guidance to young persons to choose suitable careers is available in a series of pamphlets issued by the Ministry of Labour Each of these Guide to careers pamphlets priced at five naye paise deals with one occupation It gives detailed information regarding qualifications required, training facilities available and conditions of service So far 47 such pamphlets have been published

Vocational Guidance Unit The information gleaned through these pamphlets can be supplemented by a visit to the vocational Guidance Units functioning at Employment Exchanges Here each morning they can get advice in selection of suitable jobs from trained Guidance Officers Besides general guidance talks to groups of aspirants individual advice on personal level is also given Such Units are functioning at Delhi, Lucknow, Hyderabad, Bombay Madras and Patna Some more are going to be started soon in other cities like Ambala and Calcutta

Work cum Orientation Centres Work cum Orientation Centres have been set up to enable th educated unemployed to find other than white collar employment These Centres give vocational counselling provide orientation in shortage occupations and help the persons to stand on their own feet as small enterpreneurs Already two centres one at Pusa (Delhi) and another at Kalamessery (Kerala) have started functioning A third centre for West Bengal has been sanctioned more may be opened if these are found useful.

The first six months course at Delhi centre ended in October 1957 and the third one commenced in April 1958 Technical training is imparted in five trades light mechanic wood work, house wiring repairs to electrical appliances and building construction The trainees lead a camp life and are paid a stipend of Rs 40/ p m from which messing charges are deducted Of the balance, a part is made over to them as pocket money and the residue at the end of the Camp Fifty per cent of over 200 trainees at the first course are reported to have entered business

* * *

GUIDE TO CAREERS HEALTH VISITOR

A Health Visitor's work is to promote the health of the community with special emphasis on the health and welfare of the children A health visitor thus instructs and assists women in promoting the health of the family and guides them in the care of their children Such assistance is also helpful in improving the standard of care during pregnancy and in maintaining, the mother's health as well as that of the children The Health Visitor's advice and guidance are useful in reducing the incidence of disease and in raising the standard of family nutrition and hygiene She gives expert ante natal advice to expectant mothers with regard to diet hygiene and other problems to enable them to go through pregnancy safely and to ensure for them healthy children. She also assists the mother to make appropriate arrangements for delivery She maintains registers of individuals and families and has knowledge of the community whom she serves She advises the family to make appropriate arrangements for a health check-up In case of illness and if any medical aid is necessary she gives appropriate advice

Health visitors are generally employed by Public authorities in cities towns and rural areas They may also be employed in large hospitals and maternity homes in promoting pre-natal care Individuals may be required to work in specialised fields e g under maternal and child health schemes including School Health Family Planning, Venereal Clinics and others. A large number of health visitors are employed in the health services established under Community Projects and the National Extension Services and at Health Centres in the various States Some are employed by industrial establishments Trained midwives usually assist Health Visitors in maternity cases A doctor often supervises her work and renders the appropriate medical aid

Usually the health visitor is provided with free furnished quarters near the place of her work, so that her services may easily be availed of by the neighbourhood

The Way To Qualify is to under go a two-and a half year training in a recognised Health School At present ten institutes in India are training health visitors The period of training in the case of registered nurses who hold a certificate in midwifery is one year Women who are between 18 to 35 years of age and have passed the matriculation or equivalent examination are eligible for the integrated midwifery-cum health visitor s training

The integrated two and half years training is so designed that after its completion the health visitor is competent to work in rural, urban or industrial fields The preliminary course is of 18 months and the training is conducted in a hospital To be eligible for the final course the trainees have to pass the State midwifery examination The final course extends over a period of one year The candidates are required to reside at the training institutions and board and lodging facilities are provided for the purpose

The following are the subjects of study: Preliminary 18 months—Anatomy and physiology, ethics microbiology nutrition cookery applied nutrition and dietetics household management nursing (theory and practice) personal hygiene first aid pharmacology ante natal care, midwifery training

For the final course of 12 months—tuberculosis communicable diseases, record writing, economic and social problems, civics rural development, industrial health organization of maternity and child welfare work, public health administration supervision of auxiliary workers are included

Practical training is comprehensive and covers the following subjects elementary nursing in the home, domestic science, midwifery work, ante-natal and post natal clinical practice, supervision of the health of pregnant women care of infants and children, school health, vaccination, anti tuberculosis work, pharmacology attendance at clinics for skin conditions work in children s out patient departments home nursing, training and supervision of midwifery services, observation visits to creche and nursery schools, home visiting and record writing

On completion of the training the students appear in an examination conducted by the State Nursing Council or an institution authorised to do so Successful students register themselves as health visitors under the Indian Nursing Council Act with the State, Councils or the Indian Nursing Council New Delhi

Cost Of Training Tuition fee Rs 100/- and living expenses Rs 1000/ to 1800/ for the entire course Stipends are, however, given to promising students provided they are prepared after registration, to serve the State for at least three years including service in the development areas The amount of stipend varies from one State to another, but it is usually Rs 50/ p m

Personal Qualities Necessary For The Job are a cheerful temperament, genuine interest in social-welfare work and in children and a great fund of patience Service to humanity is the guiding motto of health visitors The work requires good physical health and intending candidates have to pass a medical examination

The Way To Enter The Profession Qualified health visitors may apply to the health departments of their States or to the training institutions or the *Development Commissioner* of their State for jobs Some posts are advertised in the newspapers inviting applications from qualified health visitors

Openings occur in municipalities in Community Projects in the rural areas and in health centres under the National Extension Services Some industrial concerns and factories also employ health visitors The State and Municipal Maternity and Child Welfare Officers and health departments can often assist candidates in seeking suitable employment

Salaries vary from State to State Generally a health visitor starts on a minimum pay of Rs 75/- to Rs 100/ p m and the maximum of the scale is between Rs 100/ and Rs. 200/ In addition to pay a health visitor is entitled to dearness allowance fixed travelling expenses in some cases and free furnished accommodation and the advantages of a provident fund

Prospects For Advancement A few selected health visitors are sent abroad for further specialisation and promising candidates can rise to the post of teachers at health schools and to supervisory posts in the health services

For Further Information you may contact:—

(i) The Maternity and Child Welfare Officer of your State Health Department

(ii) The Nursing Council of your State or Nursing Superintendent of your State

PEOPLE WANT TO KNOW

By GERALD WENDT

Q *Mr Myron S Blumenthal of the Universal Trade Press Syndicate in New York writes 'I understand that in outer space beyond the limits of our atmosphere the heavens look black Why should this be so with billions of luminous stars encircling the beholder? With so few particles of matter in interstellar space to obstruct the light one would think that the sky or heavens would be a blazing curtain of light What is it that prevents distant starlight from visible above our atmosphere'*

Ans When stratosphere fliers report that the sky is black they do not mean that the stars are invisible They mean only that there is no blue sky and that in full sunshine the heavens look like the night-sky, black with countless stars The general luminosity of the day time sky and its blue colour, as seen from the surface of the earth are caused by the reflection and diffraction of sunlight by an infinite number of minute dust particles and droplets in the earth's atmosphere Above the atmosphere this cannot happen and each star, including our sun, shines with a sharp beam When one is not blinded by looking at the sun each star seems even brighter than it does when seen from the surface. But there is no "blazing curtain of light", partly because the light from every star spreads out into all of space and is thus weakened by distance and partly because there are great clouds of gas (composed of molecules not dust) scattered widely but irregularly through empty space which absorb the light energy and thus reduce or extinguish the light. Some astronomers have estimated that there is more matter in these enormous "clouds" of dark and invisible gas than there is in all the visible stars put together Thus most of the light from the stars never reaches the earth

Q *Dr Athagenes P Macias Munoz of Babahyo Ecuador writes 'As a result of the experimental explosions of atomic and hydrogen bombs radioactive products are scattered into the atmosphere and gradually fall to earth or are brought down by rain or snow. Is such rain deadly to animals or plants?"*

Ans It is not Except for the actual area in which the bomb is exploded the radioactivity that falls from the sky is much too weak to be harmful to people animals or plants This can be put in figures The unit of radiation-whether from X rays cosmic rays, radium itself or any radioactive material is the "roentgen", named after the German Professor Wilhelm Conrad Roentgen who discovered the X ray in 1895

The usual X ray examination of the teeth or of the body in a hospital may give the patient from one to five roentgens A total of ten roentgens a year is considered quite safe A person who receives 100 roentgens can become seriously ill and receiving 400 roentgens or more in a single exposure is usually fatal. But the amount of radioactivity that has been added to the surface soil in the United States where most of the bomb tests have been carried out, is about 0 001 roentgen. This is much less than the amount of radiation from cosmic rays in which we all live every day, and which is about 0 035 roentgen It is also less than the natural radioactivity of the human body which comes from the potassium salts that are contained in the blood And it is *less than one thousandth of the radiation used* in a harmless X ray examination of the teeth.

The possible harm from the scattered radioactive materials is therefore not to the individual plant animal or human being But there is some danger to future generations A very small amount of radiation of any sort including the ever present cosmic rays, can easily destroy or alter one or more of the genes that are present in the reproductive cells and are the carriers of the inheritance from parents to offspring whether plant or animal. This may result in a defective or altered inheritance in the offspring It is estimated that about two per cent of the children born are defective in one respect or another and this *may be due* to the radiations received by the reproductive cells of the father or the mother It is also generally thought that the large variety of plants and animals *now* on the earth are the result of many changes in inheritance produced by radiation through many millions of years. They are inevitable since we live under constant *radiation from natural sources* But if the scattered radioactive materials add even slightly to the radiations from the soil and the air, they must be considered harmful It is however *as yet unknown what the effect of an* additional 0 001 roentgen is on the inheritance This is at present one of the major subjects of biological research.

Q *Madame Gerard Vuillard of Saint Amarin, Haut Rhin, France asks "What is the origin of the ground swells?*

Ans This term refers to the slow rising of the sea level over a period of many minutes or even hours, more like a tide than a wave, as if the sea itself were rising up or swelling It is in fact a wave or a series of waves many miles long and only a few feet high that are the residue of a storm at sea As the short but high waves of a violent storm move out of the storm area they lose part of their energy and thus flatten out and individual waves combine into longer, lower and gentler waves The remaining energy can carry these long waves for thousands of miles from the storm centre Often they become so long and gentle that they are hardly noticeable at sea but they finally expend their energy on a distant shore as an easily noticeable ground swell

Q *Mr V N Jindal of Lucknow, India writes. When water is kept in a copper or brass utensil overnight it acquires an unplesasant metallic taste Is this due to impurities in the water or do metals have a taste? I would also like to know if metals have an odour as when I have worked on a piece of brass or steel with a file I have noticed afterwards characteristic odour on my hands even when the metal has been washed with soap or a detergent*

Ans The senses of taste and smell are very delicate and can be stimulated by exceedingly small quantities of materials In order to affect the sense of taste the metal must dissolve to some slight extent in the water and most common metals do dissolve sufficiently to be tasted especially when there are materials already dissolved in the water It happens even with pure distilled water and this is why such water should not be kept in metallic vessels but in glass For this reason also expert tasters of tea and coffee prefer to make their brew in glass or porcelain vessels, not in metal.

In order to affect the sense of smell the metal must evaporate to some slight extent into the atmosphere This is more likely to occur when the metal is heated as in filing But the evaporation is so slight that very few people are able to smell a metal under any conditions The odour is more likely to come from something on the metal even from the soap in which it was washed Since most people cannot smell metals they are usually considered not to have an odour even though exceptional persons with a keen olfactory sense may be able to detect one

Q *Mr V N Jindal, of Lucknow writes "In India it is hot for the greater part of the year so that people find the cold weather very uncomfortable when it comes Then they are very careful to cover up their ears either with their turban or a scarf wrapped over the head the ears neck and chin Is it good for the health to cover up the ears or should they remain uncovered ?*

Ans The ears are very sensitive to cold because they protude into the cold air and because they are poorly supplied with blood vessels In freezing weather they are the first part of the body to suffer So all peoples in very cold climates cover their ears with high collars on their overcoats with cloth or fur flaps on their caps or with separate ear muffs' It can do harm and is much more sensible than letting the ears freeze

Q *Mr Moeljadi Editor of the Indonesian weekly Pesata asks Are the people of the last fifty years cleverer than those of foregoing generations ? Do they have better or bigger brains than the people of former centuries?*

Ans One must distinguish between knowledge on the one hand and intelligence on the other

Our knowledge today is greater our intelligence is not The human race is distinguished from other animals by its intelligence which means the ability to learn and think There is no reason to suppose that this ability is any greater in the man of today of whatever race than it was in the people of 100 000 years ago The size of the brain has not changed nor have any other physical features since the days of the earliest true humans the Cro-Magnon people But the human race is also distinguished by the ability to transmit its knowledge and thoughts orally and by written words Thus knowledge accumulates generation after generation In the process of education children learn the accumulated knowledge of their ancestors and of other peoples and go on from there to increase the sum total of human knowledge

Human beings have always invented new methods of increasing knowledge and of accomplishing their purpose For instance, the invention of the wheel the use of fire for cooking domestication of plants and animals the devising of alphabets and of number symbols and the use of writing all required as much intelligence in their day as do our modern inventions All these human achievements come to a child today through education In this century the use of the automobile and of the airplane have added to

man s power and are learned easily Now the most highly educated young minds can go on to perfect rocket flight and perhaps space travel Thus they seem to be 'cleverer than the peoples of long ago But this is the result of their education in past knowledge and no of any inherent difference in their capacity to think.

Q *Mlle Marie Claire Olivier of Monteceau les Mines France writes 'I read recently that the Jordan is one of the rivers that winds the most Is this true and if so why?*

Ans. The question why rivers meander instead of following a straight course has long puzzled some of the world s leading scientists, and even Albert Einstein once propounded a theory on the subject ('Meanders , or the series of loops and bends in a river, take their name from the winding course of the River Meander in Asia Minor)

Formerly it was believed that meandering occurred mainly among 'old' rivers, flowing in valleys with a minimal gradient, but recent research has proved this theory to be too general.

The River Jordan is a case in point It is not 'old' as rivers go dating back to the period following the recession of the Dead Sea Its gradient is steep and its current swift Yet it winds almost as much as the Meander itself The distance from Lake Tiberias to the Dead Sea is only about 63 miles as the crow flies but the actual course of the Jordan between these two points is more than twice as long

A research project on the meanders of the Jordan has just been completed after two years of work by Dr I Schattner, Lecturer in Geography at the Hebrew University in Jerusalem

Dr Schattner holds that the meanders of the Jordan are caused mainly by the extremely arid conditions prevailing in the rift valley and the character of the soft strata into which the river has cut its channel Since the valley has little or no vegetational cover, the surface is liable to crack and even small amounts of rainfall can cause quite a disproportionate amount of rain wash and gullying Rainfall is sporadic in these parts but when it rains it pours and cloudbursts are not unusual. The earth is swept into the Jordan greatly increasing the load of the river—one of the factors causing meandering

Earthquakes a relatively frequent phenomenon in the Jordan Valley also play their part. These 'quakes are liable to produce major landslides in the valley which on mo[re] than one occasion have interrupted the ent[ire] flow of the river, causing it to alter its cour[se]

In general Dr Schattner notes, two ty[pes] of meanders can be observed in the Jord[an] Valley between Lake Tiberias and the De[ad] Sea. The northern part of its course betw[een] the Lake and Wadi Rajeb—about half t[he] distance—includes long straight stretch[es] broken by vast angular loops the remain[ing] section, from Wadi Rajeb to the Dead S[ea] consists almost entirely of twists and tur[ns] This difference is probably due to the f[act] that the northern section of the river cros[ses] considerable outcrops of hard rock while t[he] strata in the southern section are much mo[re] homogeneous

During his research Dr Schattner stud[ied] hundreds of aerial photographs of the Jord[an] Valley taken over a period of nearly forty ye[ars] —the first were taken by the German A[ir] Force in World War I They showed th[at] the Jordan is an extremely "active" riv[er] *frequently changing its bed Hardly a sectio[n]* of its meandering course has remained stea[dy] for more than a few years

Q *Mr Jindal of Lucknow, India writes 'In the winter if the doors and windows a[re] closed in the evening there is no particular fee[l]ing of discomfort on entering a room next morn[ing] However in the summer the atmosphere see[ms] polluted and one experiences a feeling of discom[]fort Is this because in winter the air has mo[re] oxygen than in summer?*

Ans There is no difference in the oxyge[n] content of the air between winter and summe[r] between indoors and outdoors The effect is [a] psychological one and "pollution is a rather strong word for the various odours that giv[e] a feeling of discomfort or even revulsion Al[l] liquids and most solids have a greate[r] tendency to evaporate or vaporize at hig[h] temperatures rather than at lower ones, an[d] it is the vapour that causes the sensation o[f] smell Thus in a hot closed room, all smell[s] from liquids, soiled clothes food spices an[d] various woods are intensified whether or no[t] there are people in the room. It is thes[e] mixed odours that cause discomfort.

Ventilation is needed in summer becaus[e] bodily comfort then depends on the coolin[g] effect of perspiration Without ventilation there is less evaporation of perspiration and th[e] human body cannot keep itself cool. I[n] *winter perspiration is not involved* and venti[]lation is not so important

Educ_tion's Responsibility In A Democracy

By ROBERT F. GOHEEN
President, Princeton University, U.S A

AS I see them, our "temples of learning" today—that is to say more prosaically, our state and private universities as they have developed in the United States—are very far from being seats of either serene unworldliness or of bumbling naivete The situation is quite the contrary! Nevertheless the justifiable satisfication and pride which we may feel on this score have some very somber prospects To illustrate what I mean let me set forth three general propositions, in sequence.

(1) The development of higher education and research into our universities in the pa t 50 years has brought about a far closer interdependence between the world of learning and the world of affairs than any other society has yet known or even dreamed

(2) The well being of our complex, technologically potent society is closely bound to our universities being effective centres of teaching and research

(3) Increasing demands arising from the rapid growth in the population and from a heightened appetite for the services rendered by our universities threatens for the very near future a severe perhaps even catastrophic curtailing of their effective powers

Within the framework of this preliminary synopsis I want to proceed to particulars

As recently as 1900 only about four percent of the college age youth in the United States were seeking and receiving education beyond the high school level At the present time some 33 percent of the nation s college age youth are enrolled in our institutions for higher education One may contrast to this achievement the fact that the comparable figure for England today is some five percent

This highly significant growth relates to a very distinctive change in the pattern of American higher education during this same period a change or era of evolution which has enabled American universities to reach out more directly and more broadly into the general life of the nation I am of course thinking of the development of vocational and technological training Whereas elsewhere technological and vocational education has remained most often the concern of institutions of a lower order, in this country it has to a marked degree been incorporated into the offerings of our universities Today, in fact, nearly two thirds of the students in American colleges and universities are pursuing vocational technological, or strictly professional courses while only about one third are candidates for degrees in the more traditional 'arts and science' programmes which were once the main bill of fare

Despite the anguish of traditionalists, and there has been much the extension of the university s role to include education in vocational and technological subjects cannot be said to have radically debased our academic coinage Instead it has brought the applica tion of h gh standards of objectivity and of systematic thinking to vocational and technological problems Advances in knowledge reached in university laboratories and disseminated through university cour es have vastly increased the yield of our grain crops opened the way to unknown mineral resources, raised beyond past credence the life expectancy in human childbirth

These are but few of the many tangible returns directly attributable to the development of our universities in such areas in the past 50 to 75 years We must add into the balance as sheer gain the thousands upon thousands of competently trained engineers farmers, nurses, journalists business school graduates and other vocational specialists who have been schooled in our universities In accepting such tasks clearly the universities have reached down from whatever remote elevation they may have been thought to have held and have proved their ability and their concern to lighten the darkness and the dangers in which we all spend our workaday lives

What then about the situat on in those fields of study which are usually called either liberal or 'arts and science ? (They include the humanities the basic sciences and the social sciences) Proportionately the expansion has been slighter and the support offered by the general public considerably less vigorous There are nevertheless signs of a maturing sense of appreciation for research and teaching directed to more exact knowledge and improved understanding regardless of immediate applications

Personally I have no doubt that the dis-

interested search for truth is intrinsically valuable yet, I see no reason to be scornful of utility In any case it has been repeatedly demonstrated in the last century that 'use less researches may turn out to be very useful indeed The harnessing of energy from nuclear fission stems from purely abstract researches on the nature of atomic structure It is but one of the most recent (though perhaps the most spectacular) of many similar instances Other astrophysical researches centering on nuclear fusion now held out the prospect that from simple sea water we may in time be able to draw usable energy amounting to 1 000 times the world's present power capacity for a thousand million years It is no cause for wonder that education and research in the fundamental sciences are being preached with a new sense of urgency in our land today and that they are now drawing to our universities the support of tens of millions of dollars each year from government and from industry

" Less tangible rewards and less spectacular vistas beckon the student in the humanities or social sciences Yet as one reads the spate of pronouncements which have been made in recent years by leaders in industry it is clear that even the once lowly liberal arts graduate has been found to be useful and necessary As John Gardner President of the Carnegie Corporation of New York, has observed ' we are just beginning to understand that one of the distinguishing marks of a modern complex society is its insatiable appetite for educated talent. Liberal education in arts and sciences is called upon increasingly to serve this growing requirement of commerce, industry, banking, the government and the professions These, and virtually all important walks of our national life are bidding for the services of young people prepared to carry forward the cultural values of the past, to join in the extension of knowledge, to face thoughtfully and effectively the complex private and public problems of our age

There is no blinking away the complexity of our times, and the fact that mounting complexity is increasing the need for people whose purview of human experience is both broad and deep whose patterns of though are imaginative and synoptic rather than being limited to the know how of a specialty We are today living in an uncertain, changing world The techniques the machinery, the systems of organisation taught today may tomorrow prove obsolete A man must be trained in the basic things in order to be prepared to meet the unexpected. Study in research in the humanities and social [illegible] are appropriately receiving merited [illegible] as the main avenues by which one learns to take advantage of mankind's varied history (its successes and its failures) it gains insight into the forces that move individuals and societies and (it should be hoped) also learns to cherish the eternal human quest for general principles and values superior to any the world has yet known

A further consideration is suggested here It is cardinal in the function of a university and applies in all its fields of study, however manifold Those who work in education know that effective advances of knowledge, and effective programmes of teaching are based not only on originality of mind, but on co-operation, tolerance and integrity I do not mean to exclude these qualities the[illegible]

EMPLOYMENT OUTLOOK

Towards the end of 1954 there were only about 750 qualified health visitors in the whole country In order to provide a reasonable standard of public health facilities it has been estimated that one health visitor is necessary for every 20 000 of the population Thus India needs nearly 19,000 health visitors

Community Projects and development areas of various States are in need of qualified health visitors As the present training facilities are limited the existing schools are being expanded and new health schools are being opened

Employment prospects in this profession are bright It provides a career to educated girls Some training can be had at government expense in a number of states and immediate employment will be available to most of the trained health visitors during the coming few years

(Courtesy—Ministry of Labour Government of India)

are to be assumed. Basing upon them, I venture to assert categorically that the fundamental responsibility of a university is to extend the frontiers of knowledge and ever to improve our understanding of the world in which we live. It is this search and this restless testing for improved understanding that alone can sustain the universities in their creative activities. Nor, in teaching must this quest ever be reduced to the mere inculcation of facts. After all, what most distinguishes a university is that it endeavours to send its students out as thinking human beings, not merely as well informed human beings.

Aristotle made the point twenty three hundred years ago in a rather extreme form when he said "the total sum of useful knowledge imparted to students should never be large enough to make them mechanically minded." I have made the point that our universities have accepted to a large degree the task of "mechanical education." What our great universities happily have not done is to regard that task as all sufficient. They have preserved the emphasis upon inquiry and part of the lack of serenity which I find characteristic of our major temples of learning lies right here. They are not internally placid but excited and exciting places. Their temper is such because they are places where ideas and assertions are disputed, weighed and tested. Whatever his field or whatever his age in years, no one is permitted to think he grasps all he can or should know.

While intellectual curiosity and creative thinking are not confined to universities, a complex, prosperous, go-ahead society such as ours must constantly seek to strengthen its universities as centres wherein such qualities will be generated and disseminated out through the social whole. Ours is a busy society. Most men engaged in business, government and industry today are preoccupied with a host of pressing details. They must worry about immediate consequences. They seldom have time for the long reflective view, even though, as many of them recognise, a long critically reflective view might be the most useful thing of all to them—and to our country.

Academicians are scarcely men of leisure either. Most of the educators I know are about as leisurely as whirling dervishes. But theirs is properly a different sort of "busyness"—active and reflective mindwork directed to the long view, to seeking out new insight, new theories, new methods, even new principles in which existing interpretations and theories prove imperfect.

There have been times of course—some of them only recently passed—when such intellectual curiosity has been thought suspect. At times it has been dangerous "to think otherwise", even in a land of freedom that was born in dissent. I believe that such timidity in the face of new ideas is but a fleeting phase in the forward movement of a relatively young country. When any society is content to rest upon what it already knows, when it fails to invite self criticism and to permit the generation of new ideas, it is very surely on the way to fossilization.

In the broad view it must be said that the freedom of thought and inquiry which we have cultivated in our universities has, on the whole, been protected fairly well by our society. This fact is, indeed, one of the important indices that ours is a healthy nation, one likely to play a meaningful role in the future of the world over the centuries ahead. In contrast, let me say, Lucretius' willingness to settle for a serene and prefabricated philosophy is as much a sign of impending stagnation in the late Greco Roman world as is the radical breach he finds between its intellectuals and the general public.

So far, then, the general diagnosis of the state of our universities is one of encouraging vitality and strength. I have purposefully passed over the pressing day to day problems of our universities and over the diversities among them. Not often has their over all accomplishment received due recognition. At the same time we have reached the point where today's problems may indeed seem insignificant in comparison to what the future may hold for higher education.

Great accomplishments generally raise great expectations. But what are the expectations? There are currently in this country some eight million young people of college age, of whom close to three million are enrolled in colleges, universities and other institutions of higher education. By 1970 there will be in the neighbourhood of 14 million young people of college age, of whom more than twice the current number, or 6.2 million, can be expected to want a higher education. The number may be further swollen if the steady rise continues in the proportion of college-age youth seeking higher education.

Without further statistics it may simply be stated that to continue to offer the kind of educational services they are now offering, our

colleges and universities must acquire more teachers in the next 15 years than in all their previous history combined

I have no panacea. The thoughtful creative minds which we require in numbers in all important aspects of our national life cannot be mass-produced Nor can we afford to let the cultivation of them to the fullest of their powers go down by default to the pressure of numbers Our best hope must lie in the development of a much higher degree of enlightened self interest among the American public upon this issue.

In the words of Dr James R. Killian Jr, the age in which we live ' imposes a relentless requirement for new knowledge and discovery requiring at all levels of modern societies—if they are really to flourish—a love for learning and recognition of all that is excellent in mind and spirit.' And if we are to move forward as members of a free and progressive society the products of our universities must above all others be sure that sufficient energy and requisite resources are devoted to the encouragement of talent and of intellectual accomplishment In the process of making and acquiring things we must never forget that of prior and more fundamental importance is the development of men and ideas.

All university people and all thoughtful men and women, bear an urgent and critical charge In simple words it is to work each of us as best we can for the spread of that understanding which favours the life of the mind and which recognises the excitement and the necessity of our universities as places of search and testing—and not as things apart but as vital and productive forces within our national life

Thus sustained well being and effective direction of the highly complex highly potent society which we have evolved depend upon our universities continuing to be the vital centres of teaching and research The interrelationship of the two is inextricable It reaches today into virtually every significant activity of our people both at home and abroad Everyone has a vital stake in extending the understanding and support which all universities public and private must have in order that they in turn may sustain their obligations to the well being of the nation and mankind.

MALARIA ERADICATION PROGRAMME IN INDIA

That the eradication progamme is ultimately cheaper than a continued control programme was the main consideration that weighed with the Government of India in deciding to change the National Malaria Control Programme into one of Eradication.

Today malaria has been brought to bay, though not completely conquered Our casualties today are less than a quarter of what they were at the end of 1947

The target for the population to be protected will be raised from 230 million to very nearly the total population of India i.e about 390 million, including a natural increase of 30 million, over the 1951 census figure of 360 million

To achieve reduction of the disease, however, all areas, where malaria transmission is known to occur in such a low degree as not to constitute a health problem, will be brought within the ambit of spraying operations for two years from 1960-1961 One hundred and sixty additional units will be established to cover them and only one round of spray will afford adequate protection in these areas

If certain criteria like child spleen rate, child parasite rate and the infant parasite rate are satisfied over a period of two consecutive years, the spraying operations will be discontinued giving way to surveillance phase of the malaria eradication work.

The surveillance staff will go into operation by 1960 61, i.e, one year prior to the contemplated interruption of spraying Even when spraying is interrupted, the surveillance staff will continue to exercise vigilance for a further period of three years.

The estimated cost of the malaria eradication programme during the current and the next Plan period will be about Rs 63.24 crores whereas during the same period a control programme would cost about Rs 52 02 crores

This programme does not aim at the eradication of mosquitoes Even when malaria eradication has been achieved mosquitoes will still continue to be there but they will cease to be the transmitters of malaria infection

My Conception Of An Ideal State

(In this resurgent India the mind of the young people is building dreams of a bright future In the following three articles this future is viewed from different angles Our readers would benefit from this symposium in many ways especially if they are candidates for higher examinations It will also stimulate thought and inspire budding writers to create some thing new More articles on this topic shall be published in next issue — Ed C and C)

(By A P Srivastava)

Since the emergence of State a number of experiments have been made at the cost of thousands of lives but still a perfect state remains in thought only Many ideals of states have been achieved but an ideal state still remains in imagination only as ever

A number of great thinkers and philosophers when stung by the offencive and cruel realities of life, have built up airy pictures of ideal states where the wicked do not trouble the good and all the people enjoy freedom, sound health, and prosperity They Plato being one one of them could not but take recourse to imagination to satisfy their sense of justice Plato had seen how his master was given poison without any fault, he had also noticed the evils of adminis tration around him and naturally he built up an ideal state in his book the Republic, where people are honest, healthy and educated. He laid great emphasis on health and education People will do gymnastic and study mathema tics and other sciences, till the age of 20. Then weeding will take place and the abler would again undergo training till the age of thirty years and again men of the best metal will be sorted out for further training who will become philosophers, and kings Thus the jobs allotted to individuals will be on the basis of their merit and ability

Plato also laid great emphasis on proper mating In his republic the best men are to be mated with the best women for the sole purpose of producing superior offsprings Children will be nursed by the state

Philosophers of the Laissez faire school believed that the best state was that which interfered least with the people Then there came thinkers who uphold state intervention to the extent of total nationalization of all means of production Sir Thomas More in his Utopia imagines a state where every action of every individual is governed by the state He also holds that the institution of private property should not exist, everybody should work according to his or her ability and should take according to his or her needs. The state will look after the education, health and prosperity of the individuals

Conception of ideal state with regard to form of government varies from person to person Some are of the opinion that autocracy instead of democracy is the best form of government

The final aim of every human being is happiness And obviously the ideal state must promote it to the maximum Perfect happiness can only be attained when people do not have any wants But this is contrary to the laws of nature. Therefore an ideal state can only restrict wants to the minimum.

This can be done by proper education But the state must also provide every individual with food and clothing

In this state all the lands will belong to the government For production of cloth sugar and other necessities of life the government will own factories where people will work for a limited time say six hours a day and the rest of the time will be utilized in entertainment and amusements

All the cities and villages will be well planned with beautiful gardens and wide roads Fountains and flowers and beautiful pieces of sculpture will be the articles of decoration Fruit trees will be planted on both sides of the roads

Government will have clean and well furnished hospitals where patients will recieve free treatment Doctors will receive pay from the government and will work for six hours, the prescribed limit for every individual

In such a well planned and well organised state where people receive the the minimum comforts and neccessaries of life people are bound to live honestly

There will be no jealousy They will not be corrupt because there will be no rivalry in accummulation of riches among the persons Besides their education will give them contentment and conscience will regulate their lives Women will enjoy the same rights as men

But can such a state come into existence ?

People are mad after materialism They all are deeply engrossed in corrupt habits They have lost their character They do not have a conscience They must have money by hook or by crook to satisfy their multiple wants They live in slums which destroy their health and soul Great inequality of wealth makes them jealous of one another Examples are not lacking when children make fun of their teachers when they talk of truth honesty and good behaviour They do so obviously because they have all the time been seeing just the opposite of them around them

It appears that all efforts to establish an ideal state will be vain. But we should not lose heart We should go on working sincerely for the betterment of the people Education must be provided with a view to build up the character of students rather than to test their power of reproduction of a few history or economics books The strength of a country does not lie in the number of good and big cities or aircrafts which she possesses or the number of people themselves but in the character of the people Once character is built other things will very easily be acquired Of course it will take time but the work in this direction should be started immediately The first and the foremost step in this regard will be of opening decent schools with hostels in secluded places where they should be taught moral values

They should eat, drink, play and sleep with their teachers who shower their love and affection upon them like parents A child's mind is like clay, it can be moulded designed and polished by the hands of an able teacher And thus slowly when older generations go out, the newer will step into their shoes and tread the path of righteousness truth and honesty And naturally the day will not be far when such an ideal state will come into existence.

• • •

(By Harish Chandra Sharma)

From the very dawn of civilization to the present day man has been seeking to attain perfection He felt that the lack of organization and ord r among the people was an obstacle in the way to social progress so he devised the state As early as in the fourth century B C. Aristotle would declare that man is a social and political animal, a man who lives without a state is either a beast or a god Necessary as the state was considered for the attainment of human perfection man always tried to improve upon the theory and practice of the state through observation, experimentation and imagination Man's significance has been that he could imagine a better society and a better organization of human beings. This imaginative faculty of man gave birth to the conceptions of the ideal state Ideals, of course, donot fall within the realm of practicality, but still they serve as models for other states for our movement and behaviour

These ideales have been put before us from time to time by the greatest philosophers of human history They have presented to us their own conceptions of ideal state Manu Plato Dante, More and Bacon occupy important places among these philosophers 'Manu Smriti The Republic' Utopia, 'Republique and New Atlantis,' sketch the ideal states in their own ways Plato preferred the rule of a philosopher king to the rule of the majority while Dante was an exponent of republicanism. Bacon had his own ideal in which the scientist occupied an important place

Anyway, we are under no compulsion to accept any one of the orthodox forms of the state Let us not bother about the form of the state

' For forms of government let fools contest,
Whatever is best administered is best '!

The form of government is only a means to an end it is not an end in itself The end of my ideal state is the highest development of human personality, the welfare and prosperity of the society as a whole Any form of government which caters to these ideals is, in my opinion the best form of government Sometimes, a monarchy may be as good as or even better than a democracy So I am not very particular about the form of the state

However, for the sake of the development of human personality it is very necessary that individuals should have certain fundamental rights they must be armed with certain freedoms, which should be considered inviolable They must also have direct share in legislation Of course such a state ought to be a democratic one, but it shall be a, modified form of democracy My conception of an ideal state presupposes that all people are educated They have highest type of moral character Everyone has the capacity to use his wisdom in a right way All these qualities shall be possible with the help of a highly scientific system of education, No organization of political parties shall be allowed in the ideal state because the political parties represent the interest of a particular group, they miseducate rather than

educate the people Everything is to be tested on its own merits The ultimate authority to approve of all state actions shall be the people

As regards the organization of administrative units within the state, there shall be small self sufficient communities as primary administrative units In a nutshell the ideal state shall not only have a modified democratic government but also a democratic society behind it

As already stated the quality of a people depends upon the system of education The most important function of the state shall be the control of educational system Ignorance, being the cause of all evils shall be banished from the ideal state. Nobody is to be compelled to take up a particular course Everyone shall be free to learn things according to his own aptitude and interest

The ideal state shall have no police force All the disputes of a community are to be settled by the community itself There shall be no courts of appeal The community shall appoint *ad hoc* committees for each particular dispute with the consent of the parties at variance The decision of the committee shall be final

The economic set up of the ideal state shall be a socialistic one All the property of a community shall be owned by the community as a whole The community shall work through co-operatives There shall be a co-operative for every trade or career service Within the community everyone shall be contributing to the prosperity of the community as much as he can and, in turn, he shall be getting from the community as much as he needs Nobody shall be allowed to accumulate personal wealth People shall be getting free supply of all their necessities from the community

All the communities within the state shall be contributing a portion of their incomes to the state for the maintenance of all state services and other functions which the communities cannot carry on profitably State shall also see that there is harmonious development of every community within its boundaries State shall help backward communities to maintain a minimum standard of welfare and prosperity

The ideal state shall not be sovereign in all respects It shall have to surrender a part of its sovereignty for the sake of international peace and security The ideal state shall not be required to maintain defence services The International Organization shall be responsible to safeguard the state against external aggression.

The end of such a state shall naturally be to assist the individual in the development of his personality The State shall endeavour for peace prosperity and welfare of society The individual can think of higher things only when his physical needs are satisfied The ideal state shall have the ideal of banishing all the enemies of mankind—the pains of the body the natural calamities and physical wants

The success of such an ideal state depends upon the educational system Unless there is a sound, scientific system of education which caters to moral and spiritual development of the individual such a state cannot be translated into reality Again, the ideal state also presupposes the existence of an International Organization which is powerful enough to regulate the conduct of all states and safeguard the security of the ideal state

However even if these conditions are fulfilled, it is not necessary that the ideal state may be established in all respects In fact the difficulties come to the forefront when the theory is put into practice Therefore we shall have to reject or amend many things in course of its establishment Truth is often a compromise between the ideal and the real Only a harmonious combination of our ideals on the one hand and reality on the other shall satisfy our needs

* * *

(*By V Narayanan*)

Man's organisational activity as his any other activity is based upon neccessities The need for a government arose when man felt the necessity for a sustained living Any government therefore should aspire first for the material requirements of its citizens for that is its only raison d'etre A Government in its ideal condition will therefore be expected first of all to provide a minimum standard of life for its citizens It will then be required to provide for each of its citizens adequate safeguards against violation of individual freedom by others Further it will be held responsible for the moral and mental condition of its people Hence it will have to make adequate provisions for the compulsory education of all its citizens upto a particular stage

However the conception of an ideal state is not peculiar to our age Man's desire to establish a social system on the principle of 'Right is Might' is of very ancient origin

From that far distant time in human history political philosophers have been at great pains to define an ideal state Our ancients had conceived the idea very early and recorded it in our national epics and the puranas Historically speaking the prestige of Kautilya as a political thinker is very great His ideas regarding how a state machinery should be run are contained in his treatise on polity entitled Arthasastra. Even our own time is not lacking in fertile framers of imaginery commonwealths We have had only a few centuries ago, Butler the author of Erewhon, and Thomas More the author of Utopia both of them rivalling Plato the author of Republic

During this long period of the evolution of human society in its present form, various political thinkers have propounded various theories regarding what an ideal state should be. Various forms of government have come into existence to accomplish the different ideals The various cracies, and 'archies such as democracy, aristocracy plutocracy and monarchy oligarchy etc, are but symbols of man's attempt at realising the ideal government Man's spirit of dissatisfaction at the efficacy of old forms of government to realise the ideal has been responsible for the evolution of newer forms

It appears from the direction in which the world shifts now that forms of government other than democracy and totalitarianism have had their day The different modes of government that exist in the world to-day reduce on analysis to either of these forms or to a form in between these two Limited monarchy exists in some of the European countries a notable being the United Kingdom But the principles taught by Rousseau and Voltaire have too irresistible an appeal for the people to allow any more the despotic rule of a single individual to exist. The spirit of the age will have to triumph and the last vestige of monarchy will wither away by the creation of a classless society in which process the dictatorship of the proletariat is lending a helping hand.

Once agreed that the form of government to be adopted in an ideal state should be democratic in substance the question then arises of the functions of such a state. Remembering Abraham Lincoln's definition of democracy as the government of the people by the people and for the people one can say that the government of the ideal state should engage in activities that would help the uplift of the people By the uplift of the people is meant an all round development that takes within its purview their social, political, moral as well as mental aspects

Political and social freedom and the guaranteeing of fundamental rights to all people alone would not suffice Such freedom if not combined with an attempt to uplift the people morally and mentally would lose much of its import Moral and mental uplift of the people is as necessary as the political and social uplift and provisions for them should be made by the government of the ideal state

But we will be in fools paradise If we rest with these and take no account of the people As mentioned in the beginning government springing as it does from the material requirements of the people should make enough provisions to guarantee a minimum standard of life for all of its people Otherwise it would lose its significance

As has been repeatedly emphasized by all thinkers the ultimate goal of all of our public actions should be the unification of mankind by peaceful means under one world government. The inventions of modern science are helping to make that ideal a practicability. The growing internationalist tendencies augur well for the unification of mankind

Some persons of a pessimistic and cynical temperament may doubt the possibility of bringing into existence such an ideal state They may dub others of a more optimistic nature who hope that some day such a state would come to exist as too sanguine But it can be said without doubt that when there is the will and desire to achieve the ideal it will become easy of realisation

Nobody will deny that the existing governments are only stepping stones towards achieving that ideal As Julian Huxley has pointed out any particular democracy is only an attempt at realising the general democratic ideal.

GEMS OF THOUGHT

Nothing is so easy but it becomes difficult when done with reluctance

—*Terence*

* * *

The world is a looking glass and gives back to every man the reflection of his own face Frown at it and it will in turn look sourly upon you laugh at it, and with it, and it is a jolly kind companion

—*Thackeray*

Reflections On Economic Methodology

By CHENNAT GOPALAKRISHNAN M A

THE aim of Economics has been the subject matter of acute controversy One such controversy veers round the discussion as to whether the aim of Economics is the study of methods of increasing material welfare of human beings or a study of the utilisation of scarce means for alternative ends This constitutes the theme of Normative or Positive Science Further some economists assert that Economics and Ethics are closely associated Others challenge this view and declare that Ethics has no right to enter the realm of Economics Again there are economists who firmly believe that Economics is concerned only with pure theory and that policy recommendations do not come under its canopy But this cult of scientific purism has been vigorously assailed and it is argued that research and study in pure theory should go hand in hand with policy recommendation and practical application Economists should be tool makers as well as tool users

Prof Pigou holds the view that Economics is not the arena for intellectual gymnastics He calls into question the view that Economics should be a method for winning the truth for its own sake Prof Pigou who is the disciple of Marshall pinned his faith to the Marshallian thesis that the aim of Economics is the promotion of material welfare of human beings In his ' Economics of Welfare Prof Pigou states that Economics is concerned with that part of social welfare that can be brought directly or indirectly into relation with the measuring rod of money Thus Prof Pigou attaches great significance to the welfare concept in Economics

But this view has been subjected to trenchant criticism by Lionnel Robbins who initiated the Great Revolt in Economic Methodology He defines Economics as that Science 'which studies human behaviour as a relationship between ends and scarce means which have got alternative uses Robbins asserts that Economics has got nothing to do with welfare considerations Economist is concerned only with the end viz. the utilisation of scarce resources for the attainment of multiplicity of needs. Thus it serves on scarcity as the essential economic concept Thus Robbins declares that Economics is entirely neutral between ends

J M Keynes also differs from the Pigovian conception of Economics Witness what Lord Keynes observes The theory of Economics does not furnish a body of settled conclusions immediately applicable to policy It is a method rather than a doctrine an apparatus of the mind a technique of thinking which helps its possessor to draw correct conclusions Thus Keynesian conception runs counter to the view of Prof Pigou Keynes considers Economics as a form of intellectual gymnastics whereas Pigou criticizes this view of Economics Thus Economics to Lord Keynes is a technique of thinking a method and an approach Thus Keynes gives his support to the cult of 'Scientific Purism

Prof Pigou believes that Economics is chiefly valuable as a handmaid of Ethics and a servant of practice Prof Pigou states thus Economics cannot stand alone Economics and Ethics are mutually dependent The first is hand maid to the Second Marshall of course was quite in favour of this view ' Ethical forces States Marshall in Principles , are among those of which the economist has to take account He even points out that attempts to construct an abstract science round the Economic Man who is under no ethical influence have not been succesful nor even thoroughly carried out

More recently Mr R G Hawtrey has taken up the same position He maintains that Economics cannot be dissociated from Ethics But Lionnel Robbins questions the validity of these assumptions Robbins rejects the claim of Hawtrey on the following ground Unfortunately it does not seem logically possible to associate Economics and Ethics in any form but mere juxtaposition. Economics deals with ascertainable facts Ethics with valuations and obligations The two fields of Enquiry are not on the same plane of discourse But the above view of Robbins has been subjected to severe criticism It is alleged that Robbins argues from incomplete premises It is true to say that Economics deals with ascertainable facts but this is not the whole truth. It would be the whole truth if it were proved beyond the shadow of doubt that Economics deals with ascertainable facts only But Prof Robbins argues precisely against those economists who have urged that Economics should also include normative conclusions But, they have as clear a right to include them it is pointed out as Robbins has to reject them so long as the question has not been finally settled.

Prof Devas in his Political Economy stresses the need for close relationship between Economics and Ethics The fear of bias he argues is not much of an argument in favour of the separation of Economics for most economists have quite wit enough to know what practical results follow from their innocent looking indicatives and open bias is better than veiled bias

Thus Prof Pigou s statement that Economics is the handmaid of Ethics has received popular acceptance and recognition The noted English Economist Cairncross clearly sums up the relation between Economics and Ethics However reluctant economists may be to introduce the brittle thread of Ethics (so often snapped by disagreement) in their analysis they cannot offer the guidance which is so urgently sought of them unless they do They can explain how the economic system works without putting the mantle of philosophy over the rather drab working clothes of economic science."

Another important assertion of Pigou is that Economics should be the servant of practice The English economists generally hold the view that it is not the function of Economics to solve practical problems Although the economic aspects of these problems may be very important and the economists opinion is of very great value yet no problem can be solved on economic grounds alone for political and moral considerations may be involved

But, one cannot agree with the above view Prof Pigou s observation has been supported by most modern economists Actual experience has also testified the truth of Prof Pigou s statement Adam Smith Ricardo, Malthus and in modern times Lord Keynes have all actively interested themselves in the problems of their times In the words of Fraser, an economist who is only an economist is a poor pretty fish According to Tugwell "it is only a premature flowering of Economics which is responsible for its separation from practical life Mr Wootton complains that we spend too much time forging theoretical tools and too little time in trying to make practical use of them The gap between theory and practice yawns lamentably widely Elsewhere Prof Pigou himself declares "Our impulse is not the philosopher's impulse knowledge for the sake of knowledge but rather the physiologist s knowledge for the healing that knowledge may help to bring

Most recently Mrs Robinson in her illuminating booklet clearly shows how economic doctrines are inextricably associated with practical problems of the day She categorically asserts that to feign ignorance of this fact in the name of 'Pure Science is a very unscientific refusal to accept the facts. "An element of propaganda enters into even the most severely technical details of the subject"

The application of economic principles to solve practical problems has gained wide currency *Applied Economics is an eloquent* testimony to this new development Thus, Rural Economics Industrial organization, Banking and Currency, Public Finance etc, are branches of Economics which make use of pure theory to solve practical problems Many brilliant economists of the present century are also first rate policy makers and they successfully employ pure theory to tackle efficiently and solve effectively the problems of modern world The superb success of the policy prescriptions of Lord Keynes the creation of I M F and World Bank which are based on sound theoretical principles the work carried out by the panel of economists in framing the Second Plan of India—all these clearly show how Economics can bear the role of the servant *of practice quite successfully*

This does not however rule out the privilege of economist to dabble in pure theory Prof Pigou in one of his essays cites the instances of economists who were mere tool makers they indulged in pure theory for the sheer delight it offered Edgeworth is an instance in point Then, there are tool users, who employ economic tools forged by others to solve economic problems Prof Pigou cites the instances of Dr Bowley and Dr Stamp in this connection Then, there are economists who play a double role both tool makers and tool users. Thus Alfred Marshall was both a tool maker and tool user Prof Pigou prefers this last type to the other two types He condemns the view so stubbornly held by certain economists that economics is a pure science and as such the prescription of policies is beyond its competence Economic analysis should render the "full service of which it is capable in helping to guide practice" asserts Pigou in his essay entitled The Function of Economic Analysis"

Question Box

In these columns we answer the queries from our readers. It may not be possible to answer each and every question but a considered reply shall be given to selected questions. Letters from our readers are welcome. These should be addressed to the **Editor, Question Box.**

SEATO AND NATO

Q. Mention the aims of SEATO and NATO. Which countries constitute them?

(Ajai Kumar Baravia, Meerut
Bachcham Lal Gupta, Farrukabad
B L. Bansal, Patiala
Anilkumar Bhatnagar, Moga)

Ans. The aim of South East Asia Treaty Organization is collective action in the event of external or internal aggression against any one of its members.

North Atlantic Treaty Organization aims at the settlement of all international disputes involving any of its members by peaceful means and assisting each other in case of armed attack against any of them in Europe or North America.

The members of SEATO formed in 1954 are (1) U.S.A. (2) Britain (3) France (4) Australia (5) New Zealand (6) Thailand (7) The Philippines (8) Pakistan.

The following countries constitute NATO formed in 1949: (1) U.S.A. (2) Britain (3) France (4) Canada (5) Belgium (6) Netherlands (7) Luxemburg (8) Norway (9) Denmark (10) Iceland (11) Italy (12) Portugal (13) Greenland (14) Germany (15) Turkey.

LATIN AMERICA

Q. Please name the countries that come under Latin America?

(Baldev Singh Manwa, Moga)

Ans. (1) Guiana (British French Dutch) (2) Venezuela (3) Colombia (4) Ecuador (5) Peru (6) Chile (7) Argentina (8) Uruguay (9) Paraguay (10) Bolivia (11) Brazil.

ABBREVIATIONS

Q. What do the following abbreviations stand for?

1. GATT
2. EAC *(Subba Rao, Hyderabad)*
3. NEFA
4. UNESCO
5. U.A.R.
6. A A F
7. A D C
8. D.D.T *(Raju Lochan, Kanpur)*
9. N N R C
10. T C A
11. UNICEF
12. ECAFE *(C M. Prasad, Rohini)*

Ans. 1. General Agreement on Traiffs and Trade
2. Extra Assistant Commissioner
3. North East Frontier Agency
4. United Nations Educational Scientific, Cultural Organization
5. United Arab Republic
6. Auxiliary Air Force
7. Aide-de Camp
8. Domani Dormiai o Tranquilli ('Tomorrow we'll be able to sleep soundly')
9. Neutral Nations Repatriation Commission
10. Technical Co-operation Aid
11. United Nations International Children's Emergency Fund
12. Economic Commission for Asia and Far East

PANCH SHILA

Q. Please explain the term Panch Shila.

(Mahboob Ahmed, Allahabad)

Ans. The term refers to the five principles of Co-existence first enunciated by India and China and having since been accepted by many countries. These principles are:

(1) Mutual respect for each other's territorial integrity and sovereignty (2) Non aggression (3) Non interference in each other's internal affairs (4) Equality and mutual benefit. (5) Peaceful co-existence.

DEFICIT FINANCING

Q. Briefly explain the concept of Deficit Financing. *(Vijaya Rao, New Delhi)*

Ans. When the estimated revenue of Government falls short of the estimated expenditure a deficit or gap is created in the budget. In order to fill this gap the Govern-

ment resorts to the printing of currency without corresponding backing in gold reserves or foreign securities. This economic process is known as Deficit Financing.

BOOKS AND AUTHORS

Q Please name the Authors of the following books

(*Krishna Kumar Shrivastava Champaran.*)
(a) Utopia (b) The Mysterious Universe (c) Pilgrim's Progress (d) Ulysses

Ans (a) Sir Thomas Moore
(b) Sir James Jeans
(c) Bunyan
(d) James Joyce

SCIENTIFIC TERMS

Q What is the difference between (a) Destroyer and warship, (b) Minesweeper and frigate and (c) Rocket and Missile

(*Subhadra Laxmi Joshi Kathmandu*)

Ans (a) The term destroyer' connotes a swift moving torpedo shooting depth bombing anti aircraft protector of convoys War ship is a vessel designed to suit the requirements of warfare

(b) A vessel specially fitted and employed in dangerous task of clearing a mine field A frigate is a ship of war next in size and equipment to a ship of line

(c) Rocket is a firework which is projected through the air used for making signals in war and for saving life at sea by conveying a line over a stranded vessel The term missile refers to a weapon thrown by hand.

STATE TRADING CORPORATION

Q In which year was State Trading Corporation established? Please furnish information about its set up and functions

(*Zachma Thomas, New Delhi*)

Ans. Government of India set up State Trading Corporation in May, 1956 It is a private limited company registered under the Companies Act 1956. It has an authorised capital of Rs 1 crore and a subscribed capital of Rs 5 lakhs. One function of the Corporation is to organise and effect exports from and imports into India of all such goods and commodities as the company may from time to time determine Another function is the purchase sale and transport of the general trade in such goods and commodities in India or anywhere else in the world and to do such other things as are incidental or conducive to the attainment of this object

WATER TRASPORT

Q What is Master Plan for Water Transport in India? (*Miss Jaya Shree Indore*)

Ans Central and Power Commission of the Government of India has drawn up a master plan for developing inland waterways in the country to provide adequate and cheap transport in a developing economy The plan envisages the linking of Calcutta port on the east with Cochin on the West via Cuttack and Madras by a network of canals connecting some of the minor rivers of Orissa, Andhra and Madras, a continuous waterway from Western India to Northern and north east India via Central India and a continuous waterway from the West coast to the east coast through the hinterlands of Bomby M P and Andhra.

POPULATION

Q Please mention the Population of: (a) India (b) Capital of India (A S Seal, Ludhiana)

Ans According to the 1951 Census (a) the population of India is 356 879,394 and (b) that of the capital of India is 1191,104 (*Delhi plus New Delhi*) But since then the population has increased substantially

HISTORY AND MAN

Q 'In civilized ages men write histories in barbarous ages they act them

(Miss Shanta, Trivandrum)

Ans This is a rather confusing statement. In the first place any particular age cannot be singled out as civilized Civilization is a continuous growth and hence it cannot be confined to any specific Age Similarly from a strictly objective point of view, any specific Age cannot be considered as exclusively barbarous. Even admitting this highly unrealistic classification of civilized and barbarous Ages, one hardly finds any scientific basis for the statement that history is written in the former age and acted in the latter

SOVIET PRIME MINISTER.

Q Please explain the position and powers of U.S.S.R Prime Minister

(P S Bedia New Delhi)

Ans The Prime Minister or Chairman of the Council of Ministers presides over the meetings of Ministers In theory he has no overriding powers over the ministers He is Unus inter pares and not 'primus inter pares But the Prime Minister in practice

exercises tremendous influence Because, this office is invariably occupied by topmen of Communist Party It is on account of their position in Communist Party that the Prime Ministers wield great influence in actual practice

MEANINGS

Q Please explain the meanings of the following phrases

(a) Fait accompli
(b) Ignotum per ignotius
(Ram Prasad Sant New Delhi)
(c) Cosmos *(F C Shah Kharsia)*
(d) Amour Propre
(e) Robot
(f) Claustrophobia *(K. K. Bhutani Allahabad)*

Ans
(a) Accomplished fact
(b) The unknown (explained) by the still more unknown
(c) Universe
(d) Self love vanity
(e) A man like machine or mechanical man; a speaking automaton super humanly efficient, but heartless and soulless
(f) Morbid dread of confined spaces

ON ECONOMICS

Q "When six economists meet there are seven opinions If so will not economists create more problems than they possibly can solve ?

(B Raghavan, New Delhi)
(B Sreedharan New Delhi.)

Ans Mrs Barbara Wooton s above statement gives a biased and distorted view of Economics The existence of diversity of veiws is really a healthy sign it is, in fact, the hallmark of a dynamic branch of knowledge Of all the social sciences Economics is easily the most dynamic and hence the scope for divergence of views is naturally greater in Economics

Moreover, today one comes across numerous policy recommendations on economic issues which are the products of elaborate discussions and analyses by economists This fact, therefore explodes the very basis of Mrs Wootton s allegation that economists can never agree with each other

VICE-PRESIDENT OF INDIA

Q How is the Vice-President of India elected? Mention all particulars about this post *(K.A Krishnan New Delhi.)*

Ans Vice President is elected by both Houses of Parliament in a joint sitting on the basis of proportional representation and single transferable vote The candidate seeking election should be a citizen of India and at least 35 years old and should be qualified for election to the upper house His term of office is 5 years and he is the ex officio chairman of the Council of States He will be elevated to the position of President during casual vacancies There is no provision for promoting a Vice President to President on the death resignation or removal of President as in U S A He may be removed from office by a resolution of the Council of States by a majority of the total members of the Council of States and agreed to by the House of People also For this there should be at least 14 day's notice

PUBLICITY

Q. What avenues are open to a person who desires to choose Publicity as a career? *(Anandamoy Mukherjee, Calcutta)*

Ans One can successfully engage in publicity as

1 The owner of a business or as the advertising Manager for the owner
2 An agency that takes care of the advertising problems of more than one business
3 A space seller for a publisher or medium owner
4 The advertising manger for a pulisher
5 A writer of advertising copy or an illustrator or a layout man
6 A worker in industries related to advertising such as engraving printing merchandising or research

Different phases of the publicity profession, therefore, require different types of training

INDIAN CULTURE

Q Is it not because of the weakness of Indian culture that we failed to make the Muslims our friends? *(V K. Mathew Pathanamthitta.)*

Ans The assumption that we have failed to make Muslims our friends cannot be accepted unqualified There are any number of Muslims who have absolute faith in and admiration for the cultural values and traditions of India Moreover it is a plain historical truism that Muslims have contributed much to the development and growth of Indian culture. King Akbar is an instance in point Hence if at all there is any element of weakness in Indian culture, Muslims are also partly responsible for it.

●●●

Intelligence Test

(Below are given some questions to test quickness of your mind and intelligence. It does not matter that you attempt all the questions. What matters is the time taken by you to find the correct answers. The whole paper should not take more than 30 minutes to a fairly intelligent person. Try now and find out.)

—QUESTIONS—

1 *The Problem of the Two Students*

Read the following passage carefully and try to find a solution.

Two young boys appeared at the registrar's office at college.

The clerk handed them questionnaires. Each boy subscribed to the following facts:

Each was named Jones. Each was born on February 3, 1910. Each was born at 120 East 57th Street, New York City. Each had a father named Joseph Jones. Each had a mother named Lillian Jones. After completing the questionnaires the boys handed them to the registrar.

He read them and asked, "Are you two brothers?"

They replied, "Yes, we are."

Glancing up from his papers the registrar looked at the students. He noticed that they looked exactly alike and said, "You're twins, aren't you?"

Promptly they both answered, "No."

Assuming that all the answers they gave, both written and spoken, were accurate and that they were both born of the same mother and father, how do you account of the fact that they were not twins?

2 Change the first word to the second in a series of steps like dog to cat. Dog to dot to cot to cat.

1 SERF to FING (2) FARE to HOME (3) CARD to GAME 4 GOLD to BILL (5) SHOPS to STORE (6) FISH to BAIT

3 Take the added letter (s) and make a new word out of the whole, e.g., fight with an L is flight.

1 VEAL with a G (2) CHIVE with an L and an E. (3) DEIGN with a Y (4) LEGATEE with a V and a B

(5) THAW with an E and an L (6) LIN with a C and an E.

4 There's a stranger lurking in each of these groups. Can you find it?

1 Sodium, aluminium, helium, sulphur, potassium, columbium

2 Tangibility, substantiality, nihility, hypostasis, subsistence

3 Jive, jazz, jute, syncopation, symphony

4 Mattina, matin, manna, morgen

5 Tomato, potato, artichoke, onion, spinach

6 Sobriety, inebriety, prohibition, teetotalism, temperance

7 Penitence, compunction, contrition, recusance, remorse, regret.

5 In the following sentences you will find the names of famous people buried. For example: "Why don't you shake Spear's hand?"

1 Her bad throat was due to swollen tonsils

2 If you can't order the books, then turn them over to me

3 It will appear you ignored the summons, if you aren't on time

4 If the car ever entered that tunnel, all would have been lost

6 The number 41 is called a PRIME NUMBER because:

(a) It is under 100
(b) It will not be divided by 2
(c) It is an odd number
(d) Its only factors are itself and 1
(e) It is not in any of the time tables

7 A trawler leaves Great Yarmouth and sails N. E. for 100 miles. It alters course

and sails S E for 30 miles Then it turns and sails 100 miles S W and then drops anchor

(A) In which direction is Great Yarmouth ?

(B) How many miles away ?

8 Which one of the following words is best described by all three of these adjectives red soft round ?

(a) billiard ball (b) tomato (c) cushion (d) kitten (e) rubber

9 When written in a certain code the word FACETIOUS becomes FIC2T345S and the word IMPORTANCE becomes 3 MP4RTINC2.

The following sentence is written in the same code

Write down what it means

W2 M5 ST ILL HIV2 1 G44D 2D5 CI T34N

10 Read very carefully through the following poem at least twice and then answer the questions

THE WINDMILL

Behold ! a giant am I !
Aloft here in my tower
With my granite jaws I devour

The maize and the wheat and the rye
And grind them into flour

I Look down over the farms
In the fields of grain I see
The harvest that is to be
And I fling to the air my arms
For I know it is all for me

I hear the sound of flails
Far off from the threshing floors
In barns, with their open doors
And the wind the wind in my sails,
Louder and louder roars

1 What does Behold mean in line I ?
2. Why is there an exclamation mark (!) after Behold ?
3 Why does the Windmill say that it is a giant ?
4 Why does the Windmill talk about its granite Jaws ? (line 3)
5 Give another word meaning the same as devour in line 3
6 What three things does the Windmill devour ?
7 What makes you think that this is not an English Windmill ?
8 What does it see when it looks over the fields ?
9 Give one word meaning the same as 'that is to be (line 8)
10 What is meant by I fling to the air my arms in line 9 ?
11 Why does it fling its arms to the air ?
12 What are flails ? (line 11)
13 Where would you find them ?
14 Why do the barns have their doors open ? (line 13)
15 What noise does the wind make in the Windmill s sails ?
16 What are threshing floors ? (line 12)
17 What sound would the flails make going round?
18 What sound would the flails make ?

ANSWERS

1 They were two of a set of triplets

2. 1 serf to sere to sire to sine to sing to king
2. fare to hare to have to hove to home
3 card to care to came to game
4 gold to bold to boll to bill
5 shoes to shots to shote to shore to store
6 fish to fist to fast to bast to bait.

3 (1) gavel (2) vehicle (3) dyeing (4) vegetable (5) wealth (6) nickel

4 (1) helium (2) nihility (3) symphonic (4) manna (5) tomato (6) inebriety (7) recusance

5 1 Her bad throat was due to *swelling tonsils*
2. If you can t order the books, then turn them over to me

QUESTIONS

1 (a) What are the important minerals of India ? Where are they found ?

(b) Sketch the governmental policy towards the development of minerals

2 (a) Which countries constitute Middle East ?

(b) Name the Prime Minister and President of Lebanon

(c) What is the political status of Aden?

3 What do the following abbreviations stand for ?

(1) W F T U (2) L.S.S (3) I G Y (4) S T C (5) A I M O (6) E T O (7) A.B.C. (8) I E N S (9) I C W.A (10) C S W B (11) P.E O (12) I I C.C.

4 Name the present occupants of the following posts

1 Prime Minister of France
2 President of Italy
3 Indian Ambassador to Cambodia
4 President of Pakistan Muslim League
5 Prime Minister of Sweden
6 Governor of Madras
7 Chief Minister of Mysore
8. President of Tunis
9 President of United Arab Federation.
10 Administrator of Naga Tuensang Area

5 Link the following Indian cities to their respective states

(1) Jodhpur (2) Kanpur (3) Sholapur (4) Bhagalpur (5) Jabalpur (6) Jadavpur

6 Name the authors of

(1) The Guide (2) Seasons of Jupiter (3) Nectar in a sieve (4) Arab Dawn (5) The Evolution of India (6) Rhythm in Heavens (7) The Sorcerer's Daughter (8) The picture of Dorian Gray (9) The Story of My Life (10) Poverty and Social Change.

7 Who or what are they ?

(1) Sanya (2) Malinovsky, (3) Cerrics (4) Malaria (5) Jaffna. (6) Jwalamukhi. (7) San Marino (8) Buraimi (9) Vanguard (10) Strijdom

8 Name the capitals of

(1) Libya (2) Ghana (3) Irish Republic (4) Ethiopia (5) Kenya (6) Argentina (7) Fiji Islands (8) British Guiana (9) Siberia (10) Sudan.

9 Locate the following

1 Indian Standards Institute
2 National Botanic Gardens.
3 Tata Institute of Fundamental Research
4 Hindustan Antibiotics
5 Central Potato Research Institute
6 Bharat Electronics

10 Name the following

1 Largest bridge in India
2 Longest cantilever span bridge in India
3 India's highest waterfall
4 Largest Indian lake
5 Largest delta in India

11 Name the industries in the following places

(1) Jamnagar (2) Titagarh (3) Monghyr (4) Mirzapur

12 (a) Where was Asiad held ?

(b) When and where will the Fourth Asian games be held ?

(c) How many gold medals did India win in the third Asian Games ?

(d) What is her rank ?

(e) Name the sportsmen who secured the gold medals for India

ANSWERS

1 (a) Main Minerals of India are *Gold*—It is available chiefly in gold mines of Kolar in Mysore India contributes about three per cent of world's production of gold Kolar produces about 95 percent of India's gold output.

Coal—India ranks seventh among the coal producing countries of the world and her reserves are quite considerable It is found mainly in Bengal and Bihar which contribute nearly 82 p c of the total output The most important coal fields of India are Jharia and Raniganj which supply about 70 per cent of the total output and almost the entire quantity of high grade coal

Iron—India possesses some of the world's largest reserves of iron ore with iron content ranging between 60 and 70 per cent About half of the Indian production comes from Singhbhum district of Bihar and it is also found in Orissa M P Madras and Mysore

Salt—About three fourth of the annual consumption of salt in India is produced in the country itself It is obtained from the shores of Sambhar Lake of Rajasthan and also obtained by evaporation of sea water round the coasts of India

Petroleum—is obtained in Digboi and Nahorkatia (Assam) Petroleum refineries have been established in Trombay Island in Bombay and Visakhapatnam.

Mica—It is chiefly obtained from Bengal Bihar and Madras India is the greatest producer of sheet mica in the world accounting for 87 p c in value of world's produce Main use of mica is for electrical goods, paints and rubber industry

Manganese—country's output in manganese ranks third in the world The largest and richest of these are situated in Madhya Pradesh Next in importance come Keonjhar and Bonai the hills of Andhra Orissa border Singhbhum Gujerat, Udaipur and Mysore It is used in steel manufacture chemical industry and dry cell batteries

Building Materials—The diverse rock formations of India constitute a rich source of building material such as pink marble in Rajasthan granite of the Deccan cream and reddish brown sandstone in north India white and grey marble and limestone in various parts of the country

Saltpetre—It is practically restricted to Bihar, U P and the Punjab

Chromite—Comes mainly from Keonjhar Singhbhum and Mysore

India's non ferrous metals—(1) Copper in Chotanagpur (Bihar) (2) Bauxite in Madhya Pradesh Bombay Bihar Madras and Kashmir (3) Lead in Udaipur and Jaipur (4) Zinc in in Jodhpur (5) Monazite in the beach sands of Travancore Cape Comorin (6) Chromite in Bihar, Bombay, Madras, Mysore, Orissa (7) Magnesite in Bihar, Kashmir Madras Mysore, (8) Kyanite in Bihar

(b) Government's Mineral Policy The Industrial Policy Resolutions of the Government of India published on April 6 1948 and in 1956 explicitly recognised minerals amongst industries whose location must be governed by economic factors of all India import or which require considerable investment or a high degree of technical skill and must consequently be the subject of central regulation and control

The Government's role in the future development of India's mineral wealth was clearly laid down when the Second Five Year Plan was begun in April, 1956, and future mineral development will be the exclusive responsiblity of the State in so far as it concerns atomic energy minerals, iron and steel, coal and lignite mineral oils mining of iron manganese, chrome gypsum sulphur, gold diamonds, copper lead tin, zinc, molybdenum and wolfram All other minerals except minor minerals aluminium and other non ferrous metals not included in the first category will be progressively owned by the State

In September 1948 Indian Parliament passed the historic measure Mines and Minerals (Regulation and Development) Act 1948 The Act applies to all minerals including oil. It extends to all States including Centrally administered areas It gives powers to Central Government to frame rules for the regulation of the terms and conditions of prospecting licences and grant of leases for the conservation and development of minerals and for the modification of existing licences and leases on payment of compensation The ownership of mines and minerals continued to vest in the States and State Governments will continue to grant concession and collect royalties and rents as hitherto But this will now be done within the framework of the general control exercised by the centre and the rules framed by the Central Government.

TEACHING OF THREE LANGUAGES AT SECONDARY STAGE

Dr K.L. Shrimali, Minister of Education, in a statement laid on the table of the Lok Sabha on May 1 outlined the progress made in the implementation of the recommendation of the Central Advisory Board of Education for compulsory teaching of three languages at the secondary stage in the various States

The following is the text of Dr K L. Shrimali s statement

The State Governments and Union Administrations of West Bengal Assam Kerala, Orissa Mysore Uttar Pradesh Rajasthan, Delhi Tripura and Laccadive Minicoy and Amindive Islands have accepted the recommendation of the Central Advisory Board of Education regarding the compulsory teaching of three languages at the Secondary stage.

The State Governments of Madhya Pradesh and Jammu and Kashmir have accepted the recommendation but with slight variations to suit their local circumstances

The State Government of Bihar and Union Administration of Andaman & Nicobar Islands are in general agreement with the language policy as recommended by the Central Advisory Board of Education but the final decision has not yet been taken

The Madras State has adopted the policy as recommended by its Legislature Comittee.

The State Governments of Punjab Andhra Pradesh and Bombay are still considering the matter

The Union Administrations of Himachal Pradesh and Manipur have not yet offered any comments in the matter

• • •

NATIONAL COMMITTEE FOR WOMEN'S EDUCATION

Dr K.L. Shrimali Minister of Education announced in Lok Sabha on May 6, that the Government of India have appointed a National Committee under the Chairmanship of Shrimati Durgabai Deshmukh, Chairman of the Central Social Welfare Board to go into the question of girls education in the country

According to the statement the following are the terms of reference of the National Committee on Women's Education

(i) To suggest special measures to make up the leeway in Women's Education at the Primary and Secondary levels

(ii) To examine the problem of wastage in girls education at these levels

(iii) To examine the problem of adult women who have relapsed into illiteracy or have received inadequate education and who need continuation of education so as to enable them to earn a living and participate in projects of national reconstruction

(iv) To survey the nature and extent of material and other *facilities* offered by voluntary welfare organisations for the education of such women and to recommend steps necessary to enable them to offer larger educational facilities to them and

(v) To examine the possibility and methods of encouraging a larger number of women to go into vocational trades by providing suitable vocational training as a part of their formal education or through special courses designed for adult women

The Committee consists of the following —

1. Smt Durgabai Deshmukh (Chairman) Chairman Central Social Welfare Board
2. Miss S. Panandikar Joint Director of Education Bombay State
3. Shri P.N. Mathur Principal Banasthali Vidyapeeth, Rajasthan
4. Smt Kulsum Sayani Editor, Rahber Bombay
5. Shri J.P. Naik Mouni Vidyapeeth Gargoti
6. Smt Zohra Ahmed, Member, Bihar State Social Welfare Board, and
7. Smt O.C. Srinivasan Retd Director of Public Instruction Madras State.

NO GRANTS TO PUBLIC SCHOOLS FROM 1958-59

Dr K.L. Shrimali Minister of Education in a statement in the Lok Sabha on May 5 said that the Government of India had decided that no grants should be given to public schools from 1958 59 onwards

The following is the text of the Minister's statement —

"In keeping with the recommendation of the Secondary Education Commission, the Government of India decided that 1957-58 should be the last year of grants to the public schools and that no grant should be given from 1958-59 onwards However, this decision does not debar financial assistance to public schools for specific purposes under the various schemes of the Ministry relating to Secondary Education

"As recommended by the Commission, the Ministry of Education has also been awarding scholarships to meritorious but poor students at the public schools

"The policy being followed by the Government is in consonance with the recommendation of the Secondary Education Commission and there has been no recent change

NEW ENGINEERING COLLEGES

The new engineering colleges under the expansion of Technical Education in the Second Five Year Plan are proposed to be opened at Patiala and Ludhiana (Punjab), Raipur and Gwalior (Madhya Pradesh) Nagpur (Bombay) Coimbatore and Madurai (Madras) Waltair (Andhra Pradesh) Burla (Orissa) and Gauhati (Assam) This information was given by Shri Humayun Kabir Minister of Scientific Research and Cultural Affairs in the Lok Sabha on May 9, 1958.

REVISED SYSTEM OF PUNJAB MATRICULATION EXAMINATION

Without waiting for guidance from the Board of Higher Secondary Education Punjab University has taken what is described as the first major step towards reform of the existing system of examination.

It has been decided that in future in the award of matriculation certificates a student's merit be judged not only on the basis of his

performance in the matriculation examination, as is done at present, but also on his work throughout the two-year term

The university has allotted 25% of the total marks in the matriculation examination to work in the school itself Hundreds of educational institutions all over the State have been directed to submit to the university regularly the results of all house tests for the purpose

Through this new emphasis on house tests the university authorities hope to discourage the widely prevalent practice among students of neglecting their studies except for a few weeks just before the university examination Also, if there is need for constant application during the entire term there should be less tendency to cram for examination or depend on cheap aids and "made easy" publications

Since it is quite a big change in the present system of examination the university is introducing the new scheme with caution If the experiment is a success, the university may earmark 50% of the total marks to the results of the house test and term examinations

The new system will greatly add to the university's work. This year over 130 000 boys and girls sat for the matriculation examination in the Punjab Their number is likely to increase steadily The university will thus be required to maintain at a time the house test records of nearly 300 000 candidates and organize a large body of educationists to assess them for the purposes of the final result According to the Vice Chancellor Mr A. C Joshi a large staff will have to be appointed to handle the work. It is the enormity of the undertaking which is preventing the university from extending the system to the Intermediate and degree examinations

Under the new system, the practice of candidates appearing privately will be discouraged Exceptions will however be made in the case of women candidates as the number of girls school is still inadequate

COIR INDUSTRY IN INDIA

A sum of Rs 1 crore was originally provided in the Second Five Year Plan for schemes for development of coir industry—Rs 30 lakhs for direct Central schemes, to be implemented by the Coir Board, and Rs 70 lakhs for schemes to be implemented by the coconut producing States

In view of the importance of coir industry as a foreign exchange earner the Government of India have now enhanced the overall allocation for development of the industry for the Second Plan period to Rs 170 lakhs The allocation of the State schemes has been increased from Rs 70 lakhs to Rs, 140 lakhs

The total exports of coir goods from the Indian ports during the last year stood as 35 370 tons valued at Rs 4 20 crores The figures for 1956 were 36,867 tons valued at Rs 4 21 crores

The Government of India have sanctioned a scheme of the Coir Board for establishment of a Coir Research Institute near Allepey and a Branch Institute in Calcutta, at the total cost of Rs 20 28 lakhs during the Second Plan period

The Coir Board has taken part in four exhibitions in India and five exhibitions in foreign countries and won several prizes for decoration and display of coir goods As a result of this the Board has been receiving several enquiries from both internal and foreign dealers which are being promptly attended to by the Board.

The Board has sold coir goods worth Rs 54 579 till the end of November, 1957, through its showroom cum sales depot in New Delhi which was opened towards the end of 1955 A mobile propaganda van has also been supplied to the showroom for publicising the coir goods in Delhi areas

The Board proposes to open three more showroom-cum sales depots at Calcutta Bombay and Madras during the current financial year Provision has also been made for the opening of two showroom-cum sales depots during 1958 59, one each at Bangalore and Jullundur

TWO KINDS OF DISCONTENT

There are two kinds of discontent in this world the discontent that works and the discontent that wrings its hands The first gets what it wants and the second loses what it had There is no cure for the first but success, and there is no cure at all for the second.

—*Elbert Hubbard*

LETTERS to the EDITOR

Letters from the readers giving their own opinion or point of view on all interesting subjects are published in these columns. Letters should be brief to the point, neatly typed, double space They may be written under a pseudonym, but must be accompanied by writer's name and address. The views expressed here do not necessarily reflect editorial opinion or policy

ENGLISH VS HINDI

Sir

A number of views for and against English as the Lingua Franca have appeared in these columns of your Magazine May we, too avail ourselves of the opportunity offered by you? We know that English has been and will be the vehicle of thought and expression among different nations of the world English, we hope will maintain its importance in international affairs for an indefinite time Without English we are helpless outside India No language other than English can help us to broaden the horizon of our knowledge specially of the scientific achievements of the present day world It is through English that most of the nations express their own views on world politics. So without prejudice we must recognise its importance And here lies the necessity of learning English We must not neglect it. On the contrary it should be given the top priority in the syllabuses of our secondary schools and colleges.

Some people say that we are still mentally slaves as we are continuing English as the official language. But unfortunately their argument has no a leg to stand upon. Their suggestion is to drive out English They do no consider the difficulty that our future generation will face in international affairs.

Of course we should never over look the need of national language in a democratic country like India It is the best medium through which we can unite our country But it will be a great injustice to the non-Hindi speaking people if we accept Hindi at this present juncture. No doubt Hindi is essential [illegible] for unification of our country and English is for tightening the bond of friendship with other nations So, all possible efforts should be made to develop Hindi among the non Hindi speaking people and at the same time English must not be neglected.

Our humble opinion is that English should continue in India for some decades more until Hindi attains the status of a lingua franca throughout India—from Kashmir to Kerala and Rajkot to Assam And this is we think the crux of the views expressed by some men of high calibre like Rajaji and Gen Cariappa We, with all our heart and sense support their views

Yours etc.

FUTURE DESTINY OF MANKIND

Sir

Mankind to-day stands uneasily poised on the brink of a volcano which may erupt at any moment and its fury may spell ruin and destruction It is on the verge of a precipice Either there will be death and disaster or life and hope Either the world will settle down in peace or blow up in flames

The reasons responsible for such a posture may be epitomised as the menace of atomic war, allegations and counter allegations between power blocs so called 'cold war' tension. Humanity is living under the spectre of an atomic war The technological development in science and production of nuclear weapons have also added to the present tension.

The progress in science is the most splendid achievement of mankind and a boon if the phenomena of its literature is [illegible] to right and peaceful channels The destiny of mankind depends largely on the right use of science The war in the present context would mean cataclysm and annihilation of human race At the present moment in the world history the issue that faces mankind, is no

longer between peace and war, but is between existence and extinction

Secondly the destiny of mankind has been challenged by the cold war tension created by two rival power blocs—U S.A and U S S R The spectre of atomic war and world conflagration is the outcome of these two rival blocs The communists are out to destroy capitalism just as capitalists are determined to annihilate communism

Thus to save mankind from catastrophe of a global war it is exigent to preach dictum like 'live and let live and international brotherhood A and H bombs and other nuclear tests should be banned The hands of U N O should be strengthend to spread gospel of peace throughout the world and promote attitude of compromise co-existence and spirit of tolerance The principles of Panch shila as enunciated by our Prime Minister can be of immense to help reduce fear suspicion and mistrust

Bombay — Yours etc

* * *

EFFECTS OF STRONTIUM 90

Sir,

Strontium 90 which has a life of about 30 years and which is produced by explosions of atomic and hydrogen bombs is carried along in the high levels of the atmosphere which revolves round the earth It falls slowly and continually to the earth with dust and rain and comes to rest on vegetation Man and domestic animals eat these plants and their organism will thus absorb the strontium which is harmful because of its radiations Even milk would contain the radio active substance If experiments are not stopped, the amount of strontium affecting men and particularly young children who are growing will certainly reach a level sufficient to cause numerous bone cancers and leukamias

Many people are indifferent thinking that they are sheltered from the effects of experimental explosions becaus they are far from the sites of these explosions They are making a mistake A great danger weighs on each one of us and on our descendants, if the experimental explosions of nuclear weapons are not stopped immediately

Yours etc
Bulandshahr — D K Tomar

PAKISTANI FIRING ON INDIAN BORDER

Sir

The recent indiscriminate and unprovoked firing of Pakistani troops along Sylhet Cacher border and neighbouring Indian territories has created a feeling of anxiety and fear among Indians living near the border Unsuccessful in their s botage and conspiracy in Kashmir Paskistan h s changed its tactics and started firing on the Indian border Further, Pakistan has started mobilising her troops along our border Pakistani troops heavily equipped with modern weapons are brought from West Pakistan to this area

But it is a matter of great regret that Union government is silent on this issue though the area of Pakistani firing is increasing everyday Despite the assurances gievn by Assam s Chief Minister, Sri Chaliha no effective step has been taken to stop this Pakistani nonsense While Pakistan has collected a vast army in the area with modern arms we have sent there a handful of border police Government must tackle the situation very seriously and cautiously army must take control of the situation immediately and restore peace and security in that area Any delay or negligence on the part of the Union Government will seriously threaten the peace security and integrity of our country

Government of India must know that sending protests to the irresponsible Pakistan Government will be ineffective and she must answer back *bullet* for *bullet*. Government of India must follow the policy of firmness and not of appeasement towards the Pakistan Government.

Yours etc

VIEWS ON DEMOCRACY

Sir

Democracy is a form of Government where imperialism is out of place Democracy aims for individual equality irrespective of caste creed colour or religion It views the masses as one common fraternity The modern era is an era of democracy, all over the world Freedom of thought speech and action is th birth right of every individual born under the sun It is regrettable that we in India have not yet comprehended the aims and ideals of our independence and democracy Individual equality has no place in our country We are still clinging

to the habits and customs of the ancient times We are still under rating individual equality by adhering to the caste system. In addition to caste system, there is the evil of untouchability Of what earthly use are prayer meetings, or hymns sung when we look upon our fellow beings with contempt because of their low caste ? A man is the image of God Our democracy can be successful only when the caste system and evil of untouchability are eliminated

Ahmadabad Yours etc.

HANDLOOM INDUSTRY IN INDI[A]

There are over 28 lakhs of loom[s] India.

Each loom provides employment to [illegible] three persons at various stages : prepar[atory] process weaving and marketing Abo[ut] lakhs of people are thus employed in [the] industry About the same number of p[eople] are employed in all the other industrie[s] the country put together

Handlooms produce yearly more [than] 1,500 million yards—roughly one-thi[rd] the total mill production Certain vari[eties] of cloth have been reserved for the handl[oom] sector such as coloured sarees, dhoties [with] half an inch border towels bed sh[eets] himroos lungies, table cloths, turkish to[wels] napkins, etc

The production of handloom cloth [has] doubled in the course of last seven years

The target of production at the end of [the] Second Five Year Plan period is 2,[illegible] million yards—about 700 million yards [over] and above the present production.

More than 5 000 co-operative socie[ties] have come up already and they have 10 l[akhs] of looms in their fold

There are 1 450 co-operative marketi[ng] emporia in the country of which 22 [are] inter-State emporia There are 36 mobi[le] vans selling handloom cloth in rural areas [in] different parts of the country

Handloom exports earn about 8 crores [in] foreign currency a year Our importa[nt] traditional export markets are Ceylon, Sin[ga]pore and Nigeria (West Africa) Th[ere] are Government sponsored emporia in Ceyl[on], Singapur Aden, Bangkok and Rango[on]. There is now demand for handloom fabr[ics] from Americas West Germany and ot[her] Western countries

A Handlooms Fabrics Marketing Socie[ty] has been established to promote inter-St[ate] and export marketing for the handlo[om] fabrics.

FILM WORLD

Cinema Popular in Delhi

The cinema is still the most popular means of entertainment in the Capital of India This is reflected by the increase in revenues from entertainment tax during 1957 58 The yield from this source was Rs 35 38 908 during 1957 58 as against Rs 34 29 560 collected during the preceding year

This increase in revenue was registered despite the fact that the local cinemas were closed for more than a fortnight during June last year when the city was in the grip of influenza epidemic.

At present there are 34 permanent cinemas and one temporary all over Delhi In 300 cases the tax was levied under the provisions of the U P Entertainment and Betting Tax Act Betting tax fetched a revenue of Rs 3 28 372 which showed an increase of about Rs 21 000 over the collections of the preceding year A wholetime officer is responsible for the enforcement of the Cinematograph Act and the U P Entertainment and Betting Tax Act 1937 as extended to Delhi Ten cases involving violation of the provisions of the Acts were sent to the court during the year

Hollywood s Offer to Ex Queen Soraya

Hollywood is bidding anew for ex Queen Soraya s autobiography

Producer Philip Waxman is said to be prepared to give her a £90 000 contract if she will star in a film depicting her life story

Waxman sent a letter to Bermuda where the ex Queen is now staying at a secluded holiday cottage saying that her broken marriage had aroused the sympathy and understanding of the world

He added ' Not only is yours a fine dramatic story but also it would create understanding and goodwill for the Iranian people Your photographs evidence your beauty A young woman with your education and experience in public life must have many of the talents required for acting

Have you ever considered a screen career? This letter may kindle thinking

Waxman assured ex Queen Soraya that the film would be produced in excellent taste but so far the ex Queen has not reacted

World Film Conference

Representatives from every film making nation are being invited to a conference at Edinburgh in September during the 12th International Film Festival there.

Producers directors, film writers, distributors, exhibitors and critics are being asked to join in two days of discussion ranging over the future of the cinema as an art and as entertainment

The conference is planned at a time when the cinema faces an exciting stage in its history Television social habits and new techniques are changing in varying degree the pattern of film production and presentation

The 1958 Film Festival from august 24, to September 14 promises the organisers say, to be the most outstanding film season yet presented in Edinburgh Significant new films entered from all over the world will seek the certificates which place Edinburgh s valued seal of merit upon Festival acceptances

Last year films were shown from 34 countries

* * *

Cinema Attendance falls in U.S A

Average weekly cinema attendances in America have fallen from 90 million to 46½ million in the ten years after 1946 according to a survey prepared for the American Federation of Labour Film Council by Dr Irving Bernstein Americans paid just over £463 million to see films in 1956 compared with more than £600 million 10 years earlier

Pat Somerst president of the Federation has urged the diversion of a percentage of taxes on admissions to help finance domestic film production as is done in Britain with help from the Government in negotiating reasonable regulations on earnings remittances. He has also recommended continued agitation for the modification of tax regul tions which discourage domestic film production

The survey shows that, during the 10 years under review the combined earnings of the 10 film companies dropped from £ 43 million to £ 11½ million

Best Film Drama

The screen writers branch of the Writers Guild of America in Hollywood voted "12

to the habits and customs of the ancient times We are still under rating individual equality by adhering to the caste system In addition to caste system there is the evil of untouchability Of what earthly use are prayer meetings, or hymns sung when we look upon our fellow beings with contempt because of their low caste ? A man is the image of God Our democracy can be successful only when the caste system and evil of untouchability are eliminated.

HALLDOR LAXNESS

Sir,

In the April 1958 issue of Careers & Courses (pp 43) Halldor Laxness is included in the list of Nobel Prize winners for Medicine and Physiology But I wish to point out that it was the Nobel Priz for Literature (1955) that he won.

Ranchi   Yours etc.
10-5-58   Debdas Banerjea.

(We regret the error and thank you for bringing it to our notice—Ed C & C')

AN INSTRUCTIVE MAGAZINE

Sir

I am a monthly purchaser of your magazine and I appreciate it immensely It is true, as has been observed before by numerous readers that *Careers & Courses* is the only enlightening magazine which drives us through knowledge and philosophy Nothing needs to be said more about such an elegant journal. It is indeed unique

I like your instructive magazine very much.

Shillong   Yours etc.
6 6 58   B Singh Parmar

SPORTSMAN SPIRIT

Sir

I always read your journal with care interest and profit It is commendable that like a true journalist you never hesitate to accept, regret and amend your mistakes. That is a sports man spirit ! But can you not expunge these slipshods and make the valuable magazine more authentic ? I am sure you can, and you will !

New Delhi   Yours etc.

HANDLOOM INDUSTRY IN INDIA

There are over 28 lakhs of looms [illegible] India.

Each loom provides employment to [illegible] three persons at various stages preparing process weaving and marketing About [illegible] lakhs of people are thus employed in th[illegible] industry About the same number of people are employed in all the other industries [illegible] the country put together

Handlooms produce yearly more tha[illegible] 1 500 million yards—roughly one-third of the total mill production Certain varieties of cloth have been reserved for the handloom sector such as coloured sarees dhoties with half an inch border towels bed sheets, *himroos lungies, table cloths, turkish towels,* napkins, etc

The production of handloom cloth has doubled in the course of last seven years.

The target of production at the end of the Second Five Year Plan period is 2,200 million yards—about 700 million yards over and above the present production.

More than 5 000 co-operative societies have come up already and they have *10 lakhs* of looms in their fold

There are 1 450 co-operative marketing emporia in the country of which 21 are inter-State emporia. There are 36 mobile vans selling handloom cloth in rural areas in different parts of the country.

Handloom exports earn about 8 crores of foreign currency a year Our important traditional export markets are Ceylon, Singapore and Nigeria (West Africa) There are Government sponsored emporia in Ceylon, Singapur Aden Bangkok and Rangoon. There is now demand for handloom fabrics, from Americas, West Germany and other Western countries.

A Handlooms Fabrics Marketing Society has been established to promote inter-State and export marketing for the handloom fabrics.

One World Award

Producer Sam Spiegel has been named winner of the One World Award" for 1957 for Columbia's 'The Bridge On The River Kwai.

The One World Council which makes the Award is an organisation founded to form and cultivate a climate of opinion in which men of goodwill can work together for one world

Indian Films for foreign Markets

Indian films can make an entry into the American market if proper promotional efforts are made, according to the Government of India

This conclusion was reached on a perusal of an article published in an American trade publication which proclaimed that the United States had imported 832 films in 1957 Hollywood's own production that year was 270

Out of the 832 films Japan exported 301, Italy 160, Mexico 116 and Britain 93 Other countries were France Germany Greece, Russia, Sweden and Spain

To discuss the issue of breaking into the United States market the biggest film market in the world the Ministry of In formation and Broadcasting of the Govern ment of India held an informal meeting which was attended by leading importers of the country, in New Delhi

BOOK REVIEWS

"RECENT DEVELOPMENTS IN HOUSING *by S C Aggarwal B.A (Hons) Dipl Min Eng (Leeds) Salt Commissioner to Govt of India (Retd) pp 175 Price Rs. 4 80 Published by Jain Book Agency, New Delhi*

Mr Aggarwal, the author, is well known for having written several standard books on Salt, Supply and Housing His book ' Industrial Housing in India published some years ago was a comprehensive compendium of all types of housing p' blic, industrial and rural

As several Housing schemes have been formulated and started since his first book was out, Mr Aggarwal has brought out this new book on housing problems

In the present work the author has narrated the developments that have taken place in India since 1952 53 Details and progress of various schemes such as subsidized Industrial Housing Low Income Group Housing Plantation Labour Housing, and Slum Clearance etc have been given. Difficulties being experienced and practical suggestions to overcome them have also been added Besides the bo k contains general chapters such as Housing Policy Housing Research Town and Country Planning Housing Legislation, Housing Costs Housing Finance Housing Statistics, Housing Organisation (Centre and States) Building Industry Co operative Housing and Summaries of the views of Rent Committees Conferences Panels, and Seminars, on Housing

The book will be most useful to all alike-officials non officials, businessmen industrialists Economists, trade unionists social workers, public men, and it is hoped that it will receive the same appreciation that Industrial Housing in India received

We congratulate the author on having brought out this book at this juncture when this question is in the forefront It is a problem next to food and the future of our industrial and other progress is bo nd up with this question. The book is also available direct from the author Shri S C Aggarwal, 122 Lakshman Chowk Dehra Dun

EVERY MAN'S DICTIONARY OF LITERARY BIOGRAPHY ENGLISH AND AMERICAN *By D C Browning (Published by J M Dent and Sons London E P Dutton & Co Inc New York Price 20 Sh. net pp 752)*

Some years back Everyman s Library published a volume entitled Biographical Dictionary of English Literature . The present volume though written on the same lines is decidedly a substantial improvement over the original one and can rightly be considered as a new reference book for all practical purposes

The book under review presents in a single handy volume 2300 literary biographies The entire range of English and American literature from the beginning to the present day comes under its purview

American literature has made rapid strides in the past half a century In many branches it equals English literature and in some spheres even surpasses it. Hence it is in the fitness of things that American Literature is allowed the due place it deserves in this book Another new feature of the book is the insertion of the day and month as well as the year of each author s birth and death

This timely publication fills a large void in our reference literature and is sure to render remarkable benefit to the journalist the student and the layman alike

* * *

U.S.S.R REFERENCE BOOK *(Published by the Information Dept of U S S R Embassy in India, New Delhi pp 328 Price Rs 2/-)*

This reference book on U.S.S.R. gives a candid and clear picture of the different facets of Soviet life. With the aid of facts, figures and photos this book furnishes a convincing and lucid account of the remarkable progress Soviet Union is making in the various sectors of national life

The preliminary chapter furnishes general information on Soviet Union In the subsequent chapters different aspects are treated in a fairly comprehensive manner Thus we get a good deal of useful information on the national wealth, population state and social system, public organizations, national econo-

my, labour relations health services education, cultural activities scientific achievements, press radio, literature and art physical cul ture, Defence services and religion of modern Russia In addition to this, supplementary data on the different republics of U S S R. are also incorporated in the book. Further, there are four supplements which enlighten the reader on the major events in the history of U S S R. between 1917 and 1957 Metric equivalents for certain old Russian Measures new names of old towns and also the Exchange Rate in roubles of foreign currencies

This book is certainly a major contribution and it serves the purpose of an authentic and reliable reference book on Soviet Union

* * * *

ATOMIC WEAPONS IN WORLD POLITICS *By Sailendra Nath Dhar (Publish ed by Das Gupta & Co (P) Ltd Calcutta 7 pp 234 Price Rs 10/)*

The advent of atomic and thermo nuclear weapons in the arena of world politics has marked a turning point in the international situation It has brought in its train series of complicated and intricate issues and has consequently altered the very texture and tone of current world politics

Prof Sailendra Nath attempts in this book an analysis of the impact of atomic weapons on the current political situation of the world. He lucidly sketches the new developments and changes which have emerged as a consequence of the introduction of atomic weapons and then proceeds to an examination of the prob lems involved in these new changes In the course of his discussion he also offers some suggestions to solve these problems in an effective manner

Prof Nath shows an unusual insight in his approach to the problem With com mendable clarity he has untangled the webs of many a confusing issue and presented a fairly balanced assessment of the current state of affairs in world politics

However the suggestions of the author to solve the dangerous aftermaths of the new developments do not seem to be practicable They are more in the nature of the aspirations of an idealist and hence one is inclined to doubt their utility

All told one can safely regard this book as a major attempt to shed light on a rather confusing and complex issue

TOLERANCE

The highest result of education is tolerance Long ago men fought and died for their faith, but it took ages to teach them the other kind of courage—the courage to recognize the faiths of their brethren and their rights of conscience Tolerance is the first principle of community, it is the spirit which conserves the best that all men think No loss by flood or lightning no destruction of cities and temples by the hostile forces of nature has deprived man of so many noble lives and impulses as those which his intolerance has destroyed.

—Helen Keller

SCIENCE & INVENTION

RESEARCHERS DEVELOP TRANQUILIZERS FOR PLANTS

Researchers of the United States Rubber Company have worked out a chemical tranquilzer very much like those used to curb the emotional ills of human beings The difference is that this is for use on plant life

Plants, like humans suffer from shocks and stresses These shocks may result from heat spells cold snaps, prolonged rains, droughts and other vagaries of nature

Tests show the product works in two ways to increase yields When sprayed on plants during blossoming it helps plants and trees to retain full producing blossoms in the face of poor growing conditions If the plant is only a few weeks old spraying is said to more than double the number of blossoms

Field tests increased lima bean yields up to 90 per cent doubled the quantity of fruit on cherry trees increased by a third the volume of fruits on orange trees and increased cotton yields from 10 to 30 per cent

* * *

GIANT SIZED VEGETABLES

Heads of cabbage about 16 feet in diametre and carrots about 3 3 feet long can be grown by introducing hibberelines a fungi with a great growth stimulating capacity into the soil

Prof Mikhail Shemyakin an authority on organic chemistry said in Moscow that Hibberelines give chemists and biologists unheard of opportunities for a radical reconstruction of agriculture Five grams of fungi strains per hectare is enough to obtain giant sized vegetables Moreover, hibberelines cut the vegetation period from months to weeks thus making it possible to solve the problem of introducing farm crops in both the extreme north and the deserts

* * *

WHY THE SPUTNIK FOLLOWS ITS ORBIT

Why does the Sputnik revolve round the earth along its own independent orbit instead of following the revolution of the planet? Why does the Sputnik accompany our planet in her flight around the sun? Here Professor Kirill Stanyukovich answers the questions

This happens in conformity with the law of the conservation of angular momentum! The centrifugal force of the Sputniks, which were given a speed of 8 000 metres per second when launched in the upper layers of the atmosphere, offset the force of the earth's gravity

A Sputnik will continue to rotate like a top along its orbit until the speed drops If it is launched at an orbit which is set at a certain angle to the equator as was the case with the two Soviet Sputniks, then since the earth itself turns it will fly over different points of our planet

It is known that the period of a satellite's revolution round the earth increases with the distance from the earth If a satellite which flies at an altitude of 1,700 km circles the earth in 96 minutes, the moon which revolves around the earth at a distance of some 400 000 km will take about 4 weeks to go round it Therefore it is apparent that at a certain distance from the earth a Sputnik will revolve round the globe in exactly 24 hours

It has been estimated that to bring this about a Sputnik will have to revolve in the plane of the equator about 35,800 km above the earth. In this case its angular speed will equal the angular speed of the earth and the effect will be that it will seem to hover over one point of the globe In reality the orbit of the Sputnik will coincide with that of earth

As to the question why the Sputnik accompanies the earth in her flight around the sun, the explanation lies in the force of gravity of our planet. Indeed the moon which is a natural satellite also follows the earth in their common orbit around the sun.

AUSTRALIAN SOLAR FURNACE TO TEST METALS

A special solar furnace now being constructed by Australian scientists in the grounds of Sydney University will be used to tests the resistance of metals to temperatures of 3000 to 4 000 degrees centigrade Such tests are highly important for metals needed in the construction of rockets, jet engines and atomic

power plants which are subjected to very high temperatures

The main feature of the Australian solar furnace will be a 65 foot four legged tower which will support a concave paraboloidal mirror 12 feet in diameter This mirror will collect sunlight reflected onto it by another mirror—a heliostat—on the ground. From a small laboratory in the tower the metal or other material to be tested will be lowered in block form to a position where solar heat gathered by the concave mirror above can be concentrated onto a small area of its surface

Scientists hope the furnace will provide a solution to present difficulties in testing metals for heat resistance Conventional furnace methods of testing are dirty as the test material contacts other materials and becomes contaminated, especially if melting occurs Chemical action helps to cause dissolution Metals can be tested under 'clean conditions in high vacuum heating but the method is expensive and involves problems such as escaping gases from the test materials preventing maintenance of a high vacuum

* * *

HEAT RESISTANT SYNTHETIC RUBBER

The National Synthetic Rubber Research Institute in Leningrad have developed a new type of synthetic rubber obtained from oil gases—a very cheap raw material The new rubber is heat resistant and tyres made from synthetic rubber can withstand temperature up to 250 300 degrees centigrade It will be recalled that existing rubber made from natural and synthetic fibres does not stand temperature above 130 degrees

New methods have been developed at the Institute to manufacture varieties of heat resistant rubber which is also immune to various solvents

* * *

CHLOROPHYLL SYNTHETIC ALMOST COMPLETED

Harvard scientist Dr Robert Woodward reports his research team is very close to synthesizing chlorophyll, the green substance in vegetation without which life could not exist. The organic chemist said he and his research team have synthesized a compound approaching chlorophyll It is now only a matter of a short time before the actual green matter of life itself is made by man he says Chlorophyll is the matter which enables plants to take the sun s light and use it to store up energy Dr Woodward s research previously had led to synthetics of such complex compounds as quinine terramycin and strychnine

MICROWAVE DEVICE SEES THROUGH FOG

An electronic device that can 'see the ground from an airplane through fog or clouds has been developed by the Diamond Antenna and Microwave Corporation of Wakefield Massachusetts, in the United States It may be the definitive piece of equipment to permit genuinely blind landings the company says

Called the Eyetron,' the new device sees by means of microwave radio waves These are short waves of extremely high frequency The device converts the waves into visible light, and this enables it to produce pictures of objects on the ground instantaneously and continuously In describing the Eyetron, the company says that it is a revolutionary device that reproduces the vision of the human eye electronically

* * *

NEW USE FOR OLD CHEMICAL

U S investigators have discovered an important medical use for a long known substance a so-called amino sugar which goes by the chemical name of glucosamine This substance has one remarkable property of immediate interest to physicians. Blended with penicillin and other antibiotics, it carries the drugs into the bloodstream faster and keeps them there longer In other words it slows the rate at which the body throws off antibiotics and thus increases the duration and effectiveness of individual doses

* * *

FRESH WATER FROM ANTARCTIC SUNPOWER

Antarctic sun energy is being used to operate a solar still for transforming salt water into fresh by the Australian Expedition at Davis base in Antarctica The still, manufactured by an Australian firm in Victoria, is of extremely simple compact design and can produce small quantities of purified water in any climate or condition at very low cost

It consists of a salt water tank with a capacity of 17 gallons which automatically feeds salt water into a shallow tray of black plastic material over which is placed a conical glass dome As the water evaporates globules form on the inside of the dome run down into a catchment gutter leading to an outlet tube into the fresh water container About two gallons of purified drinking water

are being produced daily by this method at the Australian Antarctic base

The apparatus can be erected and set in operation in 30 minutes and can be packed for dropping by parachute Once erected, the solar still needs no maintenance except occasional cleaning It can be used in all climates since normal daylight is all that is needed to set the process in motion.

NEW SYSTEM OF TRACKING SATELLITES

A better tracking method for directing radar antennae at the moon and man made satellites estimated to be 25 times more precise than previous systems was recently revealed at a meeting of the Institute of Radio Engineers in New York City It functions on punched cards U S Naval Observatory data concerning the moon is first perforated on cards Then the data is relayed to a digital computer which figures where the moon or satellite will be at different moments in relation to the antennae Results of the computer s figurings are kept on magnetic tapes and relayed to another type of calculator an analogue system using a constant stream of positional signals which keep the antenna directed continually and precisely at the moon or satellite

NEW CHEMICAL DISSOLVES BLOOD CLOTS

Blood clots which threaten a person s life can be safely dissolved through shots of a recently discovered chemical U S scientists report It has proved effective in dissipating clots obstructing blood vessels in the legs of 35 patients

Doctors next will use it against clots obstructing arteries carrying blood to the heart Such blockage usually results in coronary diseases

This chemical is a regular part of human and cow blood and is called Plasmin RPMI 10 It reacts against clots less than five days old After that period its application has little or no effectiveness

HELPING DWARFED CHILDREN GROW

A hormone taken from the brains of deceased persons is enabling some dwarfed children to grow U S medical authorities report A 13 year old girl whose height was only that of a six year old girl gained nearly an inch after a six week period of taking only a ten-thousandth of an ounce (only 0028 gram) of the developmental hormone each day Her growth had ceased when a tumour damaged the pituitary gland in the brain which generates maturing hormones

Two other youngsters of the same age, similarly afflicted are also profiting from treatment according to Dr Philip H Henneman of the Massachusetts General Hospital and Harvard University Medical School

The hormone is derived from the pituitary glands of deceased persons and is purified into gray powder It also serves to hasten the burning of fat in the body according to Dr Henneman who believes it might be able to combat excess fat and atherosclerosis a fatty obstruction of the arteries which causes heart attacks

X RAYS ON OPERATION TABLE

A new X ray machine which can make films safely while the patient is on the operating table has been developed by the U S Veterans Administration The new machine will allow doctors to reduce the time necessary for pre surgery X ray diagnosis to about three minutes in critical cases The film can be developed with a Polaroid process and interpreted so quickly that the operation can get underway in a minute and a half Formerly X ray apparatus had to be used carefully in presence of explosive anesthetics and a much longer time was needed to process the X ray plates

NEW TOMATO POWDER

A new tomato powder—a superior product for preparing sauce soup juice and dry prepared mixes—is ready for commercial preparation and placing on the U.S retail market The powder mixes readily with water Packaged to keep its moisture content low it keeps its quality under severe storage conditions The new product climaxes several years of research and testing at the Western Utilisation Research and Development Laboratories of the U S Department of Agriculture at Albany California

TEETH TRANSPLANTING

A Harvard dental school surgeon has demonstrated here the transplantation of human teeth from one part of the jaw to another. Dr Walter C Guralnick showed members of the Dental Alumni Association transplanted teeth in teenagers jaws as hard as rocks The four youths were among 40 young patients who have had such transplants he said. In these operations Dr Guralnick took out teeth that had not yet emerged from the gums The extracted tooth is placed in

PEOPLE IN THE NEWS

GEN DE GAULLE

Gen Charles Andre Joseph Marie de Gaulle the new Premier of France, was born at Lille on November 22 1890

His parents were Henri de Gaulle and Jeanne Maillot—Delannoy

Gen de Gaulle entered the French Military Academy of Saint Cyre where he was gazetted a Second Lieutenant in 1911

He was wounded three times in World War II at Champigne and at Verdun He was mentioned in despatches several times

He was taken prisoner in 1916 and remained in German hands until the Armistice in 1918 despite five daring attempts at escape

Later he became Professor of Military History at St Cyre

He became a member of Marshal Petain s Staff and served in Syria from 1929 to 1932 afterwards serving on the Secretariat General of France s National Defence Council

The outbreak of World War II found him a Colonel commanding a tank brigade where he put into operation some advanced ideas on mechanised warfare.

On the collapse of France Gen de Gaulle refused to surrender He made a hair's breath escape to England with the assistance of General Sir Edward Spears who head d a British mission to contact him and to set up headquarters for th Free French fighting forces in London with the double armed ' Cross of Lorraine a their badge

After commanding the forces until 1943 General de Gaulle was successfully head of the French Provisional Government in 1944 to 1945 and head of the Government and head of the armies until 1946

When the new Constitution setting up France s Fourth Republic came into operation Gen de Gaulle refused to ally himself with any of the existing political parties but founded the ' French Peoples Rally in 1947 in opposition to the political left wing

After 1953 the Rally took no part in parliamentary life but General de Gaulle has continued to express his patriotic political views in such publications as I Appeal

A devout Christian Gen de Gaulle has powerful enemies among anti-clerical and international influences which have long been a background force in French politics and finance

He married in 1921 Mademoiselle Yvonne Vendroux

They have one son and one daughter

DHONDO KESHAV KARVE

On Friday April 18 1958 India paid homage to Dr D K Karve on the date of the centenary of his birth

Dhondo Keshav Karve was born on April 18 1858 at Sheravali in Bombay State in the house of his maternal grand father Kesopant Paranjpye He was the second son and the fifth issue of Kesopant and Lakshmibai Karve The Karves who were Chitpavan Brahmins had their ancestral home at Murud in the Ratnagiri district of South Konkan In the pursuit of further education, Dhondo after continual and early struggle against adversity arrived in Bombay and embarked upon the life of a poor student He lived frugally gave tuitions won scholarships until in 1885 he graduated from Elphinstone College Bomba

The austere and frugal mode of existence was to continue after Karve became a teacher at the Maratha High School Bombay, which was run by Rajaramshastri Bhagwati Such also had been the New English School started by Bal Gangadhar Tilak and Gopal Ganesh Agarkar in Poona a few years earli r On a meagre salary Karve had to support his wife Radhabai whom he had married at an early age and his young son Raghunath The early death of Radhabai worn out by continual hardships, left Karve disconsolate In this mood, he welcomed the chance to leave Bombay and accepted an offer from Gopal Krishna Gokhale to join Fergusson College at Poona as Professor of Mathematics This college had been founded in 1885 by Tilak and Agarkar and here Karve was to teach from 1891 to 1914

The cause of the remarriage of widows had been initiated in Maharashtra by Vishnu Shastri Pandit in the 1860s Karve was aware

that although forty years had passed since the Widow Remarriage Act in 1856, it had proved ineffective in combating age-old prejudices Karve struck a blow in the cause of widow remarriage when on March 9 1893, he married Godubai, the widowed sister of his friend Nathar Balkrishna Joshi Godubai had been married at eight had been widowed three months later and had, after years of suffering been helped by her brother to enter the Sharada Sadan run by Pandita Ramabai at Bombay In fact, Godubai was the first student to be admitted to this institution Anandibai or Baya as she came to be called later was twenty seven years old at the time of her remarriage.

Stoically the Karves met the inevitable social opposition and the ostracism imposed upon them by an outraged society Karve had never waited for public approval and he was sustained in his efforts by the support of a few loyal friends Anandibai however in her autobiography *Maze Puran* has revealed the humiliations and the ridicule that was heaped upon them everywhere At Murud visiting his elder brother Dada Karve and his wife had to stay in a stable outside the family house lest the excommunication be extended to his brother Baya was to stand by the side of her husband in all his struggles until her death in November 1950

In 1893 at Wardha, Karve helped to found the Widow Remarriage Association Three years later, with the co-operation of fifteen friends, he formed the Anath Balikashram Association. In an attempt to tackle the twin problems of the education of women and the remarriage of widows Karve established in 1900 the Anath Balikashram at Hingne, a place roughly four miles from Poona The little hut housed eleven inmates eight of whom were widows

Karve believed in the potency of education for the success of reform There were also at this stage many widows who although irrevocably opposed to the idea of a second marriage were sincerely anxious to receive education Karve realized that a greater cause would be served if priority were given to the education of women and of widows rather than to their remarriage.

In 1907, Karve founded the Mahila Vidyalaya, considered a landmark in modern education for Maharashtrian women. In 1908 however he tried the experiment of instilling among the social workers a missionary zeal and of imposing upon them a more uncompromising ideal On November 4 of that year was founded the Nishkam Karma Math The follower had to take a vow of social service, to renounce all claims and rights to what he called his own The provision made by the Math for him and his family was to be willingly accepted

Karve retired from Fergusson College in 1914 and thereafter devoted his energies to the concept of a women s university in Maharashtra There was something irresistible about his intensity, his singleness of purpose and his enthusiasm On July 6 1916 a college for women was opened with Karve as its Principal, now sixty years old The Indian Women s University established at Hingne was dignified by Dr Ramkrishna Gopal Bhandarkar as its Chancellor and by Dr R. P Paranjpye, Karve s cousin as the Vice-Chancellor

Following the donation of Rs 15 000 000 by Shri Vithaldas Thackersey, the University was renamed "Shrimati Nathibai Damodar Thackersey Women s University, commonly referred to as S N.D T Undaunted and seventy years old, Karve now undertook a journey abroad to collect funds for the University For fifteen months he toured the countries of the West and was handsomely rewarded with donations

During this period the utter lack of facilities for general education among villagers impelled Karve to establish the Maharashtra Village Primary Education Society This society was to dedicate itself to the launching of schools in villages In the cause of social equality, Karve began a renewed attack upon Hindu caste system and followed it up by the foundation in 1948 of the Caste Abolition Society In 1953, the first session of the revived Social Reform Conference was inaugurated by him at Poona Karve s endeavours were being met with enthusiastic approval Various universities honoured him with Doctorate—Banaras, Poona Bombay and his own university He received Padma Vibhushan in 1955 and finally on January 26, 1958, was awarded Bharat Ratna, the highest decoration in the country

PANDITA RAMABAI

Pandita Ramabai, the centenary of whose birth was celebrated on April 23 last is one of the most remarkable women that India has produced in modern times She was one who emancipated herself from the age-old slavery of custom and convention and who is reckoned today as a pioneer of women s education and social reform

Born in a strict orthodox family in a Mangalore village her father Ananta Shastry a Mahratta Brahman was an eminent Sanskrit scholar Her mother Lakshmibai who stood as an embodiment of typical Indian woman hood learnt Sanskrit from her husband While very young Ramabai learnt Sanskrit from her parents and when she was barely 12 years old she would recite very fluently as many as 20 000 sacred verses in Sanskrit and it is no wonder that in later years she was rightly honoured with the coveted title of *Pandita* Then she acquired a good knowledge of Marathi and later in her travels to various places, she picked up Canarese Bengali Hinduatani and English.

Her life was one of domestic unhappiness which she bore with remarkable fortitude When she was very young the village in which she lived and the surrounding areas were in the grip of a revere famine Ananta Shastry though he was not in affluent circum stances was known for his generous impulses and after giving away what he had to the distressed people accompanied by his wife Lakshmibai his son Srinivas and his daughter Ramabai, left the village and wandered from place to place visiting sacred temples on the way Too much physical strain caused by incessant travel and privation had an adverse effect on his health, hastening his death. Very soon, his devoted wife followed her husband, leaving Srinivas and Ramabai to their fate It is said that for three years the party wandered about 4 000 miles on foot

Both the brother and the sister came to Calcutta in 1878 where she created a profound impression on the public by her lectures on the emancipation of Indian women Every where she spoke strongly in defence of Indian women condemning in unequivocal terms early marriages and the plight of widows In support of her views she quoted extensively in Sanskrit from the Hindu shastras In Cal cutta, she was honoured with the title of Saraswati by an assembly of Sanskrit scholars and from this time she was universally known as Pandita Ramabai

Here too misfortune dogged her at every turn Her brother died leaving Ramabai all alone in the wide world Nearly six months after his death she married a Bengali lawyer belonging to a Shudra caste a social reformer and a great friend of her brother named Babu Bipin Bihari Dass Medhavi For breaking caste she was ridiculed and slandered by the orthodox sections of the Hindus Her married life though happy was short and within two years of her marriage, her husband died of cholera and again she was left alone except for a tender daughter Manorama by name

Leaving Calcutta she came to Poona where she was cordially received by many leading Maharashtrian social reformers like Ranade Kelkar Karve and others who strongly supported her cause With their support she started a society for women called 'The Arya Mahila Samaj, branches of which were founded in various centres Appearing before the English Education Commission in 1882, she strongly pleaded for the education of women

In 1882 she brought out a book called *Stridharma Niti* in which she clearly enunciat ed the duties and responsibilies of Indian women in their everyday life Feeling the handicap of not knowing perfect English Ramabai sailed for England in 1883 where she received instructions from the Sisters of Wantage and Miss Belle Principal of the Cheltenham Ladies College In the latter part of 1883, she was initiated into Christianity During her stay in England she espoused the cause of the Indian women and agitated for their rights and liberties

In 1886 she visited America where she was cordially received by the public wherever she went In her new book *The High Caste Hindu Women* she exposed many of the wrongs meted out to Indian women and eloquently pleaded for the abolition of *sati* and various other disabilities of Indian women

Returning to India in 1889 she opened her first home for widows known as Sha rada Sadan in Bomby which gave protection to many Brahman widows In 1890 this organization was shifted to Poona and housed in a new building In 1896 the terrible famine which swept the land gave her an opportunity to render social service to the afflicted Unmindful of her own comforts she visited the famine areas and snatched hundreds of girls and widows from the jaws of death and brought them to the home called '*Mukti*' in Khedgaon Here she started various departments in the interest of the rescued people such as paint ing weaving basket making and organized a children's school and a home for the deform ed and mentally afflicted. The Government of India recognised Ramabai's work by the presentation to her in 1919 of the *Kaiser-i-Hind* gold medal Another severe famine again brought her to the rescue of thousands of famished women Before her death on

April 5 1922 she had the misfortune to lose her beloved daughter Manorama who had heartily co-operated with her in all her varied activities The organizations founded by her are working efficiently and stand as a monument to her selfless love and regard for helpless women and children

SIR JADUNATH SARKAR

In passing away on May 19 1958 of Sir Jadunath Sarkar India has lost one of its most distinguished historians and a man of letters of great eminence Born in 1870 Sir Jadunath had his education in India At the University he was a brilliant student He took the M A degree in English in the first division and was the recipient of the Prem Chand Roy Chand studentship Later he turned to history and by his assiduous industry and devotion he rose to a position of great eminence In early life he entered the educational service and was appointed a Professor in the Ravenshaw College Cuttack. Later he went to the Patna College in Bihar where he remained for many years as the Head of the Department of History in the Indian Education Service It was here that he began his researches in Mughal history and wrote the *History of Aurangzeb* in five volumes

Prof Sarkar's small text book on Indian economics made him better known to students than the volumes on 17th century His grasp of Persian helped him to make the best of his chosen field and his Meyer lectures in Madras on India through the ages revealed that he could attempt synoptic view gracefully

After retirement he became Vice-Chancellor of Calcutta University picked for the post as an eminent alumnus who had developed higher education in both Cuttack and Patna during his service under the Government He certainly helped D S N Sen to continue his own keen study of the Maratha power and in the post freedom period he brought to bear a keen and well filled mind on current problems developing on the whole, an optimistic view The learned societies to which he gave support by his researches accorded ample recognition to his intellect and industry The effective organisation of India's records also owes much to his scholarly skill in dealing with State papers

SPUTNIK II BURNT DOWN

The Second Soviet Sputnik placed in the orbit on November 3 1957 entered the denser layers of the atmosphere in the morning of April 14 disintegrated and burnt away According to the information on hand its fragments were dispersed along a line running in the south eastern direction over the Lesser Antilles Brazil and the Atlantic ocean

Gradually lowering down in the upper layers of the atmosphere the Sputnik had changed the parameters of its orbit (apogee, period of revolution etc) during its more than five months existence

Observation of these changes and analysis of the extensive materials about the Sputnik's parametres yielded new valuable data on the thickness of the upper strata of the atmosphere

Sputnik II was used to carry out an extensive programme of special scientific measurements necessary for the study of the earth's ionosphere measurement of cosmic particles, propagation of radio waves and for the [illegible] solution of some other geophysical problems

In addition to scientific instruments on the Sputnik carried a special container holding a test animal—Laika—which permitted to observe the behaviour of a living organism in conditions of a cosmic flight

A wide range of various Soviet organizations was enlisted for observations and the scientific analysis of the obtained results Very valuable also were the data received from numerous foreign observers

During its existence Sputnik II had completed some 2 370 revolutions around the globe and travelled more than 100 million kilometres It repeatedly passed over all the main inhabited localities of our planet which was ensured by the big angle of its orbit which was 65 degrees to the earth's equatorial plane The angle of the Soviet Sputnik's orbit made possible its tracking practically from all the inhabited parts of the globe The Sputnik's [illegible] permitted all the population of the world to see it with the unaided eye

Foreign Events

INSURRECTION IN LEBANON

Serious anti government disturbances involving heavy loss of life broke out in the Lebanon during the second week of May originating in Tripoli and spreading to Beirut Sidon and the northern and north eastern areas near the Syrian border The disturbances were fomented primarily by Moslem opponents of the Government's pro Western policy and sympathizers of President Nasser and the United Arab Republic aided by infiltrators who crossed the border from Syria and attacked Lebanese frontier Western posts (Generally speaking the pro-Western policy of President Chamoun and M Sami Solh is supported by the Lebanese Christians but opposed by considerable sections of the Moslem population—notably the Sunni Moslems one of whose principal strongholds is Tripoli) A secondary cause of the disorders was the apparent fear of Opposition groups that the Government might introduce constitutional amendments to enable President Chamoun to stand for a second term of office An additional complication arose from the outbreak of fighting between pro government and anti government Druse tribesmen in the south eastern Lebanon

The disturbances began after the murder on May 8 of a newspaper proprietor (M Nassib Matni) who had campaigned strongly against the pro Western policy of M Sami Solh's Government and in support of the United Arab Republic. In Tripoli—a nationalist stronghold—various Opposition groups called an immediate general strike in protest against the murder of M Matni leading to clashes with the police on May 9 in which 40 people were injured On May 10-11 Tripoli was the scene of serious rioting in which 16 people were killed and over 100 injured the demonstrators erected street barricades publicly displayed portraits of President Nasser wrecked the library of the U S Information Service and left it ablaze and smashed a number of business premises in addition the city's hydro electric plant was put out of action by a bomb explosion temporarily depriving Tripoli of electric light

The disorders spread on May 12 to Beirut where bomb explosions occurred in different parts of the city (one near the Presidential palace) and serious clashes took place between rioters and the police in which several people were killed and about 20 injured As in Tripoli the mob attacked the premises of the U S Information Service breaking through a police cordon, throwing books and furniture into the street and setting the library ablaze Anti American demonstrations also took place near the U S Embassy and stones were thrown at a bus-load of American citizens being driven to Beirut airport

Further bomb outrages occurred in Beirut on May 13 in which Captain Shebab (a nephew of the Lebanese C in C General Shebab) was killed when a grenade was thrown into his car and on May 15 when six people were killed and 50 injured and in the worst incident a bomb was thrown from a lorry into a crowded restaurant killing four people and wounding 35 Outside the capital minor disturbances took place at Tyre and Sidon and the Iraq Petroleum Company's pipeline was sabotaged near the Syrian border (the damage was repaired three days later)

The Lebanese Government announced on May 12 that the Belgian Consul General in Damascus (M Louis de San) had been arrested on the Syrian border while trying to cross into the Lebanon in a diplomatic car which when examined by Customs officials was allegedly found to contain 33 sub machine guns 28 pistols a timebomb and a large quantity of ammuniton On the following day some 500 armed men from Syria attacked the Customs post where M de San had been arrested—apparently as a reprisal—and killed the six officials on duty before they were driven back across the border by Lebanese troops

Syrian armed bands again crossed the northern Lebanese border on May 15 and attacked frontier posts being engaged by Lebanese troops supported by jet fighters Beirut reports stated that there had been heavy fighting in the northern border area and that 1,000 rioters mostly from Syria were in

control of small airfield north of Tripoli and that the armed forces had repulsed an attempt to storm a Government building at Baalbek It was also announced that a number of infiltrators and saboteurs from Syria had been arrested and expelled

During the next three days reports from Beirut spoke of battles in the mountain areas against rebel bands infiltrators from Syria and dissident Druse tribesmen it was claimed that Lebanese forces supported by tanks armoured cars and aircraft had recaptured the border town of Halba—previously occupied by the insurgents—and were re establishing control in the northern and north eastern areas It was also announced that a mule caravan carrying arms and ammunition from Syria had been attacked and destroyed by Lebanese fighters

In Tripoli fierce street fighting was reported on May 18 after a lull of several days little factual information was available but foreign press correspondents said that the insurgents were fighting from behind barricades and offering desperate resistance to Lebanese troops engaged in mopping up rebel strongholds Further bomb explosions were reported from Beirut, and a curfew was imposed at Sidon after two tank lorries of the (American) Aramco Oil Company had been set on fire by demonstrators

Fighting had meanwhile broken out in the mountains south east of Beirut between rival forces of Druse tribesmen—some supporting the Druse leader Kamal Jumblatt, who is opposed to the Government and others supporting the Emir Majid Arslan, Minister of Defence in the Government After the dissident tribesmen had unsuccessfully tried to besiege President Chamoun's summer palace at Beit-ed-Din, a truce was concluded on May 18 between Kamal Jumblatt and the Emir Majid Arslan and the rival factions agreed to disperse

The Lebanese Army had taken over security duties in Beirut, Tripoli and other affected centres on May 12, a curfew having previously been imposed in these cities Strategic points Government buildings, and foreign diplomatic missions were strongly guarded by tanks and armoured cars and the streets were patrolled by lorry borne troops

In a press statement on May 13 the Lebanese Foreign Minister (Dr Charles Malik) accused the United Arab Republic of direct responsibility for the disturbances and of "massive interference in Leban[ese] internal affairs After announcing that [a] protest had been made to Cairo, Dr Mal[ik] emphasized that the Government were "abso[-] lutely determined to defend integrity free[-] dom and independence of the Lebanon to the end and would 'not make th[e] slightest concession to those who plan th[e] destruction of the Lebanon

At a press conference in Beirut on May 21 President Chamoun repeated the accusa[-] tions of massive interference by the United Arab Republic in Lebanese affair[s] like Dr Malik he emphasized that the Lebanon was determined never to becom[e] subservient to the United Arab Republic's policy or its orientation It was announced on the following day that Lebanese Govern[-] ment had decided to take its complain[t] against the United Arab Republic to the Security Council

The Lebanese Foreign Office announced on May 21 that a protest had been delivered to the Arab League against U.A R inter[-] ference in Lebanese affairs, and that a[n] immediate session of the League's Council had been requested. It was suggested that this meeting should be held in a neutral centre—either in Benghazi or Khartoum

A spokesman of the U S State Department disclosed on May 14 that the United States was supplying Lebanon with small arms and equipment such as rifles, ammunition, pistols, and tear gas—the stuff you would ordinarily need to suppress a riot After recalling that such equipment had been sent to the Lebanon since 1956 under U.S aid programmes he paid tribute to the 'courageous efforts of the legally con[-] stituted Government of the Lebanon to main[-] tain security and stability and expressed the State Department's hope for the rapid re-establishment of normal conditions. The arms and equipment were flown to the Leba[-] non during the week-end May 17 18, at the urgent request of the Lebanese Government.

It was further announced by the Sta[te] Department on May 16-17 (a) that arrange[-] ments were being made to supply American tanks to the Lebanon in reponse to a request made by the Lebanese Government at the tim[e] of Ambassador Richards mission to the middle East; (b) that consideration would be given to the despatch of U S troops should President Chamoun call for them

because his security forces could not guarantee the protection of American lives and property and (c) that 18 *Globemaster* transport planes each capable of seating 200 persons were being flown from the Donaldson Air Base (South Carolina) to Western Germany and would be available to evacuate U S nationals from the Lebanon if necessary Another 22 *Globemasters* were being held in readiness at the Donaldson base

The *Tass* Agency issued a statement on May 17 saying that U S or other Western intervention in the Lebanese crisis could have serious consequences not only for the future of the Lebanese State and its independence but also for peace in the Middle East. It added that leading circles in the U S S R were "confident that no Power will intervene in the internal affairs of the Lebanon regardless of the form which such interference takes or permit the formation of a dangerous military centre in that area

The British Admiralty stated on May 19 that a NATO naval exercise taking place in the Western Mediterranean had been switched to the Eastern Mediterranean so that British and American warships could be available, if needed, to help in evacuating British and U S nationals from the Lebanon.

Background To understand the complex internal and external forces at work in the Lebanon one must know the facts The Lebanon is an independent Arab country with a population of 1,500 000 Though a small population, it is not homogeneous Half of the population is Christian the rest being Muslims and Druses About 11 per cent of the population are Arab refugees from Palestine The Druses call themselves Muslims, but also believe in the theory of re incarnation There are two sects of the Druses Janablati and Yazbaki These rival religions and sects have led to the convention that the President should always be a Christian and the Prime Minister a Sunni Muslim This ingenious division of power may get perilously tilted. Although, as the 'New York Times says, Lebonon is the most advanced of the Arab nations far ahead of the others in the standard of living literacy and political consciousness and although it is economically prosperous at the moment there is a feudal and tribal basis headed by famous forty families that leads to endless rivalries. To these rivalries have now been added the complexities of international politics The Lebanon became independent in 1943 by getting rid of French control with British help Since then it has managed to maintain peace at home and good relations with foreign countries Peace at home has been maintained by the Lebanese politicians confining their programmes to those that commanded the multipartisan religious support They built up good relations with their Arab neighbours by joining the Arab League in 1945 and taking part in the war against Israel in 1948 From the beginning the Lebanon followed pro-West policies Then came the Egyptian revolution and Col Nasser s policy of positive neutrality This created political split in the country While some Lebanese wanted their country to follow Nasser s policy of neutrality the ruling party wanted to adhere to its pro-Western policy A crisis developed when the Lebanese Government accepted the Eisenhower doctrine Since then differences have waxed furiously Fat was put in the fire when it became known that President Camille Chamoun was getting the constitution changed so that he could run for another six years term of office when his present term expires at the end of the year (The president has decided not to stand for the second term and not to amend the Constitution)

* * *

Russia Launches Third Sputnik

Soviet Sputnik Three was launched under the IGY Programme on May 15 1958 It is designed to study the upper layers of the atmosphere and cosmic space Sputnik Three was orbited at an angle of 65 degrees to the plane of the equator Initial reports placed its apogee 1880 km (1 168 miles) It takes 108 minutes to circuit the earth

It was detached from the carrier rocket which is travelling along a similar orbit

Sputnik Three is in the form of a cone 1 73 metres (5 ft. 8 in) in diametre at the base and 3 57 metres (11ft. 8 5in) in height without the protruding antennae

It weighs 1,327 kilograms (2 925 5 lbs) The weight of the instruments for scientific research the radio measuring apparatus and the sources of electric power aboard weigh 968 kilograms (2,134 lbs).

Instruments are installed in Sputnik Three to study the pressure and composition of the atmosphere in its upper layers the concentration of positive ions the magnitudes of the electric charge of the Sputnik and the tension of the earth s electrostatic field the intensity of the sun s corpuscular radiation; the composition and variation of primary cosmic radiation,

the distribution of the photons and heavy nuclei in cosmic rays micrometeors the temperature in the Sputnik and on its surface

A multichannel telemetering system with a high electivity has been installed on the Sputnik to transmit the data to recording stations on the earth The Sputnik is equipped with special transmitting devices which allow the measurement of the coordinates of its trajectory

With the aim of enlisting broad scientific circles in the observation of Soviet Sputnik Three a radio-transmitter has been installed in it which constantly emits powerful telegraph beats on a frequency of 20 005 megacycles lasting 150-300 milliseconds A programme device controls the operation of the scientific and radiotechnical instruments aboard the Sputnik Apart from electrochemical batteries the Sputnik is equipped with solar batteries

A themoregulating system which with the aid of special devices changes the coefficient of radiation and reflection of the Sputnik's surface serves to ensure a temperature regimen for the normal operation of the apparatus on board

The data on the Sputnik's coordinates received by the radar stations are processed automatically reduced to a standard astronomic time and transmitted by communication lines to a coordinating and calculating centre The measurements received by the calculating centre from the various stations are automatically fed into high speed electronic computers which determine the basic parametres of the Sputnik's orbit and the calculation of its ethemerides

The third Soviet Sputnik will measure, for the first time the intensity of the earth's magnetic field. The measurements will provide information about the structure of the outer fringe of the geomagnetic field and the distribution of electric currents in the ionosphere and upper atmosphere It is important to know this structure inasmuch as the distribution of the magnetic field affects the movement of the corpuscular streams approaching the earth from the sun and the variation of cosmic rays The Sputnik's study of the earth's magnetic field will clear up the picture of the distribution of force line of the geomagnetic field and check the hypothesis of the deformation and distortion of the earth's magnetic field in the upper atmosphere

Also the Sputnik will study micrometeors penetrating the earth's atmosphere from outer space. This is of great importance for science and for the solution of one of the practical tasks of the near future that of ensuring the safety of cosmic ships The sputnik will help determine the concentration of meteoric particles along the earth's orbit and their energy

General Election in South Africa

The Nationalist Party was returned to power with an increased majority in the South African general elections held on April 16 The elections were the first 'all white' election in South Africa as the Cape Coloured voters had been placed on a separate electoral roll under the Separate Representation of Voters Act. The elections in the four Cape coloured constituencies were held on April 3, prior to the General Elections proper

The new House of Assembly (the 12th of the Union) contains 163 members of whom four represent the Cape Coloureds and three are Natives Representatives The position in the new House is shown below, comparison being given with party strengths at the dissolution of the former House on March 11 :

	New House	Old House (at dissolution)
Nationalist Party	103	96
United Party	53	52
Labour Party	—	4
Independents	—	4
Natives Representatives	3	3
Cape Coloured Representatives	4	—

As the four Cape Coloured representatives all support the United Party the U.P's effective strength in the new House is therefore 57 The representatives of the Cape Coloured electors are Eruopeans, as laid down in the Separate Representation of Voters Act.

The three Natives Representatives (two Liberals and an Independent, all Europeans) were not affected by the dissolution (as they are separately elected Their terms of office expire later in the year

All members of the Government were returned in the elections on April 16 in most cases with increased majorities J G Strydom, the Prime Minister was re-elected for Waterberg with a majority of 4, 774 an increase of 1, 357 compared with the last general election.

Prior to the elections many constituencies were re-delimited and various new constituencies created under the provisions of the Electoral Laws Amendment Act, 1952, which also formed the basis for re-delimitation at the last (1953) general elections This

Act provided for delimitation of constituencies on the basis of the total number of registered White European voters over the age of 21, as shown by periodical registrations of voters and supplementary registrations every two or three years The 1958 elections were held on the basis of a general registration which closed on Feb 28 1957 On the basis of the 1956 registration, the Transvaal had 655 711 voters, Cape Province 510 297 Natal 157 510 and the Orange Free State 133 356—a total of 1 456 874 Together with the supplementary registration (i e new voters coming on the register for first time on reaching the age of (21) the total electorate was well over 1 500 000

As stated above the Cape Coloured electors voted on April 3 to elect four European M P.s to represent their interests in the new Parliament Independents supported by the United Party were returned for three of the Cape Coloured constituencies (Peninsula Boland and Karoo) and a U P candidate for Outeniqua Between 29 000 and 30 000 Cape Coloureds were eligible to vote the electorate being confined to males

In a post-election broadcast on April 17 Mr Strydom declared that the answer that has been given to our opponents here, and to those who libel our country beyond our borders is that the electorate of South Africa are solidly behind the Government and our policy and that no interference in our domestic affairs will be tolerated

Mr Strydom said that the Government would continue its aim of fostering the growing good relations and co-operation between the two language groups—English and Afrikaans speaking He added As far as the colour question is concerned we shall continue resolutely on the course we have taken—that is to develop and maintain the traditional way of life of our country namely apartheid or separation between White and non White This we shall do because we are convinced that it is the only way to maintain ourselves as a White race while at the same time doing justice to the non Whites and to avoid racial clashes in South Africa

Speaking on April 22 at a victory rally in Pretoria Mr Strydom declared that the ultimate goal of the Nationalist Party was a republic. He appealed for the greatest possible co-operation between the two language groups and reiterated that the apartheid policy would be implemented in a manner fair to both Europeans and non Europeans

CEMENT INDUSTRY IN INDIA

Production of cement in 1957 was 5 6 million tons as against 4.9 million tons during 1956

As against an installed capacity of 5 7 million tons at the beginning of 1957 the capacity went up to 6 63 million tons at the end.

Besides the 29 units already in operation in the country, 54 schemes, comprising of 25 new units and 29 projects for the expansion of existing units involving a total additional capacity of 8 67 million tons a year, have so far been approved by the Government of India

Of these, fifteen schemes (four new units and eleven schemes for expansion of existing units) with a total capacity of 1 8 million tons are expected to be completed by the end of 1958 while another eleven schemes will be completed it is hoped by the end of 1959 giving a total capacity of 10 4 million tons by that date The remaining schemes are scheduled to be completed by 1960-61

To bridge the gap between the indigenous production and demand to some extent, it was decided early in 1956 to import up to 700 000 tons of cement from foreign countries during that year

The State Trading Corporation had made firm arrangements for the import of a major portion of this quantity but due to the Suez crisis only about 108 000 tons actually arrived during 1956 A further quantity of 321 000 tons arrived during 1957 against outstanding contracts

With the improvement in domestic production the supply position has eased somewhat. As a result a certain amount of relaxation of the control over distribution has become possible And in future with the shortage of foreign exchange and increased tempo of indigenous production it is unlikely that imports of cement will be necessary

Due to the modernisation of some of the units for making asbestos cement products, the capacity of the industry has reached 210 000 tons (against 141 400 tons in 1956) and production has increased from 119,828 tons in 1956 to 153 761 tons in the current year Almost all units are working to full capacity

HOME AFFAIRS

Orissa Ministry's Resignation and Withdrawal

Although the Congress Party in the Orissa Legislature had a majority of two in a House of 138 (Congress strength was 65 and had the support of five Jharkand Party members), the Chief Minister of Orissa Mr Hare Krishna Mahtab, tendered the resignation of his Cabinet to the Governor, Mr Y N Sukhtankar on may 9 as it was felt that it was difficult for the Congress Party to carry on the administration of the State with such a slender majority (In the next two weeks the Congress Party won three by-elections to the Assembly, raising its strength to 68)

A *Communique* issued on May 10 from Raj Bhavan in Puri said 'Dr Hare Krishna Mahtab Chief Minister met the Governor on May 9 and tendered his resignation of the office of the Chief Minister The Governor has received the resignation which is now under his consideration The Governor has been pleased to request Dr Hare Krishna Mahtab to continue in office till such time as he is able to make alternative arrangements and Dr Mahtab has agreed to continue'

On May 10 the Governor Mr Y N Sukhtankar asked the leader of the Opposition in the State Assembly, Mr R N Sinha Deo to let him know by May 13 at the latest whether he was in a position to form a stable ministry to replace the Congress Cabinet which had resigned

It was also stated that Dr Mahtab had also resigned the leadership of the Congress Assembly Party Mr Mahtab told newsmen that by unburdening himself of the responsibilities of the leadership of the Party he would be able to render better service to the people of the State

The Governor of Orissa Mr Y N Sukthankar said in Puri on May 19 that as soon as he received the information he had asked for from the Leader of the Opposition and after the completion of any further inquiries that might be necessary he proposed to call the leader of that party which commanded a majority in the House to form a Government

On may 23 the Governor of Orissa, Mr Y N Sukhtankar, rejected the claim of the Leader of the Opposition Mr R N Singh Deo, that he had the support of 72 member in the State Assembly and that he could form a stable alternative ministry

The same night (May 23-24 midnight) Dr Hare Krishna Mahtab withdrew the 15-day old resignation of his Cabinet.

Later Dr Mahtab told newsmen that he did so on the advice of Mr U N Dhebar, Congress President, and after the Governor had written to him saying that he was satisfied that the Congress was in a majority in the Assembly He added that if he had pressed the resignation, President's rule would have followed as he had recommended in his letter of resignation to the Governor

Conference on Community Development

The recommendations of the first National Conference on Community Development which met for five days from May 20 to 24 at Mount Abu when implemented will bring about radical changes in the Community Development programme

The recommendations were discussed at a Seminar in the Union Ministry of Community Development on May 28, which, [illegible] the conference recognised that the Government agencies, including the technical departments, had reached the cross road

The programme as Shri S K Dey the Union Minister for Community Development said had reached a crisis of *adolescence* and like an adolescent needed a careful watch on the bright as well as the dark features, so as to ensure a healthy growth

Most delegates attending the conference felt that the conference had been too exacting and did not provide time for individual meetings with their counterparts from other States If thinking were not to suffer in quality they said, either the number of items on the agenda in future should be reduced or more time provided

Meeting for five days as against duration of four days of the conference in previous years, the 17 sub-committees which dealt with various items on the agenda ranging from agricultural production to [illegible] and cultural needs of the people and steps to eliminate [illegible] in the programme thrashed

out the problems and suggested solutions based on pooled experience of the delegates which included members of the Planning Commission, representatives of several Ministries of the Government of India Development Commissioners and the Heads of Departments of the State Governments

An important subject of discussion at the conference was what has generally been referred to as the 'second front', i e the involvement of the people's associates in the programme The people's associates now to be brought into the programme, will be drawn from such non-official sources as Bharat Sevak Samaj Bharat Yuvak Samaj, Gram Sahayaks Social Welfare Board Co-operative Unions, Ramakrishna Mission, Sarva Seva Sangh and other voluntary workers' organisations Gram Sahayaks trained in various camps since the scheme was launched in October, 1957 will perhaps constitute the most important source

The involvement of the 'people's associates', it is hoped, will lead to drawing the people on the ground more closely into the programme as the architects of their own destiny Until now the Community Development programme has been regarded as a movement of the people the people's representatives and the people's servants

An important recommendation of the conference puts an end to the system of Block Advisory Committees whose place is to be taken by the Block Development Committees, consisting of M P s M L A s and representatives of the panchayats elected by them This recommendation is an important step in the direction of democratic decentralisation The Block Development Committees will henceforth be vested with powers to generally approve not only the Block budget but also the individual schemes It is of course hoped that these will set up healthy conventions The Block Development Committees will have sub committees dealing with various facets of development These sub-committees will include members of the Committees or panchayats, according to their special aptitudes and the people's associates This measure will lead to competition on a functional level as against the communal and political levels which have resulted in factionalism in the villages Village panchayats will likewise have functional sub committees at their own level The village panchayats and the cooperatives will bear the primary responsibility for the planning and execution of the development programmes within their orbits These basic institutions will also marshal the resources of the community for the implementation of the programmes for economic and social improvements

The village school will also become a nucleus of activity for the children and the youth The village teachers, who are to be drawn into the programme more organically will be given special training and provided with special facilities which would mean an augmentation of the teachers income by the community

The conference felt that a concerted drive has to be launched for the enrolment of village girls to work as school teachers The Prime Minister's message to the conference threw the problem into sharp focus It emphasized that woman is the primary mover behind society and if the programme is to register further progress women teachers or Gram Lakshmis and Gram Kakis must be enrolled in all areas with funds available for the women's programme If necessary resources can be added from the maternity and child welfare programme envisaged in the public health schemes or even from the industrial programmes of various all India Boards

The conference emphasized the need for proper coordination between the country Development programme and the Gramdan movement The movement is now to form a part of the curriculum at the extension training centres throughout the country

Special attention is to be paid to the needs of *the poorer sections of the rural population,* particularly the landless labourers small peasants Harijans and the tribal people Importance is to be attached to extending loans for credit worthy purposes

The resolution adopted by the conference on May 23 outlined measures to bring about an increase in agricultural production Each family is to have a plan for increasing agricultural production by making the fullest use of irrigational facilities Each Village Level worker is to devote at least 75% of his time to increasing agricultural production

Every village is to have a multi purpose co-operative society which could assist every family in the plan for increasing agricultural production the emphasis being on extending help for credit worthy purposes as against to credit worthy individuals

In regard to village industries, the conference recommended all efforts are to be made to

meet the local requirements from local resources

Indo American Programme Agreements

The Governments of India and the United States signed on May 27 eight Indo-American Programme Agreements under which India will receive $285,555 in technical assistance in the fields of groundwater exploration, livestock improvement, industrial research health co-operative membership education and agriculture

The projects represent a portion of $6 3 million programme of technical assistance to India under the United States Fiscal Year 1958 budget.

Under the agreement covering groundwater exploration $153 000 is provided to extend the contract of the Ralph M. Persons Engineering Co, and American firm which is furnishing technical services to the Exploratory Tube-well Organization in India A total of $4 million has been provided for this programme in previous years

A sum of $41,100 is provided for improvement of Indian livestock It will be used to procure from outside India equipment needed for cattle swine, and poultry development and for improved marketing methods

In the field of Health, $7 500 is provided for Audio-Visual and other demonstrational materials for the Central Bureau of Health Education and $14 430 for the procurement of 30 microscopes and other scientific equipment needed for five regional centres concerned with the malaria eradication programme

Earlier this year T C M provided $8 735 000 for the foreign exchange costs of the malaria eradication programme

In the field of industry $13 450 is provided for the services of an American technician to work with the National Building Organization on methods of increasing the production and use of lime as a substitute for cement and $26 550 for the services of a chemical engineer to work on problems in connection with the production of common salt.

To assist the All India Cooperative Union, a sum of $21,000 is provided to procure three audio-visual vans and other equipment for nine training districts near Delhi Patna and Madras

Under the agricultural agreement T C M will make available $8,525 of technical assistance funds to procure from outside India various items of equipment and supplies for assistance to the soil laboratories in Trivandrum Coimbatore, Bangalore, Hyderabad, Nagpur and Gwalior as well as to procure books for the Central Soil Conservation Board

Conference of Planning Forums

The two-day session of the Eastern Region Conference of Planning Forums concluded at Darjeeling on May 30, 1958 adopting a resolution calling upon Planning Forums to undertake village studies and investigations which would help contribute to the formulation of the Third Five-Year Plan

With the aid of the information and data collected from such studies which would be action-oriented, the resolution added, Planning Forums could draw up typical village development plans. Mr S N Mishra, Union Deputy Minister for Planning, presided.

The conference adopted with minor changes a report of the sub-committee appointed to work out proposals for the implementation of the future programme of work as laid down by the central executive committee, with particular reference to the contribution Planning Forums could make to the formulation of the Third Plan The sub-committee, in its report stated that Planning Forums would not be able to undertake very elaborate surveys However they could contribute to the formulation of the Third Plan by providing information and basic data through their village surveys

The sub-committee suggested that Planning Forums should undertake village studies which would be action-oriented Planning Forums will draw up village plans on the basis of the data collected in the course of such enquiries The idea is to consider the needs in relation to the available resources and only those items should be selected which appear important from this point of view A proforma would be made available by the Planning Commission to the forums for their guidance.

Planning Forums would also undertake a quick survey of plan consciousness among educated persons including students in the urban areas

Regarding small savings the Conference was of the view that as the objective of the movement is to create "small savings consciousness among students Planning Forums need primarily concentrate their attention on the student and teacher population in their own institutions They should also try to expand their sphere of activity and help spread

THE SOURCES OF KNOWLEDGE

It is by book that mind speaks to mind, by books the world's intelligence grows books are the tree of knowledge, which has grown into and twined its branches with those of the tree of life, and of their common fruit men eat and become as gods knowing good and evil.

—C Kegan Paul

WORST INVENTION

I wonder if the mirror isn't the world's worst invention. The optimist looks into a mirror and becomes too optimistic the pessimist too pessimistic. Thus mirrors increase conceit or destroy confidence Far better is seeing ourselves as reflected in the expressions on the faces of people we meet during the day The way you look to others is apt to be nearer the truth than the way you may look to yourself.

—The Star

(Continued from page 582)

the movement in other institutions Planning Forums should encourage the habit of thrift and investment in postal and other savings accounts Each member of the institution could open postal and other savings bank account in his name

In regard to organisational matters relating to Planning Forums, the conference decided that each Planning Forum should maintain a list of members either through membership forms or voluntary registration Active members should consist of those who satisfy any one or more of the following conditions (a) at least 60 per cent attendance at meeting organised by the Forum, (b) participation in village survey and (c) taking active interest in small savings and other activities of Planning Forums This list should be periodically revised to assess the active membership of the Planning Forums

The conference suggested that the Planning Forums throughout India should as last year observe the National Plan Day on September 13 by organising meetings, group discussions exhibitions, etc

India And International Organisations

The activities of the Government of India in the International sphere have been guided since independence by the ideals of conduct embodied in one of the directive principles of the Constitution This directive requires the State to endeavour to promote international peace and security to maintain just and honourable relations between nations, to foster respect for international law and treaty obligations and to encourage settlement of international disputes by arbitration.

UNITED NATIONS ORGANISATION

A founder member of the United Nations Organisation India is a firm adherent of the principles enshrined in the UN Charter Her association with the United Nations has been marked by a number of significant events, the most notable being the spontaneous tribute paid in 1948 by the world organisation to Mahatma Gandhi and through him to the great traditions of the country which gave birth to him Among others worth recalling have been India's membership of the Security Council for a two-year term from 1950 to 1952 the Indian Plan for the solution of the prisoners of war problem and the cease fire in Korea, her chairmanship of the Neutral Nations Repatriation Commission for Korea in 1953 54 the election of Smt Vijayalakshmi Pandit as the President of the eighth session of the UN General Assembly in 1953 and India's chairmanship of the UN sponsored International Conference on Atoms for Peace in Geneva in 1955

The Indian delegation to the twelfth session of the UN General Assembly in 1957 was composed as follows

Representatives	V K. Krishna Menon (Chairman) Ali Yavar Jung G S Pathak Arthur S Lall, Rev Fr J D Souza.
Alternate Representatives	Fakhruddin Ali Ahmad M. Gopala Menon, J N Sahni Mona Hensman
Advisers	Tarakeshwari Sinha, Avtar Singh R. A Narayanan R Jaipal P N Kaul A K Mitra Romesh Bhandari, N E. Chacko
Secretary General	T J Natarajan

POLITICAL AND SECURITY

Hungary

In the discussions on Hungary during 1957, India continued to oppose the presence of foreign troops, whether in Hungary or anywhere else in the world while emphasising the avoidance of a negative approach to the situation in order that honourable negotiations between the UN and the parties concerned might be facilitated

Egypt and Israel

With six other member nations India introduced and secured passage of two separate resolutions during the debate on the Secretary General's suggestions for the evacuation of Israeli troops from Egyptian territory The first one called for the complete withdrawal of Israeli troops from Egypt and the other asked the Assembly to recognise that the Israeli withdrawal must be followed by action which would progress towards the creation of peaceful conditions Reiterating her earlier stand taken at the time of contributing troops to it India maintained that the United Nations Emergency Force could at no time become an occupying force in another country and the movements and functions of the force therefore must depend upon the agreements made

POLITICAL AND SECURITY

Hungary

In the discussions on Hungary during 1957, India continued to oppose the presence of foreign troops, whether in Hungary or anywhere else in the world, while emphasising the avoidance of a negative approach to the situation in order that honourable negotiations between the UN and the parties concerned might be facilitated

Egypt and Israel

With six other member nations India introduced and secured passage of two separate resolutions during the debate on the Secretary General s suggestions for the evacuation of Israeli troops from Egyptian territory The first one called for the complete withdrawal of Israeli troops from Egypt and the other asked the Assembly to recognise that the Israeli withdrawal must be followed by action which would progress towards the creation of peaceful conditions Reiterating her earlier stand taken at the time of contributing troops to it India maintained that the United Nations Emergency Force could at no time become an occupying force in another country and the movements and functions of the force therefore must depend upon the agreements made

Algeria

In the debate on Algeria India's experience with her former rulers was cited in support of the view that "once independence is gained, co-operation between former rulers and former colonials, on a basis of equality and mutual respect, is possible but it is possible only if that co operation *comes by free will from* both sides Co-operation that is compelled still spells domination The Assembly's recommendation calling for efforts to resolve the Algerian problem through private talks in conformity with the principles of the UN Charter was described by the Indian representative as the best way out" at this stage

Syria and Turkey

With the assistance of Norway Japan and the United States, *India was responsible for* a *compromise*, as part of an agreed formula, to end without a vote the debate on *Syria's demand for a commission of inquiry* to investigate the crisis on the border between Syria and Turkey

Cyprus

During the *debate* on the *Cyprus* question in December 1957, the stand taken earlier in the eleventh session that it was a colonial question was reaffirmed by the leader of Indian delegation who observed We stand four square by the independence of the Cypriot people and their right to be a sovereign State entitled to membership of the United Nations

Kashmir

In pursuance of the Security Council's *resolution* of *February 21 1957, Dr* Gunnar Jarring visited the sub-continent and later submitted his report. During the discussions in the Council on the report India was represented by V K Krishna Menon, who detailing Pakistani violations of the Security Council's resolution of January 17, 1948 and Part I of the UNCIP resolution of August 13 1948 as recorded by the agencies of the Council *in their reports*, emphasised that vacation of Pakistani aggression on Indian Union territory was the issue before the Council The Indian representative *made it clear* that the Government of India could not *accept the resolution requesting Dr Graham to visit the* sub-continent for further talks with the Governments of Pakistan and India but assured Dr Graham the traditional hospitality of his country He added that the *resolution which India could* accept and which he hoped, the Council would adopt in time would be one calling upon Pakistan to vacate the aggression in terms of the UN Charter

Disarmament

Ever since it came up before the UN India has taken an active interest in the problem of disarmament and made certain concrete proposals for its *solution* at the tenth session of the Assembly as also before the Disarmament Commission in July 1956 *During* the twelfth session of the Assembly, India sponsored jointly with *four other countries*, a resolution seeking to enlarge the membership of the Disarmament *Commission* and to *find a modus vivendi* aimed at the *reconciliation* of the Soviet and Western attitudes on the issue. India was chosen as *one of the* eleven members of the enlarged Commission

When the *24 Power Resolution* sponsored by the Western Powers came up for discussion in November *1957 India moved* a *number* of amendments one of which sought inclusion of a *provision for the setting up* of a scientific technical body to recommend a system of control and inspection after immediate agreement for the cessation of nuclear tests and another *asked that* powers possessing atomic weapons should abstain from using them

Atomic Energy

India was designated as one of the permanent governors of the International Atomic *Energy Agency* the instrument of which were ratified by her in July

1957 At the General Conference of the Agency held in Vienna in October India played an active role in the drafting of a resolution seeking agreement between the UN and the Agency which was ratified by the Assembly in November 1957

Trust and Non Self Governing Territories

India has been a member of the Trusteeship Council since 1954 and was re elected for a further term of three years beginning from January 1, 1957 at the eleventh session of the UN General Assembly A significant event of the year 1957 was the election of the Indian representative as Chairman of the Standing Com mittee on Petitions and of the Committee on Adminis trative Unions

At the nineteenth session of the Council in 1957, India was represented by V K Krishna Menon with Arthur S Lall as alternate representative She lent her support to Thailand s proposal for augmenting the membership of the UN Committee on South West Africa from seven to nine Along with Syria she spon sored a resolution recommending that France set up a legislative assembly by adult suffrage in French Togo land at an early date The proposal was not acceptable to the Council

The leader of the Indian delegation vigorously opposed the use of the Trust territory of Marshall Islands as proving grounds for nuclear tests as being contrary to the world concept of a sacred trust when the issue came up before the Council in May 1957 The administrative reforms introduced by Britain in the Trust territory of British Cameroons were warmly wel comed

People of Indian Origin in South Africa

The Special Political Committee adopted a joint resolution sponsored by Iran Mexico, the Philippines and Yugoslavia appealing to the Government of South Africa to participate in negotiations with the Govern ments of India and Pakistan with a view to solving the problem in accordance with the purposes and principles of the UN Charter and the Universal Declaration on Human Rights The parties are to report jointly or separately to the UN Assembly regarding the progress of the negotiations

Peaceful Co-existence

Along with Sweden and Yugoslavia, India submit ted for the consideration of the twelfth session of the Political Committee a resolution calling upon all States to make every effort to strengthen international peac and to develop friendly and co operative relations and settle disputes by peaceful means as enjoined in the Charter

Elections to U N Bodies

In May 1957, India was elected to the UN Techni cal Assistance Committee In June she was elected Chairman of the Sub Committee on Freedom of Infor mation set up by the Human Rights Commission.

An amendment providing for the reservation of one of the offices of Vice President of the Assembly for the Commonwealth countries was tabled by India along with seven other member nations and adopted by the Assembly s Special Political Committee She co sponsor ed with sixteen other nations a resolution in the same Committee for increasing the number of judges on the International Court of Justice and for enlarging the UN Economic and Social Council Her plea for increased representation for Asian and African countries was post poned for another year

International Law Commission

India is a member of the International Law Com mission established by the UN General Assembly in 1948 The Commission is charged with promoting the progressive development of international law and its codification Its 21 members, elected by the Assembly for a three year term, do not serve as representatives of their governments but in their individual capacity as experts

CONTD

A standing legal committee known as the Asian Legal Consultative Committee came into existence in November 1956 at New Delhi for examining questions under the consideration of the International Commission and placing its views before it considering legal problems referred to it by any of the participating countries (Burma Ceylon, India Indonesia, Iraq Japan and Syria) and exchanging views and information on legal matters of common concern. India is represented on the Committee by M C. Setalvad and Sachin Chaudhuri At its first session held in New Delhi in April 1958, it adopted rules of procedure and decided to locate its headquarters at New Delhi and to establish consultative arrangements with the UN and its specialised agencies as well as the International Law Commission and the International Law Institute.

ECONOMIC AND SOCIAL

India has served on the Economic and Social Council of the United Nations since its inception, except for two brief spells in 1948 and 1952. Though she chose not to seek re-election to the Council in 1957 she continues to be a member of several functional commissions of the Council She was a member of the Committee for consideration of a convention on the abolition of slavery, etc in 1956 which she signed in September 1956 She was elected to the Technical Assistance Committee on May 1 1957 and is represented on the following other functional commissions of the Council Commission on International Commodity Trade Commission on Human Rights Commission on Narcotic Drugs Population Commission Social Commission Statistical Commission and Transport and Communication Commission

Economic Commission for Asia and the Far East (ECAFE)

The Asian countries have a natural link between their own economic efforts and those of the UN in the ECAFE which was established in March 1947 The Commission has so far held two of its sessions in India in 1948 and 1956 The first executive secretary was an Indian and after his resignation in 1956, another Indian has been appointed to the post.

The report presented to the thirteenth session of the Commission held in Bangkok in March 1957, was impressed with the size of India's second Plan and observed India is among the best placed countries in the region to undertake developmental planning on an ambitious scale."

India's Minister for Trade was elected first Vice Chairman of the ninth session of the Committee on Industry and Trade which met in Bangkok in March 1957 The Commission's Committee on Small Scale Industries which met in June 1957 in Madras considered ways of improving footwear production and marketing leather and leather products from the countries of Asia and the Far East. The preparation of a draft geological map of Asia and the Far East was discussed at the meeting of the working party of senior geologist of the Commission held at Calcutta in November 1957 At the meeting of the Sub-committee on Mineral Resources also held at Calcutta in November 1957, USSR, USA, UK, Australia and France offered India and other Asian countries technical assistance, information and training in the prospecting and utilisation of radio-active minerals The leader of the Indian delegation in the ECAFE seminar on low-cost roads and soil stabilisation organised in January 1958 in New Delhi was elected its Chairman

Food and Agricultural Organization (FAO)

India has been actively associated as one of its founder members with the FAO since its inception The Executive Committee of the FAO had for its chairman an Indian who was closely associated with the drafting of the organisation's constitution It was through the initiative taken by India at the conference in 1955 that the FAO constitution was amended to permit non self governing countries to join the organisation as associate members and participate in its various technical meetings She is represented on important standing committees of the organisation such as the FAO Council the [illegible]

-gramme Committee the Finance Control Committee and the Committee on Commodity Problems, In 1956 the organisation elected B R. Sen as the Director General of FAO

The FAO has rendered valuable technical assistance to India in building up her farm economy particularly in connection with the operation and maintenance of farm machinery reclamation of waste lands control of rinderpest and other diseases, improvements in methods of fishing dairy and poultry farming forestry and locust control etc The first pilot study sponsored by FAO on the uses of agricultural surpluses to finance economic development was conducted in India in 1955

The Union Food Minister led the Indian delegation to the plenary conference of the FAO held in November 1957 at which India was re elected to the FAO Council for three years and to membership of its Committees on Programme, Financial Control and Commodity Problems.

The concept of small watersheds as the basis for the planning and management of land use was the main topic of discussion at the International Development Centre on Watershed Management for Asia and the Far East organised at Hazaribagh during February March 1957 The second FAO Development Centre on Farm Planning and Management was held in New Delhi in October 1957

International Labour Organisation (ILO)

India has been a member of the International Labour Organisation since its inception in 1919 and has been a permanent member of its governing body since 1922 She is a member of eight out of the nine industrial committees set up by ILO India has so far ratified 23 ILO conventions The more important of these provide for the limitation of working hours in industrial undertakings prohibition of the employment during night hours of women and children under 14 compensation in cases of injury or death, protection of dock labourers against accidents, suppression of compulsory labour in all forms, and a system of labour inspection and machinery for fixing minimum wages in certain trades

The services of experts were availed of by India in 1957 in the fields of productivity employment information and occupational analysis and for the National Safety Council and Trade Training Project under the ILO's Expanded Programme of Technical Assistance Fourteen Indian trainees were sent in 1957 to different foreign countries for training in supervisory duties trade unionism labour administration industrial relations labour management and factory inspection under the same programme Two ILO fellowship holders from Burma and Sarawak received facilities for study in the fields of social security and co-operation

Apart from the meetings of the governing body and the 40th session of the ILO Conference held in Geneva in June 1957 Indian representatives participated in the 4th session of the Advisory Committee on Salaried Employees and professional Workers held at Geneva in April 1957, the Tripartite Working Party on Wages, Hours of Work and Manning on Boardship held at Geneva in April 1957 the 6th session of the Metal Trades Committee held at Geneva in May 1957 the 6th session of the Iron and Steel Committee held at Monterry (Mexico) in October 1957 and the Tripartite Technical Meeting for Mines other than Coal Mines held at Geneva in November December 1957

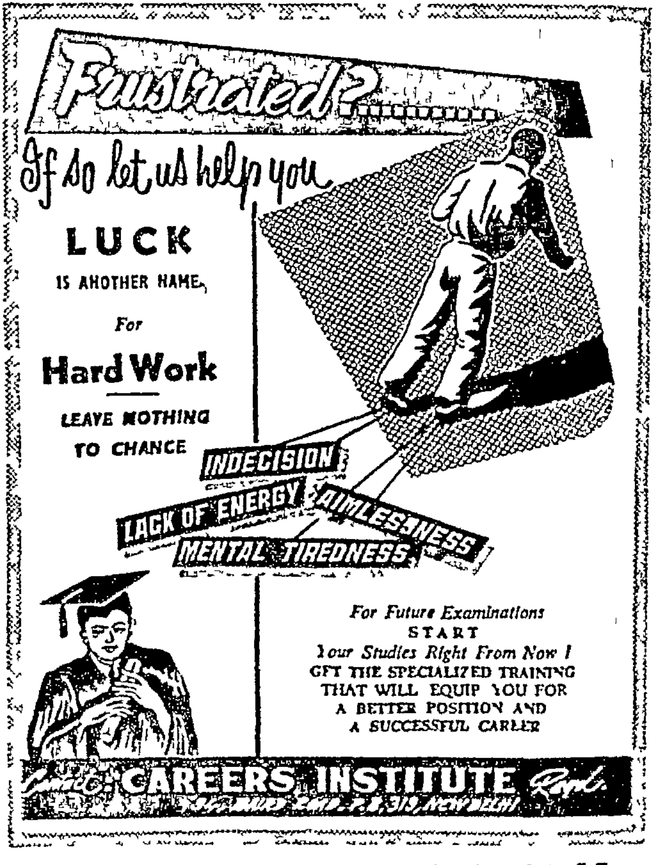
India also participated in the seminar organised by the ILO Regional Training on Co-operation at Nuwara Eliya (Ceylon) in November 1957 The Asian Seminar on Vocational Guidance and Employment Counselling, organised by the ILO was held in New Delhi in December 1957

from the Bank totalling Rs. 176 05 crore. Some of these loans have been given directly to the Government of India and others to private enterprise against a Government guarantee. The schemes for which the Bank has advanced loans include (i) purchase of locomotives for the Indian Railways (ii) purchase of agricultural machinery such as tractors and bulldozers required for reclamation of weed infested and jungle lands, (iii) the Bokaro Konar Project of DVC which has now been completed (iv) the second phase of DVC Project, (v) purchase of planes by Air India International, (vi) purchase of equipment and materials for railways, (vii) expansion and modernisation of the Indian Iron and Steel Co. Ltd., (viii) installation of thermal plants at Trombay (ix) assistance to Industrial Credit and Investment Corporation of India to enable it to advance loans to private companies and (x) the expansion Programme of the Tata Iron and Steel Company

The Bank has sent several missions to India for field surveys of various projects and also for investigating the country's development programmes. The IBRD recently appointed one of its senior officers as its Resident Representative in New Delhi who remains in close contact with the Government of India in regard to country's development plans and projects. India participated in the 12th annual meeting of the Board of Governors of the IBRD held in Washington on September 25, 1957. The Union Finance Minister led the Indian delegation

Under the terms of IBRD's Articles the Bank is precluded from making non-guaranteed loans. This has prevented it from rendering substantial assistance to private enterprise. India has, therefore, been advocating for sometime the establishment of an International Finance Corporation which could be authorised to make such loans. The Corporation came into existence in July 1956. India's quota in the subscribed capital of 93 million dollars is 4 431 million dollars.

International Monetary Fund (IMF)



India is also an original member of the International Monetary Fund set up in 1945 to maintain the stability of exchange rates, to facilitate the expansion and balanced growth of international trade and to provide exchange resources during temporary disequilibriums in the balance of payments of member nations. India which ratified the Fund Agreement on December 24 1945, has a quota of 400 million dollars and a permanent representative on the Executive Board of the Fund. In 1953, the Government of India invited a mission from the Fund to study and report on India's monetary and fiscal policies. The report of the Fund Mission was published under the title *Economic Development with Stability*

In order to meet the shortage of foreign exchange the Government of India, in January 1957 negotiated with the Fund for a loan of 127 5 million dollars. India in 1957, availed of a 200 million dollars standby credit from the Fund. The first withdrawal of 60 million dollars was effected in February the second withdrawal of 67.5 million dollars in March, and the third withdrawal of 72.5 million dollars in June 1957. Under the articles of agreement of the IMF India is entitled to purchase back for rupees foreign currency equivalent to 400 million dollars deposited by it with the Fund. The Union Finance Minister led the Indian delegation to the 12th annual meeting of the IMF held in Washington in September 1957. At the invitation of the Finance Minister the Managing Director of the IMF visited India in February 1958 and reviewed India's fiscal policies

Special UN Fund for Economic Development (SUNFED)

India has been intimately associated with the various stages in the development of the SUNFED idea. In December 1957 the UN decided to establish a special fund to provide to the less developed countries systematic and sustained assistance in fields essential to their technical economic and social development. India is among the sixteen countries represented on the Preparatory Committee.

EDITORIAL

THE SARVODAYA IDEOLOGY

When India achieved political freedom Gandhiji desired that his followers should disband the Congress and its members devote themselves to social and economic uplift of the masses. To Gandhiji mere political freedom had no meaning until it was accompanied by economic and social freedom for every Indian living even in the remote corners of India's villages. The task before him was to deliver every man from the shackles of poverty and social ills. This purpose was to be achieved not through the Government machinery but by mutual cooperation, not through force but by love and non violence. Gandhiji had shown the path of Sarvodaya—welfare for all but before he could launch the movement actively he was forcibly removed from amongst us by the cruel hand of an assassin. The congressites who should have taken the work of constructing a new society on Gandhian ideals stuck to ministerial seats, hence the desire of Gandhiji remained unfulfilled for sometime. It was not until 1951 when Acharya Vinoba Bhave started Bhoodan movement that the task of giving actual shape to Gandhiji's ideal of Sarvodaya Samaj was actively begun. The movement soon became popular and attracted to its fold many sincere and devoted persons who whole heartedly worked full time for ameliorating the social and economic ills of millions of backward villagers. The Bhoodan movement got still more impetus when Shri Jai Prakash Narain, a renowned socialist leader gave up active politics and joined hands with Acharya Bhave. The Bhoodan movement had ramified into various forms of other activities such as Gramdan, Sampatidan, Shramdan etc—all aimed at non-violently changing the social, economic and cultural structure of the village society.

During his life Gandhiji devoted much of his time and activities for the promotion of communal harmony and Harijan uplift. He wanted to create a classless society based on love and mutual cooperation. Gandhiji's ideal of Sarvodaya was a means to the goal of building up a new society—a society without poverty, grief or strife—a society where truth and peace would reign supreme. He wanted villages to become selfsufficient. He had before him an ideal of Gram Swaraj. He wanted decentralisation of power and asked the villagers not to depend much on outside help

or government aid. If society is to be reconstructed on Gandhian ideals the villages must become autonomous. Acharya Vinoba Bhave has also emphasised the need for planning from the bottom—from the village upward. In an economically under-developed country like India with a large population and area it is impossible for a centralised administration or planning body to approach each village and plan for its all-round development in accordance with its local needs and requirements. The Community Development Conference held at Mount Abu in the last week of May 1958 also laid great stress on the urgent need for harnessing voluntary cooperation of various village institutions like the panchayat, the cooperative and the school. The ideal of Sarvodaya emphasises the need for achieving the welfare of all through maximum decentralisation of political and economic power. Gandhiji had repeatedly said that Swaraj would not be of much importance if it did not produce a glow of freedom in every village and hamlet of India. Acharya Vinoba Bhave had the same idea when he started his Bhoodan movement.

One of the aims of Sarvodaya is to abolish private ownership. It is not to be done by force or through governmental laws—as is done in Communist countries—but by peaceful and non-violent methods. The Bhoodan movement was started by Acharya Vinoba Bhave in April 1951 in Telangana (Andhra Pradesh) in order to realise the objective of a socialist state and weal of the community by working on Gandhian lines. The success of *Bhoodan* has demonstrated that a radical social change can be brought about by voluntary peaceful methods. The Bhoodan movement has brought about a remarkable revolution in ideas so far as the concept of ownership of land is concerned and it has shown a clear and definite direction in which rural life can be reorganised with a view to the ultimate establishment of a Sarvodaya Society. Within seven years from the start of *Bhoodan* movement nearly 44 lakh acres of land had been received as free gift out of which only 7 lakh acres have been redistributed to landless tillers so far. The remaining land is still lying idle. The slow work of redistribution of land has been the cause of growing resentment of the people in Bhoodan. The reason for delay in redistribution of land partly lies in the lack of efficient workers or organisation which should take up this work. Legal and constitutional difficulties are also a hindrance in the way of smooth distribution and transfer of land. Much of the donated land was useless and it was uneconomical to till it. A way out of this impasse had to be found. Gramdan or collective donation of whole village land was found an ideal solution for the difficulties connected with Bhoodan. The Gramdan movement also met with success and more than four thousand *Gramdans* have been obtained so far. The Gramdan not only freed the bhoodan workers of the problem of land redistribution—for after the *Gramdan* land belonged to the village community as such—but it also created the consciousness of revolution in the village community. It was not just one landlord who had emancipated himself of the passion for possession but the village community itself had renounced the concept of private property in land. In gramdan villages, the individual ownership of land ceases. The whole village becomes a unit. The first Gramdan was given in May 1952 in Mangroth (Uttar Pradesh). It was an unexpected, spontaneous and voluntary gesture of the villagers. Under village autonomy the village people themselves become responsible for maintenance, education and defence of the village. Mangroth fully justified these aspirations. It is presenting an ideal of village autonomy. The work of Gramdan assumed mass proportion in 1955 when Acharya Vinobaji foot marched in the tribal areas of Orissa. Six hundred villages in Koraput district alone had declared gramdan by the end of 1955. Other States had not lagged behind in offering gramdans. Now more than 4,000 villages throughout India are enjoying the benefits of reconstruction on Sarvodaya ideas.

Gramdan has opened up new possibilities of social reconstruction and economic upliftment—of building up a new social order based on equality and cooperation. Land improvement and common irrigation arrangements have become possible. But depending on agriculture alone cannot bring prosperity to the Gramdan villages. There are other activities which are to be taken up by Sarvodaya workers if they expect to establish fully autonomous villages. Rural cottage industries have to be promoted to provide work for non-agricultural periods in the villages. Credit facilities should be provided for establishing small industries. This work can be done by banks or government agencies. Cooperative stores should be started where the villagers can sell their products of cottage industries and also buy the daily requirements of food and implements for their work. Villagers should be taught thrifty habits of saving money. The

Government's small savings schemes can help a lot in this connection Every child in the village should receive basic education and be taught some kind of handicraft The villagers must learn to settle their own local disputes through panchayats The Sarvodaya workers are trying their best in establishing direct democracy and autonomy in gramdan villages Not only politically but socially and economically also the lot of the villagers is being improved. Sarvodaya work is demonstrating to the world how a society's face can be changed nonviolently—by love cooperation and service The gram swarajya is being established The dream of Gandhiji is taking a practical shape

Gramdan posed a new problem for the *Sarvodaya* workers Most of the villages given as *gramdan* were poor ones with land resources underutilized for want of facilities Money as well as expert knowledge were needed to make these villages self sufficient and economically developed It soon became apparent that a movement on this scale, involving almost an upheaval of village economy in certain areas could not work in isolation from State authority Under the circumstances the only solution that appeared obvious was to effect a coordination between the Gramdan movement and the Community Development programme sponsored by the Government of India Consequently a series of talks took place between the spokesmen of the Sarvodaya Sangh led by Mr Jai Prakash Narain and the Minister of Community Development Mr S K Dey A result of these talks was the working arrangement under which the programme of activities to be undertaken at a field level by the Community Projects administration was to be chalked out after joint consultation between the *gramdan* workers and the Community Development personnel The implementation of this programme is to be supervised jointly by committees consisting of representatives of the Sevasangh and the C.D project personnel What final shape the integration between gramdan and community development will take the time will only reveal

One of the basic ideals of Sarvodaya is self help Gandhiji said that the reconstruction work in villages should be carried out by the villagers themselves through mutual cooperation Acharya Vinoba Bhave said at the tenth All India Sarvodaya Sammelan held at Pandharpur "The Planning of Villages must be done by villagers themselves and not by capital cities like Delhi The[illegible] could be liberated from the shackl[illegible] and fear only through establishmen[illegible] self dependence There is no other alternat[illegible] If people depend wholly on the government for administering their affairs then there would be nothing more dangerous than that

Addressing the Andhra Pradesh Sarvodaya Workers camp Dr Rajendra Prasad said I am happy to note that the Bhoodan and Gramdan have made some progress. Still we are not satisfied and we want the Government to undertake legislation to help these movements I do not approve of this We must even if we are few, try to stand on our own legs and teach the people to do likewise He asked the people to discard the feeling of helplessness and the tendency to depend on the Government for everything

To carry on the work of Sarvodaya and propagate its ideals *Sarva Seva Sangh* is doing a yeoman's service Gandhiji wanted the Congress to be substituted by a broad based organisation of social workers Sarva Seva Sangh aspires to fulfil his dream This organisation serves to strengthen people's instinct for mutual cooperation and self reliance The work of Sarva Seva Sangh is being co-ordinated by *Shanti Sena*—a service corps of dedicated missionaries This peace brigade is a group of workers who have dedicated themselves to social service The task of Shanti Sena is to erase the causes and aspects of trouble and create conditions of peace Another duty is to protect women minorities and civic freedom of the individual A *Shanti Sainik* creates conditions of fearlessness in the society As a matter of fact creating condition of peace and maintaining it, is a human necessity In non—violence alone lies the lasting solution of the evils in human society World conditions are forcing men to see the inevitability of non violence If India is to fulfil her destiny men and women of this land must express the values of non violence in the day to-day life Shanti Sena, in the last analysis is an effort to create the New Man who has learnt to live in brotherly cooperation and friendliness with his neighbour

To meet the expenditure of the Sarvodaya movement money is accepted in form of voluntary gifts—sampattidan People are readily contributing to this scheme by giving money and grain in gifts The *Sarvodaya Patra* had caught the imagination of young and old alike The Sarvodaya Patra (pot) not

scheme envisages keeping of pots in every house where children of the family will every day put a handful of foodgrains into it. This is collected by sarvodaya workers periodically.

The Sarvodaya work is not confined to India's villages only. Its appeal is world wide. Sarvodaya ideals would show the right path to the troubled and tension ridden world. Dr Rajendra Prasad in a message to the tenth All India Sarvodaya Sammelan said: "Those who ardently believe that to usher in the era of progress and prosperity, human society must be reconstructed on the basis of tolerance, mutual love and sacrifice would surely get inspiration from the Sarvodaya movement." The Prime Minister Mr Nehru said: "The concept of Sarvodaya may seem a little odd to many of us and yet basically it is a far better word and concept than the many that we use. I have refrained from using it because I think we are not good enough for it and I do not wish to exploit a noble word and idea."

Dada Dharmadhikari said at the Sammelan: "If we are desirous of establishing a society where people are not forced to sell their labour, where one human being will defend the other and where law would not interfere in the average walk of life then its foundations must be laid on Sarvodaya ideals."

The Sarvodaya movement has a great future. Its ideals must be propagated to establish peace and goodwill among men throughout the world. As the *New Statesman* (London) has said Sarvodaya might outlast in the less developed parts of the earth the clash of capitalism and communism. Sarvodaya is a way out from the world's present impasse.

FORTHCOMING EXAMINATIONS

I SURVEY OF INDIA EXAMINATION NOVEMBER 1958

The Union Public Service Commission will hold a combined competitive examination [illegible] ... D[illegible] and Madras sometime in [illegible] ... for [illegible] Survey and Class II Services.

Age 18-[illegible] ... officers of the Survey of India Department: 20-28 years. Upper age limit relaxable in case of Scheduled Castes, Scheduled Tribes, bona fide displaced persons from Pakistan or from the unliberated areas of Jammu and Kashmir, residents of the former French Settlements which have now become part of India and of the Andaman and Nicobar Islands.

Qualifications: B.A. or B.Sc. degree with Mathematics as one of the subjects or Engineering Degree or Diploma or its equivalent. Full particulars and application form obtainable from Secretary, Union Public Service Commission, Dholpur House, New Delhi by remitting Re 1.00 by money order or on cash payment at the counter. Candidates must clearly state on money order coupon *Survey of India Examination November 1958 and also give their name and full postal address in Capital Letters*. Postal orders or cheques or currency notes will not be accepted in lieu of money orders. Completed applications must reach Secretary, Union Public Service Commission by the 30th August 1958 (13th September 1958 in case of candidates residing abroad.)

II INDIAN NAVY EXAMINATION DECEMBER 1958

The U P S C will hold an examination for selection of Special Entry Cadets for the Indian Navy sometime in December 1958. Full details from **U P S C, Dholpur House, New Delhi.**

TRUE FRIENDSHIP: A RARITY

To be everybody's friend is to be nobody's friend. For friendship is the feeling you put aside for a particular person as distinct from all other people. It is a very beautiful and intimate and close relationship which is desecrated if it is bestowed casually. To be able to say that you have a friend is to know that there is one person to whom your affairs are as important as his own, on whose aid and counsel and affection you can count in all times of trouble and [illegible] ... the person who [illegible] needs your help.

It is impossible for any man or woman to feel like that for more than a few people.

—[illegible]

Industrial Management and Industrial Relations

By B P SINGH ROY

Since the first application of science to management in the seventies of the last century industrial management after the two world wars is now admittedly a complex machinery In the present day world industrial management means much more than successfully running an industry and being able to declare a good dividend on the capital employed It requires a more comprehensive study of many a complicated problem associated with industry and general economic life of a country and of even international economic problems such as price of raw materials purchasing power of nation outside the producing country availability of shipping space and other transport facilities, besides carefully watching at times complications in the field of international politics In this talk which was broadcast by All India Radio Calcutta recently B P Singh Roy a leading industrialist points out that India has pledged to raise the standard of living of the people as rapidly as possible through industrialisation and improved methods of agriculture

OUR country has committed to raise the standard of living of the people as rapidly as possible through industrialisation improved methods of agriculture and such other means as might be conducive to that end The expansion is visualised both in public and private sectors The success in achievement of the ultimate objective is to a large extent dependent on how our industrial and agricultural operations are managed Whereas competent management will ensure success of the projects irrespective of whether it is in public or private sector wastage of resources, unrest and strike will inevitably affect the attainment of the objectives

Application Of Science

The first application of science to management was made by Mr F W Taylor of United States in the seventies of the last century The early applications were made in the steel, engineering and construction industries The phases of the processes of production were carefully studied time and motion study was developed implements were improved piece rate carefully set and the concept of planning and experimentation were encouraged. It got a great impetus during the World War when mass production was greatly expanded Thereafter scientific management no longer remained confined to factory but was extended even to sales and financial management and general administrative work including personnel European thinkers such as Oliver Sheldon of U.K and Henri Fayol of France and others made substantial contributions to management thought There exists now the International Scientific Management Committee with which the national management movements in 25 countries are affiliated

The expression industrial management has since the First World War signified more things forms and manner of industrial activities than in the past Industrial organisation in the context of the present day world does not mean mere combination of capital and business enterprise for successful exploitation of labour or use of raw materials for production of marketable goods of a particular class or variety for meeting the requirements of society

Pragmatic Conception

The expression industrial organisation as understood at presen is more pragmatic than ever with powerful potentialities affecting the economic life of a country A few years ago a solitary individual or a group of individuals with sufficient business acumen and enterprise for utilising of a limited amount of capital could build up successfully a business or industrial organisation through conservative and orthodox methods of buying and selling in favourable markets or of processing industrial raw materials to the utmost financial advantage but without paying sufficient heed to the health, comfort training or economic well being of the workers who directly contributed through labour and skill to the earning of millions of pounds fo the capitalist The psychology of the world has been completely transformed in this regard during the last 40 years Now business management does not

mean merely effective methods of profit earning but much more

Complex Machinery

Industrial management is now a complex machinery and it is by no means easy to draw up an exhaustive schedule of what should constitute a good industrial management. It has many facades—industrial, commercial, and financial over and above those of supervision, control and regulation of production, procurement of proper raw materials and handling of labour so as to be able to obtain their willing co-operation to the venture in a uniform manner. Besides, there are the most important problems of studying market conditions, trend of demand, economic pricing for facing competition and of organising continuous industrial research for improving the technique of production with a view to keep the industry abreast of time and popular taste and demand. These are the increasing problems which have to be solved or adjusted according to the requirements of an industry.

Classification Of Industries

Industries may broadly be divided into basic, medium and small, including those that may be described as cottage industries. Though the basic principle of industrial managent is the same for all classes of industries the method of handling the problems affecting a particular industry or industries must vary in details. Honesty, perseverance and sympathy are no doubt the fundamental factors of a successful industrial management. They produce public confidence, willing co-operation and sincere devotion of the various partners in an industrial venture. *Formerly* industry and business were purely under *private management* but with the march of time, change in the outlook of the people regarding the functions and duties of State no industry on which happiness of a section of the community is dependent can be regarded as purely private concern. The idea of a Welfare State has widened the sphere of Government interference in business and industry. Government control and regulation have come to be regarded as proper and inevitable provided they do not kill private incentive or become part and parcel of party politics or of the administrative machinery of the country.

Contractual Obligation

The society from the early days has slowly but steadily advanced from status to contract. Since the First World War even the idea of contractual obligation has undergone a remarkable change and contracts which unreasonably affect freedom of action or free thinking of men are no longer considered valid on the ground of social justice and legislative measures are being freely undertaken for counteracting such contracts. In a democratic society unfair wage rates, unhealthy living conditions of labour, absence of proper facilities for the education of their children are as much inconsistent and incompatible with honest living and thinking as slavery in ancient times or the obligations of a vassal in the days of feudalism. The clash of ideas on these matters often leads to suspension of co-operation between labour and capital resulting in strikes and lock outs with their unhappy consequences on industrial progress and economic advancement of the people. These problems are undoubtedly more acute in undeveloped countries like ours where labour is still ignorant and is liable to political exploitation. One of the primary duties of a good industrial management is to inspire a sense of identity of the worker with the industry.

Co-operation Of Workers

Plans and decisions cannot become effective unless they are understood and accepted by those who are expected to contribute to their success. Orders which are not appreciated and accepted are not obeyed. Willingness is therefore intrinsic to the continuance of co-operative action. In short the high productivity and progress of an organisation is a interlinked with the consent of the co-operators.

Strikes have come to be recognised as a legitimate means of giving expression to grievances of labour and of getting them remedied. But in Europe and America such strikes are seldom resorted to on political grounds, and are not used for harming the industry itself. In these industrially advanced countries trade unionism has developed on right lines and is often utilised for solution of economic problems and betterment of the standard of living of labour. There politics is a means to an end and not an end in itself.

Trade Unionism

If trade unionism has made labour more self-conscious and capable of compelling the attention of the management to labour problems it is not usually abused for fomenting discontent amongst the working classes or for encouraging them to direct action and

(Continued on page 616)

FOREIGN INFLUENCES ON INDIAN LANGUAGES

By Dr SUNITI KUMAR CHATTERJI

INDIA although now divided into two independent States of India proper (or Bharata) and Pakistan forms as a country a single and self contained geographical unit The peoples who inhabit the subcontinent of India also, despite original differences in race, language and culture, virtually form one people, the basic diversities in race and language as well as culture having been very largely modified and reduced to a single or common type wh ch can quite adequately and properly be described or labelled as *the Indian type* This has been brought about by a very wide and deep racial and linguistic as well as cultural miscegenation which has been going on for several thousands of years (ever since the basic races and language culture groups which found themselves in India realised that they were to live in this country side by side) Leaving the question of race apart which is generally relegated to the background by the more prominent features and factors of language and culture (and sometimes also of religion as part of the culture), we note on the Indian scene, from the most ancient period of history these four distinct language groups each with its own distinct mentality and cultural milieu (1) Austro-Asiatic in its Munda or Kol branch (2) Sino-Tibetan, mainly in its Tibeto Burman branch, (3) Dravidian and (4) Indo-European, in its Aryan branch. The languages belonging to each of these four groups originally differed from each other in phonetic and morphological structure in syntax and in vocabulary But owing to mutual influences, which were being exercised upon each other for the last 3000 years and more, by people speaking these languages living side by side and mixing with each other these four speech families have on the soil of India tended to converge towards each other in sounds and forms and in words and word-order, and to develop some common traits which may be described as *pan Indian* as leading to a noteworthy harmony or symphony of speech which transcends or rises superior to basic disagreements or antiphonies.

In the matter of language India has also reacted to the influences from foreign languages more or less as a single linguistic unit Thus, modern borrowings in Indian languages, of words and names from languages of Europe (which have mostly come to them through English) almost invariably represent the alveolar (*danta mulya* as they would be described in Sanskrit) t d sounds of English and other European languages-even the pure dental t d sounds of languages like Italian—by the pan-Indian cerebral or retroflex (*murdhanya*) sounds, t d thus English *ticket table motor, desk dock badminton* French *metis, Dupleix,* Italian *Magenta Garibaldi,* Russian *Soviet Vodka Trotsky German Goethe Hitler* etc have in all cases in their equivalents in the various languages of India the characteristic cerebral sounds of t d, and never the dental t d

Fascinating Topic

The influence of extra Indian foreign languages upon the languages of India is a fascinating topic in Indian linguistics and it demonstrates how India became affected by foreign lands in her culture in the domains of both material objects and intellectual ideas The Indian people as a whole attained its completed *Indian* character after the Aryans as the latest ethnic and cultural element, arrived in India and the Aryan language in its successive phases (with the Dravidian languages coming in later) gives the fullest expression to the Indian mind and Indian culture The oldest records of India which we can read either in the contemporary documents or in later manuscripts are all in Aayan the Asoka inscriptions the texts of the *Vedas* the *Brahmanas* the *Mahabharata* the *Puranas* etc etc The earliest Indian records as in the Harappa and Mohen jo-Daro seals have not yet been deciphered and interpreted The character of their language whether it was Aryan or Dravidian or some other still remains an enigma though it is likely that it was some form of Proto-Dravidian

Foreign Words In Vedas

Already in the oldest recorded speech of India the Sanskrit of the *Vedas* we find a number of foreign i e extra Indian words which the Aryan speaking people while trekking to India in the centuries before 1000 B C picked up from the Assyro-Babylonian and other peoples with whom they came in contact One such foreign word, a word

of Semitic origin which is found in Assyro-Babylonian and Hebrew, still survives in most of the modern languages of India as an inheritance from the Vedic speech. It is the common Indian word for a weight—*man*, anglicised as *maund*, which is found in Vedic Sanskrit as *mana*, in Assyro-Babylonian as *manah*, and in Hebrew as *minah* etc. Apart from this pan Indian word there has been no other survival of a foreign or extra Indian word from Vedic in our modern Indian languages.

Kaurava Pandava Period

From after the period of the *Kauravas* and the *Pandavas* which we find celebrated in the national epic of India the Sanskrit *Mahabharata* i.e. from the middle of the 10th century B.C. (according to a sober and reasonable datation arrived at by different methods by three distinguished Indologists F.E. Pargiter, Hem Chandra Ray Chaudhuri, and L.D. Barnett) India may be said to have entered into the documented period of her history. It was during this *Kaurava Pandava* period that the four *Veda* books were compiled and probably first written down by Vyasa and Vyasa also started the tradition of recording ancient legends and history in compilations which later became the *Puranas*. From after this period India came in touch successively with a number of foreign peoples who came to the country both as military invaders and as trading adventurers, viz., the Assyrians the Achaemenian Persians the Greeks under Alexander the Great and his successors various Iranian peoples like the Sakas, and Greek merchants in South India, then Turkic peoples like the Gurjaras and Hunas, Muslim Arabs and Muslim Turks and Iranians and Christian Armenian merchants and finally the modern Christian peoples of Europe who ushered in the modern age in India—the Portuguese, the English, the Dutch, the French. All these peoples exerted a tremendous amount of influence on India as a whole and their vestiges we find in the words from their languages which were adopted into the languages of India.

Two Ways Of Infiltration

These foreign words came in two ways. In the first instance they were [illegible] by the people of India in their spoken languages, when they came in contact with the foreign peoples [illegible] in India. Then [illegible] of [illegible] and the [illegible] which were taken over by learned persons and adopted into the learned language, Sanskrit, as part of a new technical vocabulary. In the first instance words of popular borrowing spread widely whether through the spoken languages or through Sanskrit but the comparatively smaller number of technical words naturally enough remained confined to the learned books on a particular science and only a few of them could filter down into the current or spoken tongues. Thus, words of a popular character like the Greek Syrinx 'tube a tunnel', *drakhme* 'a coin', *semidalis* 'wheat flour', Old Persian [illegible] [illegible] *mudra* Egyptian or flat seal, Middle Persian *post* 'parchment to write upon', *[illegible]* 'engraver in metal', *nanak* 'a coin', etc. were adopted into Sanskrit while they have survived as inheritances from the ancient and mediaeval speeches of India in most of the modern Indian languages as for example Hindi and Bengali *surenga* 'tunnel', *dam* 'a coin', [illegible] *sivanyan* 'vermicelli', *suwar* or *sawar* 'horseman', *mudi* 'seal finger ring', *potha* or *pothi* 'manuscript book', Bengali *sekra* 'goldsmith', Panjabi *nanak* beside Hindi Bengali etc. [illegible] 'a coin'. On the other hand learned Sanskrit words like astronomical terms e.g. *hora*, *kendra*, *drekkana*, *asphujit*, *jamitra*, *lipta*, [illegible], [illegible] *taukshika* etc., etc. which are also borrowed from the Greek do not usually survive in the common speech of modern India although a few have come down, like *hora* 'hour' and *kendra* 'centre', as common enough learned borrowings from Sanskrit in most of the modern languages of India Aryan or Dravidian.

Borrowings From Greek

Most of the early foreign borrowings in Indian languages came from the old Greek and Old and Middle Iranian. The Tamils of about 1900 years ago had contacts in their own [illegible] with Greek traders, and in Old Tamil of the Sangam Period at least one borrowing from Greek as a popular word has been noted by Dr. Kamil Zvelebil a Czech [illegible] Dravidianist the Greek word [illegible] [illegible] which is found in Old Tamil as [illegible] but this word has not survived. Names of foreign peoples were frequently foreign in origin e.g. *Parasika*, *Yavana*, *Romaka*, [illegible], [illegible], *Saka*, [illegible], *Huna*, *Arabi* etc. The Tamil word [illegible] [illegible] Tamil [illegible] [illegible] and it is found in Sanskrit as *Turushka* 'Turk'. There were a few borrowings from Early Chinese and from Early Turki also. An Old Chinese word for paper [illegible] [illegible] [illegible] in the 7th-8th century

as *Saya* this we find in contemporary Sanskrit, but it is now no longer in use. The common North Indian word *Thakur* is looked upon as a borrowing from the Early Turki *Tegin Tegir* 'lord, master'.

Muslim Influence

By far the largest foreign borrowings have taken place in India during the last seven to eight hundred years, when the dominant people on the Indian scene were the Muslims of both foreign and Indian origin who used Persian as their official and cultural language and Arabic as the language of their religion. The Turks were the first Muslim people who conquered North India, and they brought in Persian and it is curious to note that comparatively few Turki words have found their way to Indian languages (there are a bare 80 in Hindustani and only some 40 in Bengali). Persian exerted a very great influence all over India during these last few centuries, and as Persian has absorbed a very large number of words from the Arabic, these Arabic (or Perso-Arabic) words have also come to Indian languages through Persian. Hindustani has passed on some of its Persian (and Perso-Arabic) loan words to the languages of the Deccan and South India like Marathi and Telugu, Kannada, Tamil and Malayalam. These words relate primarily to administration, law and revenue, and there are other words of a general import also. This Persian element (coming up to between 2 to 3 thousand words found practically throughout India—there are of course many more in Hindustani or Hindi-Urdu) certainly presents a common inheritance in all the languages of India.

European Elements

Finally, we have to consider the European elements. These are also pan-Indian in their character. There are over 200 Portuguese words current in the different Indian languages. Bengali shows over 100. They relate to objects and institutions brought to India by the Portuguese, and relate also to the Christian religion. A few Dutch and French words taken over directly from these languages are also there. The largest European element is of course presented by the English words in all our Indian languages.

The English have gone but their language without peril to ourselves cannot be removed from the domains of administration and science and higher education. English is our main gate-way to knowledge to creative modern thought; it makes accessible to us all the great things that have been said and done in the world. Moreover, in a polyglot country which has no modern language of its own claiming the spontaneous and universal homage of all sections of the people, English is found necessary to maintain administrative efficiency and intellectual unity and progress at an all-India level. To prevent the fissiparous tendencies of a growing linguism and linguistic intolerance English will be helpful, and the sense of political unity of India, which is based unquestionably on India's geographical and cultural unity, has in the present age been newly fostered by English, and English can help in maintaining it as the result of what has been called compulsion of events. In spite of nationalistic puristic tendencies in certain quarters to eliminate or restrict English words, the cry is still they come. Newer and newer words not only in technology and in science but also in politics and general cultural affairs are thronging in and are in use among all sections of the people and we are bewildered—we cannot shirk or shun them, howsoever we might try to create new words from the Sanskrit or Old Tamil or Arabic.

Profound Influence of English

In addition to giving words relating to all the departments of life and all aspects of thought, English is exerting a very profound influence on the major languages of Modern India by helping to mould them as expressive and modern mediums in drawing out their latent powers by presenting before them models which may conveniently be followed in the matter of idioms, locutions, turns of expression and even habits of thinking. In this way English is modernising the Indian mind, both directly, and indirectly through the Indian languages, and is bringing about an integration of Indian thought and culture and Indian science and letters with the rest of the modern world. The Great Synthesis of Cultures which has always been India's ideal is being fostered in present-day India through the presence and the silent and all-pervading influence of English. After Sanskrit, English is the force which is making all the Indian languages fall in line with each other and become in their ensemble the true representatives of the culture and mentality of modern India—modern India which in realising herself finds both Sanskrit and English almost equally indispensable. There is no doubt that the English element, all-embracing and ever extending, is strengthening the symphony of Indian languages by supplying a very powerful and an indispensable common leaven and bond of unity for a modern and progressive free India.

THE PROBLEM OF STUDENTS

By Dr ATINDRANATH BOSE
Calcutta University

LATELY students have become a headache of elders,—of educationists, of parents, of the keepers of law and order and of society at large. Hardly a day goes without a report that somewhere examination hall have been raided, academic life has been disturbed or hooliganism indulged in some form or other. Copying in examination halls and travelling without ticket are treated as matters of right and invigilators and ticket examiners are beaten up for standing on the way. Along with the lowering of ethics and discipline there has been a fall of academic standard to a level not known before.

Diagnosis Essential For Cure

Although every one seems to be agitated over this ominous development there has been little dispassionate thinking over the reasons which lie behind it. The first step towards the cure of a disease is a correct diagnosis. We have not yet diagnosed the malaise from which the student community have been suffering.

A cheap diagnosis is the infection of politics. It is often said that the students are spoiled by the politicians who make them play their game. No doubt, the major political parties have their students organisations which are sometimes utilised to serve their political aims. But such organisations enlist a microscopic fraction of the student community. A large number take part in union elections and in functions and festivals sponsored by these organisations but they owe no allegiance to and are not influenced by the political parties which might be pulling the strings from behind. The mass of the students are indifferent to politics. They are more interested in rock and roll films and other lighter form of amusement than elections, processions and street shouting. The hooligan type of student is not the same as the political type whatever may be the faults of the latter.

Frustration Of Youth

What lies at the root of the disease is a sense of frustration and cynicism. The average student has little of the [illegible] ... of the [illegible] of youth. He lives under the present and without a future. Forty years ago the Sadler Commission made the following remark on the life of Calcutta students.

"Surrounded as he is by manifold [illegible] and housed under dreary conditions the students tend to become moody, [illegible] and absorbed in himself and his prospects. He needs, therefore, more than other students of the same age, recreation and diversion." Today the statement is truer than ever. The survey made by the departments of [illegible] and Anthropology of the Calcutta University in 1954 of the conditions of living and [illegible] of undergraduate students in Calcutta brought out a painful picture. It showed that [illegible] p.c. of students came from families with a per capita expenditure of Rs. 30 or less per month, 55 p.c. had an average floor space of [illegible] feet, 31 p.c. got below subsistance diet [illegible] annas twelve or less per diem. About [illegible] the students required immediate medical aid to cure them of ailments which interfered with normal work.

There is no reason to suppose that conditions in other cities or in the districts are better. Generally, they are worse. Opportunities for healthy recreation like sports and [illegible] are available to a few. A large majority have to live in unhealthy surroundings on poor diet with some disease as companion and without a good society. No wonder that they develop morbid habits and that their youthful instincts are perverted. The more sensitive among them imbibe a cynical disregard for conventional values of life, for all idealistic [illegible] and tend to be grossly selfish.

Ordeal Of Examination

Add to these the periodic ordeal of the examination. The system of a written examination as the sole test of merit has been criticised and found wanting by educationists themselves. At best it is a machine for sifting the unworthies although, strictly speaking, it is not so. Even if it is, the object of education is not to sift and reject but to find out the best in all and make use of it. If it fails the fault lies not with the student but with the system. The demand made by the [illegible] of Hyderabad school a few weeks ago that the students must be passed and promoted [illegible] [illegible] [illegible] by the elders. It is true that the examination cannot be done away with and a scientific [illegible] of merit based on class work and [illegible] [illegible] substituted in its place.

Social Environment

While probing into the problem of students it is often overlooked that the fault is not of the students alone The whole society is infected with the same virus There is a general deterioration of character and discipline among the educated middle class Ticketless travelling and beating of checkers riotous activities on flimsy pretexts insolence and incivility have become the general trait of an increasing section of our intelligentsia After all the youngsters imitate elders their parents teachers and the legislators who are the representatives of the people. It is difficult even for a well meaning student to get out of the stifling social atmosphere

It is necessary to note that the guilt of indiscipline and rowdiness does not attach to the majority of students or for the matter of that, of the public The majority are still peace loving and innocent and have no propensity for criminal activities But they are too passive and indifferent to oppose the trouble-shooters The whole community suffers from apathy and timidity the lack of courage to stand for ones convictions against the mob Every society has its anti social elements just as every organism has its germs of disease. But these are normally held in check and can only assert if the social or human body loses health and the germ killing cells cease to work.

This is, however no plea for complacency and resignation It is no use arguing that since the society is bad the examples are bad, the students will be spoilt and no attempt to reform them will avail The vicious circle must be broken somewhere. If the society is to be raised from its present level a start will have to be made somewhere and obviously it is to be made with the students Because they are the future

The so-called youth and students organisations are not up to this job They have specialised in stereotyped forms of surface activities They are quick to oppose every infringement of students rights real or imaginary by bringing them on the streets. But they have never spoken a word on the duties of students never condemned an act of indiscipline or hooliganism on the part of their clientele The same is true of teachers associations which have agitated for teachers pay scales and security of service but have never attended to improving the quality of teaching or to the need of teachers associating with the students

Towards Reform

The first step towards reform is the improvement in teaching If teaching is good students are bound to be attentive If teaching is lifeless and mechanical students would seek interest outside the class room The academic authorities should therefore strictly insist on the quality of teaching and remunerate the competent teacher with a respectable salary Students feel a spontaneous attraction for the good teacher and the latter has the opportunity to forge friendly relations with them If he is not merely good in teaching but good also in personality and character he can easily impart his influence on the students and be their friend philosopher and guide. This teacher student association may be the nucleus of a new social life embracing the people of a locality It may breathe a bracing and purifying air and set a model for others to follow A brotherhood of teachers and students directed towards moulding new human material through service and self purification building a new pioneer force that will stand guard on fundamental social values, will change the foul atmosphere from which there seems to be no escape now Such an enterprise needs teachers like Prafulla Chandra Roy or C. F Andrews and institutions like the Fergusson College of Poona or Aswini Dutta s College of Barisal of old memory A teacher and institution with an ideal are the basic factors in an educational system which can produce men of intelligence character and self-discipline.

These are however not all The best effort may be stultified without financial resources and without a minimum standard of living assured to teachers and students alike. Smaller classes less expensive education replacement of the examination system and many other things must necessary follow to nurse the pioneering work of reform But the first thing must come first and brook no delay

MY CONCEPTION OF AN IDEAL STATE

Under this caption we published three different articles written by our thr readers (T month we publish three more art cles on the same subject We hope to continue this featur e publish more articles on different subjects written by our readers This will inculcate the habit writing and also stimulate thought and inspiration among the students and new writers.

(*By Vinod Khanna*)

What we call ideal and revolutionary today generally becomes practical and conser vative to-morrow Plato s communism of property has been successfully put into practice by Russia and other communist coun tries His advocation of 'one man, one work has applied most profitably to day in the shape of specialization of functions. And what is modern civil service? Isn t it just the adaptation of Plato s Guardian Class to the present times?

As briefly referred to, the philosophers like Plato St Augustine, Dante Sir Thomas More and many more who gave to this world Utopias or Ideal States had a purpose in view when they wrote They were not being led away by their fancies and imagination They were all trying to solve the problems of their times by using their fertile brains As with Plato so with More money or property was the root cause of all evil Hence th advocation of communism St. Augustine wanted that the people should think of humanity at large instead of thinking of and pursuing their own selfish interests For this he put the conception of a city of the dead before the people A city not of this world but of the other world which every man must make an endeavour to go. Whereas Dante and Pierre Dubois were the advocates of a universal monarchy because of internal disorders and external bickerings to-day as it was then there is a real need of having an Ideal which may be worth trying for

In actual fact the need to-day is much greater because humanity is facing its greatest crisis since he beginning of the world To live together peacefully or to be destroyed by the modern engines of warfare are the two befo ... first ... Who will not ... But we can ... states of the w... tied in favour of my conception Ideal is a W...

This World ... It w... governmen...

just another General Assembly of the U N But it will be th sovereign body in the Wo State Its constitution shall be on the lines U S Congress It will have two hou The Upper House shall represent all the sta equally irrespective of their size o strengt Whereas the Lower House will be popula elected on the basis of universal adult franchi the World Executive shall be on the lines the Indian Executive under the present consti tution There will be a World Preside elected by an electoral college There will a council of Ministers, headed by a Prime Minister to aid and advise the President the performance of his functions The Cou cil of Ministers will be responsible to t popular Chamber of the World—Parliame Th present International Court of Justi with some improvements can be retained the World Judiciary Along with this t World Government will have an Internatio al Civil Service and a World Force to s that its decisions are being properly impl mented by the various states

The member states will have the freedo to form and maintain whatever type o government th ir people want The differe experiments will only enrich humanity

A relevant question crops up what w be the functions of this state and what w be the relationship between the Feder Government and the member states?

There are two alternatives before me fro which to choose—should this World State b a mere Police State or should it be a 'Welfar State'? I will choose th second alternativ Though this will mean less powers and little restrictive autonomy for the membe states yet the sacrifice will have to be mad Why? Because not only is there a large portio of th world which is still under the shackle of other states but even those states whic are free have a tremendous diff ence in the development. In actual fact this is one causes of international bickerings I ... police functions to World Gover... sure it will be quite impossible maintain international peace ... The states will be debarred fro... in the Atomic field ...

aggressive purposes The states should have only police force to maintain internal order World Government will have an International Force equipped with the latest weapons to be used against any recalcitrant state

Another important function of such a state will be to mediate between the member states Its decision will be final

Another function of the Federal Government should be Education though in many states of the World at the present time this function lies with the units But for the success of a World State, it is very essential that this function must lie with the World Government Right from Plato and Aristotle political philosophers have emphasised the importance of education Plato said if education is neglected it matters little what else the state does Aristotle said that a citizen must be educated according to the spirit of the constitution Again eternal vigilance is the price of liberty has been truly said Therfore not only the World Federal Government will introduce free and compulsory education for all children upto the age of fourteen but it will see that the children are educated according to the spirit of the constitution Qualities of love, forbearance hard work, international brotherhood etc will be inculcated in them

Thus the end of the World State will be to eradicate poverty want disease hunger and of course war from this world Though the national states are at the brink of a suicidal war, they are not ready for a World State Why? Because of many reasons As man is selfish therefore nobody likes to renounce power The present political leaders of the World, excepting a few, are selfish They are not ready to leave their all powerful (in the national sense) states Again the powerful Munition Magnates are doing their best to keep the present cold war from coming to an end Then false national pride is keeping the people from renouncing their national sovereignities

The United Nations Organization can be strengthened as an important step towards World Government Formation of zonal federal states like the Western Powers combining in one Federal Stat the Communist States, in another and the neutral states in a third Federal State will be another important step that direction

* * *

(B) A N JOG)

THE conception of an ideal state is an old one. It is to be found in the writings of many old philosophers whom the world has produced Thus we see it in the Republic of Plato, the Utopia of Thomas More, Sidney's 'Arcadia and many others H G Wells in England and Kautilya in India have also put before us the ideal form of administration But it must be remembered that the ideal changes with the time and it emerges from the prevailing needs It is, therefore clear that though the above mentioned writings will guide us in our present concept of an Ideal State yet more of it will depend upon the changed circumstances. Present conception can not be a replica of the old

We want the state of things in which we live to change radically so that human life may be happier and sweeter Naturally we think of an ideal state in which the evils of present times would not appear In my opinion the ideal state of today should have a democratic form of government based on adult franchise The age of despotism and totalitarianism has gone I believe in parliamentary type of democracy in which the opposition party should play a part as important as the ruling one

The functions of such an Ideal state will be like those of most civilised states of today The state will not rely on taxation but would engage in industrial activities of all kinds But in case of a poor state like India it is not possible to follow any extreme path It should follow as it is doing at present a middle path Though it is not possible in the beginning to abolish taxation, to provide free education to discourage large scale private enterprise and to look after every department of life yet it should be the aim

Within the state there should be complete freedom of opinion and association. The citizens should enjoy all the fundamental rights namely Right to Equality Right to personal freedom the Right against exploitation, Right to freedom of religion and Cultural and educational rights There should not be any kind of political persecution The state should rely on education and propaganda to check crimes Criminals should not be treated as enemies of society but as misguided and mentally defective persons. In other words Jail Administration should be enlightened A jail should be a place for correction rather than punishment. Every thing that encourages crimes, poverty ignorance, and communalism should b removed from society

The ideal state should adopt peaceful methods to fight every evil The public activities should be moulded by moral force Thus the place of social service in such a state

is more important It is only these methods of social education which promise to remove *ignorance* and *to broaden the minds.* of the people The State should be a secular state in which all faiths should be equally free to exist. The aim of the ideal state should be to achieve equal distribution of wealth, and provide equal opportunity for progress A Socialistic pattern of society should be the aim

In the international sphere the ideal state should be strong enough to defend its sovereignty It should have a sufficient force *to be used of course, only for* defence against an aggressor Maintaining its own sovereignty it should respect the sovereignty of other States i e imperialistic attitude should be curbed. On the other hand it should do all it can to promote international good will and understanding and as a member of the United Nations it should help in every way the cause of international peace It should sacrifice the idea of nationalism to achieve internationalism It is possible keeping the way of life and form of government different in different states to come under a single world state Thus in foreign relations the principles of peaceful co-existance should be the basis This will make every state feel as a member of a single world family

No doubt it is extremely difficult to bring into being such an ideal state under the present day conditions Big Business would oppose it so would all the other religious and secular vested interests The national idea would come into conflict with it But there are many hopeful signs too Looking at the achievements even of India, the ideal to be achieved does not seem to be an impossibility for the greatest happiness of the greatest number but aim at the greatest happiness of every individual and of society as a whole

The ideal should be splendid though not over ambitious It should be within reach When there is a splendid ideal before us, we can make sacrifices for it with a cheerful heart

(B) Savita Borgoankar)

Often we hear the term Welfare State which is the conception of an ideal State in modern times This is the goal which most of the countries aim at. India is also one of them But what exactly do we mean py an ideal state?

In the fifteenth century the political philosophy of Britain was laissezfaire Political thinkers like Benthum James Mill and Herb Spencer were its protagonists They believe that the state should not interfere in the affairs of the individual. For them individual freedom was as sacred and as necessary as is to human life In their view the state should confine itself only to the defence from external attacks and to suppression of disorder It should not interfere with the rights of private property and taxation should be as low as possible.

But the protagonists of this doctrine were rich *Half a century after the advent of the* Industrial Revolution the rich became richer and the poor still poorer

The conscience of the people was then roused and they began to think how a state should be and what its objects should be Philosophers like Green examined the conditions of the poor and what objects the state should achieve He said that in society there is always the danger of one individual being restricted by the undue freedom of others and under such conditions there can be no equality and security and it is only through the state that the protection to such people can be given It is through the state that the people can get equality of opportunity protection against exploitation and financial relief in old age and during sickness

The State must interfere in matters of Education also as it must also provide employment to everybody who can work as well as ensure proper working conditions

The state should take measures to promote public health It should give free medical service This should be the most important aspect of an ideal state because the state prosp rs only when the citizens are healthy

The state should not merely provide material things like food clothing shelter recreation and facilities to travel but also strive *for the moral advancement of the people*

In the ideal state of my conception compromise shall be brought about between these two conflicting ideologies While the state would not interfere in the personal affairs of individuals it would make it sure that the personal behaviour of an individual does not jeopardise the freedom and happiness of another individual The state must create conditions of well being and see that every individual takes advantage of these to the maximum

DO YOU THINK TOO MUCH?

Probably you do but if you want to live longer and be more successful take a tip from science don t push your brains too hard spend more time relaxing

By JOHN E. GIBSON

BELIEVE it or not but science has found that you ll live longer be happier health ier, and more successful if you ll just slow down a bit on your mental activity For contrary to what the copy books taught us, recent studies of leading psychologists and psychiatrists both in this country and the U.S have shown that most people would be better off mentally and physically, if they didn t think so much In fact their researches offer con vincing evidence that a great many of our bodily ills and mental troubles are a direct result of over thinking

Sir Heneage Ogilvie one of Britain s great est medical authorities some time ago complet ed the study of the effects of brain activity on general health and well being Most of us he finds think too much

The evidence clearly indicates the British scientists say and if people would give their brains a rest they would be far less subject to a host of psychosomatic ailments such as high blood pressure ulcers heart trouble and simi lar stress diseases Also says Sir Heneage they would be more likely to stay happily mar ried and they d find it easier to get ahead in the world

The British scientists conclusions are backed up by the findings of leading U S authorities Exhaustive studies conducted by the eminent psychiatrist Dr David Harold Fink show that the condition of a large percentage of psychiat ric patients is principally due to over thinking "Their brains are constantly turning over" says Dr Fink They spend most of their waking hours mulling over various real or fancied problems or else trying to analyse their own reactions The tensions produced by this incessant cerebral activity not only affect them physically but result in emotional maladjust ments as well

"A great many of these patients" says the psychiatrist also are afflicted with insomnia which stems from the same cause their over active craniums won t slow down long enough to let them get to sleep Before this type of individual will respond to therapy means must be found to make him cut down on his mental activity and give his brain a rest

Reaching normal adjustment

Dr Fink tells his patients to practise not thinking for at least an hour every day When I can get them to do this the psychiatrist says "For a well integrated personality thought should as far as possible be balanced with action When we let our thought proces ses race too far ahead of our ability to express them in some sort of action, we get into trouble. Goethe says that thought without action is a disease And modern psychiatric studies attest to the fact

Dr Fink s advice spend less time thinking —and devote more time to providing the thoughts you do think with active and concrete expression To do otherwise is like racing your car engine with the car out of gear It gets you nowhere and it s a strain on the engine

Paradoxically enough lazy people are more prone to over think than energetic ones are The lazy man spends a good part of his time just thinking about the things he is going to do He mulls over ambitious projects in his mind, then files them away for future action and begins thinking about new things He seldom achieves anything however because he s too tired or hasn t the time to put them into action And he dissipates enough energy in mental activity to accomplish a good percentage of his objectives. Small wonder that he lacks self confidence and feels frustrated Most of his brain children never get past the mental blue print stage

Psychiatrists agree that, considered strictly from the point of mental hygiene it s better to act without thinking than to think without acting Psychological studies show that wo- men exercise the conscious thinking processes to a far lesser extent than men do They are far more apt to act on impulse and rely more on flashes of intuitive perception than actual thinking It is significant that they are far less subject to mental breakdowns than men are and much more immune to stress diseases. And despite women s distaste for mental cogi- tation it is interesting to note that they are quite as successful in achieving their objectives as are men.

Thinking disturbs the blood circulation

Authorities cite many reasons why thinking too much lowers bodily resistance and renders us more subject to physical ills

For one thing, it interferes with the proper

circulation of the body's blood supply. It also affects the entire nervous system and inhibits glandular as well as organic functions. Tests show, in fact, that there is virtually no part of the body not affected in one way or another. Studies conducted by Dr. Tavis Windsor of the University of Southern California and Dr. George Burch of Tulane University show that thinking hard causes your finger tips to shrink. They don't shrink if someone asks you what six times four is but they do if you have to multiply something like nine times seventeen. In other words the physical effect is in direct relation to the degree of mental effort.

If you're the kind of person whose brain is constantly turning over, the odds are better than even that you suffer from what doctors call 'chronic fatigue.' This malady is a continual tiredness accompanied by a persistent feeling of depression and frustration.

If you want to get rid of it, take the advice of Dr. Walter Freeman, noted psychiatrist who has long specialised in this ailment. He finds that physical rest only makes matters worse. He cures his patients by prescribing swimming, horse riding and long hikes. Dr. Freeman explains the effectiveness of this therapy briefly and significantly: "When their muscles are working," he says, "their brains are resting—and that does the trick."

Furthermore Sir Heneage Ogilvie's studies show that a man functions most effectively and does his most important work when he allows his mind to wander at its own pace—instead of driving it. "It has been my observation," he says, "that science is advanced farther in a short length of time by the informal chatter of a few like minded friends over coffee than by the formal exchange of papers or by any number of scientific congresses."

The great U.S. scientist, Dr. Willis R. Whitney, who has been called the father of industrial research, agrees that thinking is vastly overrated as a method for solving problems. Our conscious thought processes, as Dr. Whitney points out, actually constitute a small part of our intelligence. The mainspring of the intelligence is the subconscious mind over which we have only indirect control. Our subconscious mind, because it is extremely sensitive, accumulates a veritable treasure house of knowledge. We are consciously aware of a great many factors which our conscious thinking processes miss altogether. But it is only when we stop pushing our brains and are mentally relaxed that we are sensitive to the promptings of our subconscious intelligence.

Subconscious promptings

"Many persons of brilliant achievement," says Dr. Whitney, "do not realise how much of their success is owed to their subconscious faculties." "They often believe," he says, "that they solve their hardest problems by cold logic and thinking, but actually they reach the solution through the subconscious promptings we call hunches and then work out the reasons afterwards."

Instead of trying to force your brain to think when you have problems to solve, Dr. Whitney advises you to relax and put the mind at rest. For he says: "your subconscious or intuitive processes can't operate when your conscious mind is tied up in knots."

Mr. C.G. Suits, for years an industrial research chief, points out that a great many of our most important scientific inventions were not thought out, but were born of intuitive flashes of intelligence.

Among the examples he cites are the modern radio receiver, the automatic traffic signal, and the thermostatic control on the car engine. Correspondingly, some of the brightest ideas a man ever gets come to him not while he's consciously thinking about them, but when his mind is completely at rest—such as when he's shaving, or taking a casual stroll, or lolling in the bath.

Dr. Suits finds the big difference between the ordinary mortal and the man of genius is that the latter keeps his mind relaxed and freely open to his subconscious promptings. The average man doesn't. His mind is tense and too pre-occupied with squirrel-cage thinking to be receptive.

So if you want to be happier and healthier, live longer and be more successful, take a tip from science and don't push your brains too hard. (From the *Psychology* Magazine).

PEOPLE WANT TO KNOW

By GERALD WENDT

Q A *reader in Zagreb Croatia writes to ask "Is it true that bees construct the cells of their honeycombs with geometric precision?*

Ans This question has been dealt with thoroughly by the French scientist Jacques Nicolle writing in *Diogenes* a quarterly review published by the International Council for Philosophy and Humanistic Studies with assistance from Unesco

M Nicolle quotes the following passage from Professor Leon Bertin s work *La vie des animaux* (The Life of Animals)

'In 1712 a nephew of Cassini the astronomer Maraldi determined the angles of the lozenges (of the bottom of the bee hive) He found them equal to 109°28 and 70°32

'The French physicist and naturalist Reaumur suspected that the bees must be guided by *reasons of economy in the construction* of the bottom (of their hives in order to save wax) So without revealing Maraldi s calculations, he put the following problem to the German geometrician Koenig Among all the hexagonal cells of the bottom (of the hive) composed of three equal lozenges or rhombuses determine which cell can be constructed with the least matter

Koenig dealt with the problem by differential calculus and found that the angles of the lozenges must be 109°26 and 70°34 It was surprising to find that his figures almost tallied with those of Maraldi But the story did not end there because in 1743 the Scottish mathematician Maclaurin demonstrated that Koening had made a mistake in his calculations and the correct measurements of the angles were precisely those indicated by Maraldi and by the bees

'After this writes Professor Bertin one might well inscribe over the bee-hive the following saying of Pythagoras Let no man enter here unless he is a geometrician

Q *A reader of the Stornoway Gazette Isle of Lewis (Scotland) writes There seem to be indications that the ice caps are receding at both poles It is maintained that of the ice caps melted, the quantity of water in the oceans would be increased to the extent of submerging great sea ports like London and New York Is this fact or theory?*

Ans It is a fact that glaciers are receding in all parts of the earth which indicates a slight warming of the average temperature But it has not yet been established that the polar ice-caps are also melting This would require an extended series of measurements of the thickness of the polar ice which have not been made But this is one of the objectives of the present International Geophysical Year

The thickness of the ice on the Antarctic Continent is especially important since about 90 percent of all the earth s snow and ice is there It has been estimated to be between 2 000 feet and 8 000 feet thick on the average At some points it is certainly 10 000 feet thick If all this ice should melt the level of the ocean would rise at least 85 feet and possibly 400 feet which would indeed submerge most of the great seaport cities

A Californian expert Professor Robert P Sharp has estimated for the American Geophysical Union that the average thickness of the Antarctic ice is in excess of one mile and that its complete melting would raise the sea level all over the earth by 200 feet He calls this ice something of a Sword of Damocles hanging over the heads of all peoples living close to the sea However he also advises a relaxed attitude toward this possibility It cannot happen fast Conceivably ' he says, it might happen in 10 000 to 20 000 years

Q *Mr J W.R Da Costa of Jaffna Ceylon asks Why do detergents wash cleaner than soap?*

Ans Instead of the old fashioned bar of soap and the scrubbing board modern housewives now use soap powders (still based as for centuries on chemically treated animal fats or vegetable oils) but more frequently they use detergents

Let us be quite clear however when speaking of detergents that soap itself is a detergent. That is it removes dirt—which is what detergence means Strictly speaking therefore these new chemicals should be called soapless detergents They were made by nature millions of years ago and come from mineral oil deep in the heart of the earth They are produced during distillation of petrol or gasoline Their commercial use has developed

since the Second World War and their development was encouraged by the shortage of fats and oils during and immediately after the war. But they are not just substitutes for soap. They have scientific values in their own right. They make water wetter.

Water, in order to dissolve or remove dirt has got to permeate it. It has got to wet it. But oil and grease repel water—that is why a sheep's fatty fleece acts as a waterproof. And that is why water runs off a duck's oily back. If you were unkind enough to wash a sheep or a duck with chemical detergents the sheep's fleece would no longer be waterproof and the duck would sink because its feathers would become waterlogged.

Now why does this happen? To understand the action of detergents you have to know something about what is scientifically called surface tension. To make surface tension very simple one might think of a globule of oil or a blob of grease as a tiny balloon. Just as the balloon has a thin rubber coating so the oil or grease has an invisible skin which prevents the water from penetrating. What the detergent does by its chemical action is to destroy that skin—remove the surface tension—so that the water being now wetter, can dissolve the oil or grease. So a greasy plate or an oily cloth is properly cleaned by a detergent.

This, of course, has very important uses in industry as well as in the home, and there are some medical scientists who hope that the detergent action may even be of some value within the human body. One of the things which cause diseases of the arteries and the heart is the clogging of the blood vessels with fat—like the furring of a waste pipe with grease—and the doctors are looking for a detergent which carried by the blood stream, would prevent this clogging of the blood vessels. But they know they have to be very careful. Mineral chemicals of this kind are always liable to have injurious effects on the body. That is why it is advisable to wear rubber gloves when washing with detergents in the kitchen sink or the washing machine.

Q. *M. Pierre Jacob of the editorial staff of the Manuel General de l'Instruction Primaire, a Paris weekly for primary schoolteachers asks: "Why is sea water salt and how does it retain its saltness when such a great volume of fresh water is pouring into it [illegible]?"*

Ans. When the hard rocks of the earth's crust are thrust up to form mountains they are exposed to the [illegible] and thus to the chemical action of water, oxygen and carbonic acid from the air and to alternate heating by the sun and cooling by frost and ice. The[y] slowly crumble which speeds the chemi[cal] action and permits the attack by pla[nts] [illegible]. The result is disintegration into gravel, [sand] and ultimately soil. Most of the products [of] this decomposition are solid materials that remain nearby or tumble down the [illegible] and rivers. But others dissolve in the [illegible] waters and remain invisibly in the waters [of] the rivers. Thus all "fresh" water—except rain water—contains a small but definite quantity of these dissolved "salts". Water that is called "hard" contains relatively large quantities. All rivers run to the sea and carry the salts with them. In the course of the millions of years of geological time the salt has accumulated in the sea because the evaporation from the surface takes only pure water and leaves the salt behind. As the rain falls and returns to the sea in rivers it brings more salt with each cycle. Thus the saltness of the sea is slowly but steadily increasing. The fresh water from the rivers does not dilute the ocean and make it less salty because just as much water evaporates as the rivers pour in. The level of the sea remains constant and so the salt-content slowly increases in the course of the centuries. At present the salt content of sea-water amounts to 35 parts per thousand. This means that one metric ton (2,000 pounds) of sea water contains 7[0] pounds of salts. With only minor variations due to local conditions it is the same in all the oceans the world over.

Q. *Senor Alberto Lopez Cicenio of Guaya[quil] asks: "What is the attractive force that keeps the system of planets in equilibrium? It is said to be comparable to the attraction between magnets. But the mass of the planets must also exert a certain influence. Does every planet have the power to attract others? What is the relation of this attractive force to gravitation? Finally does every planet exert gravitation?"*

Ans. This question is timely and important now because the artificial satellites being launched during the International Geophysical Year are governed by precisely the same principles that keep the planets and the Moon in their orbits. In this new age of exploration and perhaps of travel in outer space it is as important to understand planetary motion as it is to understand how aeroplanes fly.

No more is involved than the simple laws of motion and principle of gravitation which were established by Sir Isaac Newton three hundred years ago. Neither magnetism nor [illegible]

force comparable to magnetism i involved The fall of an apple from a tree the orbits of the planets and the path of the artifical satellites are all governed by gravitation No one knows what 'causes gravity but it is simply a fact that all material objects large or small attract each other in proportion to their masses This attraction is too small to be noticed with objects of human size but for planets and all astronomical bodies it is large and definite The mass of the moon for instance is about one eighth that of the Earth and its effective gravitational pull on any object in space is only one eighth that of the Earth

A second factor in gravitation is that it decreases with the distance between the objects that attract each other The decrease is stated mathematically as being inversely proportional to the square of the distance' This means that at twice the distance the gravitational pull is reduced to one fourth at ten times the distance it is reduced to one hundredth (the square of one tenth) These two factors mass and distance are the only ones involved in the attractions between the planets and the sun or between the planets and their moons

If this were all, the entire solar system, planets and moons, would long ago have crashed into the sun under its enormous force of gravitation But the opposing factor that keeps this from happening and that keeps every planet and moon in its orbit is its motion its velocity Here the governing principle is Newton s famous First Law of Motion This states that every material object remains forever in its own state of motion unchanged in speed or direction unless and until some external force is applied to it to change that motion Earthly objects are always slowed down by friction A ball or a rifle bullet is slowed by the friction of the air until it stops or falls But in outer space there is no air therefore no substantial friction and the motion of astronomical objects continues indefinitely

Nevertheless the planets are subject to gravitation The net result of the swift outward motion of the planets and the inward pull of the sun s gravity on them is a compromise an equilibrium in which the planet continues to move but does so in an orbit around the sun It maintains its velocity yet never changes its average distance from the sun because it moves in a steady circular or elliptical orbit around the sun The same is true of the motion of moons around their respective planets

And for precisely the same reason an artificial satellite once having attained speed of roughly 18 000 miles per hour continues in an orbit around the earth in equilibrium between that velocity and the earth s gravitational pull In the case of the artificial satellite however only a few hundred miles above the earth there is still some air present which gradually slows it down by friction As it thus loses speed gravity gets the upper hand and the satellite slowly sinks ultimately to plunge downward toward the earth and to be vapourized in the heat generated by friction with the denser air at lower altitudes

Q *Miss Mireille Santoni, of Rabat, Morocco writes I have heard that bats use a sort of radar to avoid obstacles when they fly in the dark Do other animals such as insects emit and detect sound of very high pitch ?*

Ans Many insects emit shrill high pitched sounds and some of them are probably too high for the human ear to hear but it is not known that they use them as a guide in flying Bats are not blind but their sight is so poor that they can do little more than distinguish a brighter from a fainter light and locate its general direction Thus they can distinguish daybreak and nightfall But they direct their flight by their very sensitive sense of hearing They emit a very high pitched sound hear the echoes of that sound from nearby objects and judge the direction and the distance of the object from the nature of the echo The sound has been recorded by the use of microphones and has been found to be about two octaves higher than the highest sound the human ear can detect Such short sound waves can be reflected from objets that are too small or too thin to echo ordinary audible sound If bats are gagged so that they cannot give out the sound or if they are deafened so that they cannot hear it they are unable to detect obstacles and crash into them in the dark.

Radar also makes use of echoes but it is not correct to say that bats use a sort of radar" Radar waves are not sound waves They are electromagnetic waves or short radio waves which are transmitted and reflected as light waves are and at the speed of light After they are reflected from an object, such as a plane in the sky that may be 200 miles away they are focused on a fluorescent screen and there make a visible picture as on a television screen

More remarkable than the ability of bats to fly safely in the dark is their ability to

return to their home roost or cave at night from distances as great as 60 miles They do not use their eyes for tests have shown that fully blindfolded bats arrive at home even more successfully than others Their echo sense is also no explanation because they can hardly detect echoes from objects more than 30 feet away Yet they reach home at their normal flying speed of 10 miles an hour and so must fly there almost direct The only explanation seems to be that they become as familiar with their home area through their sense of hearing as birds and other animals do by sight.

Q *Mrs Ann Firth of Bedford England wants to know why the sea looks blue at some places but green at others and often seems to change colour*

Ans The colour of the surface of the ocean depends primarily on the colour of the sky at a given time and place On a clear day, when the sky is deep blue the light reflected from the water is also blue On a hazy day the colour is greenish gray while on a dark stormy day the sea looks quite gray or even the dark colour of metallic lead. The surface of the sea reflects the colour that falls upon it.

But the colour that one sees when one looks down into or through the water is another matter Sea water that is clean and clear absorbs the red and orange portions of the white sunlight which enters it but it is rather transparent to blue light and lets it pass Thus the underwater colour and the colour that is reflected from the bottom is blue But this is only when the water is very clear as it is for instance, in the rock bottomed Blue Grotto on the Island of Capri near Naples, in Italy If the water contains fine sediment or microscopic forms of life this cloudiness produces a green effect, much as the deep blue of the sky becomes pale when there is a slight haze in the air

The Mediterranean Sea is noted for its blue colour because at most points it is free from sediments washed in by rivers But even the bluest water looks green when breaking waves fill it with the tiny air bubbles of foam On any ocean the water near the shore is likely to look green because of sand sediments microscopic life or form. In general, tropical seas are blue while arctic seas are green because the colder water is richer in microscopic plants and animals To this is added, moreover the effect of light reflected from the sky which is more often clear and blue in the tropics than it is in colder regions where clouds and fogs are more common.

—o—

PERSEVERANCE AND ELASTICITY

Perseverance is often praised but it is not so often realized that another quality must accompany it *to make it of any value*—and this is elasticity Perseverance in only one direction very often fail but if one is ready to take whatever road offers and to change the chosen way if circumstances change and yet to keep the end in view—then success is infinitely more probable

—Freya Stark

(Continued from page 602)

hostility against industry or its management. Trade unionism is a very delicately poised instrument both for self assertion as well as for self control on the part of labour Dealing with trade unions therefore is a difficult and a rather delicate duty that has to be handled with extreme care caution sympathy and understanding The business management has to qualify itself for the task besides studying and handling the problems of finance marketing utilisation of available labour for production and agencies for distribution.

The idea of trying to monopolize the market either as producers or distributors no longer finds favour with modern society and any attempt on those directions meet with public disapproval as anti social All classes of agencies big or small whether for production or distribution should be utilised as far as possible both for making an industry broad based, and in the general economic interest of the country

Thus it would be evident that Industrial Management in the present day world is much more than successfully running an industry and being able to declare a good dividend on the capital employed It requires a more comprehensive study of many a complicated problem associated with industry and general economic life of the country and of even international economic problems such as price of raw materials, purchasing power of nations outside the producing country availability of shipping space and other transport facilities besides carefully watching at times complications in the field of international politics. Thorough and comprehensive training in business management and acquisition of experience are essential for the purpose

POLITENESS--BEST GUIDE IN LIFE'S JOURNEY

BY GEN K M CARIAPPA

WE of today have the matchless privilege of being the inheritors of the glories of an ancient civilization Our mythologies and the history of our people are overflowing with evidence of the qualities of good manners, courtesy and respect for our elders our gurus and our women These are noble qualities latent in us all developed in some fully and in others not so fully But today there are visible signs of many of us falling off in these standards Why ?

Since Independence we have been talking of our culture—please permit me to say this—ad nauseam We seem to live on the glories of the past Let us all search our hearts truthfully and see if we are living up to the legacy left us in this respect. Are we all, young and old, really keeping up our traditional qualities of good manners and politeness both in word and in deed ?

To me the reason for this laxity seems to be the wrong interpretation of the real meaning of democracy of nationalism and of independence This has given to some the licence to ignore the practising in their daily lives of these inexpensive but most valuabe commodities

Wrong Notion

To Such people anyone who is punctilious in the observance of the rules of society in regard to good manners and politeness is a Westerner Why it should be so, I just cannot understand Is it the feeling of such people that good manners and politeness are the monopoly of Westerners

To me every Indian man and woman is a gentleman—is a lady not by mere high birth but because they are Indians The expressions What a perfect gentleman!—What a perfect Lady!— are instinct with eulogies for one so addressed for his or her uprightness of character godliness of soul good manners politeness and courtesy It is within the reach of everyone of us to be so eulogized if we want to and I say we must, in order to make our nation greater than it is today

Our codes of manners and customs have not been unaffected by the impact of Western traditions I do not for one split second champion the cause of ultra conservatives who refuse to accept anything new which might help improve our own ideas because they wish to preserve their own for ever

This is not right We must move with the times in this rapidly changing pattern of society but in this we should not be slavish apes Let us make the acceptance of new ideas a genuine synthesis to improve our own indigenous conduct in society

The words 'please sorry and thank you' do not seem to be in the vocabulary of a good many of us today These words cost us nothing to use but their use on proper occasion pays dividends in winning the respect of fellow human beings Some of us are getting a little too slap-dash rough and rude and abrupt in our behaviour in public

A busy salesman behind the counter in a shop or an official occupied with some other work or an unusually harassed telephone operator at the exchange would not fail to extend prompt and efficient service to you if they find that you are a considerate and polite person who does not get irritated and abusive through impatience Politeness and consideration for others always pay

When we talk to each other in company some of us talk in an unnecessarily loud voice Very many of us are not good listeners We all jabber away at the same time Some like their own voice and monopolise conversation and become verbal bores

Art of Conversation

The art of gentle conversation seems to be a thing of the past Washing dirty linen in the public is not uncommon A gentleman or a lady does not speak ill of other persons unless they are certain of facts and figures and even if they are they say to themselves why speak. What better way can you think of, to keep friends ?

It is rather embarrassing to hear people contradicting their elders and their seniors whilst discussing things in public One can express one's disagreements politely and tactfully without being crude and rude

I wonder if the watch making industry in India would be profitable for what use are watches to us when they do not think it quite necessary to be on time for any [illegible]

private or public and to whom the word punctuality is just a word? To such people does it matter if the meals cooked for them are getting cold if many other guests are waiting to meet them if children are waiting in the sun or rain or cold if the office staff want some urgent orders on time if the audience are getting a little impatient by the inordinate delay in commencing a show and so on

To be punctual is an act of discipline and consideration for others Habitual unpunctuality is a social crime unpardonable If every one pays a fine of just one naya paisa for being late I feel sure we need have no worries for money for our Third Five year Plan

In mixed parties young people including women used to stand up whenever elders entered as a mark of respect This is a rare sight now Some of our young ladies are aping the West and do not get up at all because in Western society a lady young or old is not expected to get up on such occasions

Keep It Up

What tragedy that our own charming young women are giving up our own delightful custom of such grace Let us please keep up this custom. It was just not done for young people to smoke or sit cross legged in the presence of their father How many keep this up now? One often hears young brats asking their father with their hands in their pockets Will you have a cigarette, Dad? —Frightful!

A gentleman never makes a promise which he cannot keep and if he does make a promise which he finds he cannot keep he tells you in time why he cannot The worst thing a man can suffer in his public life is to lose the faith and trust of his fellow beings. A gentleman would never have this said about him by any one: Do not believe a word he says—Don't trust him—Have you ever known him to keep a promise?

When one has enjoyed the hospitality of another be it stay with him or taking a meal it is customary to write to one's host a short note of thanks afterwards How many of us have the courtesy to do this? It is good manners also to express one's gratitude either in person or in writing for any service or act of kindness from others and not take things for granted.

Arrogance, conceit and vulgar display of wealth and power are not the traits of gentlemen Staying as guest in the house of a friend calls for a good many acts of correctness on the part of the guest Arrive on time Conform to the customs of the house in regard to the hours of meals Dress correctly at all times Do not accept outside invitations without first consulting your hosts—they may have laid on something for you in the house

How embarrassing it will be for hosts who may have laid on a large party for you if you tell them I am dining out tonight with my old pal? In all these there should be 'May I please' and not 'I will' I have had experience of this on numerous occasions It is not done for a guest to discuss one's hosts with the servants of the house Economy in the use of light and water by guests in the rooms they are occupying would be appreciated by their hosts.

A word about tipping the servants The hosts must first be asked if they would permit it, and if they do give what you want to by your host or directly to the servants if the host request you to do so When leaving the room it is but proper to leave it in a tidy state and not with bits of paper thrown about, beds not done up towels and scraps of paper in the bathroom lying about, having used the towels for cleaning shoes

It is gentlemanly and ladylike to be correctly dressed at all times Sad it is that there is today laxity in this respect Slovenly and untidy turn-out in the public does not command the respect of others One does not have to wear expensively tailored clothes to look smart Whether we wear Western dress or our own, it must be correct and complete and not half of one and half of the other

Road Rules

A gentleman driving a car through crowded public thoroughfares, on dust roads, when passing houses or people past schools and hospitals would automatically slow down He would stop his car to let women, children, loadcarrying persons, animal drawn vehicles and old and disabled people to have the right of way This is consideration for others He would not be a road hog and hang on to the middle of the road. He would pull up to the left of the road when he stops.

It is the height of ill manners to remain seated in public conveyances such as trams, buses and trains when women and elderly people are left standing for want of seats.

Our forefathers maintained a certain tradition and a certain standard in their dealings with their fellow beings They followed as it were a style of living of which they were proud Western influence has had some impact on all these

CRISIS IN THE SECOND PLAN

BY SHER SINGH GUPTA

ONE of the chief merits claimed for our second Five Year Plan as compared to the First Plan was that it attempted planning both in terms of physical and financial resources at the command of the country

Unlike the First Plan, the Second Plan has somewhat more concretely defined its aims and objectives While introducing the Second Plan, the Planning Commission had declared, "Our Second Five Year Plan seeks to rebuild rural India, to lay the foundations of the industrial progress and to secure to the greatest extent feasible opportunities for weaker and under developed sections of our people and the balanced development of all parts of the country For a country whose economic development was long retarded these are difficult tasks but given the efforts and sacrifices, they are well within our capacity to achieve

"The following four principal objectives were set forth in the Second Plan —

1 A sizable increase in national income so as to raise the level of living in the country

2 Rapid industrialisation with particular emphasis on basic and heavy industries

3 Expansion of employment opportunities

4 Reduction of inequalities in income and wealth

We had originally proposed to spend Rs 4800 crores in the public sector during the Second Plan period to achieve certain physical targets

Last year when the plan was discussed in Parliament Shri T T Krishnamachari our former Finance Minister declared that in order to carry out the plan in full and to achieve the original physical targets we should have to spend Rs 5600 because of increase in the prices of coal iron steel cement non ferrous metals petroleum etc which were basic materials constituting the main cost structure of the plan This meant that even if the full outlay of Rs 4800 crores was spent the plan would have been carried out only to the extent of just 83 per cent of the original targets

The Planning Commission has now proposed the carrying out of a financial outlay of Rs 4500 crores as against the original outlay of Rs 4500 crores which means that our achievement of the original targets will further be reduced to 80 per cent provided the price line remained steady

The National Development Council has, however decided to stick to the original investment targets of Rs 4800 crores with the condition that first preference will be given to the execution of all the programmes directly related to increase in agricultural production, core projects and projects which have already been taken in hand and have reached an advanced stage The execution of some projects involving an outlay of Rs 300 crores will be undertaken to the extent additional resources become available

According to the memorandum of the Planning Commission submitted to the N D C a few weeks ago we are faced with a shortfall of Rs 240 crores as even if we undertake an outlay of Rs 4500 crores

The crisis in our planning efforts is also clearly visible from the tempo of development which instead of increasing with the progress of the plan has tended to slow down Despite a sizable increase in the installed capacity in the industrial sector the rate of growth has decreased and many factories have closed down and workers thrown on the road

Although it is correct that certain difficulties beyond our control like increased expenditure on defence and adverse situation in foreign markets have contributed to the crisis in the plan yet it is not the whole truth

Some critics have tried to explain away the difficulties in a light hearted manner they say that the plan is very ambitious We have planned to double our 1951 per capita income in 25 years It is not a big ambition Our Prime Minister in his *Discovery of India* writes we calculated that a really progressive standard of living would necessitate the increase of national wealth by 500 or 600 per cent That was however too big a jump for us and we aimed at a 200 or 300 per cent increase within ten years In 1944 the Bombay Plan known as Birla Plan had urged a three fourths increase in the national income in 15 years

The real truth is that the question of the size of the Plan is bound up with the policies pursued by the Government The crisis in the plan is in fact born out of the policies pursued by the Government The crisis in the plan is in fact born of the policies so far pursued which has led to the consequent

crisis in human sector The crisis in the human sector has hampered exploitation of our vast resources in men and material

A number of causes have led to the crisis in the plan. Some of the causes stem directly from our 200 years of political slavery Our economy still continues to bear the imprint of that slavery The period during which we remained politically a slave nation our economic progress had not only been held in bondage but our indigenous industries were elbowed out of existence by unhealthy competition and other underhand means adopted by our foreign rulers and we were forced to be a raw material producing nation. We have thus started very late on the path of economic development of our country and this fact is proving a big handicap in our way

Another cause of the crisis is that after 1947, most of the people that count, have shown increasing tendency to subordinate national interests to their personal ambitions

Our decision to make an experiment in planning under a mixed economy with a structural framework of British type and planning ambitions of USSR and China has also been the source of headache for the plan Our State owning only just a little over 3 per cent of the industrial stock in the country, tries to enunciate an all embracing national policy without an effective controlling mechanism with the result that personal ambitions of unscrupulous enterprisers repeated get the better of national interests and echoes of scandals damp the enthusiasm of the people It was this ineffective controlling mechanism which mainly gave rise to an awful shortfall in our foreign exchange resources

Savings

The people in our country have an old habit of hoarding their savings in the form of gold and serious efforts have still to be made in the countryside to persuade the people to invest their savings in the country's economy Besides vast amounts are today wastefully used in the agricultural sector for purchasing land or, in other words for purchasing the right to collect rent The money invested for developing the land forms only 25 per cent of the money spent on land transactions This is mainly due to the fact that the separation between the right of ownership and the right of cultivation has not been ended as yet and the slogan of 'land to the tiller' is still a far cry

One of the main obstacles in our efforts to put our economic planning on an even keel during all these years has been our inability to overcome our shortage of food production. This is mostly due to our indecisive policy about land reforms and the consequent confusion created by it in the domain of landlord-tenant relationship An American professor, Dr Daniel Thorner, has estimated that during the past few years more tenants were evicted from land in India than during the last 100 years In many cases, the landlords have preferred to keep their lands fallow rather than lease them out to tenants

Other causes which have contributed to the crisis in our plan include our excessive reliance on foreign capital our method of raising resources by disproportionately increasing the volume of indirect taxes and resort to heavy deficit financing

For the successful implementation of our plan, we shall have to undertake a bold execution of the land policy laid down by the Planning Commission and impose physical control on consumption in an effective manner as repeatedly recommended by the panel of economists.

Besides we shall have to adopt certain other measures like diversification of our foreign trade pattern a ban on the remittance of profits abroad by foreign companies, vigorous check against gold smuggling and tax evasion, family planning change in the pattern of taxation to give relief to the poor man greater reliance on people than on bureaucrats and the compulsory acquisition of gold from princes and sahukars (Courtesy *The Tribune*)

GEMS OF THOUGHT

I think a man and woman should choose each other for life for the simple reason that a long life with all its accidents is barely enough for a man and a woman to understand each other and to understand is to love —*J B Yeats*

• • • •

Pure humanity friendship, home, the inter-change of love bring to earth a foretaste of heaven —*Mary Baker Eddy*

• • • •

In marriage the "better half" is usually the half who can control his or her temper or continue patience, understanding or love a few seconds longer and with better grace than the other half —*C U Wea*

"COMMON MAN IN AMERICA"

BY SHRI G L MEHTA

WHEN it was suggested that I should say something about the common man in the United States I wondered whether a common man is not somewhat uncommon The 'common man in any country like the "average man is somewhat of an abstraction It is not always easy to find common characteristics among a people and there are always exceptions—in fact almost every person you meet is an exception However in the words of Walt Whitman there is a democratic average and basic equality in America which make wide generalisations possible But we should not forget when we speak about another people that it is not they but we who are foreigners in their country What might appear novel or strange to us is familiar to them and could have good reasons for its origin and existence

Fine, Very Fine

Even a casual visitor to the United States cannot but be impressed not merely by the vastness of the country and the magnitude of its development but also by the friendliness of its pepole The common men and women of America are informal hospitable and above all generous They are extroverts, not shy and reserved They are cheerful optimistic confident Ask an American when you meet him how he is He will not say getting along or not yet dead He will tell you Fine very fine was never better in my life This is not merely a conventional way of reply It is an expression of a prevalent mood a mood of hope and self assurance The slogan the difficult we do at once the impossible takes a little longer is not idle boast. It is a reflection of a temperament born of American conquest of new frontiers its remarkable technological development and its wealth and power Americans look forward to the future they do not hanker after the past indeed, they have not too much of a past to look to The Unit d States is one of those few countries which are neither blessed nor cursed by a long history

Pragmatic and Practical

Americans are a pragmatic practical people They are not doctrinaire they have little use for abstractions and theories they distrust ideologies The American mind is essentially an engineering mind it is experimental, exploratory and empirical. Americans are at their best in adapting discoveries and inventions in making improvements in producing and reproducing things on a mass scale including agricultural commodities They believe in action in constant change in bigger and better things I am not suggesting that there are no thinkers or men devoted to basic research in the United States Nor indeed do I consider that such persistent emphasis on practical results and on success measured by material reward of such restlessness and craving for new sensations are an unmixed blessing But the fact remains that what America is today and what it has achieved has been due apart from several fortuitously favourable circumstances to this dynamic spirit of the people a spirit which believes in ever conquering and harnessing natural forces and which is not prepared to accept defeat

Unparallelled Strength

And let us recognise that the United States has acquired unparallelled strength wealth and productivity in a very short time and that the Americen standard of living is the highest in the world today—whether we approve or not of all its manifestations Representing about 6½ per cent of the the world s population the United States contributes nearly 50 per cent to the world s industrial production and owns 20 per cent of its wealth The average income per head per annum of its people is nearly 2 000 dollars that is Rs 10 000 as compared to our per capita income of Rs 280/ There are in the United States five crores cars for personal use apart from over one crore in business there are about six crores telephones 14 crores radios and four crores television sets Over 95 per cent of the people have electric power in their homes In short the majority of the American population of 170 million (or 17 crores) enjoys material comforts and amenities of life exceeding those of all except a very small minority in the rest of the world. This has been made possible through the initiative and enterprise and spirit of adventure of common men and women their free institutions and their technological inventiveness and adaptation

Dignity of Labour

But because of these high levels of income and productivity we should not imagine the common American living on the 45th floor of Hotel Waldorf Astoria in New York working on the 54th floor in the Empire State Building driving at furious speed on super highway in the largest possible automobile and marrying and remarrying like a Hollywood Star Americans are also domesticated fond of their families and homes and communities in which they live and above all they work hard They are continuously searching for labour saving devices because a man is more expensive than a machine in their country But this does not evidently seem to save much of their labour as they feel almost guilty when they have nothing to do Brought up on a religion of work output and productivity—in which they are ironically at one with the communists—most Americans including the well to-do cannot and do not expect rough work to be done by others Since domestic servants are rare (except in the Southern States where Negroes can be employed) and are prohibitively expensive the American man and his wife (as also their children) have to do almost all the domestic work themselves from cooking to dish washing *from scrubbing the floor to* washing the clothes In these chores various gadgets no doubt lighten their burden But no one looks down upon such work as beneath one's status Dignity of labour is not a phrase but a daily necessity

There is a deeper reason however for this common attitude to work Americans firmly believe that given equal opportunity a fair field and no favour they can rise to the highest rungs of the ladder in business industry professions and public life The most popular interpretations of the American "way of life" is provided by examples of persons rising from the log cabin to White House from an office boy to the head of a multi million firm from a poor immigrant to a world famous technician or [illegible]. Such examples abound and they stimulate individual effort and help national advancement. Not having had a hereditary monarchy or feudalism and with an expanding economy whose benefits are increasingly diffused there is [illegible] a greater equalitarianism and a certain [illegible] dance. American capitalism itself is being transformed during the last thirty years where by it accepts and [illegible] always [illegible] measures of control and planning and State intervention

American Generosity

Although Americans do exert their efforts the utmost to make money and love well enough they do not believe in amassing wealth It has been incisively observed by a British sociologist that the acquisition of money is important in America but its retention is relatively unimportant And that explains American generosity both individual and collective Perhaps in no other country do people give so easily and freely almost without counting the cost. This is not because of a super abundance of wealth, for people are known to contribute even at a personal sacrifice I have known cases where expenses for repatriating Indian students who died there have been paid by Universities or Foundations although they were under no obligation to do so Students in Universities have foregone one meal a day to collect money for bringing over to the States a foreign student who could not afford the expenses or provide milk and foodgrains in some remote village of which they might never have heard I can multiply these examples but that is hardly necessary The world by now has become aware of the pioneering spirit of the United States in this matter This is not merely a post-war phenomenon as is commonly supposed and as *is exemplified in the* Marshall Plan and economic aid programmes or massive support to international organisations When Tokyo was partially destroyed in 1923 by earthquake it was in great part rebuilt by money given by thousands of Americans many of whom had never seen a Japanese in their lives. The Hoover Commission for Relief after the First World War gave succour to millions in Europe These and numerous similar instances are evidences of the characteristic of common Americans to give money for causes which they consider worthy It is true that material success is a primary objective of Americans and such success is measured in terms of dollars But with this goes spontaneous and genuine goodwill for common people everywhere and a kind of fellow feeling which is a positive manifestation of humane spirit. Whatever one's views on capitalism it remains true that social obligations of wealth are almost instinctively accepted in the United States and the results of such acceptance are visible all over the land and beyond

Pursuit of Peace

While the tempo of life in the United States is very fast and the strain and stress of maintaining a high standard of living are

heavy Americans are anxious to be happy and keen to enjoy themselves. Americans "enjoy" everything A motor drive a lecture a party, a vacation and also their acquaintances and they like to think they are enjoying The American Constitution is perhaps the only one in the world which declares 'the pursuit of happiness as an inalienable right of citizens along with life and liberty From the cradle to the grave the Americans seek to translate this injuction in their lives and activities and organisations schools provide facilities for recreation and play and pleasure for children, and finally, when a man dies everything is done to remove the sting of death by elaborately decorating coffins making funerals lavish and constructing charming cemetries

Gregarious and Mobile

The people of America are gregarious and mobile They like to meet people and they like others to meet them and they like to be liked They are very fond of meetings and conventions large banquets and fabulous parties Go to any town in the United States any time and almost without exception there will be a convention or annual conference of some sort at the hotel where you are staying Perhaps because they lived solitary lives at the frontiers in the earlier days and perhaps because of the highly organised life they now lead, Americans dread lonesomeness The main accent is hence on co-operation in living on what has come to be called togetherness They are also a mobile people they travel about continuously on the roads in the automobile or bus or in planes and frequently by train They think nothing of travelling a thousand miles by plane to deliver a lecture and get back or fifty miles and more by car to attend a dinner or a meeting No doubt their excellent roads and availability of cars make this possible They also change their habitation without sentimental attachment to a locality Because of plenty of opportunities of employment they can do this They go from one profession or trade to another They migrate from one city to another or to a far off State to find out new lines of work and settle down in completely strange surroundings The fact that the United States is one vast country—almost one and a half time the area of India—and has one law, one culture one language no customs barriers and plenty of economic opportunities enable them to do all this. The people are also ingenious in discovering new ways of earning a living and in finding out new gadgets or techiniques

American Women

What about American women? Much of what I have said holds good in regard to them although they are not so keenly involved in the economic struggle as men But the dominant position of mother in family and of women in society has been well recognised It has been stated although I cannot vouch the accuracy of the figures that women control over three quarters of the investment capital in the United States Those who made market research have also reckoned that women make more than three quarters of the retail purchases in the United States In any event, women outlive men in the United States as in many other countries they own a major portion of national wealth they are an active and influential body of citizens Women's organisations like the League of Women Voters and Republican and Democratic Women's Associations participate in national affairs They are also prominent in the academic life and in commercial and social activities But in the Senate of the United States there is only one woman member and in the House of Representatives more than a dozen

"Century Of Common Man"

Nearly fifteen years ago during the darkest days of the last World War the late President Roosevelt called this the century of the common man I doubt whether this has turned out to be a correct prediction of the trend during the subsequent decade and a half But there is little doubt that in the United States which has been a great melting pot of diverse races and nations migrating from abroad the common men and women are conscious of their heritage and keen to preserve their way of life America is perhaps the only country in the world which did not start its existence as a State but as hundreds of thousands of individuals seeking to live and work and advance Plentiful natural resources as well as the enterprise and energy of the people have made it the richest country in the world and one of the two most powerful Like common people everywhere, Americans want to live in peace They believe in Abraham Lincoln's words that their Declaration of Independence gives 'liberty not alone to the people of this country but hope to the world for all future time for it gives promise that in due time the weights should be lifted from the shoulders of all men and that all men should have an equal chance"

STUDENTS' EMPORIUM

WHAT MAKES MEN GREAT

What makes one man famous and another unknown? How do celebrities differ from ordinary people? And are they any better or worse?

Over the last 14 years these questions have interested me for two reasons

1 I have found that most readers are interested in *celebrities* and *sincerely wonder* how they differ from the neighbour next door

2 After interviewing nearly 1 000 celebrities—from a lonely prisoner waiting to be hanged to a lonely general writing for the combat chance to win a final star—I came to wonder myself how they were different why they were different

Do they have anything in common these people who stick out from the crowd for one reason or another, who stand for an hour or a day or a lifetime in the spotlight?

Here are a few tentative conclusions I reached.

The greatest single difference between most celebrities and most non celebrities is less a matter of talent than concentration

The power of concentrated and durable attention to a fixed goal is, by my observation, the singlest and surest avenue to fame and recognition The glow around a steady sweat will shine longer and farther than the broken gleam from a sporadic brilliance Most celebrities whether they are flagpole sitters, movie stars, or bankers, bend their wits more to the purpose at hand than the ordinary citizen

When most successful people say "my hobby is my work" they aren t lying.

To the ordinary man work is a way to earn a living To most celebrities—certainly those who last—their work is their very life

Whether famous and successful men have more fun out of life than the average man is hard to say Some do, some don t.

I have met some very famous folk who were so tied up by nervousness they looked more like pretzels than people On the other hand I have known many more people just as [illegible] whose names weren t famous.

Winston Churchill a superb craftsman in many fields seems to have more gusto than the average carpenter But I have known hired hands who met life with the same aplomb. Fame is no guarantee of happiness—no more than is motherhood.

Celebrities differ in some ways occupationally Show world celebrities for example are notorious hypochondriacs and realize their health is their greatest capital asset Industrial executives however, still are spendthrift of this greatest of natural resources

It is common for celebrities to admit loneliness, but to them work is a greater refuge than it is for perhaps you or me It is also a greater consolation.

One thing that impresses me most about a celebrity is this. If you ask him what he is looking for most in this world he will sometimes answer— 'myself' *(By Hal Boyle)*

• • • •

THE JOY OF CREATIVE WORK

Hero-worship is an inborn trait in humans Small boys of every creed and country will follow around bigger boys starry-eyed and slavishly imitative. *Every little girl wants to try on her mother s clothes copy her mother s ways*

The instinct to admire and to emulate is surely inherent in our make-up. Obviously without it we would never have got anywhere, never learnt anything If we did not imitate we would have to learn everything we do from scratch And that is patently impossible

Children learn so much more and so much more thoroughly, from observation and imitation than from lecturing No amount of preaching of reward or of punishment, will produce the same result as the example constantly before their eyes Every pedagogue knows this and every parent should know it too

[illegible] do we ever quite grow out of the urge to model ourselves on our betters A number of illustrated papers of a certain type thrive only because people are so keenly interested in how other people—especially famous ones—live and do and talk It is quite amazing

how the most humdrum of occupation the most commonplace utterance becomes note worthy if it is a celebrity who does or says it The average woman really believes that any thing being used by a film star or society beauty has got to be good The avid curiosity with which the public laps up every detail of the private lives of the great is a psychological phenomenon Why do we suppose that a famous sportsman is also a great gourmet? Why should we want to know what he likes to eat? Why ask a visiting opera singer what she thinks of Indian sculpture? (when she probably doesn't)

The attraction is twofold on the one hand we want to know what makes a genius tick what has he got that we haven't got When we discover something unusual we wonder at it we dream what it would be like to be so exceptional ourselves to be rich and famous. On the other hand we feel reassured somehow when we see pictures of a queen playing with her children of a film star cooking or of a great writer working in his garden This makes us feel that after all these great ones are just folks like us and so to be just folks is not such a bad thing after all.

It will do us good to remember that even the great inventors did not start from scratch Einstein did not invent the multiplication tables Michelangelo spent many years as an apprentice to a jeweller painter Mozart whose father was a professional musician dedicated his early works to Haydn whom he considered his teacher So there is nothing discouraging still less shameful in imitating

And yet in all of us there lurks a creative instinct. We all love to produce something whether it is a cake blouse or a great painting But all too often we are discouraged early because our achievements fall far short of our ambition And because we can get almost everything ready made mostly better than what we colud produce ourselves many people have altogether stopped all creative activity When you can hear recordings by Rubinstein or Horowitz at any time Daisy, Daisy on the old upright seems a futile achievement When almost every calendar presents excellent reproductions of great paintings you want to hide away your little watercolour sketches and never see them again Even accomplishments like churning butter or baking a cake which used to give satisfaction to a number of housewives lost their appeal when the ready made articles from the shops are so much better in looks at least if not in taste

The absence of a satisfying occupation is the cause of much unhappiness these days We often say An ounce of doing is worth a ton of appreciation The happiest are those who have something to do which either they enjoy doing or which they feel is worth while Is there any reason why you should not be amongst those lucky happy ones?

Think of something you would very much like to do and go ahead and do it Hobbies are endless and for everybody there is something that will give satisfaction The main thing about a hobby is to do it *only* because you enjoy it and not for money or other people's appreciation If those come they should be taken as incidental A number of people have quite accidentally turned a passionate hobby into a paying profession But if you ask any of them what they enjoyed more—pottering around with their hobby or the name and profits they made from their invention—they will all vouch for the former

You never know where your talent lies until you have tried One well to-do woman used to be bored stiff playing bridge and mah jong Then she started doing voluntary work in a hospital in the mornings and now she is never bored

So let us watch others observe and admire them by all means But let us also do something ourselves It's so much more fun

(*Mady Singh in the Statesman*)

PARENTS AS TEACHERS

Good teachers and good parents share the same interests and work towards the same goals Both want Jimmie or Nancy to grow up into his or her own best self to be healthy to grow in knowledge and understanding to have wholesome attitudes to mingle happily with others of his own age to cultivate habits and skills appropriate to his maturity and needs.

The good teacher works for such outcomes in the classroom by example precept and skilful guidance of learning activities He also guides Jimmie or Nancy in many out of class school situations some of them quite as important as any classroom lesson

So too the parents exert a powerful and continuous influence on what their children learn and on what they do And each one—the teacher and the parent—is properly concerned about the other's influence [illegible] let us examine [illegible] often our [illegible] teacher about his pupil home situations probably differ from school

to school to be sure, but those we shall list are a least commonly encountered.

What is the parents' attitude towards the school? Towards the teacher? Here is one of the most important of all home influences for good or ill. If parents have confidence in the school, if they believe that it has a good programme and that its teachers are capable and conscientious, their children will come to school with wholesome attitudes of confidence and respect. Conversely, when parents distrust the school, their children are likely to reflect disinterest, if not contempt, which makes successful school work all but impossible. A basic concern of every good teacher, therefore, is to establish on the part of the parents an understanding of what the school is trying to do and to merit the confidence of parents in his own ability as a teacher.

What are parents' educational goals for their children? Fortunate is the child whose parents simply take it for granted that he will go through school and (normally) through college. If parents genuinely believe that schooling is valuable and that their children should go as far in school as their abilities and interests will carry them, the children themselves will tend to look upon education as something important. The temptation to drop out of school will be minimised. The "get by" attitude will not be a satisfactory standard. Instead, the pupil will come to school with a positive attitude, with the will to learn and the expectation of success. For the teacher these are potent allies.

There is, however, the danger of parents being over-ambitious for their children—expecting them to make higher grades, have greater interest in some particular subject, or to pursue their academic pursuits farther than the student's abilities and interests will carry them. This is a special hazard when the parents themselves have done well in school and find that their offspring do not quite measure up to their ambitions for them. This can lead to [illegible], and to the development on the part of the youngster of a sense of frustration, guilt, and perhaps self-condemnation. Many teachers have to work against such over-ambition to help pupils face reality with regard to their own abilities, to maintain their self-confidence, their will to succeed, and their essential self-respect.

Most teachers are pleased when parents of their pupils hold education in high esteem, provided only that their ambitions for their children are realistic and sound.

In what way is the home affecting the child's health? Because pupils do not learn as well or behave as well when they are undernourished or over-tired or otherwise below par physically as when they are in robust health, home influences on health are important. Many a time the teacher is concerned about pupils who come to school hungry, who are not getting medical care when they need it, who do not get enough sleep, or who are subject to some other condition or situation that is undermining their good health. Most parents want to do what is best for their children in this particular, but often they are not aware of the health needs of their children or of unwholesome health influences for which they may be actually responsible.

Does the home provide an environment for effective homework? Not all of the pupil's study and academic learning can take place at school. Some study must be done outside. In some families there is a time and place for homework and adequate facilities for home study. What the household provides in the way of books, magazines, music, art and other cultural and informal source material is highly important. In some families there is no incentive to do any home study—no place in which to work without distraction, few if any study resources, many competing demands for the student's time, and very little parental encouragement. Such differences in home learning opportunity quite obviously must be taken into account by the school.

Do the parents stimulate and encourage intellectual interests? Do the parents themselves read widely? Do they have broad and varied interests which they share with their children? Are the children encouraged to discuss the things in which they are interested, or are they "to be seen and not heard"? Important too are the parents' attitudes towards children's questions. In some families these are important avenues of learning. In some questions are "over answered"; in some they are "squelched". What parents do to deepen and enrich their children's interests in the world about them and in the cultural and intellectual heritage which is theirs has a far-reaching influence on what the school can accomplish.

What type of discipline is maintained in the home? The conduct and [illegible] in school often reflects very strongly the effects of parental discipline. After all, an established regard for the basic elements of good manners is sometimes a helpful clue to home training. More important than observance of

the forms of etiquette however is the presence or absence of genuine kindliness thoughtfulness of others and a spirit of helpfulness and cooperation If home discipline is lax inconsistent or unduly strict it is likely to result in behaviour that the school cannot condone Many times a pupil s extreme shyness or nervousness or displays of temper or chip on the shoulder belligerency cannot be remedied or appreciably reduced unless or until a change can be effected in home disciplinary methods By and large the discipline of home and school should follow common patterns and adhere to common behaviour standards Otherwise the inconsistency is quickly noticed and confusion if not attempts at evasion will almost certainly occur

There are other concerns The good teacher must take into account the pupil s home companions and friends the amount of spending money which he is allowed the chores and home responsibilities he regularly assumes the personal decisions he is permitted and encouraged to make Recreation and hobbies are also important Sometimes even household pets The purpose here is not to list all the home factors that affect school success but rather to show how directly and continuously the home life of the pupil either strengthens or weakens the work of the school Parents are teachers whether or not they know it and whether or not they want to accept the role

Cooperation is the magic key Since home and school are working for the same outcomes there is no reason for conflict There is ample cause for close and constant cooperation Teachers and parents should become acquainted They should find opportunity to discuss the specific problems and interests and needs of Jimmie or Nancy Parents should hear from the teacher the things he is trying to accomplish with their son or daughter The teacher should find out from the parents the way the student is living and learning when he is out of school Together they should evaluate and revise their plans as needed From time to time they should exchange new observations and recheck the student s progress Such cooperation multiplies the effectiveness of both home and school It is an essential foundation for learning at its best (By Martha Shull)

SCHOOLS TEACH PRACTICAL LIVING

Scandinavian schools are going in for adventurous syllabuses. In a Swedish school near Stockholm there is a shopping centre in the basement where children learn arithmetic in the grocers shops geography in the Post Office household duties in a specially furnished apartment and mechanics in a workshop where they can take down and reassemble car engines bicycles and electric toy trains

In the Bernadotte School near Copenhagen tolerance and understanding for other races and creeds stand higher on the educational schedule than mathematics and spelling and in Hellerup the Danes run the only nursery school in the world where children from many other countries come and speak only Esperanto

A small village school north of Oslo has been decorated by leading Norwegian artists to help awaken among the children of poor smallholders who live in bare cottage an appreciation of art and beauty

Such educational experiments are not unique but in the small Scandinavian coutries where social welfare and stable economies have laid the foundation for a wealthy well *clothed and wellfed new generation they* are more easily performed But here as elsewhere educators and public authorities have their great school problems Trade and industry are absorbing many of the best brains and there is a shortage of teachers especially for the high schools The increasing number of youngsters have crammed the classes and new schools cannot be built fast enough

There are some peculiar geographical problems too In the thinly populated mountains and valleys of Norway and Sweden children often have to go 10 or 15 miles to and from school or get their education in one-class schools where pupils of all ages between seven and 15 are instructed by one teacher

In recent years there was a rush to the technical lines and the humanistic line in some co-educationl high schools is almost exclusively followed by girls.

So educaitonal methods are still in the melting pot and school schedules are constantly reformed.

In building plans architects are often given a free hand to develop their ideas with the result that each community has a new and different school house comparable and often surpassing the most daring designs in the U S This is a reflection of the deep public interest in the schooling of their children taken in all the Scandinavian countries Another fact is that leading newspa

(ii) The Employment Exchange nearest your residence.

Employment outlook Stenographers have become an indispensable part of every modern office Considering the cost of training and the duration of the period of preparation the profession offers fairly wide scope of employment opportunity to educated men and women

Openings for stenographers are fast increasing Employment Exchanges all over the country report persistent shortages of stenographers in English as well as in Hindi and other Indian languages Any educated person who can acquire the necessary speed is assured of early employment and for an energetic and capable stenographer there are numerous prospects of advancement

---

(*Continued from Page 618*)

While one is free to imbibe influences whether of the West or of the East one should not be purely imitative It would be better if one s own genuine way of living is not wholly departed from as otherwise one is neither fish fowl nor good red herring whereas a genuine synthesis is a praiseworthy effort

I learnt what little I know and practise in my life from my dear parents and elders of old Can we, the elders of today with hands on our hearts, say that we are a model to our young people in respect of the subject of this talk ? I am afraid not all of us can say it This is our sacred duty to our children

We must bring them up by advice, by personal example and where necessary by firmness to be the gentlemen and ladies of our land As Indians by birth they have the qualities of the latter latent in them all but they have to be developed Who else can do this better than one s parents and school teachers ?

Many young men with high academic and professional qualifications have had to step aside to make room for others with slightly lesser qualifications perhaps because the latter had a little more of politeness good manners and courtesy than the former I do stress this for these latter

FLOOD CONTROL IN INDIA

There are Flood Control Boards in the States of Andhra Pradesh Assam Bihar Bombay Jammu and Kashmir, Kerala Madhya Pradesh Mysore Orissa, Punjab Uttar Pradesh and West Bengal and River Commissions (Floods) for the Brahmaputra the Ganga the North West and Central India rivers

The Central Flood Control Board has accepted in principle the necessity of demarcating flood areas to prevent indiscriminate developmental activities and to stop encroachment on the beds of drainage channels It has also recommended the levy of flood cess on the beneficiaries of flood control projects

The damage caused by floods during 1957 was about Rs 18 7 crores

The emergent works completed during the last three working seasons withstood the floods well In addition to a number of towns in Assam Uttar Pradesh Bihar and West Bengal, an area of about 32 lakh acres has been saved from inundation

The High Level Committee on Floods, which was set up in April 1957, has been assessing the floods problem in various states and examining the available relevant data

As regards surveys by the end of November 1957 46, 137 sq miles were actually photographed and 30 101 sq miles of tertiary levelling were completed in the Brahmaputra, the Ganga and the North-West Central India and Deccan river basins

The co-operation extended by the bordering Himalayan countries in investigations and collection of data continues to be encouraging. Fifty three raingauges in Nepal eight wireless stations 14 raingauges in Sikkim have so far been set up. The Government of the People s Republic of China have also been sending wireless messages about hydrological observations on the river Tsangpo (Brahmaputra) from three stations set up by them in Tibet

EDUCATION IN THE UNITED STATES

BY PROF R S OJHA
Banaras University

THE education of the whole man and the idea that education is a right to which every qualified young citizen is entitled these are basic tenets in the American system of higher education Whether man s or co-educational whether privately or publicly financed institutions of higher learning in nearly all cases are very closely associated to these principles

Yet a difference in method in attaining common goals is clearly apparent as one views the system of higher education in the United States

For one thing the distinction between college and university in the United States is not so marked as it is in Europe The terms in fact, often are interchangeable While in France college is the end of secondary schooling in the United States it is the beginning of higher education Thus the American student is in college at an older age than is his European opposite

American universities are of two main types —private and state subsidized The private universities of venerable tradition centred mostly east of the Mississippi river aim at imparting high quality instruction to a selected student body and have more or less classical curriculums They are quite expensive They depend largely on students fees and private philanthropy and receive little public money Among the State universities a high place is given to California Michigan Wisconsin Minnesota and Ohio to name but a handful. We find the largest number of them in the central and western part of the country They are financed by local governments and are therefore not too dependent on fees paid by students Thus they are less expensive

In addition there are scores of smaller colleges secular and sectarian private and semi public, coeducational and non co educational all of which contribute to the structure and tradition of American education

The concept of education in America is a peculiar fusion of the French idea of specialization and research with the English college system of teaching According to the American view a true university is a repository of all the knowledge already acquired and its mission is to advance this knowledge by means of research and to disseminate it through teaching

In humanities and sciences the American university normally offers a four year course of study the successful completion of which leads to a bachelor s degree After graduation the master s degree may be earned in one year and the doctorate in three

The first two years of the bachelor s course are devoted mainly to general reading of such subjects as English foreign languages social sciences mathematics physics and chemistry After the sophomore (second) year a student elects his field of concentration called a major and starts his plan of specialization with the aid of a faculty adviser Some institutions require the choice of one or two minor subjects as well

American universities use the credit or point system generally requiring 120 credits for the B.A degree At the end of each semester there is a final written examination In some subjects the tests are held every week depending on the decision of the professor In India we have one consolidated examination at the end of a year or two hence our students are afflicted by the fear of examination American students seem to take examination more as a matter of course

There is a tendency in America toward extending the principle of co-education In elementary schools about 96 percent of students attend co-educational institutions In public secondary schools co-education is general but private secondary schools are principally for separate education In colleges co-education prevails in the west Separate colleges for women are found more commonly in New England and the Atlantic States North and South

The system of co-education received an impetus during the depression of the 1930s when many of the segregated institutions began to accept students of the opposite sex in order to keep up their enrollments and to maintain the needed income from fees During the second World War some women s colleges admitted men as they found enrollments reduced by the military draft In the post war period some women s colleges accepted male

war veterans and many colleges finding many married men among their students opened classes to the wives of veterans.

Like Oxford or Cambridge, Yale University has separate colleges each being a complete community in itself. At Harvard such residences are called houses. Each college or house has some 300 students and a group of professors forming its own faculty. It has a dining hall, a library and several common rooms. The students know each other intimately and are also in touch with the teaching staff. At Yale new students are grouped together in dormitories constituting the old campus. Harvard has a similar arrangement. Columbia University has large buildings structures for students but the small cottage type units of North-western University are more elegant. In the University of Chicago undergraduates and graduates, whether theological, medical or law students live under the same roof contributing to the education of one another.

In an increasing number of universities and colleges cooperative dormitories are springing up. The inhabitants of such [illegible] form an organisation and carry on all the work connected with the maintenance of their own living quarters.

A considerable number of students find accommodation in fraternities and sororities. These societies usually with Greek letter names select their own members. They run large clubhouses providing not only board and lodging but also social and recreational facilities. The cost of living here is somewhat higher and therefore their membership is open only to wealthy students.

Living expenses of students vary from place to place. Some institutions offer different types of facilities in their hostels and dining halls to suit the varying economic life of the students. In most [illegible] tuition fees are not charged from the residents of the state. Scholarships are numerous in every college. Awards to researchers and senior students are designated Fellowships which are generally of substantial value. A group of higher [illegible] is the teaching fellows [illegible] opportunity for the [illegible] apprentice experience in conducting college classes.

Many students in the United States earn [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] to support themselves. There are many jobs open to students [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] libraries and [illegible] in the dining hall. Many universities run employment bureaus aiding students find jobs in public and private concerns. American students do not mind working as chauffeurs, salesmen, messengers [illegible] baby sitters and nurses for children. There is no stigma attached to a youth even if he tends a furnace or works as a gardener or a waiter in a restaurant.

[illegible] in Europe or India [illegible] has [illegible] in administrative matters. In the United States however the students in some places elect a council of their own to represent them on the administration. Everywhere the dean and the Chairman of the department [illegible] the advice of the students, read their reports and when possible accept their suggestions. In some colleges senior students are appointed as advisers to junior candidates and brilliant post-graduate students conduct discussion or seminar classes. Most colleges in the United States have a well-staffed council of [illegible] placed in charge of counselling people in extracurricular matters.

Americans want education to be complete and all inclusive. "The education of the whole man" is their phrase. Equal attention is paid to the development of head, heart and hand. Therefore they have an extensive arrangement for games and athletics. A whole series of extramural activities such as drama, [illegible] forums, debating societies, political clubs and literary magazines are encouraged. Professors do not stand apart from the students. The teacher occasionally invites the students to his home for tea or dinner and often spends his vacation at the student's home.

For American students the university life is the golden period. In later years they retain a sentimental attachment to their alma mater. They teach their children the inspiring songs they sang at athletic contests and social functions. They manifest their loyalty to their schools by regularly contributing to the school funds. Most scholarships are endowment funds donated by graduates of that particular university. (U. IS)

Intelligence Test

(Below are given some questions to test quickness of your mind and intelligence. It does not matter that you attempt all the questions. What matters is the time taken by you to find the correct answers. The whole paper should not take more than 30 minutes to a fairly intelligent person. Try now and find out.)

— QUESTIONS—

I Read the following passage carefully and try to find a solution

A train leaves New York every hour on the hour A train leaves Washington every hour on the hour Both trains run on Eastern Standard time It takes six hours for the trip from New York to Washington It takes six hours for the trip from Washington to New York

You are on a train which leaves New York for Washington at eleven in the morning As your train pulls out of Penn Station in New York a train from Washington is just gasping out its last chug as it slowly comes to a halt.

Including this incoming train how many trains will you see en route from New York to Washington throughout your trip ? It is assumed of course that you do not fall asleep and that no cinders get in your eye

II Alice Brenda Cissie and Doreen competed for a scholarship

"What luck have you had ? Someone asked them

Said Alice Cissie was top Brenda was second

Said Brenda No Cissie was second and Doreen was third

Said Cissie Doreen was bottom Alice was second

Each of the three girls had made two assertions of which only one was true Who won the scholarship ?

III Professor Probe sent for his three sons Here's a problem for you he said Suppose you had 19 chocolates to be divided among your sisters Suppose that each of them is to get at least two chocolates but that no two of them are to get the same number In how many different ways could this be done ?

The boys set to work on the problem, not very successfully Cyril's answer was in four ways Bernard's in six ways Sidney's in seven ways However one of the three answers was right How many daughters has the Professor ?

IV Like to meet the girls? said Spotham the famous impresario They're just finishing their act

I'd love to I said as Spotham ushered me backstage I've come across may be half a dozen of them They're all dazzling blondes aren't they?

All blondes? said Spotham Not on your life Listen ! You're a bit of a mathematician aren't you? Then I'll tell you something that a mathematician told me It's an even money chance that both girls will be blondes if you select two of them at random

How many blondes are there ?

V Make a new word by taking away one letter from each of these Do not re arrange the order of the letters

(1) SMILE. (2) FIRST (3) POWDER (4) CASTER (5) DREAM

Make a new word by taking away two letters from each of these Do not re arrange the order of the letters

(6) GLIMPSE (7) LEARN (8) SEARCH (9) TICKLE (10) GRAPPLE.

Make a new word by taking away one letter and adding another letter to the beginning or end of each of these Do not re arrange the order of the letters (11) WIVES (12) LEAVE (13) SHARE (14) GROUP (15) MARCH

VI Something is "wrong" in each of the following sentences Write down the "wrong" word in each sentence

(1) He asked for match to light his electric fire
(2) The Crown Prince told his men that he would abdicate the throne
(3) The goose could be seen with its duckling on the pond
(4) The smell of broken glass was apparent as he went into the house
(5) My brother had the misfortune to fall from a basement window on to a road thirty feet below
(6) The bedridden old lady made her usual walk down the road
(7) It was a juvenile of about thirty five who did it

VII The following is the key to a code the first four vowels of the Alphabet are represented by 2, 3 4 5 and the first five consonants by 6 7 8 9 10 Now find out the words given in code

(1) 72103 (2) 6584732 (3) 625103
(4) 9558 (5) 593473

Give in the same code

(6) BEAD (7) FADE (8) COFFEE
(9) DECIDE (10) CAFE

VIII Arrange the following in the natural ascending order

(1) elephant, cow mouse [illegible] sheep cat
(2) scalding tepid warm cold freezing hot
(3) gale squall breeze wind calm typhoon
(4) eel, whale, porpoise cod salmon, shrimp
(5) bright, brilliant clear dark overcast
(6) painful, agonising irritating smarting

IX Complete the following comparisons by choosing the most suitable word from those given in brackets

(1) Man is to [illegible] as horse is to (horseman, mare, colt filly)
(2) Son is to daughter as brother is to ([illegible] uncle aunt sister)
(3) Parson is to church as teacher is to (pupil school lesson book)
(4) Sing is to [illegible] as give is to (giver gifted [illegible] gift)
(5) On is to off as in is to (up down out from)

X Write down the letter that is at the beginning of the best answers to each of following. You will find that only one answer to each question is [illegible]

(1) Traffic lights are used
 (a) to light up the streets
 (b) to control cars at cross roads.
 (c) to [illegible] up children crossing streets.
(2) Shops are closed on Sunday
 (a) to give shop-keepers a rest.
 (b) to observe the Sabbath.
 (c) to let people save money
(3) Bees always alight on flowers
 (a) to sting them.
 (b) to gather food for winter
 (c) to rest for a while
(4) Sailors wear wide-bottom trousers
 (a) to catch the wind
 (b) to look attractive
 (c) because they can be rolled up when scrubbing decks

ANSWERS

I Since it takes six hours to make the trip from Washington to New York the train which pulls in o New York as you leave Pennsylvania Station left Washington at 5 a m You will arrive at Washington six hours later, or at 5 p m You will therefore pass trains which left or will leave Washington at the following hours 5 a m 6 a m 7 a m 8 a m 9 a m 10 a m 11 a m 12 a m-1 p m 2 p m 3 p m 4 p m Of course at the exact moment you pull into the Washington station a train will be leaving for New York If you re alert you will also see this one The answer then is thirteen trains

II If A's second statement (B was 2nd) is true C's second statement (A was 2nd) is untrue and her first statement (Doreen was bottom) true But now similarly B's first statement is true and two girls are 2nd

Hence A's first statement is true whence it follows that B's and C's second statements are true Thus the order is (1) Clare (2) Alice (3) Doreen (4) Brenda

III This puzzle can only be solved by trial

We have to find a number n which is such that 19 can be divided into n numbers (all different and exclusive of 1) in not fewer than 4 and not more than 7 ways

n is obviously not 2 For if so we get :

2 17 3 16 4 15 ..9 10 i.e. there are 8 partitions

Try 3 Now we get :

2 3 14 2 4 13 2 5 12 2 6 11 2 7 10 2 8 9 3 4 12 3 5 11 and so on 14 partitions in all

Try [illegible] Then we get

2 3 4 10 2 3 5 9 2 3 6 8 2 4 5 8 2 4 6 7

(Continued on Page 6[illegible]5)

(7) India's Permanent Representative in U N
(8) Indian Ambassador in Indonesia

ANSWERS

I This doctrine was advocated by Mr Eisenhower President of the United States of America. This means that if the rule of a foreign power in any area ceases or its influence becomes less, power vaccum is created which must be filled by some other outside force. President Eisenhower described that a vacuum or lack of power has been created in the Middle East and this should be made good for peace and security in the region. Mr Eisenhower supported his New Plan for Peace in the Middle East with five reasons given below and asked the American Congress on 5th January 1957 to grant him standby authority to send United States military forces into the Middle East if he considered it essential to world security. Previously, Mr Eisenhower had received such an authority from Congress to use force in the defence of Formosa when the Chinese were threatening invasion.

The five reasons given by the American President were (1) shrinking of the British

influence in the Middle East and thus greater need in U.S. world-wide defence planning (2) creation of a political and economic vacuum due to failure of the Anglo-French attack on Egypt which might enable the Soviet Union to derive great potential benefit threatening the security of the United States (3) The U.S.A. could not stand aside and watch the Soviet Union increase its "penetration" of the Middle East by aggravating the Anglo-French dispute with Egypt over Suez and the Arab-Israeli quarrel. (4) The best way to solve this problem was considered to obtain a formal advance authority from the Congress which alone has the power to declare war (5) the President would then have a free hand unhampered by constitutional provisions which might tend to slow down his response in emergency. The President also asked the American Congress for appropriation of about 4,000 million dollars for military and economic assistance to overseas allies and another appropriation of 200 million dollars for a two-year economic aid programme for the Arab States and Israel.

II Adam Rapacki the Polish Foreign Minister and Chairman of the Polish Delegation of the United Nations submitted for the first time on October 2 1957 a proposal to the General Assembly of the United Nations. This proposal aimed at creating a de-nuclearised zone which would cover Poland, East Germany, West Germany and Czechoslovakia. In December last year Rapacki took up this question again through diplomatic channels.

The failure of the U.N. Disarmament sub-committee to achieve its objective compelled Poland to make a modest beginning in the sphere of disarmament. That is how the idea of the 'denuclearised Zone' in Central Europe was first conceived. It was presented to other members of the Warsaw Pact in the form in which Adam Rapacki introduced it later to the UN General Assembly.

The Rapacki Plan proposes :—

(1) The creation of a zone covering the territory of Poland, Czechoslovakia, the German Democratic Republic and the German Federal Republic.

(2) [illegible] in these territories should [illegible] nor [illegible]

(3) The equipment and installations [illegible] for their [illegible] could not be [illegible]

(4) The use of nuclear weapons against [illegible] should be prohibited.

(5) The States in this zone should undertake not to manufacture nuclear weapons nor maintain, import or permit the assembly of nuclear weapons of any type on their territories.

(6) The four powers, the USSR, the USA, Great Britain and France should undertake not to equip their forces stationed in or in the region of the zone with nuclear weapons.

(7) In order to ensure the implementation of this plan, the States concerned should undertake to create a system of broad and effective control in the area of the proposed zone.

For the purpose of supervising the implementation of this control a machinery should be established. The manner and procedure for giving effect to these proposals could be agreed upon by a free and frank discussion among the Powers concerned.

III The National Development Council has decided that the total outlay of the second Five Year Plan should be maintained at Rs. 4,800 crores.

In view, however, of the assessment of resources made by the Planning Commission the Council has recommended that the projects and programmes to be undertaken within the ceiling of Rs. 4,800 crores should be divided into two parts. Part (A) of the Plan involving a total outlay of Rs. 4,500 crores should include besides projects and programmes directly related to increase in agricultural production, core projects and projects which have reached an advanced stage and other inescapable schemes. The remaining schemes should be included in Part (B) of the Plan with a total outlay of Rs. 300 crores.

Part (A) of the Plan would represent the level of outlay upon which, on the present assessment of resources, commitments might be entered into for the rest of the Plan period. Projects in Part (B) of the Plan could be undertaken to the extent to which additional resources become available. The list of projects to be included in the two parts of the Plan would be settled after discussion between the Planning Commission and the Central and State Governments. In working out the details [illegible] care should be taken [illegible] the needs of the backward [illegible] and areas were given due consideration and that high priority [illegible] given to [illegible] of the Community Development [illegible]. There should be [illegible] of the Plan [illegible] Central [illegible]

State may make minor adjustments in the allocations within the overall ceilings

The Council has suggested that the Centre and the States should endeavour to raise resources to the maximum extent possible through additional taxation, mobilising small savings and achieving economies in the Plan and non Plan expenditure

The Council has stressed the fact that the level of outlay which could be undertaken would depend in a large degree on the success achieved in increasing agricultural production Local participation and community effort must be enlisted on the largest scale possible in support of agricultural programmes such as the full utilisation of the available irrigation potentials and the adoption of improved practices especially in areas which have irrigation and assured rainfall and intensive efforts should be made to reach every family through the village panchayat and the village co-operative

Prize Bonds Scheme In regard to augmenting Plan resources, the Council has discussed a proposal for the issue of prize bonds in addition to the small savings scheme It stated that similar schemes were worked in some of the foreign countries The principal feature of the proposals is that bonds bearing no interest will be issued and from the interest calculated on the amounts collected, prizes will be given to bond holders winning in a draw held periodically It has recommended that this scheme as also the scheme for compulsory savings may be examined by both the Central and State Governments

IV It is a general idea that the system of education prevalent during the British rule is unsuited to our needs After Independence we inherited the system of education from the British It suited their imperialist needs for turning out clerks to run the machinery of the Government The Congress Government set before the country the task of reconstructing the educational system as the foundation of a new national life but all the efforts we have made to overhaul it have not amounted to much There has been no radical change in the old British system of education except that the standard of education has fallen deplorably During British Government our universities turned out what may be termed as intellectual giants, but when we attained independence and our own Government is taking increasing interest and spending lot of money in the spread of education, we have been producing what may be called intellectual pigmies English has been decried as a foreign language and we have decided to put Hindi in place of English by 1965 without first making Hindi rich enough to take the place of English The fallen standard in English teaching has resulted in all round deterioration

The present out moded system of examination in the educational institutions definitely needs a change A degree or a certificate is not the true test of the talents of a student.

The present examination system mainly depends on essay tests which measure only a single ability—the temporary ability to memorise assigned material Stress should be laid on intelligence tests and the cumulative record of students in various fields of activity in assessing their merit It is recommended that 50 percent of the marks in the secondary examination should be given on the basis of the work done by the student throughout the year All the State Governments are convinced of the necessity of introducing these reforms and were taking steps to do so

To improve and raise the standards of our education we lay down following suggestions

1 Measures should be adopted to improve the efficiency social status and general welfare of the teachers Only trained teachers should be given jobs and encouraged.

2 Students should be kept away from taking any part in active politics or agitational activities such as hunger strikes hartals demonstrations etc. The political parties should not utilize the students as pawns on the chess board of politics

3 The present system of examination should be modified Emphasis should be placed on learning rather than on memory The present method of instruction by lectures should be supplemented by small discussion classes and seminars

4 English should be made a compulsory subject in universities as this language opens the gateway to various sciences and arts

5 General Knowledge should be added to the curriculum as an additional compulsory subject at all stages of study There should be courses specially designed for general education in each of the three fields of knowledge namely humanities, social sciences and natural sciences

6 Standard and well-[illegible] text should be prescribed

Government should not nationalise the text books

6 But its duty should be only to select good and standard books written by eminent educationists

7 The system of education should be reorientated so that the student may become a useful citizen and an asset to society rather than a degree-holding robot groping in the darkness of future

3 4-5-7 Six partitions in all, as Bessel discovered

This must be the answer; as 2-3-4-5-6 total 20 so n cannot be greater than 4. The Professor has four daughters

IV Let there be n girls of whom m are blondes Then if it is an even chance the two girls chosen at random are blondes

$$\frac{m(m-1)}{n(n-1)}=\frac{1}{2}$$

i.e $2m(m-1)=n(n-1)$

This equation has an infinitude of solutions of which the only one consistent with the rest of the data is

$n=21 \quad m=15$

Hence there are 15 blondes.

U.S AID FOR TECHNICAL EDUCATION

Higher technical education in India will be spurred under a newly signed Indo-U.S technical assistance agreement

The agreement aims to achieve this by bringing American professors to teach in Indian institutions and providing training facilities in higher education for Indian scholars in the United States

This forms a part of 10 Indo U S project agreements signed in New Delhi under which India will receive a total of $1 681 744 in technical assistance funds for various phases of her developmental activity Technical education accounts for $1 150 288

The funds now allocated represent a portion of the $6 3 million ear marked for a programme of U S technical assistance to India till June 30 this year The agreements were signed by N C Sen Gupta, Joint Secretary Ministry of Finance for the Government of India and Howard E. Houston Director of the U.S Technical Cooperation Mission in India

The project on technical education a supplemental agreement to concentrate additional technical assistance in five Indian engineering colleges calls for the execution of inter university contracts with three U S engineering institutions. It will provide three-year assignments for 26 American professors at the following Indian colleges

Indian Institute of Technology at Kharagpur Bengal Engineering College at Howrah University of Roorkee at Roorkee Guindy Engineering College at Madras and Poona College of Engineering at Poona

Also training opportunities in the United States will be provided under contract for 20 Indian participants in this field

CORRESPONDENCE COURSES UNDER COLOMBO PLAN

New prospects have opened up for training Indian technicians engineers and agricultural graduates in advanced courses under the new system of correspondence scholarships initiated by the Australian Government under the Colombo Plan in India

As many as 151 engineers accountants and agriculturists will be benefited under the scheme The first batch of 12 accountant trainees will sit for their examinations under the correspondence course at a centre to be selected by the Government of India These students are on the accounts staff of the Company Law Department of the Ministry of Commerce. Other 32 accountants and business management graduates would soon be taking similar correspondence courses

The most important batch of trainees however is from the Railway Ministry Forty seven railway officials were recently nominated by the Union Finance Minister for taking correspondence courses from Australian correspondence colleges and universities These examinations will carry no diplomas or certificates with them but are designed to produce better engineers agriculturists and technicians

Fifty two technical instructors from Central technical training institutions have been seconded to the correspondence courses scheme by the Government of India The idea is to impart training of a high order not available in India and make the trainees more efficient in their jobs

Australia which is considered a leader in the field of agriculture and animal husbandry will also train eight agricultural and animal husbandry staff members of State and Central Governments in improved agricultutal and mechanized dairying methods

The correspondence system has been long established in Australia It was made necessary by long distances and isolation in that country It was first extended to Asian countries in 1957 About 600 Asian students from 11 Asian countries are currently benefited by this project. Australian correspondence colleges and universities provide free text books and lessons to the trainees in India and elsewhere The only expenditure the trainees incur is on postage of home work lessons which are to be posted back to Australia.

Australian training institutions provide regular reports to the Government of India on the progress the students make on their courses. So far the Union Government has confined the correspondence courses mostly to Government employees.

POOLING OF TECHNICAL MANPOWER IN INDIA

The National Register of the Council of Scientific and Industrial Research has recently been reorganised in consultation with the Planning Commission and Manpower Directorate of the Ministry of Home Affairs, Government of India. The scope of the Register has also been greatly expanded.

The Registration under the new system is being done by means of a specially designed card, which aims at better classification of personnel and quicker handling of the information.

The new Register at present will cover technical personnel holding a Master's degree in science and/or Bachelor's degree in professional or specialised course (e.g. Agriculture, Veterinary Sciences etc.) or Diploma in Engineering or Technology or post graduate qualifications in respect of medical personnel.

It is estimated that the potential of registrable technical personnel in India is of the order of 1,20,000. The project being large, it has been arranged that registration cards should be available to the qualified persons at the following centres throughout the country, viz.

(a) Employment Exchanges numbering about 200

(b) All National Laboratories of the C.S.I.R. and (c) Public Service Commissions of Jammu and Kashmir, Assam, Bihar, Kerala, Bombay, Punjab and West Bengal.

The completed cards could either be handed over at these centres or returned direct to the National Register, Council of Scientific and Industrial Research, Old Mill Road, New Delhi.

In India the idea of manpower planning first took a concrete shape in 1947. The recommendations made by the Manpower Committee set up by the Government of India resulted [illegible] in the establishment of the National Register of Scientific and Technical Personnel in 1948. During the last ten years this Register provided valuable preliminary information as to the availability and status of the technical personnel in the country.

The growing demand for specialised technical personnel [illegible] with the undertaking of the Five-Year Plans, particularly the Second Five-Year Plan which lays a greater emphasis on industrialisation of India.

• • •

60,000 TEACHERS TO BE APPOINTED

The Government of India have approved a scheme to relieve educated unemployment and expansion of Primary Education to be launched during 1958-59.

Under the Scheme, 60,000 teachers will be appointed during the next three years, beginning from 1958-59. About 15,000 teachers will be appointed in 1958-59, 20,000 in 1959-60 and 25,000 in 1960-61. These teachers will be utilised mainly for opening Junior Basic or Primary schools in school-less villages, preference being given to relatively more backward areas in a State.

Since the problem of education at the Primary stage in most of the States at present is largely that of bringing girls to school, efforts will be made under the Scheme to recruit as many women teachers as possible and therefore while making appointments preference will be given to women teachers.

The Scheme provides for the construction of 6,000 quarters in the whole country. Of these 1,200 will be constructed in 1958-59, 2,400 in 1959-60 and appointment of several Inspecting Officers, e.g. Sub-Inspectors or Sub-Deputy Inspectors as they may be designated in different States.

FUNCTIONAL SCHOOLS FOR INDIA

The third regional seminar on 'Planning Functional Schools for India which concluded its three-day deliberations in Bhopal on June 27 has recommended building of a nucleus which will provide the necessary teaching environment most conducive to the methods advocated today and enable the country to teach the maximum number of school going children with the least possible expense.

The new approach presupposed a good deal of cooperation on the part of the community Though the nucleus would come from the Government, the actual class room structures will be put up by the community

This approach will enable the community to have well equipped schools functioning quickly and with minimum of expenditure and also create an environment that will automatically lead to adoption of better methods of education

Regional committees have been set up which will draw up plans of school buildings in accordance with the decisions taken at the seminar so as to provide incentive to the community

As an important step towards improving the status of teachers the seminar suggested provision of staff quarters in the school premises by diverting the amount of expenditure saved on school buildings to extend this facility to the teachers

The seminar also recommended that with a view to expediting planning and construction, the Department of Education in each State should have a designing and building unit of its own with other necessary staff

The experts were of the view that reduction in the cost of school building was absolutely imperative for educational expansion in the country

Amongst other ways of effecting economy they suggested that no room should be provided in a school unless and until its full time utilisation was guaranteed. This will naturally lead to multiple use of class rooms and reduce their number

The experts also emphasised the importance of drawing up a standard master plan for the whole school even though the completion of the building may be spread over years and be done in stages

* * *

KERALA EDUCATION RE-MODELLED

The Kerala Government has passed orders re modelling the present set up of education in the State, under which the total duration of the entire school course including higher secondary class will be 11 years

According to the order published in the *Gazette* the secondary education will commence from Standard VIII corresponding to the old Form IV after an integrated course of seven years of primary education The new syllabuses for the integrated seven years will cover as much as is being covered at present in the eight years in the primary classes

The mother tongue or the regional language will continue to be the medium of instruction and will also be a compulsory language. In the lower primary classes there will be no text book other than the one for the study of regional language but the teachers will prepare their own notes in other subjects to teach in accordance with the syllabus English will be introduced in Standard V and Hindi in Standard VI They will also be compulsory subjects for all

The secondary course will be of three years duration (Standard VIII IX and X) and the higher secondary of four years duration (Standard VIII to XI) The order says that as the conversion of all high schools into higher secondary schools will be a phased programme there will be these two types of secondary schools for some years to come

The syllabuses for the secondary and the higher secondary courses are for two types of courses—academic and diversified The first year of the secondary and the higher secondary courses will be a general education course common to the academic and the diversified courses. Bifurcation of courses will begin only in Standard IX

The Case for a more Rational System of Education

THE HIGH SCHOOL OF TOMORROW

BY R. S. JAMES

The need to remould our entire educational system has been accepted on all sides, but how [illegible] has yet been done about it in practice. This informed article is by the Co-ordinator of the Department of Extension Services at the College of Education, Osmania University. It is to be hoped that the tomorrow envisaged here will not be long in coming.

ACCORDING to the Constitution of our country, Education is primarily a concern of the States with the Centre acting in an advisory co-ordinating capacity.

This indeed is a very wise provision for otherwise a centrally controlled educational system will be the negation of the very democratic way of life the Constitution promises. It is true that in a country as vast as India, with so many languages, castes and creeds, there is an underlying unity. But at the same time we cannot shut our eyes to the existence of these differences.

Besides, the educational needs of youth in one region differ so widely from the educational needs of those in another region. In fact the prime need is to decentralise education further so that it could be developed and be constantly changed to suit the changing needs of a changing society in a changing environment. The changes in the environment should bring about changes in the outlook and the practices of the school which in its turn should bring about desirable changes in the environment. Unless these two interact and mould one another the school is static and hence dead.

Needs of Society

The schools should study the needs of the society and the vocational opportunities it offers now and in the future on a regional basis so that the schools in each region could adapt the curriculum to these vocational needs. Education based on such a curriculum will become meaningful, useful, effective and economical. In fact the students of a school in a particular area could study the vocational opportunities in that area. The [illegible] of the people [illegible] the acquiring of information [illegible] and [illegible] will take the students away from [illegible] learning and promote in them the development of skills [illegible] them [illegible] of the future [illegible]. This will also give them a much better [illegible] life and help them to achieve a quicker mental and social maturity which is sorely lacking in the present day school youth.

The usual curriculum in India is thought to be very heavy because of the fact that it is looked upon as something sacred to be gone through from A to Z and because it is [illegible] unrelated to the environment of the [illegible]. Actually it is not any heavier than the curriculum of any advanced country. The curriculum should be treated as a source and a framework within which all the high schools in the region could work.

Besides the erroneous view that the curriculum is too heavy [illegible] of [illegible] tional practices.

Firstly the High School of today aims at educating every student that comes to it. This is a task that no country can undertake [illegible] less a poor country like ours. Naturally the number of students who fail to measure up to the standards we set up is enormous [illegible] in a tremendous human wastage [illegible] disillusionment.

The High School of Tomorrow has [illegible] functions.

(a) It can make literates of all who go through it. In fact quite a few of the [illegible] students come to school only to learn to read and write and be good citizens and be able to read for pleasure or read newspapers and intelligently [illegible] the modern trends in life and find [illegible] to the [illegible]. In short it is education for culture that they seek.

(b) The school can seek to equip [illegible] the knowledge and skills that would immediately be necessary to enter a vocation and earn a livelihood. [illegible] [illegible] clerks [illegible] [illegible] [illegible] the High School population.

(c) Lastly a few highly intelligent pupils could be really *educated* so that they would be prepared for higher studies at the University and higher technical and professional training and would be natural leaders in government industry and business The same kind of education for all is not only a preposterous proposition but an untenable one and psychologically unsound.

The first category of students should be offered electives that they can easily go through —such as humanities languages music, dance and drama fine arts crafts etc The second category of students could specialise in commerce economics typewriting shorthand mechanical training agricultural mechanics business administration salesmanship etc The third category will have to take for specialisation in such subjects as mathematics physical sciences biological sciences etc which would enable them to go for higher studies in the University and for professional and higher technical training The choice of electives could be determined by the help of psychological tests such as intelligence and aptitude tests and other records

Examinations

The second educational practice that makes the syllabus appear to be unduly heavy is the present system of examinations The examinations have influenced the teaching practices to disproportionate degree The examinations of today try to find out if the student knows all that is laid down in the curriculum Examinations should try to measure the educational development and growth of the pupils and the development of their abilities and skills *They should measure not what the pupils* know or do not know but rather what they can do with the knowledge and skills they have acquired

So great a pressure have the examinations exerted on the school practices that the schools seem to be in a mad rush to finish the portions' If on the other hand the methods of testing and evaluation change these would naturally affect the school practices The emphasis will then naturally be shifted from teaching to learning—from the teacher bears this out It would therefore be far better to have only a few pupils to be submitted to strict examination which would qualify them for admission to the Universities and other places of higher educational and professional training

The first two categories of pupils viz those that are seeking only a cultural and vocational education could easily be examined by the schools themselves and awarded certificates The standards of testing and evaluation used by schools could be periodically scrutinised by a Regional Standards Committee Nearly 60 to 70 per cent of the pupils could thus be freed from the Board Examinations which have become too unwieldy to be of any real and dependable value.

The last category of pupils viz those who seek admission in the higher institutions of learning to the pupil from reciting to doing from passive listening to active participation and from the training of memory to the development of skill and attitudes

Again the present mode of mass examination involving tens of thousands of pupils and thousands of examiners is most unreliable and the common expression of luck in the examination could then take this examination which, would naturally demand superior intelligence and a high standards of performance Only about 30 to 40 per cent of the school population will thus be appearing for this examination The small and easily manageable numbers will ensure the dependability of these testing procedures It will also ensure that only the best of the country's youth are going to the Universities This practice will not only reduce the pressure of admission in the Universities but will naturally improve the quality of teaching at the University level as it is then possible to pay adequate individual attention

The new type of examination however, should not be mistaken for the mere objective type of questions For objective type of questions are not as reliable as they are believed to be They demand only small bits of information rather than information in the usual form of an essay

The practical application of the knowledge and skills to the events and occurrences in the students environment and his attitude towards these are more important than the mere acquisition of facts The objectives of testing and evaluation will naturally change the objectives and practices of teaching The all India Council for Secondary Education is working on this problem through the Extension Services

Other Activities

Again the extra-curricular and co curricular activities present a serious problem So far in the High School of today they appear to the teachers and the pupils as though they are imposed upon them by the Department of Education These should be the natural growth out of the curriculum and should fulfil a felt need

the French but they are believed to have moral support of the Afro-Asian group and especially the Muslim countries of Egypt, Morocco and Tunisia. A national liberation army termed as Fellaghera by the French, has been formed with 15,000 strong guerillas functioning from its head quarters at Cairo. The French are desperately fighting to crush the rebellions and they claim to have shot down at least half a million Algerians.

The Nationalists are prepared to open negotiations with the French provided they accept a state of independence for the former. In 1956 Pandit J. L. Nehru [illegible] suggested a five-point plan for the settlement of Algerian problem which was not accepted by the French, although now General De Gaulle is working somewhat on those lines. The 21 nations of Afro-Asian group are [illegible] trying their best to see that Algeria is granted her independence. The group succeeded in getting Algerian question placed on the agenda of the 12th session of the U.N.O. But the French counter attacked and [illegible] the alleged supply of arms to the nationalists by the U.S.A.—and the [illegible].

France's youngest Prime Minister after Napoleon, M. Felix Gaillard failed to restore peace and his successor who ruled for just three weeks failed miserably to [illegible] normal conditions. Now the Iron man of France, hero of the two World Wars, Gen. De Gaulle has dramatically taken the reins in his own hands with determination to restore peace within six months during which time he would rule like a 'Dictator' without the Parliament and with power to amend the constitution. The fact that by giving such vast powers to the General the Parliament has signed her own death warrant speaks of the gravity of Algerian situation. But how far their hopes are fulfilled we have yet to see.

Yours etc.

STUDENTS' ROLE IN FREEDOM STRUGGLE

Dear Sir,

The [illegible] of freedom was [illegible] hundred years ago and the [illegible] of [illegible] was [illegible] the [illegible] the very [illegible] the foundation of the British Empire in India [illegible] the [illegible] of 1857 were [illegible]. The [illegible]

rebellion which though widespread was [illegible] organised and ill co-ordinated. [illegible] the freedom movement was born and it became the duty of [illegible] India to strengthen it in all possible ways.

Eighteen years after the failure of the [illegible] Indian Freedom Struggle the Indian National Congress was born. It was this organisation which truly made the Freedom movement broadbased and massive.

It might not be untrue to say that the Nationalist Movement in India [illegible] this sacred organisation was a beacon of light for the rest of Asia. The struggle of Indian Leaders for breaking the shackles of slavery and foreign exploitation had profound psychological effect on the neighbouring countries.

An important element in the nationalist movement for the political emancipation was the Youth of the country. Since the [illegible] of the century the Students of this country splendidly responded to the clarion call of the Congress. Hundreds of them abandoned their studies and literary careers and plunged themselves in the freedom struggle—with a smile they braved lathi charges, court imprisonments and embraced gallows. The [illegible] made by the Students Community [illegible] this distance of time appears indeed phenomenal. It can be boldly stated that but for thousands and thousands of Students who readily laid their lives at the altar of freedom this country would not have been able to achieve its independence. Youth verily constituted the backbone of Indian National Congress.

The All India Students Congress has been the [illegible] and [illegible] of the students in particular and the Youth in general. Mahatma Gandhi in one of his memorable addresses at (Wenlock Park) Madras after the [illegible] of the Simon Commission had [illegible] in unequivocal terms that but for the agitation and personal courage of the members of the All India Students Congress [illegible] of the Simon Commission [illegible] would have been a failure. Again in August 1942, the students all over the country played a glorious part in the Freedom Struggle. The [illegible] [illegible] the [illegible]. Freedom was [illegible] and on August 15th 1947 the [illegible] of this country [illegible] [illegible] and [illegible] the [illegible] [illegible].

[illegible] after the establishment of the National Government the role of the Students [illegible] [illegible]

from agitational to constructive and peaceful With the adoption of the First Five Year Plan the magnitude of the problem of economic and Social reconstruction became clear and the need for the active participation of the Students in the Development Programmes also became equally clear

The students of India have been participating in increasing numbers in Youth camps in National Extension Schemes and in Adult Education programmes However it is rather regrettable to note that the students in the post independent years have not displayed that fervour and unity which were so prominent in the pre independence era It is the duty of every student of every young man and woman of this country to dedicate himself or herself to the task of rapid socio-economic development We must all remember that we are too near to too many great events to be able to assess them objectively The attainment of Indian Independence is no doubt a great historical landmark. But what is really amazing to any student of world affairs is the phanomenal progress of India in International Affairs No country within so short a time has achieved so great a distinction in the comity of Nations It can be stated without any fear of contradiction that the rise of India in World Affairs as a staunch advocate of peace is primarily due to her awareness of the righteousness of her cause She is the rallying point of the moral forces of the world India's foreign policy has been enunciated on sound principles of statecraft It is a product of not only enlightened self interest but also of clearing idealism and cosmopolitanism It is a grand repudiation of the traditional theory of balance of power it is a remarkable experiment of applying the technique of non violence in evolving peaceful international relations She has demonstrated to the world that neither Military power nor extra-ordinary advancement in science and technique is necessary for a Nation to exert its influence in the Comity of Nations India is one of the most backward countries is one of the most populous and militarily the weakest in the world but still she has made herself felt in world affairs The Voice of India is the voice of peace—the clarion call to humanity to end war Otherwise war will end mankind Her voice is the voice of the oppressed and the dumb millions of the world Indian thesis of the co-existence of diverse political and social structures is getting very nearly vindicated by the recent revision of policies by the leaders at Kremlin From Co-existence to cooperation is a transition from peace loving Nation States to one world The idealism of yesterday (for that was how India s Policy was characterised) has become the Realism of To-day

In the words of our Beloved Prime Minister Nehruji Let all of us become Partners in a great adventure—Partners in India Limited The India of tomorrow is dependent upon our hard work cooperation Unity and Discipline

Yours etc

ESSAY WRITING

Sir

For ordinary examination purposes an essay should be a composition expressing clearly the writer s thought on some subject The ground work of the essay comprises accurate spellings correct English and proper punctuation Knowledge of the subject and skill in composition are needed to produce a good essay

In an essay it is most important for the writer to give his own ideas and feelings An essay must have the mark of sincerity and individuality Its aim should be to enlighten the reader and examiners.

An essay must be an orderly composition the exact opposite of Dr Johnson s famous definition of an essay as A loose sally of the mind an irregular and indigested piece not a regular and orderly composition The essayist must have something to say and he must ensure that he says it It is useless to write pages of trivial or irrelevant matter

The ability to tackle a subject confidently depends on the writer s mental ability and perhaps more largely on the information in his possession An essay is not primarily the expression of academic knowledge hobbies sports and matters of present-day interest are quite as important as more recondite subjects An interested observant attitude towards life will help considerably in the collection of useful knowledge Of equal importance is the mental training afforded by intelligent reading Our outlook becomes broadened and a critical faculty is developed with increasing knowledge we begin to judge what is being read in the light of what has been read previously and ultimately come to form our own opinions on subjects

A large mass of chaotic knowledge is not enough The habit of clear thinking must be cultivated for this is essential to

the French but they are believed to have moral support of the Afro-Asian group and especially the Muslim countries of Egypt Morocco and Tunisia A national liberation army termed as Fellaghers by the French, has been formed with 15 000 strong guerillas functioning from its head quarters at Cairo The French are desperately fighting to crush the rebellions and they claim to have shot down at least half a million Algerians

STUDENTS ROLE IN FREEDOM STRUGGLE

Dear Sir

The torch of freedom was lit a hundred years ago and the banner of revolt was raised against the foreign rule in the manner which very nearly shook the foundations of the British Empire in India but the pioneering protestations and the bold bid to snap the chains of slavery in 1857 were in vain The superior technical skill of the British armed forces ultimately put down with a firm hand a rebellion which though widespread was ill organised and ill co-ordinated Nevertheless the freedom movement was born and it became the duty of succeeding generations in India to strengthen it in all possible ways.

Eighteen years after the failure of the first Indian Freedom Struggle the Indian National Congress was born It was this organisation which truly made the Freedom movement broadbased and massive

It might not be untrue to say that the Nationalist Movement in India directed by this sacred organisation was a beacon of light for the rest of Asia The struggle of Indian Leaders for breaking the shackles of slavery and foreign exploitation had profound psychological effect on the neighbouring countries

An important element in the nationalist movement for the political emancipation was the Youth of the country Since the twenties of this century the Students of this country splendidly responded to the clarion call of the Congress Hundreds of them abandoned their studies and lucrative careers and plunged themselves in the Freedom struggle —with a smile they braved lathi charges courted imprisonments and embraced gallows The sacrifices made by the Student Community assessed at this distance of time appears indeed phenomenal It can be boldly stated that but for thousands and thousands of Students who readily laid their lives at the alter of freedom this country would not have been able to achieve its independence Youth verily constituted the backbone of Indian National Congress

The All India Students Congress has been the unifier and inspirer of the students in particular and the Youth in general. Mahatma Gandhi in one of his memorable addresses, at (Wenlock Park) Madras after the visit of the Simon Commission had stated in unequivocal terms that but for the agitation and personal courage of the members of the All India students Congress boycott of the Simon Commission in Madras would have been a failure Again in August 1942 the Students all over the country played a glorious part in the Freedom Struggle The year immediately preceding the attainment of Freedom was indeed stormy and on August 15th 1947 the Students and Youth of the country participated with great gusto and fervour in the country wide celebrations

Soon after the establishment of the National Government the role of the Students and Youths had to be slowly switched over

from agitational to constructive and peaceful With the adoption of the First Five Year Plan the magnitude of the problem of economic and Social reconstruction becam clear and the need for the active participation of the Students in the Development Programmes also became equally clear

The students of India have been participating in increasing numbers in Youth camps in National Extensian Schemes and in Adult Education programmes However it is rather regrettable to note that the students in the post indepindent years have not displayed that fervour and unity which were so prominent in the pre indep ndence era It is the duty of every student of every young man and woman of this country to dedicate himself or herself to the task of rapid socio-economic developm nt We must all rememb r that we are too near to too many great events to b able to ass ss them objectively The attainment of Indian Independence is no doubt a great historical landmark But what is really amazing to any student of world affairs is the phanomenal progress of India in International Affairs No country within so short a time has a hieved so great a distinc tion in the comity of Nations It can be stated without any fear of contradiction that the rise of India in World Affairs as a staunch advocate of peace is primarily due to her awareness of the righteousness of her cause She is the rallying point of the moral forces of the world India's for ign policy has been enunciated on sound principles of statecraft It is a product of not only enlightened self interest but also of clearing idealism and cosmopolitanism It is a grand repudiation of the traditional theory of balance of power it is a remarkable experiment of applying the technique of non violence in evolving peaceful international relations She has demonstrated to the world that neither Military power nor extra-ordinary advancement in science and technique is necessary for a Nation to ex rt its influence in the Comity of Nations India is one of the most backward countries is one of the most populous and militarily the weakest in the world but still she has made herself felt in world affairs The Voice of India is the voice of peace —the clarion call to humanity to end war Otherwise war will end mankind. Her voice is the voice of th oppressed and the dumb millions of the world Indian thesis of the co-existence of diverse political and social structures is getting very neatly vindicated by the recent revision of policies by the leaders at Kremlin From Co-existence to cooperation is a transition from peace loving Nation States to one world The idealism of yesterday (for that was how India s Policy was characterised) has become the Realism of To-day

ESSAY WRITING

Sir

For ordinary examination purposes an e say should be a composition expressing clearly the writer s thought on some subject The ground work of the essay comprises accurate spellings correct English and proper punctuation Knowledge of the subject and skill in composition are needed to produce a good essay

In an essay it is most important for the writer to give his own ideas and feelings An essay must have the mark of sincerity and individuality Its aim should be to enlighten the reader and examiners

An essay must be an orderly composition the exact oppo ite of Dr Johnson s famous definition of an essay as A loose sally of the mind an irregular and indigested piece not a regular and orderly composition The essayist must have something to say and he must ensure that he says it It is useless to write pages of trivial or irrelevant matter

The ability to tackle a subject confidently depends on the writer s mental ability and perhaps more largely on the information in his possession An essay is no primarily the expression of academic knowledge hobbies sports and matters of present-day interest are quite as important as more recondite subjects An interested observant attitude towards life will help considerably in the collection of useful knowledge Of equal importance is the mental training afforded by intelligent reading Our outlook becomes broadened and a critical faculty is developed with increasing knowledge we begin to judge wha is being read in the light of what has been read previously and ultima ely come to fo m our own opinions on subje ts.

A large ma s of chaotic knowled e is not enough The habit of clear thinking must be cultivated, for this is essential to

orderly expression Ideas cannot be clarified or sound opinions formed without thought and a few moments spent examining and ordering our impressions are definitely not so much time wasted

It is unwise to attempt to write an essay without some preliminary preparation since unless the writer is gifted with the rare ability to think clearly and rapidly the resultant essay will probably be a disorderly collection of incoherent ideas A number of steps is usually necessary to ensure that the finished article is really a good piece of work The main characteristics of a good essay are

1 Unity It means briefly that each sentence must lead logically to the next one and that each paragraph must follow on smoothly from the preceding one In this way a really sound and interesting essay will result.

2 *Relevancy* This means simply keeping to the point A rather common error in this respect is to write an essay which does not fit the title

3 *Proportion* An ordinary essay is not meant to be a complete exposition of the subject Usually an examinee has about an hour to write his essay and the subject matter must be fully discussed within the time allowed It is a good point to mark the most important points and apportion the allotted time among them

FILM WORLD

Brussels Film Festival Awards

The first Grand Prize of the International Experimental Film Competition was awarded to 'Dom' made by Walerian Borowczyk and Jan Lenica (Poland). To this prize was attached the sum of 10,000 dollars, contributed by Gevaert.

The second Grand Prize was awarded to 'Free Radicals' made by Len Lye (United States of America). This film also received a cash award—5,000 dollars—contributed by the firm of Sibis.

Six prizes were awarded to the following films classified in alphabetical order: 'Chansons Sans Paroles' by Yoram Gross (Israel), 'Dwaj Ludzie Z Szafa' ('Two Men and a Wardrobe') by Roman Polanski (Poland), 'Gyromorphosis' by H. Hirsh (United States—Holland), 'Highway' by Hilary Harris (United States), 'N Y N Y' by Francis Thompson (United States) and 'Sinfonia En No Bemol' by Rodolfo Kuhn (Argentina).

Three unofficial prizes were awarded as follows:

The Prize of the International Federation of Film Societies to 'L'Opera Mouff' by Agnes Varda (France).

The Prize of the Selection Jury of the Competition to Stan Brakhage for the ensemble of his work presented in the Competition and "Le Prix de l'Age d'Or" to 'Inauguration of the Pleasure Dome' by Kenneth Anger (United States).

The Competition was held in conjunction with the Brussels Universal and International Exhibition.

The audience jury at the Brussels Film Festival gave its unofficial prize for the best film to 'The Wall of China'.

Prize for the best male performance went to Horst Buchholz for his acting in the German film 'Endstation Liebe'. Kim Stanley won the prize for the best female performance in the "Goddess" (United States of America).

The International Federation for the Cinema Press gave its prize to Orson Welles for 'A Touch of Evil'.

The International Catholic Film office gave its prize to Hemmingway's 'The Old Man and the Sea'.

Orson Welles, for his role as the nasty, unprincipled detective in Universal International's 'Touch of Evil' has won 'best actor' award at the Brussels World Fair Film Festival.

At the same time the film—which was written and directed as well as acted in by Welles—was named the 'best picture' outside the competition by the foreign press.

Film Theatres in Canada

Canada as of April 1 had 1,809 theatres—1,582 conventional ones and 227 drive-ins—76 less than on April 1, 1957. Then the total was 1,885 theatres including 1,656 four walled ones and 232 ozoners, reflecting a closure of 74 conventional cinemas and five drive-ins, according to a summary report by the Canadian Motion Picture Distributors Association.

Since April 1953 when there were 1,924 conventionals and 104 drive-ins there has been an overall loss of 219 theatres. In the five year period 342 four walled cinemas were lost and 123 "ozoners" gained.

In 1957-58 there were 133 closings which offset by 18 new openings (including three "ozoners") and reopenings of 41 houses (including one ozoner) left the net loss of 47 theatres. To date 102 regular houses and eight "ozoners" have been completely dismantled.

Film Critics' Awards

President's Gold Medal winning feature film Rajkamal Kalamandir's 'Do Ankhen Barah Haath' was again adjudged the best film in the Critics' Awards 1957, announced at a function held at the Metro Cinema in Bombay under the auspices of the Film Journalists' Association.

Meena Kumari was declared the best actress of the year for her performance in Prasad Productions' 'Sharada' while Dilip Kumar was adjudged the best actor for his role in B.R. Films' 'Naya Daur'.

India's Defence Minister, Mr. V. K. Krishna Menon who presided over the func-

d presented the statuettes to the , said that the Indian film industry rgest in the world was a great national The great interest taken by the Indian n films he felt represented the grow stic interest in the country

Menon said that the function of film was not always pleasant particularly if shed to be objective and sincere in the ion of opinions They had nevertheless role to play in k eping up the standard genous films He pointed out that a ould come when other countries would know more about Indian film stars the activities of film critics

e Critics' Awards which are restricted di films and foreign films released in y announced at the function were Best — Do Ankhen Bara Haath best —Meena Kumari (Sharada) best Dilip Kumar (Naya Daur) best r—V Shantaram (Do Ankhen) best director—Shanker and Jaikishan nt Bahar) best supporting actress— Chitnis (Basant Bahar) best suppor tor—Ajit (Naya Daur) best photo- r—Faredoon Irani (Mother India) t director—M R Achrekar (Pardesi) editor—Chintaman Borkar (Do An) best dance director—Sohanlal and Krishna (Kath Putli) best story— r Mirza (' Naya Daur) best recordist— Parmar (Do Ankhen) best dialogue —V Adil (' Sharada ') best lyricist— Ludhianvi (Pyaas) best play back (female)—Geeta Dutt (Jane kya he film Pyaasa) best play back singer —Mohammad Rafi (Jine naaz hai 'Pyaasa) and best foreign film— The aker (Paramount Films)

r B N Pavri president of the Associa welcomed Mr V K Krishna Menon and guests while Mr S G Khale secretary Association proposed a vote of thanks S Thapa was the compere at the show

d Film Festival in London

he second London Film Festival will be t the National Film Theatre from October 4 next

augurated la t y ar under the sponsorship Sarda, Times in collaboration with itish Film In titute th Festival this year is to be presented by the Institute in associa tion with the London County Council

At least 20 films will be screened and it is hop d by the organisers that an Indian produc tion can be includ d

It is the policy of the London Festival to give cinema goers an opportunity of seeing with in the space of a few days some of the most not able films shown in the previous six months at the major film festivals in different parts of the world

It is thus, a festival of festival films and its composition depends upon the success ob- tained by international films at established world festivals

Last year Aparajito was shown and P ther Panchali had a special screening at the National Film Theatre in association with the Festival

The great bulk of the London Film Festival programme cannot be organised until the major world festivals have ended and selection of their best films becomes possible

However two pictures have already been chosen for screening They are The Old Man and th Sea starring Spencer Tracy from the Hemmingway novel and the Swedish picture Wild Strawberries produced by Bergman and starring S ostrom

Chinese Films for India

An attempt to exhibit Chinese films com mercially in India will soon be made by Chinese trade authorities in collaboration with Indian film distribution channels.

Six Chinese feature movies sub-titled in English have been recently brought to Bombay and will be exhibited by local film distributors

Included amongst these are Woman Bas ketball Player No 5 a story dealing with a girl basket ball enthusiast, and Two Football Teams a film with a story on the love of a football amongst middle school children

The films have been specially imported on the advice of some Indian film stars who had seen these movies in China and the Soviet Union

Along with feature films a number of car toon films with sub-titles in English will also be off red to the Indian marke

China is also contemplating the possibility of co production of films with India

SCIENCE & INVENTION

MAN MADE DIAMONDS TO BE MASS PRODUCED

Man made diamonds identical to natural stones will be in mass production for industrial users before the end of 1958, the General Electric Company in the United States reports. The diamonds are produced by subjecting carbon to high pressure and high temperature in a duplication of natural process by which diamonds are made.

The company has already produced more than 100 000 carats of man-made diamonds. These have been shown to be identical to natural diamonds on the basis of capital, X ray and chemical examinations and hardness tests. The largest of these diamonds are about the size of coarse grains of sand, and most of them are about the size of fine particles of sand.

The General Electric Company's synthetic diamonds will be used in cutting tools grinding wheels, and other industrial equipment.

EARTH'S ELECTRIC FIELDS AS SOURCE OF ENERGY

Professor Georgy Pokrovsky has suggested that the energy of electric fields in cosmic space be used to power the space ships of the future.

Writing in the youth magazine "Tekhnika Molodyozhy" (Engineering for Youth) the Soviet scientist points out that apart from the fields of gravity there are in cosmic space other power fields electric and magnetic. These fields have not yet been adequately studied. But their existence and the enormous significance are now beyond doubt. It is known that the particles which carry electric charges and make up cosmic rays develop in their movement in cosmic electromagnetic fields, speeds approaching that of light and a vast energy. These fields may be likened to gigantic super powerful accelerators of elementary particles created in the [illegible] laboratories in [illegible] in recent years. These cosmic electromagnetic fields may be used for the guided flight of space ships.

Professor Pokrovsky notes that such a space ship must have a definite type of equipment whose elements have already been designed although that was done for other purposes. The main element of the equipment of a space ship should be two accelerators for elementary particles. One of them is designed to accelerate negatively charged electrons and the other to accelerate and eject positively charged particles—the ions of hydrogen (protons). In ejecting with the aid of powerful accelerators a stream of positively charged particles the ship gradually becomes negatively charged and begins to attract on itself a stream of the lines of force of the cosmic electrical field. As this charge increases the ship heads for the cosmic system charged positively. If it is the electron accelerator that is operating the ship receives a positive charge and rushes on towards the negative pole.

UNDERWATER VOLCANOES IN THE ARCTIC

Professor Y. Gakkel, a Soviet polar explorer has found an active underwater volcano in the Central Polar Basin where the Lomonosov underwater ridge is situated. One of the things which helped the scientist to discover the volcano was the report on the observations made by workers on "North Pole 3" drifting station who recorded strong shocks and vibrations in the pack ice and a sharp smell of hydrogen sulphide.

The scientist continued his research and found volcanic activities in a number of other areas in the Arctic Ocean.

Not long ago V. Antonov a hydrologist doing ice prospecting, found signs of an underwater volcanic eruption in the North-East of the Chukotka Sea. He made the following entry in his diary "The ice seemed to be boiling in a kettle." Antonov was amazed at the state of the ice which was completely crushed and tinged an unusual brown. Antonov proved that the crushing of the ice blanket was caused by the blast wave of an underwater volcano and explained its colour by the effect of oil gushers at the bottom of the Arctic Ocean. By the way, even before Antonov flew over the Chukotka Sea, [illegible] Tkachev a well known polar geologist, had established the possibility of the existence of oilfields between the Novosibirsk Islands

and Alaska Underwater volcanic activity is now observed in several other places in the Arctic Ocean

THE LARGEST STAR IN THE SKY

Until quite recently, the Epsilon in the Auriga s Constellation was believed to be the biggest of all stars Its diameter is 3 000 times more than the diameter of the Sun

But even this gigantic star is a mere midget compared with the Alpha in the Constellation of Hercules As determined recently the diameter of this star is 200 000 times the diameter of the Sun which means that its volume is eight quadrillion times (1 quadrillion is a numeral with 15 zeros i e, a million milliards) the volume of the Sun A ray of light travelling at a speed of 300 000 kilometres a second which takes 8 5 minutes to reach the Earth from the Sun and 5 5 hours to reach Pluto (its distance from the sun is the greatest in the solar system) will cover a distance equal to the Alpha diameter in 12 days If a jet plane could make a trip around the equator of this star It would take 80 000 years to cover the distance

How far is this star from us? Light covers the distance between the Earth and this star in 1,200 years In terrestrial measures this distance exceeds 11 quadrillion kilometers a jet plane could negotiate it in 1,200 000 000 years

There are however no grounds for regarding even Alpha (of Hercules) the largest star in our solar system It is only the largest of all the stars the dimensions of which are known today

NEW SEDATIVES AND STIMULANTS

The achievements in medicine and other fields of science have enabled us successfully to influence the human psychology with the help of different pharmacological remedies For instance out of the flower of *Rauwolfia Serpentina* a medicine called *Serpina* is prepared, which can reduce the arterial pressure and soothe a man The psychiatrists are successfull using it for the treatment of those who suffer from fear complex and insomnia The medicines Miltaun and Oblivon act in the same manner Thus one tablet of Oblivon destroys in an otherwis normal man the feeling of fear which occurs due to various causes, without adversely affecting his general condition It is also known that fear neurosis is satisfactorily cured by such an exotic drug as cobra poison, when used in a very small dose While the above-mentioned drugs are sedatives there are other drugs such as *Amphetemine*, which excites the nervous cells of the cortex of human brain stimulates the process of thinking removes the feeling of fatigue and decreases the urge to sleep

Thus modern medicine has given us genuine drugs that remove fear and cheer us up

* * *

ULTRA SOUND TECHNIQUE FOR EYE DISEASES

A new technique for more accurate diagnosis of certain eye diseases was demonstrated last week at the American Medical Association meeting in San Francisco

The technique involves the use of an instrument producing high frequency sound waves which can s[illegible] through totally opaque eye tissue

Doctor Gilbert Baum of Port Chester New York, showed pictures illustrating diseases within eyes that cannot be seen by the light of X rays These included a tumour obscured by a cataract, foreign bodies invisible to X rays, and a detach d retina obscured by a hemorrhage in the back of the eye

In the past there were no instruments for examining the areas behind the e e to surmise what diseases might be present With the new ultra sound instrument the correct diagnosis may be obtained and proper treatment given

The device operates like this a burst of high frequency sound is transmitted which when it strikes an object in its path sets up a return echo This ultra sonic echo is picked up by a special microphone which converts the sound into electrical energy The electrical enregy then is converted into light similar to the way a television receiver works

To obtain an over all vi w of the eye the transmitter and receiver are moved in a sweeping motion over the eye As the echoes come back from different portions of the eye, they are sent into a radar receiver which then displays the eye s interior

NEW SUBSTANCE RIDS BODY OF STRONTIUM

A material which can erad cate radioactive strontium a possible cause of cancer and other diseases from the body with safety was described at a recent meeting of the American Chemical Society The substance which can remove the dangerous elemen from the living bone and oth r areas of the body is a

tasteless yellow dye named rhodizonate It fastens onto strontium atoms and the two materials combine to form an insoluble composite which can be evacuated in body wastes

Another chemical called tetrahydroxyquinone acts similarly according to U S authorities This and rhodizonate may form the base for evolution of more anti radiation substances

GIANT RIVER IN THE SEA MAPPED

A new "river in the sea" 250 miles wide and 1,000 feet deep has been mapped by scientists participating in the U.S International Geophysical Year (IGY) programme the University of California Scripps Institution of Oceanography at *La Jolla* California has announced

The new sub-surface current—which flows eastward along the Equator for at least 3,500 miles—was mapped by scientists from Scripps and the U S Fish and Wildlife Service Pacific Oceanic Fishery Investigations during a recent cruise called the Dolphin Expedition

Scientists spent 22 days measuring the current from the surface to a depth of more than 3 000 feet at the point where Longitude 140 Degrees West intersects the Equator They located the east flowing undercurrent only 100 feet beneath the west flowing South Equatorial Current at the surface

Measurements of the sub-surface current indicate that it is as strong as a thousand major rivers and as swift as the Gulf Stream

ELECTRONIC ROAD

In the near future drivers in the United States may be able to nap read a new paper or watch television while motoring on electronic highways in the United States according to highway authorities now concerned with developing controlled automatic roads to reduce accidents and tedium.

When all the difficulties are solved a driver will be able to travel to an electronic highway, push an "automatic pilot type" button and relax and forget about travel problems as his driving at prescribed safety speeds will be handled by electronics

The electronic roads, according to technicians, will function from buried cables and strands of wire [illegible] alongside the highway which radiate signals that can be received by transistorised receivers within the car [illegible] will be three different frequencies, one controlling the steering mechanism, another warning of obstacles ahead while the third will announce exits from the highway to nearby cities Once the driver leaves the [illegible] highway, he switches off his electronic device and reverts to regular motoring

GENETICALLY DAMAGED GENERATION

Dr J Antoinette Pirie said in London June 27 1958 that it might be necessary to have universal artificial insemination after a nuclear war

She was addressing a meeting here of [illegible] women campaigning against nuclear armaments

With most of the American and Russian population dead and vast radioactive dust clouds drifting round the earth, the number of genetically damaged children would rise to hideous, terrifying proportions said Dr Pirie

It might then be necessary to have universal compulsory artificial insemination with male sperms stored before the war

The new children would thus only receive adverse effects from one half of their parents —the mother

Another speaker at the meeting protested the "civil defence lie"

She waved civil defence pamphlets in the air and declared This total lying that asks us to lie down and be massacred it is wrong"

COLDEST PLACE ON EARTH

Many findings of the 10 000 scientists of [illegible] nations participating in the International Geophysical Year were made public in Washington on June 20 by a Congressional Appropriations Sub-Committee which took testimony and reports from the National Science Foundation

Among the findings were

The coldest spot yet discovered on earth is not the geographical South Pole but is about 500 miles nearer Australia, where Russian Scientists recorded a temperature of minus 107°F

A new mountain range 1,000 miles long and 200 miles wide has been found beneath the south west Pacific

The Antarctic is not a solid land mass covered with snow and ice but a region of frozen lakes and floes

[illegible] of the Antarctic now [illegible] that the [illegible] of the [illegible] [illegible] 000 cubic miles was 40% too low

PEOPLE IN THE NEWS

MR IMRE NAGY

Mr Imre Nagy who was Prime Minister of Hungary during the October (1956) revolution was executed after trial by a people's court it was announced in Budapest on June 11 1958

Nagy (pronounced Nodge) was a life long Communist He fought with the Austro Hungarian army in the First World War was captured by the Russians and joined the Bolsheviks when the revolution broke out Sent back to Hungary to establish a workers and peasants government he played a minor role in the short lived Communist Hungarian Government of Bela Kun In 1929 he fled to Moscow coming back with the Russians again in 1944

Nagy had long been regarded as peculiar by his Soviet associates. In Moscow he was nick named Kulak which means rich peasant and indeed there was something worldly and bourgeois in this burly six foot 200 pounder who loved good food good drink and good clothes Nagy was fond of sitting in Budapest cafes discussing politics or the merits of different Hungarian foot ball teams He was sufficiently unorthodox to approve of his daughter's marriage with a practising Protestant minister

In March 1955 he was denounced for rightist deviation. During the October revolution of 1956 Nagy as Prime Minister renounced the Warsaw Pact declared Hungarian neutrality and asked for protection from the United Nations On November 22 he was kidnapped by the Russians who had promised him safe conduct Nagy was 62

MR CAMILLE CHAMOUN

Epicentre of the storm in the Lebanon is President Camille Nimur Chamoun who has been President of the Republic since September 1952

Fifty eight year-old Chamoun, silver haired and handsome is a Maronite Christian with close affiliations with the West Although not specifically required by the constitution convention ordains that the Lebanese President should always be a Christian usually of the Maronite sect, the Prime Minister invariably being a Sunni Muslim

The Maronites though in majority are not the only Christian sect in the Lebanon the Christian community including Greek, Syrian, Armenian and Chaldean Catholics as well. The Lebanon is reputed to have the oldest Christian communities in the world

Chamoun started life as a lawyer, but entered politics early in his career He was a deputy in 1934 and Minister of Finance three years later Both the Lebanon and Syria were under French mandate until 1941 when the two countries were proclaimed separate and independent On January 1 1944 the Republic of the Lebanon came into being

In the same year Chamoun went to London as Minister at the court of S James He headed the court of St James He headed the Lebanese delegation to the U N for three years from 1945 He also served on the Preparatory Commission which dealt with the Palestine question It is not unlikely that Chamoun will be the first political casualty in the Lebanese crisis since his removal is demanded not only by the Muslims but also by the Patriarch of the Maronite Christians

• • •

MR ALFRED NOYES

Alfred Noyes poet and author who died in Ryde (England) on June 29 1958, at the age of 78 was one of the very few writers who made his living exclusively by poetry

It was George Meredith who encouraged him to do so shortly after Noyes came down from Oxford where he earned some celebrity as an oarsman Like the present Poet Laureate John Masefield some of Noyes better known poems are concerned with the sea His first volume "The Loom of Years" appeared as far back as 1902, to be followed four years later by the widely popular sea epic Drake

Shortly before the first world war Noyes delivered the Lowell Lectures in the United States taking his subject "The Sea in English Poetry" There was a strong mystical strain in his temperament and writing and apart from the sea fairyland was his special province Some believe that his epics "The Flower of Old Japan" and "The Forest of Wild Thyme" are the finest fairy poetry

since the Elizabethans His verse was notable for its rhythm and melody

In 1930 Noyes was received into the Roman Catholic Church Besides Drake his most celebrated works are Tales of the Mermaid Tavern and "The Torchbearers Noyes also wrote several plays and a book of critical essays entitled Aspects of Modern Poetry In 1953 he published his autobiography Two Worlds for Memory"

MR SHRIMAN NARAYAN

Mr Shriman Narayan General Secretary of the Congress has been appointed a member of the Planning Commission He took over the new assignment on July 15 1958 He has been given the important portfolio of food and agriculture which was previously held by the Deputy Chairman Mr V T Krishnamachari

Mr Shriman Narayan specialises in the Gandhian philosophy of national development. His thorough knowledge of the Congress ideology and his intimate contacts with the Chief Ministers and Ministers of States will undoubtedly go a long way in getting the ruling party's policies and programmes implemented in the States

Soft spoken mild pleasant mannered Shrimanji, as he is affectionately called by his friends and admirers has held the key position of the General Secretary of the nation's most powerful political organisation for an unbroken period of six difficult years Except Acharya Kripalani no other person has ever held this post for such a long time And it was during this period that the Congress fought the two general elections successfully

Known to be a conscientious and selfless worker Shrimanji shot into prominence when he wrote during his eighteen-month incarceration in connection with the Quit India movement *Gandhian Plan of Economic Development*. It was published with a forward by Gandhiji The book sold well and was translated into some regional languages

Former Principal of Seksaria Commercial College for 12 years and Dean of the Faculty of Commerce of Nagpur University for six years Shrimanji takes keen interest in education He is also a well known journalist. As soon as he took over as General Secretary of the Congress in 195 he became the editor of the Economic Review the fortnightly organ of the A-I C.C. Under his stewardship the paper has risen to an eminent position Its editorials and articles are often quoted or reproduced in the Indian and foreign press

• • •

DR. C.V RAMAN

Dr C.V Raman, the noted Indian scientist and a Nobel-Prize winner in Physics was presented the Lenin Peace Prize for 1957 at a special ceremony held in Kremlin (Moscow) on June 13, 1958

Dr Chandrasekhara Venkata Raman Laureate of International Lenin Peace Prize prominent scholar in physics is widely known not only in India but also to scientists in the countries of the world. At present Dr Raman is an adviser to the Government of India on Physics and Director of the Scientific Research Institute in Bangalore During his half-century long scientific activity Dr Raman made valuable contribution to the development of physics and especially of optics

In 1928 he discovered a phenomenon which came to be known as the Raman Effect. For this discovery of great significance he was awarded the Nobel Prize in 1930 In 1947 he was elected a Corresponding Member of the USSR Academy of Sciences

Dr C.V Raman spared no efforts for the development of science in India and contributed to establishing a number of scientific institutions.

As a prominent scholar Dr Raman takes an active part in the social life of his country In his articles and pronouncements Dr Raman exposes the aggressive policy of imperialist countries and points out that the struggle for peace is inseparably linked with the struggle for national independence and for raising the living standards of peoples Dr Raman is a vigorous opponent of science being used for war and destruction and stands for it being used exclusively for happiness and benefits to mankind.

Foreign Events

Language and Communal Riots in Ceylon

Following a period of continued tension between the Sinhalese and Tamil communities in Ceylon the Prime Minister (Mr Bandaranaike) announced on April 9 that the Government would not proceed with the implementation of the agreement on the official language question which it had concluded with the Federal Party on July 26, 1957

Considerable opposition to the agreement was expressed by the United National Party and by Sinhalese communal and Buddhist organizations during the second half of 1957

A ceremony to invoke the intervention of the gods to prevent division of the country at which the agreement was denounced as a threat to religion and the nation was held on Oct. 8 at the Temple of the Tooth in Kandy one of the most sacred Buddhist shrines during the ceremony fighting broke outside the temple and the police had to use batons to disperse the crowds

Discussions on the implementation of the agreement meanwhile continued between the Government and the Federalist leaders (Tamil lians) Progress was delayed by the Federalists insistence that the two Bills involved—the Tamil Language Bill and the Regional Councils Bill—should be ready at the same time and that the latter should include a detailed statement of the councils powers vis a vis the Central Government

The agreement of July 26 1957 had provided that the Northern Province should form one regional area and the Eastern Province two or more: that regions should be permitted to collaborate amalgamate or divide themselves that regional councillors should be directly elected, that the Councils should have powers over specified subjects including agriculture co-operatives lands and colonization education health, industries fisheries housing social services electricity water schemes and roads that they should be empowered to decide to whom lands should be allotted and who should be employed under colonization schemes and that they should receive block grants from the Government and should have powers of taxation and borrowing

The situation suddenly deteriorated at the end of March 1958, when the Federal Party organized a campaign in the Tamil speaking Northern and Eastern Provinces against the use of the Sinhalese symbol 'Sri' on the number plates of Government owned buses Their supporters took to daubing tar on this symbol whilst Sinhalese speakers retaliated by defacing Tamil letters on road signs and shop windows On April 2 Tamil demonstrators stoned the police station at Bogawantalawa (90 miles from Colombo) whereupon the police opened fire killing two plantation workers of Indian origin Their funeral was attended by nearly 80 000 plantation workers and led to a *hartal* (general stoppage of work) in the Northern and Eastern Provinces on April 5 Two days earlier two Sinhalese had been fatally stabbed and many people injured in a clash between Tamil and Sinhalese demonstrators near Ratnapura 60 miles east of Colombo

Before the Cabinet met on April 9 to discuss the situation a large number of Buddhist monks demonstrated near the Prime Minister's residence and presented to Mr Bandaranaike demands for the abrogation of the Government's agreement with the Federalists the implementation of the official Language Act the banning of the Federal Party and the repatriation of stateless Indian labourers Later the same day Mr Bandaranaike announced in a broadcast that the Government had decided not to proceed with the implementation of the agreement.

Support for the Government's action was expressed by Mr Dudley Senanayake leader of the (Opposition) United National Party

The Federal Party issued a statement on April 10 calling upon all Tamil speaking people to embark on a non violent civil disobedience movement of such magnitude as to make the prisons inadequate to accommodate them in order to secure an honourable place in the community for themselves and their language The statement accused the Government of surrendering to pressure from the Buddhist monks and failing to prevent or control Sinhalese hooliganism it declared that the only alternative before the Tamils were to fight back for their survival or to be for ever content to remain a subject race

About 100 Tamils including Mr Chelvanayakam (the Federal Party leader), seven other M.Ps, a Senator and the wives of two M.Ps, were arrested on April 10-14 for defacing the number plates of buses, but were subsequently released on bail. Federal Party spokesmen said that they also planned to court arrest by refusing to pay taxes and by travelling on Government buses without tickets, and that when arrested they would refuse to pay fines and insist on going to prison. The campaign however was not supported by the Democratic Workers Congress or the Ceylon Workers Congress, which together represent about 1,000,000 Tamil speaking Indian estate workers.

A wave of unrest and alarm swept parts of Ceylon as disturbances over the language issue broke out on May 23 with the opening of the Convention of the Federal Party—organization of Tamils—in Vavuniya.

The death roll in the rioting was about 25. Among those killed in acts of violence connected with the disturbances was a former Mayor of Nuwara Eliya, Mr D.A. Seneviratne. The worst affected area was Batticaloa in the Tamil speaking eastern province.

Cases of arson, assault and murder were also reported from the predominantly Sinhalese-speaking town of Polonnaruwa. In Colombo itself bands of hooligans indulged in an orgy of violence, arson and plunder on May 26.

Meanwhile on May 25 the Federal Party Convention decided to launch the Party's proposed non-violent civil disobedience movement on a date before August 20. It appointed a five man Council of Action with Mr S.J.V. Chelvanayakam as chairman to organize and direct the movement.

The movement was to have been launched in August 1957 a [illegible] objectives: (1) establishment of a federal form of Government in Ceylon with autonomy for the Tamil speaking areas; (2) equality of status for Tamil with Sinhalese, the official language; (3) enfranchisement of Tamil speaking Indian [illegible] and (4) cessation of Sinhalese [illegible] traditional Tamil areas.

[illegible] the Party [illegible] the agreement with the Prime Minister Mr S.W.R.D. Bandaranaike [illegible] July 1957 [illegible] [illegible] Tamil as the language of the national minority [illegible]. The [illegible] was [illegible] when Mr Bandaranaike [illegible] the Federal [illegible] [illegible]

in the situation of unrest created by the Federal Party's campaign directed against the use of the Sinhalese symbol 'Sri' on registration plates of motor vehicles.

A resolution adopted unanimously by the Convention of the Party on May 25 said that the unilateral abrogation of the agreement by the Prime Minister had convinced the Party that no "useful purpose would be served by further negotiations with him."

While the Convention was in session, hooliganism spread to more areas. Troops were called out to restore order in the disturbed areas. On May 27 a State of Emergency was declared throughout the Island. Within a few minutes of the proclamation Army and Navy personnel moved into trouble spots in Colombo.

Simultaneously the Federal Party and the newly formed Sinhalese group called the Jatika Vimukta Peramuna were banned. The proclamation of the State of Emergency meant the suspension of civil authority, to enable the military to handle problems of law and order. A dusk to dawn curfew came into force throughout the island.

On May 28 a Government spokesman said at a news conference in Colombo that the situation was "under complete control."

Background: Language divides Ceylon's people into two major groups—Tamil and Sinhalese. Moreover the linguistic division as revealed by the ugly events reinforced by religious differences. The Tamilians are Hindu and the Sinhalese Buddhist by religion. This explains why the language riots have turned into communal strife throughout the length and breadth of the country. A measure of the toll this has taken may be had from the reported number of refugees, many of them aboard [illegible] ships requisitioned by the Ceylonese Government for purposes of [illegible] evacuation of population.

Technically the troubles in Ceylon were sparked by the decision of the Federal Party of Jaffna Tamils (in no way related to the Indian Tamils in Ceylon) [illegible] disobedience movement. The [illegible] object of the movement was the fulfilment of parity for Tamil with Sinhalese and [illegible] [illegible] of a federal [illegible] based on [illegible] [illegible]. To make matters worse the [illegible] to launch the civil disobedience movement was [illegible] for a series of [illegible] [illegible] that had already overtaken the [illegible] [illegible] [illegible] [illegible] island's [illegible] But the Federal Party's

decision was precipitated by the Tamils annoyance at the breach of the solemn undertaking given to them by the Bandaranaike Government In August last year Tamil had been agreed upon as one of the national languages of Ceylon But practically within 24 hours of the agreement the Ceylonese Prime Minister was browbeaten by a Bikhshu Satyagraha and resiled from it. Subsequent attempts to have the agreement implemented produced no tangible result leading the Tamils into a mood of sourness and anger particularly when the negotiations with the Government were abruptly broken off in April 1958

As a background to the present spate of violence and strife some salient facts deserve to be noted Of Ceylon s total population of 9,000 000 six million speak Sinhalese and are mostly Buddhist the Jaffna Tamils who have been in Ceylon for over a millennium and are integral constituents of Ceylon s national population number 2 000 000 and are Hindus by and large The other section of the Tamils in Ceylon numbering about 1 000 000 is of comparatively recent Indian origin and belongs mostly to indentured plantation labour The problem that these Ceylon Indians constitute as between India and Ceylon centres round this section of the Tamils

With the Jaffna Tamils concentrated in the west and south of Ceylon (where they comprise the preponderant majority) and the Indian Tamils in Plantation areas in the west and north (where they are in a minority) the clash has literally split the country both along its spinal axis and diagonally In central Ceylon in and around Colombo the Tamils both Jaffna and Indian are numerically a minority but control large chunks of trade and commerce This fact makes for the Sinhalese complaint that the Tamils dominate the economic life of the country The high percentage of Jaffna Tamils in Ceylon s administrative services lends an edge to this complaint An outcrop of this is the powerful Sinhalese demand that the rights and interests of the Sinhalese people must specifically be safeguarded. In the General Elections in 1956 this demand was the decisive issue Both the United National Party (which had throughout given representation in its Cabinet to the Tamils) and Mr Bandaranaike s Eksath Mahajan Peramuna (People s United Front Coalition) fought the elections with promises of security and promotion of Sinhalese interests The language clash thus symptomizes economic as well as communal antagonism

Execution of Hungarian Leaders

It was announced in Budapest on June 17 1958 that M Imre Nagy Prime Minister of Hungary at the time of the uprising in October 1956 had been sentenced to death and executed after trial by a people s court It was also announced that General Pal Maleter (Defence Minister in M Nagy s Cabinet) Joszef Szilagyi and Miklos Gimes had been executed with M Nagy and that five other persons had been given prison sentences varying from five years to life imprisonment The news was broadcast by Budapest radio without comment and given on the inner pages of all Hungarian newspapers

Imre Nagy (62) first became Prime Minister *of Hungary in July 1953* after the resignation of Matyas Rakosi During his Premiership of nearly two years he took a number of important measures to mitigate the severities of the Rakosi regime—e g by abandoning the policy of compulsory agricultural collectivization closing internment camps releasing political detainees and permitting a partial return to private trading In April 1955 however he was deposed from the Premiership and deprived of party membership after his 'new course' economic policy had been violently denounced as right wing deviationist and anti Marxist Imre Nagy was the focus of the Hungarian people s uprising in October 1956 and Prime Minister for ten days until his Government was overthrown by the Soviet military intervention He left the Yugoslav Legation (where he had taken refuge) under a guarantee of safe conduct by the Kadar regime but was immediately arrested by the Soviet authorities in violation of the safe conduct pledge He and other leaders of the revolt were subsequently deported to Rumania and nothing more had been heard of them until the Budapest announcement of the trials and executions

General Pal Maleter (47) Minister of Defence in M Nagy s Government was invited by the Soviet authorities to enter into negotiations with them for the withdrawal of Soviet forces from Hungary He was arrested by the Russians while conducting these negotiations

Pal Maleter was born in Slovakia educated in Hungary and served as a regular officer in the Hungarian National Army He became a Communist after being captured by the Russians in the Second World War was subsequently parachuted into Hungary to organize partisan activity against the Germans and became famous as an anti Nazi guerilla leader

In the October (1956) revolt he was the first Hungarian general to throw in his lot with the uprising and became commander of the Free Hungarian forces based on the Killian Barracks in Budapest

The Hungarian Public Prosecutor (Dr Szenazzi) stated at a press conference on June 21 that the trials had taken place in Budapest "not long ago" and had lasted 12 days; that they had been held in secret "for reason of State interest," as the Western Powers might otherwise have interfered and "spread lies and calumnies"; that the defendants had been allowed to choose their own defence counsel and that they had been allowed to present "petitions for clemency" which had been rejected. The Public Prosecutor made no mention of the date of the trial and executions nor did he give the names of the judges, prosecutors or defence counsel taking part in the trials

Intense indignation was aroused in the Western countries, and also in many of the "uncommitted" countries at the execution of Imre Nagy and his associates. It was widely commented in British, American, French and other Western newspapers that the first announcement of the execution had come from Moscow radio and not from Budapest

President Eisenhower said at a press conference (June 18) that no incident could have more greatly shocked the civilized world than the execution of Imre Nagy and Pal Maleter, men who had sought to free their country from Russian domination. Nor could any incident have "more alerted the free world to the lack of confidence we are compelled to place in the words and actions of the Communist imperialists." The executions constituted a violation of good faith (i.e. of the safe-conduct pledge to Mr Nagy when he left the Yugoslav Legation), placed a "very great obstacle" in the way of further negotiations for a summit conference, and were clear evidence of the Soviet Union's intention of [illegible] terror and [illegible]" with the aim of [illegible] subservience to her will.

Mr Macmillan said in the British House of Commons (June 19) that [illegible] the whole [illegible] world [illegible] ment."

The British Labour Party [illegible] the [illegible] an appeal [illegible] later date

In the Communist countries (except Poland and Yugoslavia) and especially in China approval of the executions was coupled with violent attacks on Yugoslav "revisionism" and renewed denunciations of President Tito

Yugoslavia-Soviet Union Rift

It was announced *in Belgrade* on May 28 1958 that the Soviet Union had unilaterally suspended for five years the utilization of the credits to Yugoslavia totalling $ 285,000,000 (over £ 100,000,000) which had been arranged under the Soviet-Yugoslav economic agreements of January 12 1956 and August 1 1956. A Note proposing the postponement had been handed by M. Gromyko to the previous day to M. Micunovich, the Yugoslav Ambassador in Moscow; it referred to the possibility of some compensatory [illegible] in the form of current trade and stated that the East German Government concurred in the postponement of the credits

The credit granted under the agreement of January 12 1956 amounted to $110,000,000 and referred to Soviet planning and supplies of equipment for the construction of fertilizer factory, a superphosphate factory and a power station, and the modernization of three coal mines. The agreement of August 1 1956 provided for a credit of $ 175,000,000 to be granted by the Soviet Union and East Germany for the development of the Yugoslav aluminium industry

The Yugoslav reply to the Soviet Note delivered on June 3 1958 to the Soviet Ambassador in Belgrade (M. Zamchevsky) expressed the Yugoslav Government's view that it was incumbent upon the Soviet Union to fulfil the obligations undertaken under formal agreements. Yugoslavia could not agree to the postponement of the credits and if her views were not accepted she would be compelled to claim compensation for the losses suffered. A Note to the same effect was delivered to the East German Minister in Belgrade

The Yugoslav Communist paper *Borba* commenting on June 1 on the Soviet [illegible] recalled that the Belgrade Declaration for the [illegible] signed [illegible] Marshal Bulganin and M. Khrushchev in 1955 had been based on mutual respect and non-interference in the internal affairs of other [illegible] [illegible] the abandonment of any form of [illegible] and [illegible]

information, as well as any other action which creates distrust and hampers the creation of an atmosphere for constructive international co-operation and peaceful co existence between States

The *Borba* article continued In the light of the present campaign against the 'revisionism' of the Yugoslav League of Communists in which reprisals are beginning to find expression along inter State lines it is becoming clear that public opinion in the Socialist countries has not been given real information about Yugoslavia In the Chinese Soviet, and East European Press a campaign of deliberate misinformation has recently been initiated—a campaign of downright untruths about Yugoslavia

'The Soviet Union *Borba* added, had always stressed that she has no thought of taking advantage of economic assistance to other countries to achieve political objectives and that for this very reason her assistance differs in essence from the economic assistance of the United States

M Khrushchev made a bitter attack on Yugoslavia when addressing the congress of the Bulgarian Communist Party on June 3 during a visit to Sofia In the course of his speech M Khrushchev described Yugoslavia as 'the Trojan horse of imperialism

After saying that the Cominform s condemnation of Yugoslavia in 1948 was basically correct and after recalling his r conciliation with Marshal Tito in 1955 M Khruschev went on Experience has shown however that the burden of the past has proved too heavy for the Yugoslav leaders to shake off and that they have been unable to abandon their fallacious positions and move on confidently to those of Marxist Leninism. During the Hungarian events the Yugoslav leaders did the greatest harm to the cause of Socialism by their public statements and actions By their policies against the Socialist countries and fraternal parties the Yugoslav leaders have isolated Yugoslavia and the Yugoslav League of Communists from the Socialist countries and the international Communist movement

Borba announced on May 17 that the final draft of the programme of the Yugoslav League of Communists (which inspired the latest Soviet campaign against Yugoslavia) had been approved by the party leadership at a special meeting presided over by President Tito. In its final form the programme was said to include the amendments which had been introduced on the eve of the Yugoslav party congress in an attempt to meet Soviet criticisms

Iraqi-Jordanian Arabic Federation

The Arab Federation of Iraq and Jordan came officially into existence on May 13 after the necessary constitutional amendments had been approved by the Parliaments of the two countries Following a general election in Iraq on May 4 legislation amending the Iraqi Constitution to confrom to that of the Federtion was adopted unanimously by the new Chamber of Deputies on May 10 and by the Senate on the following day Parallel legislation amending the Jordanian Constitution had been unanimously approved by the Upper House in Amman on April 26 following similar action by the Lower House a fortnight earlier

In the Iraqi elections of May 4 all but 27 of the 145 deputies were return d unopposed As Iraq has had no political parties since 1954 nominations were by petition and candidates stood on their personal records Supporters of the Prime Minister General Nuri es Said, hold 130 of the 145 seats in new Chamber of Deputies the other 15 seats are held by Independents who are also regarded as supporters of General Nuri s policy

The Constitution of the Arab Federation was signed by King Faisal and King Hussein in Baghdad on May 13 and came into force on that date The Prime Ministers of Iraq and Jordan (General Nuri and Mr Ibrahim Hashem) subsequently submitted their resignations to their respective Heads of State and on May 19 the membership was announced of (1) the first Union Cabinet consisting of four Iraqi and three Jordanian Ministers (2) the new Iraqi Cabinet and (3) the new Jordanian Cabinet.

Union Cabinet The membership of the first Cabinet of the Arab Federation was as follows

General Nuri es Said (Iraq)—*Prime Minister*
Mr Ibrahim Hashem —(Jordan) *Deputy Premier*
Dr Tewfik Suweidi (Iraq)—*Foreign Affairs*
Mr Suleiman Toukan (Jordan)—*Defence*
Mr Abdul Karim Uzri (Iraq)—*Finance*
General Sami Fatteh (Iraq)—
Mr Khaloussi el Khairy (Jordan) *Ministers of State*

The former Prime Ministers of Iraq and Jordan became respectively Prime Minister and Deputy Premier of the Arab Federation Of the two Ministers of State, General Sami

Fatah has responsibility for military affairs and Mr el Khairy for Arab affairs

Senator Ahmed Mukhtar B[illegible] has succeeded General Nuri as Prime Minister of Iraq while Mr Samir Rifai succeeded Mr Ibrahim Hashem as Prime Minister of Jordan The new Cabinets were as follows

Iraqi Cabinet Senator Ahmed Mukhtar Baban—Prime Minister Mr Said Qazzaz—Interior Dr Nadjim el Pachachi —Finance Mr Burhanuddin Bashayan—National Guidance D Dhia Jaffar—Development Mr Sadiq Kamounah—Social Affairs, Mr Jamil Abdul Wahab—Justice Dr Abdul Hamid Khadim—Education Dr Abdul Alawi—Health General Saleh Jaburi—Communications

Jordanian Cabinet Mr Samir Rifai—Prime Minister Mr Falha Madadha—Interior Mr Akif el Faiz—Agriculture and Construction Dr Jamil Tutounji—Health and Social Welfare Mr Salim Bakhit—Public Works Mr Ahmed Tarouneh—Education, Mr Anastas Hananiah—Finance Dr Samir Judeh—Communications, Mr Mohammed Jabari—Justice

The Union Cabinet was sworn in by King Faisal as Head of the Federation The new Iraqi Cabinet was also sworn in by King Faisal and the new Jordanian Cabinet by King Hussein Neither the Iraqi nor the Jordanian Cabinet included Ministers of Foreign Affairs or Defence as these subjects are Federal responsibilities under the appropriate Union Ministers. The Jordanian Government officially informed all diplomatic representatives in Amman of the formation of the Union Government thus requiring heads of diplomatic missions in Amman to present their credentials to King Faisal as Head of the Arab Federation

The Federal Parliament (consisting of 20 Iraqi and 20 Jordanian parliamentarians) held its first session in Baghdad on May 27 when King Faisal was sworn in as Head of the Arab Federation The ceremony was attended by King Hussein of Jordan, the deputy head of the Federation

King Faisal issued a decree on June 2 appointing General Mohammed Aref (an Iraqi) as Chief of Staff of the combined forces of Iraq and Jordan—collectively known as the Arab Army Two Assistant Chiefs of Staff were appointed [illegible] Iraqi and one Jordanian.

Election & New Government in Japan

General elections were held in Japan on May 22 following the dissolution of the House of Representatives on April 25 The principal contestants were the Liberal Democrats led by Mr Kishi (the Prime Minister) and the Socialists led by Mr Suzuki Mosaburo

The elections resulted in the return to power of the ruling Liberal Democrats who retained their substantial overall majority in the House though with a slightly reduced representation. The final distribution of the 467 seats was as follows comparisons being shown with party strengths at the dissolution of the former House of Representatives—

	SEATS New House	Old House*
Liberal Democrats	287	[illegible]
Socialists	166	15[illegible]
Communists	1	[illegible]
Independents	12	[illegible]
Minor parties	1	4

**There were nine vacancies at the dissolution*

Subsequent to the elections, 11 of the Independents joined the Liberal Democrats and the remaining Independent joined the Socialists thus making party strength as follows

Liberal Democrats	2[illegible]
Socialists	1[illegible]
Communists	1
Minor parties	1

Mr Kishi was re-elected Prime Minister on June 12 receiving 290 votes in the House of Representatives against 1[illegible]2 for the Socialist candidate Mr Suzuki He also obtained a large majority in the House of Councillors Mr Kishi announced his new Cabinet later the same day His Cabinet consists of 1[illegible] members including Mr Aiichiro Fujiyama who retained his portfolio of Foreign Affairs

—o—

(Continued from page 653)

office until 1948 when Jamkhandi was merged with the Bombay State

Later he was nominated to the Bombay State Legislature and was immediately appointed as Parliamentary Secretary to the Chief Minister

In the first general elections Mr Jatti was elected to the Bombay Assembly and was appointed Deputy Minister in charge of Health and Labour With the reorganisation of the States he became a member of the new Mysore State Assembly and was appointed as chairman of the Mysore Land Reforms Committee which office he held till his present election as leader of the Mysore Congress Party

HOME AFFAIRS

Pakistani Stunt to Cross Ceasefire Line

The Pakistan Government sealed on June 26 the border between the West Pakistan and Pakistan occupied Kashmir to prevent the entry of persons into Azad Kashmir with a view to joining the movement of Chaudhari Ghulam Abbas who had threatened to lead a batch of volunteers towards the cease fire line on June 28 at Chenari about 36 miles from Muzaffarabad the capital of Azad Kashmir. According to reports reaching India a number of arrests were made in West Pakistan towns bordering West Pakistan-occupied Kashmir in connection with the Cross the Cease fire Line announcement of Mr Abbas. An unconfirmed report put the number of arrests at more than 1000.

A report from Karachi quoted Sardar Mohammed Ibrahim President of the Azad Kashmir Government as saying that Chaudhari Abbas's move was motivated by political aspirations. In a Press interview Sardar Ibrahim said Chaudhri Abbas wanted to gain political power in Azad Kashmir and his move was directed not against India but against him (Ibrahim) and the Pakistan Government.

Meanwhile Pakistan had informed the Security Council that she had taken measures to prevent any violation of the cease fire line in Kashmir.

Chaudhari Ghulam Abbas 55 year old leader of the Kashmir Liberation Movement was arrested at Rawalpindi under the Public Safety Act on June 27. His two top lieutenants Sardar Abdul Qayum Khan a former President of Azad Kashmir and Raja Mohammed Haider Khan a former Azad Kashmir Defence Minister were also taken into custody inside the Azad Kashmir territory.

The volunteers who had assembled at Chenari the place chosen to violate the cease fire line were dispersed by Azad Kashmir authorities.

Chaudhari Ghulam Abbas nominated Col Sher Mohammed former president of Azad Kashmir to succeed him as leader of the movement.

Chaudhari Mohammed Ali former Prime Minister of Pakistan resigned from the Pakistan Government's special Kashmir committee as a protest against the action of the Pakistan Government in arresting Chaudhari Ghulam Abbas.

The first batch of volunteers of the Kashmir liberation movement of Chaudhri Ghulam Abbas attempted to cross the Cease fire line on June 28 but failed in its attempt as it was stopped by the police five miles from the cease fire line and dispersed. The police armed with lathis and rifles encircled the volunteers and resorted to several rounds of lathi charge. Some of the 313 volunteers who refused to disperse and lay prostrate on the ground were bodily lifted and put into police vans. The exact number of arrests made by the police was not known but according to unconfirmed reports it exceeded 3 000.

Mr Ghulam Abbas was released on June 28 from Rawalpindi Central Jail but was rearrested in the evening at the West Pakistan—Azad Kashmir border and brought back to Rawalpindi.

A report dated June 29 from Muzzafarabad said that for all practical purposes the movement of Mr Abbas after a month's activity had come to an end with the failure of his followers to reach the cease fire line.

On June 30 Col Sher Mohammed Khan who succeeded Mr Ghulam Abbas as chief of the Kashmir liberation movement was arrested in Muzaffarabad where he had arrived to lead a batch of volunteers across the cease fire line.

On July 3 ten Pakistanis violated the cease fire line and crossed into Jammu in the Jhangar Area. All the 10 were arrested and detained by civil authorities. The Jhangar area was the scene of bitter fighting during the Pakistani attacks in 1947 and 1948.

The ten Pakistanis who violated the cease fire line at Jhangar apologised and were anxious to go back according to a report from Jammu dated July 4. In their statements they confessed that they had been paid and had been given the impression that they would be taken back before actually crossing the cease fire line.

Addressing a public meeting at Ferozepur on July 1 Pandit Pant said that the Pakistan

Fattah has responsibility for military affairs and Mr el Khairy for Arab affairs

Senator Ahmed Mukhtar Baban succeeded General Nuri as Prime Minister of Iraq while Mr Samir Rifai succeeded Mr Ibrahim Hashem as Prime Minister of Jordan The new Cabinets were as follows

Iraqi Cabinet Senator Ahmed Mukhtar Baban—Prime Minister Mr Said Qazzaz—Interior Dr Nadhim el Pachachi — Finance Mr Burhanuddin Bashayan—National Guidance D Dhia Jaffar—Development Mr Sadiq Kamounah—Social Affairs Mr Jamil Abdul Wahab—Justice Dr Abdul Hamid Khadim—Education Dr Abdul Alawi—Health General Saleh Jaburi—Communications

Jordanian Cabinet Mr Samir Rifai—Prime Minister Mr Falha Madadha—Interior Mr Akif el Faiz—Agriculture and Construction Dr Jamil Tutounji—Health and Social Welfare Mr Salim Bakhit—Public Works Mr Ahmed Tarouneh—Education, Mr Anastas Hananiah—Finance Dr Samir Judeh—Communications Mr Mohammed Jabari—Justice

The Union Cabinet was sworn in by King Faisal as Head of the Federation The new Iraqi Cabinet was also sworn in by King Faisal, and the new Jordanian Cabinet by King Hussein Neither the Iraqi nor the Jordanian Cabinet included Ministers of Foreign Affairs or Defence as these subjects are Federal responsibilities under the appropriate Union Ministers The Jordanian Government officially informed all diplomatic representatives in Amman of the formation of the Union Government thus requiring heads of diplomatic missions in Amman to present their credentials to King Faisal as Head of the Arab Federation

The Federal Parliament (consisting of 20 Iraqi and 20 Jordanian parliamentarians) held its first session in Baghdad on May 27, when King Faisal was sworn in as Head of the Arab Federation The ceremony was attended by King Hussein of Jordan, the deputy head of the Federation

King Faisal issued a decree on June 2 appointing General Mohammed Afef (an Iraqi) as Chief of Staff of the combined forces of Iraq and Jordan—collectively known as the Arab Army Two Assistant Chiefs of Staff were appointed [illegible]

Elections & New Government in Japan

Meanwhile Pakistan had informed the Security Council that she had taken measures to prevent any violation of the cease fire line in Kashmir

Chaudhari Ghulam Abbas 55 year old leader of the Kashmir Liberation Movement was arrested at Rawalpindi under the Public Safety Act on June 27 His two top lieutenants, Sardar Abdul Qayum Khan a former President of Azad Kashmir and Raja Mohammed Haider Khan a former Azad Kashmir Defence Minister were also taken into custody inside the Azad Kashmir territory

The volunteers who had assembled at Chenari the place chosen to violate the cease fire line were dispersed by Azad Kashmir authorities

Chaudhari Ghulam Abbas nominated Col Sher Mohammed former president of Azad Kashmir to succeed him as leader of the movement

Chaudhari Mohammed Ali former Prime Minister of Pakistan resigned from the Pakistan Government s special Kashmir committee as a protest against the action of the Pakistan Government in arresting Chaudhari Ghulam Abbas

The first batch of volunteers of the Kashmir liberation movement of Chaudhri Ghulam Abbas attempted to cross the Cease fire line on June 28 but failed in its attempt as it was stopped by the police five miles from the cease fire line and dispersed The police armed with lathis and rifles, encircled the volunteers and resorted to several rounds of lathi charge Some of the 313 volunteers who refused to disperse and lay prostrate on the ground were bodily lifted and put into police vans The exact number of arrests made by the police was not known but according to unconfirmed reports it exceeded 3 000

Mr Ghulam Abbas was released on June 28 from Rawalpindi Central Jail but was rearrested in the evening at the West Pakistan—Azad Kashmir border and brought back to Rawalpindi

A report dated June 29 from Muzzafarabad said that for all practical purposes the movement of Mr Abbas after a month s activity had come to an end with the failure of his followers to reach the cease fire line

On June 30 Col Sher Mohammed Khan who succeeded Mr Ghulam Abbas as chief of the Kashmir liberation movement was arrested in Muzaffarabad where he had arrived to lead a batch of volunteers across the cease fire line.

On July 3 ten Pakistanis violated the cease fire line and crossed into Jammu in the Jhangar Area All the 10 were arrested and detained by civil authorities The Jhangar Area was the scene of bitter fighting during the Pakistani attacks in 1947 and 1948

The ten Pakistanis who violated the cease fire line at Jhangar apologised and were anxious to go back according to a report from Jammu dated July 4 In their statements they confessed that they had been paid and had been given the impression that they would be taken back before actually crossing the cease fire line

Addressing a public meeting at [illegible] on July 1 Pandit Pant said that the Pakistan

z[illegible] did well in preventing Mr. Ghulam Abbas and his [illegible] from [illegible] across the cease fire line into Kashmir. Otherwise dire consequences would have followed, he added.

Pandit Pant said if ever any country were to try to grab India's territory, that attempt would be stopped with all our might. Kashmir, he asserted, was an integral part of India.

Addressing a meeting at Khrew, 11 miles from Srinagar on June 30, Bakshi Ghulam Mohammed charged the Pakistan rulers of having conceived the "Abbas campaign." But when Pakistani rulers saw that the people in Pakistan or in the Pakistan occupied part of Kashmir did not evince interest in the so-called campaign, they put up the show of having arrested Ghulam Abbas and his so-called volunteers. All this, he said, was stage-managed to deceive the world.

Bakshi Ghulam Mohammed said internal conditions gave anxious time to Pakistan's rulers. Accordingly they tried to divert the people's attention from internal conditions by staging stunts like the much-publicised campaign of Ghulam Abbas.

The bubble of Pakistani propaganda about the march of volunteers and arrest of 3,000 persons to stop the march on June 29 to the Kashmir border was exploded by authentic information received in Jammu from across the border. It was reported that village officials all over Azad Kashmir were asked to collect volunteers but in spite of the slogans of "Jehad" and liberation of Kashmir hardly any person volunteered for the march. Villagers were forced to stage a mock march and after taking them to about two miles towards the border from Chinari another mock show of lathi-charge was staged and volunteers were taken back. According to authentic information the story of arrest of 3,000 volunteers is false.

Addressing a press conference in New Delhi on July 3, Prime Minister Nehru remarked [illegible] motives behind the movement to cross cease-fire line, but he noted that if anyone crossed the line he would [illegible] and if there was any violence it would be dealt with in other ways as well.

Affairs of Banaras University

The [illegible] of India [illegible] of the Banaras University [illegible] Ordinance on June [illegible] providing for certain immediate steps to deal with the affairs of Banaras Hindu University, one of the premier universities of the country, having about [illegible] students on its rolls.

Aimed at ridding the university of the undesirable activities of "pressure groups", the Ordinance seeks to ensure its smooth functioning as an academic centre in the best traditions of a university.

The action followed consideration of the findings of the Banaras University Inquiry Committee which had reported that the university is today a hotbed of intrigue, nepotism, corruption and even crimes of [illegible] description.

The various measures of reform recommended by the Inquiry Committee were [illegible] being examined and the necessary legislation to give effect to decisions which the Government might eventually take on these recommendations would also be brought before Parliament in due course.

The most important of the immediate steps taken by the Government through the Ordinance which amended the Banaras University Act was that the University Court had been given an advisory role instead of being the supreme governing body and the Executive Council had been made the effective authority for the administrative and academic affairs of the university.

A still more important provision contained in the Ordinance laid down that the Executive Council shall consist of persons to be nominated by the Visitor—the President of the Union—and the University Court would not be constituted by election. The Executive shall consist of the Vice-Chancellor, [illegible] seven persons nominated by the Visitor and one nominated by the Chief Rector (Governor of Uttar Pradesh).

Another of the provisions of the Ordinance related to the future appointment of teachers and others.

There would be a selection committee for making recommendations to the Executive Council in respect of appointments to the posts of Professor, Reader, Lecturer, Registrar and [illegible] committee shall consist of [illegible] persons as the Executive Council [illegible].

[illegible] Banaras Hindu University [illegible] Committee [illegible] [illegible] the [illegible] had [illegible]

and even crimes of various description' and that it had lost its all India character

The Committee which was appointed by the President in his capacity as Visitor of the university in July 1957 went into the growing deterioration in the academic life and administration of the university and reported that a very disquieting state of affairs' prevailed at the university

The Committee had Mr M C Mahajan Ex Chief Justice of India Dr P Subbarayan M P Mrs Sucheta Kripalni MP and Mr Navroji J Wadia as members

Banaras Hindu University was established under an Act passed by the Indian Legislature in 1915 Pandit Madan Mohan Malavia was *primarily responsible* for the collection of funds and working out the scheme which led to the passing of the Bill The University was founded to meet a popular demand Large contributions had been collected from Princes and private individuals One of the objects of the University is the promotion of the building up of character in youth by making religion and ethics an integral part of education

Like the other Central universities, which have been constituted by Acts of Parliament it enjoys as much autonomy administrative and academic, as any other university in the country The Visitor, who is the President of India has well-defind powers under the Act which largely concern the approval of the statutes and the right to cause inspection in exceptional circumstances The Governor of Uttar Pradesh is the Chief Rector of the University and the present Chancellor is the Maharaja of Gwalior

One of the major steps to implement the recommendations of the Mudaliar Committee on the affairs of Banaras Hindu University was taken on July 12 by the Government of India when it announced the appointment of a nine member Executive Council and a three member Screening Committee in exercise of powers conferred on the President under the ordinance promulgated last month

The Executive Council consists of the following seven members nominated by the President Dr Rajendra Prasad as the Visitor of the University Mr Patanjali Sastri former Chief Justice of India Mrs Hansa Mehta former Vice Chancellor M S University of Baroda Dr H N Kunzru M P Prof A.R Wadia M.P and Director Tata Institute of Social Sciences Mr S K Basu M P Dr A N Khosla M P, Vice-Chancellor Roorkee University and Mr Sukhdev Pande of the Birla Education Trust Pilani

The Vice-Chancellor of the University Mr Veni Shankar Jha is an 'ex officio member of the Council

The ninth member of the Council Dr D S Haikerwal Additional Education Secretary to the U P Government has been nominated by the Governor of the State in his capacity as the Chief Rector of the University

The Screening Committee consists of the following two nominated by the Central Government Dr Radhabinod Pal (Chairman) and Mr Krishna Murari Lal

Dr Pal is a former Judge of the Calcutta High Court and Mr Krishna Murari Lal is a retired Chairman of the Uttar Pradesh Public Service Commission

The Vice Chancellor of the University is an ex-officio member of the Committee

A press note issued by the Union Ministry of Education states The Screening Committee will examine the case of all persons who at commencement of Banaras Hindu University (Amendment) Ordinance 1958 were holding teaching administrative or other posts in the University in respect of whom there is reason to believe that their continuance in office would be detrimental to the interests of the University

The Screening Committee will forward its recommendations to the Executive Council of the University for such action thereon as the Council may think fit. Before taking any such action against the person concerned the Executive Council will give him a reasonable opportunity of being heard

Under the ordinance it was pointed out the affairs of the University will continue to be managed by the Court and the Executive Council as hitherto While the Court is now an advisory body under the Ordinance, the Executive Council will continue to have all the functions and powers which this body had before the promulgation of the Ordinance and is thus an effective body for academic and administrative affairs of the University Even the recommendations of the Screening Committee will be examined by the Executive Council for such action as it may consider necessary

• • •

Change-Over to Metric Weights

Three notifications issued on Tuesday June 24 1958 prepared the way for a switch-over to a limited extent to the metric system

of weights and measures from the beginning of October.

The first of these authorised the use of metric weights for all purposes in specified areas in all States (except Jammu and Kashmir) and in the Union Territories of Delhi, Himachal Pradesh, Manipur, Tripura and Andaman and Nicobar Islands.

Another notification outlined the extent to which the Government departments and undertakings and major industries would switchover to the new system. The third notification permitted the use of existing units for a period of two years, that is till September 30, 1960.

The special needs of the jute industry were recognized by allowing it, through yet another notification, to adopt the system from July 1 this year, the date when the jute year begins. Jute mills would be authorised to use the metric system in buying raw jute and selling manufactured jute and also in forward transactions in jute raw or manufactured. The existing units would continue in use till July 1, 1960.

At a Press conference on June 26, Mr Nityanand Kanungo, Minister for Commerce, said that the whole country was expected to be covered by early 1960. The second stage would be to extend the system to areas not covered on October 1 and to introduce length, capacity measures. It would take between five and ten years from the date of enactment of legislation, December 1956, to effect a complete changeover.

Mr Kanungo estimated that the cost would come to about Rs 5 crores in the States and the same amount for the three major Central departments, the Railways, the P and T Department and the Defence Forces. It was difficult to estimate the cost to industry.

Mr Kanungo did not anticipate any difficulty in getting plant and equipment for countries such as the U.K. and the U.S.A. where the [illegible] system continued to prevail. He said these countries were already selling equipment to countries which had adopted the metric system.

From October 1 only such trades would be allowed in which [illegible] by weight. Retail trade in [illegible] would [illegible] the [illegible] would [illegible] [illegible] of the Madras [illegible] by measure the use of the present metric would continue. Elsewhere where [illegible] by weight traders would have the [illegible] sell them by kilogram instead of [illegible]. The retail sale of petrol would continue to be in gallons. The use of the metric system in regulated markets in States which had established such markets by law would be permitted by law.

Mr Kanungo said the Government of India had joined the International Bureau of Weights and Measures which was the custodian of the international kilogram and metre. Arrangements had been made with the assistance of the Bureau for purchase of a kilogram and a metre which would be Indian national prototypes and would be deposited at the National Physical Laboratory.

Standard weights for the use of State Governments and Inspectors of Weights and Measures had been manufactured by the Central Government mints at Bombay and Calcutta and distributed to the States.

Cloth Excise Duties Rationalised

The Government of India have accepted the unanimous interim recommendation of the Textile Inquiry Committee for rationalisation of excise duties on various varieties of cloth in order to help the industry to dispose of accumulated stocks.

Consequently, the excise duties on coarse and medium varieties of cloth have been reduced and those on fine and superfine cloth increased. The revised duties came into force from Friday, July 4, 1958.

According to an official announcement, a similar relief is being extended to the powerloom sector by a corresponding reduction of the rates of compounded levy.

This is the third time that the excise duties on cloth have been reduced, the first one being in December 1957 and the second in May 1958.

Though the present revision will result in a loss of Rs 3.3 crores to the Central exchequer, it is expected to help the mills particularly [illegible] medium varieties [illegible] [illegible] Government [illegible] [illegible] to benefit the consumers [illegible] these varieties of cloth [illegible] [illegible] which have closed down.

The present revision of excise duties is also expected to ensure a fair and equitable incidence of levy on the different varieties of cloth bringing it as close as practicable to an *ad valorem* levy by the introduction of differential rates on processed varieties over and above a basic rate

Under the revised rates there will be a basic rate of four nP, per yard on all coarse cloth. In addition there will be a surcharge of half nP if the cloth is bleached and three nP if shrinkproof and 1½ nP if processed in any other way

These are in place of the existing duty of three nP per square yard on coarse cloth (dhotis and sarees) and six nP per square yard on coarse cloth (other varieties)

For the medium variety under the revised rates there will be a new basic rate of five nP per square yard for counts between 17 and 25 (lower and medium) and six nP per square yard on counts between 26 and 35 (higher medium. The duty now is seven nP on medium cloth (dhotis and sarees) and nine nP on other varieties of medium cloth

There will be the same surcharges as on coarse cloth for bleached shrink proof and other processed medium cloth

The duties on fine and superfine cloth have been slightly stepped up The duty on fine varieties will now be 18 5 nP per square yard instead of the existing 17 nP The new duty on superfine cloth will be 24 5 nP per square yard as against the present 22 nP

On both fine and superfine varieties the surcharge for processed cloth will be levied as in the case of coarse and medium varieties of cloth

The surcharge will be levied for the processing having the maximum rate of duty i e if the cloth has undergone more than one process the surcharge will not be levied with cumulative effect.

It was also officially announced that the duty on coarse dhotis and sarees lying packed in bales on Thursday (July 3) will be charged at the rate of three nP per square yard if the duty is paid on or before September 30

Economic REVIEW

(I) RE FINANCE CORPORATION

The setting up of the Re Finance Corporation for Industry Private Ltd can rightly be regarded as a landmark in the history of Indian industrial finance Non avilability of sufficient funds and adequate resources is one of the major problems confronting industrial enterprises in the private sector This paucity of funds is primarily responsible for the slow growth of industrial activity in the private sector Moreover this was also a disincentive for the springing up of new industrial ventures

It is against this background that we have to view the significant role that the Re Finance Corporation can play in our developing economy Perhaps the most important objective of Second Five-Year Plan is rapid industrialization and in a mixed economy like ours responsibility for this has to be shared by both the private and the public sectors. The establishment of the Re Finance Corporation will make available additional funds to medium sized industrial units in the private sector Moreover it will assist banks in extending *normal term lending facilities to* industries

The authorized capital of the Corporation is Rs 25 crores Its initial issued capital is fixed at Rs 12½ crores and this amount will be contributed jointly by the Reserve Bank of India Life Insurance Corporation and 15 of the larger scheduled Banks The loans given in any one case cannot exceed Rs 50 lakhs and the period of the loan should not be more than seven or less than three years Further these facilities are available only to concerns whose paid up capital and reserves (excluding reserves for the payment of taxes and normal depreciation reserves) are not above Rs 12½ crores in any particular case

The Re-Finance Corporation will supplement the activities of Industrial Finance Corporation to some extent The long and medium term grants and loans which the Industrial Finance Corporation is providing at present meets only a small part of the total requirements The establishment of the Re Finance Corporation is, therefore, a welcome step which will certainly go a long way in solving the problem of financing industries

(II) ROLE OF NATIONAL SAVINGS

Small savings adorn a vital and significant role in the financing of second *Five Year Plan* Hence the necessity to mobilise small savings becomes self evident The third meeting of the National Savings Central Advisory Committee held in New Delhi on June 5 discussed at length the ways and means to be adopted to strengthen the movement The Committee recommended the following methods to widen the range of voluntary effort in promoting the savings campaign procedure for identification of the payees at the Post office specialized training of Postal Savings Bank employees purchase of national savings certificates by scheduled banks Co-operative Banks etc. on behalf of their clients provision of nomination facilities and extension of the cheque system in post office savings banks

The Committee has supported a suggestion to link the schemes included in the Plan for individual regions and areas with the collections made from these areas

An analysis of the following data will reveal the general trend in the net collections of savings —

Year	*Rs in Crores*
1951—52	37.57
1952—53	39 79
1953—54	39 69
1954—55	55.51
1955—56	67 91
1956—57	61.54
1957—58	68 13

Thus the net collections are the largest in 1957 58

In the first Five Year Plan the targets for small savings was fixed at Rs 225 crores But the net collection exceeded the target by more than Rs. 16 crores The target fixed for Second Plan is Rs 500 crores and the collection in the first two years came up to Rs 130 crores Thus Rs 370 crores are to be collected over a

period of 3 years i.e. a little more than Rs. 123 crores annually. But the net collections amount to only Rs 65.13 crores in 1957-58. This clearly indicates the necessity for a much more vigorous campaign than hitherto pursued in mobilising the Small Savings. The recent announcement of the Union Finance Ministry "to accord recognition to outstanding work done by non-officials in promoting the National Small Savings Campaign" is certainly a step in the right direction.

(III) HANDICRAFTS :

The industrial pattern envisaged in the Second Five Year Plan aims at the development of heavy industries along with small scale and cottage industries. Cottage industries and handicrafts if properly developed can provide employment to a large number of people and thus relax the tension of the unemployment situation.

The recommendations of the All India Handicrafts Board on new schemes for development of handicrafts have received the approval of the government. Three of the schemes envisage development of the brass fish industry and establishment of a procurement-cum-sales depot at Cuttack in Orissa and a production centre for flower bowls and other artistic products in Bihar. Some other schemes are meant for continuing the training-cum-production centres for different handicrafts and marketing facilities for them.

The Government has sanctioned Rs. 4 lakhs to four states—Orissa, Bihar, West Bengal and Assam—for implementing the above schemes.

The Government has also approved schemes designed to better marketing facilities for handicrafts by establishing more emporiums, procurement depots in three states—Rajasthan, Bombay and Madhya Pradesh. It is decided to set up four training and production centres in these states. All crore schemes sanctioned earlier for the development of handicrafts will be continued during the current financial year. The Government have sanctioned grants to the tune of Rs. 5 lakhs for implementing these schemes in the three states mentioned above.

All these are not mean of best efforts to encourage the actions taken by the Government in developing handicrafts.

(IV) U.S. TECHNICAL ASSISTANCE

The agreement signed recently by the governments of U.S.A and India under which India will receive $1,057,833, amply reveals America's interest in the reconstruction activities of new India. The projects cover agriculture, education and research, laboratory ground facilities at Calcutta technical training, the geological survey of India and agricultural machinery training centre at [illegible] in Madhya Pradesh.

These projects represent the first phase of the $6.3 million programme of technical assistance to India under the 1958 U.S. Budget.

An analysis of the various programmes included under the aforementioned projects will indicate the variety and extent of the technical assistance offered by U.S.A. The effort on the part of America to render substantial technical and economic aid to under-developed economies will markedly help the promotion of peaceful co-existence.

(V) PROGRESS OF FLOOD CONTROL

The magnitude of the damage done by inundation to our cultivation is distressingly startling. Every year we come across reports about the havoc wrought about by the fury of flood waters to foodgrains and crops. The past experience was an eye-opener to our government and now they have begun to pay serious attention to the problem of flood control.

The Union Ministry of Irrigation and Power has now undertaken in consultation with the State governments, a reallocation of funds to different states for flood control. For the current financial year the Central Flood Control Board has recommended Rs. 8 crores in the form of loan assistance to the States.

The first attempt to put flood control work on an organised basis was undertaken in 1954. The first phase of the programme worked out during the First Five-Year Plan related mainly to collection of data, aerial and ground surveys and execution of emergency works. It may be said to the credit of the planners that the works executed during this period could withstand the onslaught of the floods of 1955 and 1956.

With the launching of the Second Plan, the second phase of flood control programme commenced. The ultimate aim of the government is the preparation of a comprehensive and integrated plan for each river based on the flood affected areas.

The solution of India's overland problems rests to a great degree on the successful

implementation of flood control schemes and it is, indeed, heartening to see that the planners have given proper attention to this problem

(VI) EMPLOYMENT POTENTIAL OF C D PROJECTS

A recent announcement has revealed that the manpower requirements of community development and extension service projects during the second plan period would be over 3,50 000 persons Of these, the occupations which can absorb educated persons are block development officers extension officers for industries agriculture, animal husbandry and co-operation social education organizers overseers and village level workers

It is estimated that during the second plan period 3800 new national extension service cum community project blocks are to be taken up as against 1200 during the First Plan

Community development is an integral part of every welfare state and the role of community Development Projects in our economy has to be viewed in this perspective. Thus it becomes crystal clear that the scope for community development is fast widening in the developing economy of our nation With the expansion in the range of community development work, the scope for furnishing employment avenues will also increase

Thus Community Development Programmes indirectly contribute to the easing of the unemployment problem, especially in the rural areas It seems rather strange that many of the critics of community projects, in their over enthusiasm to dub it as an utter failure, altogether forget the numerous facilities they furnish for the absorption of unemployed.

ELECTRICITY FOR VILLAGES

According to the 1951 census, 82 7 per cent of the people in India live in 5 58 089 villages

At the beginning of the First Five Year Plan (1 4 51) the number of villages (with less than 10 000 population) supplied with electricity was 3 075 At the end of the First Plan (1 4 56) the number increased to 6 500 and at the end of the Second Plan it is estimated electricity will be supplied to 16 500 villagers

An allocation of 20 70 crore was also made during the last two years of the First Plan for creating additional employment opportunities by extending power facilities And during the Second Plan period roughly Rs 75 crores, out of Rs 427 crores allocated for power projects will be spent over the scheme

Almost all the electrified villages are located in the south in the States of Madras Mysore, Kerala and Andhra and the northern States of Uttar Pradesh Punjab and Bihar

Rural electrification is beset with difficulties of a technical and organisational nature, besides requiring capital investment of the order of Rs 3 000 crores Because of these difficulties the Government of India has decided to electrify the rural areas by phases,

The Rural Electrification Sub-Committee set up in 1954 by the Coordination Committee of the Engineers Seminar, in their report emphasised that power in rural India would increase agricultural production raise labour productivity resuscitate cottage and small scale industries and provide greater employment opportunities throughout the year. In the promotion of health educational recreational and other welfare measures its contribution would be significant too Besides it can prevent exodus from rural to urban areas by helping in dispersal of industries in the countryside

period of 3 years i.e. a little more than Rs 123 crores annually. But the net collections amount to only Rs 68.13 crores in 1957-58. This clearly indicates the necessity for a much more vigorous campaign than hitherto pursued in mobilising the Small Savings. The recent announcement of the Union Finance Ministry "to accord recognition to outstanding work done by non-officials in promoting the National Small Savings Campaign" is certainly a step in the right direction.

(III) HANDICRAFTS:

The industrial pattern envisaged in the Second Five Year Plan aims at the development of heavy industries along with small scale and cottage industries. Cottage industries and handicrafts if properly developed can provide employment to a large number of people and thus relax the tension of the unemployment situation.

The recommendations of the All India Handicrafts Board on new schemes for development of handicrafts have received the approval of the government. Three of the schemes envisage development of the brass fish industry and establishment of a procurement-cum-sales depot at Cuttack in Orissa and a production centre for flower bowls and other artistic products in Bihar. Some other schemes are meant for continuing the training-cum-production centres for different handicrafts and marketing facilities for them.

The Government has sanctioned Rs. 4 lakhs to four states—Orissa, Bihar, West Bengal and Assam—for implementing the above schemes.

The Government has also approved schemes designed to better marketing facilities for handicrafts by establishing more sale-cum-procurement depots in three states—Rajasthan, Bombay and Madhya Pradesh. It is decided to set up four training and production centres in these states. Moreover schemes sanctioned earlier for the development of handicrafts will be continued during the current financial year. The Government have sanctioned grants to the tune of Rs. 5 lakhs for implementing these schemes in the three states mentioned above.

All these augur well and bear eloquent testimony to the active interest shown by the Government in developing handicrafts.

(IV) U.S. TECHNICAL ASSISTANCE

The signing of five project agreements by the governments of U.S.A. and India, under which India will receive $1,057,830, clearly reveals America's interest in the reconstruction activities of new India. The projects [illegible] agriculture education and research, [illegible] ground facilities in Calcutta, technical training, the geological survey of India and agricultural machinery training centre at Budni in Madhya Pradesh.

These projects represent the final phase of the $6.3 million programme of tech[illegible] assistance to India under the 1958 U.S. Budget.

An analysis of the various programmes included under the aforementioned projects will indicate the variety and range of the technical assistance offered by U.S.A. The [illegible] on the part of America to render substantial technical and economic aid to under-developed economies will markedly help the promotion of peaceful co-existence.

(V) PROGRESS OF FLOOD CONTROL

The magnitude of the damage done by inundation to our cultivation is distressingly startling. Every year we come across reports about the havoc wrought about by the fury of flood waters to foodgrains and crops. This past experience was an eye-opener to our government and now they have begun to pay serious attention to the problem of flood control.

The Union Ministry of Irrigation and Power has now undertaken in consultation with the State governments a reallocation of funds to different states for flood control. For the current financial year the Central Flo[illegible] Control Board has recommended Rs. 8 crores in the form of loan assistance to the States.

The first attempt to put flood control work on an organized basis was undertaken in 1954. The first phase of this programme worked out during the First Five Year Plan related mainly to collection of data, aerial and ground surveys and execution of emergency works. It may be said to the credit of the planners that the works executed during this period could withstand the onslaught of the spates of 1955 and 1956.

With the launching of the Second Plan, the second phase of flood control programme commenced. The ultimate aim of the government is the implementation of a comprehensive and integrated plan for each river basin in the flood affected areas.

The solution of India's acute food problem relies to a marked degree on the successful [illegible]

implementation of flood control schemes and it is, indeed heartening to see that the planners have given proper attention to this problem

(VI) EMPLOYMENT POTENTIAL OF C D PROJECTS

A recent announcement has revealed that the manpower requirements of community development and extension service projects during the second plan period would be over 3,50,000 persons Of these, the occupations which can absorb educated persons are block development officers extension officers for industries agriculture, animal husbandry and co-operation social education organizers overseers and village level workers

It is estimated that during the second plan period 3800 new national extension service cum community project blocks are to be taken up as against 1200 during the First Plan

Community development is an integral part of every welfare state and the role of community Development Projects in our economy has to be viewed in this perspective Thus, it becomes crystal clear that the scope for community development is fast widening in the developing economy of our nation With the expansion in the range of community development work, the scope for furnishing employment avenues will also increase

Thus Community Development Programmes indirectly contribute to the easing of the unemployment problem, especially in the rural areas It seems rather strange that many of the critics of community projects, in their over enthusiasm to dub it as an utter failure, altogether forget the numerous facilities they furnish for the absorption of unemployed.

ELECTRICITY FOR VILLAGES

According to the 1951 census, 82 7 per cent of the people in India live in 5 58 089 villages

At the beginning of the First Five Year Plan (1 4 51) the number of villages (with less than 10 000 population) supplied with electricity was 3 075 At the end of the First Plan (1 4 56) the number increased to 6 500 and at the end of the Second Plan, it is estimated electricity will be supplied to 16 500 villagers

An allocation of 20 70 crore was also made during the last two years of the First Plan for creating additional employment opportunities by extending power facilities And during the Second Plan period roughly Rs. 75 crores out of Rs 427 crores allocated for power projects will be spent over the scheme

Almost all the electrified villages are located in the south in the States of Madras, Mysore Kerala and Andhra and the northern States of Uttar Pradesh Punjab and Bihar

Rural electrification is beset with difficulties of a technical and organisational nature, besides requiring capital investment of the order of Rs 3 000 crores Because of these difficulties the Government of India has decided to electrify the rural areas by phases,

The Rural Electrification Sub-Committee, set up in 1954 by the Coordination Committee of the Engineers Seminar in their report emphasised that power in rural India would increase agricultural production raise labour productivity resuscitate cottage and small scale industries and provide greater employment opportunities throughout the year. In the promotion of health educational recreational and other welfare measures its contribution would be significant too Besides it can prevent exodus from rural to urban areas by helping in dispersal of industries in the countryside

FORTHCOMING EXAMINATION

I Air Force Flying College Examination November, 1958

The Union Public Service Commission will hold an examination at Allahabad Bangalore, Bombay, Calcutta Delhi, Hyderabad, Jammu Ludhiana, Madras Nagpur, Patna and Shillong sometime in November 1958 for entry into the Air Force Flying College

Age Limits :—Candidates must have been born not earlier than 2nd August, 1938 and not later than 1st February 1942. *These age limits can in no case be relaxed*

Qualifications :—Matriculation or equivalent. Applications from candidates who have appeared or intend to appear at Matriculation *or equivalent examination acceptable provisionally* **Application forms and full particulars** obtainable from Secretary Union Public Service Commission Dholpur House, New Delhi, by remitting Re 1/ by money order or on cash payment at the counter Candidates must clearly *state on money order coupons* 'Air **Force Flying College Examination November 1958" and also give their name and full postal address in block letters** Postal orders or cheques or currency notes will not be accepted in lieu of money orders Application forms and connected papers are also obtainable free from the nearest Air Force Recruiting Office/Air Force Station or the National Cadet Corps Unit **Only unmarried male candidates can apply for admission to this Examination.** Completed applications must reach Union Public Service Commission by 2nd August 1958 (16th August, 1958 for candidates abroad)

II Military College Examination November 1958

The Union Public Service Commission will hold an examination at Allahabad, Bangalore Bombay Calcutta, Delhi Hyderabad Jammu Ludhiana Madras Nagpur Patna and Shillong sometime in November 1958 for entry into Military College (hitherto known as the Military Wing)

Age Limits Candidates must have been born not earlier than the 2nd July 193[illegible] and not later than 1st July 1941 *These age limits can in no case be relaxed*

Qualifications Intermediate or equivalent Applications from candidates who have appeared or intend to appear at Intermediate or equivalent examination acceptable provisionally Application forms and full particulars obtainable from Secretary Union Public Service Commission Dholpur House, New Delhi by remitting Re 1/ by money order or on cash payment at the counter Candidates must clearly state on money order coupons *Military College Examination November, 1958* and also give their name and full postal address in block letters Postal orders or cheques or currency notes will not be accepted in lieu of money orders Application forms and connected papers are also obtainable free from the nearest Recruiting Office Military Sub-Area Headquarters or National Cadet Corps Unit. **Only unmarried male candidates can apply for admission to this examination** Completed applications must reach Union Public Service Commission by the 23rd August 1958 (6th September 1958 for candidates abroad).

—o—

POINTS TO PONDER

Hate The Actions Not The Man

I remember that when Christian teachers told me long ago that I must hate a bad man's actions but not the man I used to think this a silly hair-splitting distinction: how could you hate what a *man did and not hate* the man? But years later it occurred to me that there was one man for whom I had been doing this all my life—myself —*C. S. Lewis*

• • •

ONLY ONE THING TO FEAR

My greatest fear has always been that I would be afraid—afraid physically or mentally or morally—and allow myself to be influenced by fear instead of by honest conviction

—*Eleanor Roosevelt*

• • •

THE WISDOM OF HUMILITY

There is only one thing worse than the smugness and prejudices of the ignorant and that is the smugness and prejudices of the educated " Education that does not engender a sense of humility in the student, that does *not make him appallingly aware of how* much there is to know that he does not know, is not true education It is merely mental enslavement.

From education, students should acquire enough knowledge so that they need not look up to others with envy, enough wisdom so that they will not look down on others with disdain – *Gerald Hinton Bath.*

India And International Organisations

(Continued from last month)

Other Specialised Agencies of the UN

Among other specialised agencies of the UN with which India is actively associated are the International Civil Aviation Organisation (ICAO) the International Tele Communication Union (ITU) the Universal Postal Union (UPU) and the World Meteorological Organisation (WMO) The 4th International Tuberculosis Conference organised by the International Union against Tuberculosis was held at New Delhi between January 7 and 10 1957 The 5th Session of the International Rice Commission and its *ad hoc* Working Group on the Storage and Processing of Rice was held at Calcutta in November 1956

OTHER INTERNATIONAL ORGANISATIONS

Q Name the International Organizations outside the UN with which India is associated

Ans Some of the important international organisations outside the UN, with which India is associated are the Commonwealth of Nations the Inter Parliamentary Union the Commonwealth Parliamentary Association the Colombo Plan for Co-operative Development in South and South East Asia the periodical conferences of the Prime Ministers of the five South East Asian Countries commonly known as the Colombo Powers the Asian African Conference and the International Red Cross

Commonwealth of Nations

Q Write a note on the position of India in the Commonwealth of Nations

Ans On the attainment of independence on August 15 1947, India assumed the status of a full fledged Dominion within the British Commonwealth of Nations as it was then known Later when India decided to become an independent sovereign republic under the new constitution a change in the basis of the country s association with the Commonwealth became necessary This was provided for by an official declaration issued at the end of the Commonwealth Prime Ministers Conference on April 27 1949 The declaration noted the impending constitutional changes in India and accepted her as a full member of the Commonwealth The prefix ' British was dropped and the association re designated as the ' Commonwealth of Nations This declaration was ratified by the Constituent Assembly of India on May 17, 1949

The principal organs of Commonwealth co-operation are the periodic conferences of the Prime Ministers and the Finance Ministers of the member countries (UK Canada Australia New Zealand South Africa, India Pakistan Ceylon Ghana and Malaya) There is a Liaison Committee which co ordinates the activities of some 30 other Commonwealth conferences committees commissions and organisations etc , which deal with specific subjects falling under the broad categories of defence communications science agriculture education and parliamentary affairs

The last conference of Commonwealth Prime Ministers was held at London from June 26 to July 5 1957 In the course of their discussions the Commonwealth Prime Ministers reviewed all the *major* international questions of common concern to their countries These included the events in Hungary disarmament international problems of West Asia, the *contribution* which *might* be made by the Commonwealth Governments towards the easing of tension and the maintenance of peace, stability

and political freedom in East Asia and South-East Asia the impact of the major programmes of development in their countries, the proposals for the creation of an industrial free trade area in Europe and the progress made towards freeing of trade and payments, the Colombo Plan and the development of nuclear energy for civil purposes.

The last Commonwealth Finance Ministers Conference was held in Mont Tremblant (Canada) in September-October 1957. It arrived at agreed findings on three subjects namely co-operation in the Sterling area, European economic integration, and the Commonwealth Trade and Economic Conference. Arrangements were made for continuing Commonwealth consultations on economic matters.

Colombo Plan

Q. Describe the assistance India received under Colombo Plan.

Ans. India has both been receiving as well as giving assistance under the Plan. The country has received assistance for the rehabilitation of the railway and the expansion of All India Radio from Australia; for the Mayurakshi and Kundah projects from Canada; for the All-India Institute of Medical Science and the Delhi Milk Supply Scheme from New Zealand; and for the Durgapur Steel Plant from the United Kingdom.

Till the end of June 1957, India obtained the services of 130 experts, of which 10 were from Australia, 18 from Canada, 1 from Ceylon, 7 from Japan, 8 from New Zealand and 86 from the UK. During the same period, India received training facilities in other countries for 983 persons—Australia 233, Canada 210, Japan 23, Malaya 1, New Zealand 59 and UK 452. India's assistance to Nepal amounted to Rs. 5.35 crore up to the end of March 1957. Burma utilised in August 1957, Rs. 10 crore out of the Sterling loan of Rs. 20 crore granted by India in 1955-5. Till October 1957 India provided training facilities for 645 nominees in various subjects.

The trainees have come form Nepal 420, Burma 24, Ceylon 103, Indonesia 16, Philippines 39, Thailand 10, Viet Nam 2, Singapore 2 and North Borneo 2. Of these 115 candidates have received training at the International Statistical Education Centre at Calcutta. Experts have been provided to Ceylon 12, Indonesia 2 and Singapore 3 in the fields of irrigation, banking, iron and steel engineering, sericulture, milk supply, broadcasting, organisation and methods, aerial survey and forestry. India was represented by the Union Deputy Finance Minister at the ninth meeting of the Colombo Plan Consultative Committee held at Saigon on October 20, 1957.

Colombo Powers Conference

Q. Clearly indicate the nature of India's relationship with (a) Colombo Powers Conference (b) Asian African Conference.

Ans. Another international forum in which India has developed a deep interest has been the periodical meetings of the Prime Ministers of Burma, India, Ceylon, Indonesia and Pakistan. The first such meeting was held at Colombo in April-May 1954 and the last in New Delhi in November 1956. A formal exchange of views on subjects of mutual interest took place between the Prime Ministers of India and Ceylon in December 1957 and between the President of Indonesia and the Prime Minister of India in January 1958. A conference of the national women's organisations in the Colombo power countries was held in February 1958 at Colombo for exchange of views on increased mutual help and understanding among women of the region.

Asian African Conference

At the invitation of the Prime Ministers of Burma, Ceylon, India, Indonesia and Pakistan, a Conference of Asian-African countries was held at Bandung (Indonesia) in April 1955. Twenty-nine countries of Asia and Africa comprising nearly three-fifths of the world's population participated in the Conference. The object of the Conference was to promote goodwill and co-[illegible]

ration to consider common social economic and cul tural problems to consider problems of special interest to Asian and African peoples such as recialism coloni alism etc., and to review the position of Asia and Africa in the world and the contribution they could make to the promotion of world peace and co-operation

The deliberations of the Conference resulted in the historic joint *Communique* on economic and cultural co-operation colonialism nuclear and other weapons of mass destruction and on the promotion of world peace and co operation The *Communique* also incorporated the five principles of the India China Agreement which India regards as the basis of its relations with other countries

The Conference was a world event which attracted great attention marking the coming together for the first time in history of self governing and independent nations of Asia and Africa It generated goodwill and friend hip among the Asian African countries and helped to establish personal contact among the leaders of these countries

Q Describe India s activities in relation to (a) Com monwealth Parliamentary Association (b) Inter Parlia mentary Union (c) International Red Cross Conference

Ans *Commonwealth Parliamentary Association*

The Commonwealth Parliamentary Association is an organisation composed of branches formed in the legislatures of various Commonwealth countries The aim of the Association is to promote understanding and co-operation for common purposes between those engag ed in the parliamentary government of the countries of the Commonwealth

The last conference of the Commonwealth Parlia mentary Association was held in New Delhi from December 2 to 10, 1957 India Pakistan and Ceylon acted as joint hosts The Speaker of the Lok Sabha, M Ananthasayanam Ayyangar was elected Chairman of the Conference The subjects discussed at the Confer ence were economic relations in the Commonwealth the problem of under developed territories in the Com monwealth social services in the Commonwealth the future of the smaller states in the Commonwealth the role of the English language in the Commonwealth the working of the party system in Parliament international affairs and defence

Inter Parliamentary Union

The Inter Parliamenthry Union is an association of parliamentary groups constituted within the various national Parliaments for the purpose of promoting per sonal contacts between the members of different Parlia ments The Indian Parliamentary Group has been sending delegation to the annual conferences of the Inter Parliamentary Union since 1949 At the in vitation of the Indian Parliamentary Group the 101st session of the Executive Committee of the IPU was held in New Delhi in December 1955 The Indian delega tion to the meetings of the Inter Parliamentary Union, held in Nice in April 1957 and in London in September 1957 was headed by H N Kunzru

International Red Cross Conference

India played host to the 19th International Red Cross Conference which was held in New Delhi in Octo ber November 1957 and was elected to the Finance Commission and the Standing Commission of the Con ference The Conference adopted an Indian resolution unanimously appealing to all nations to intensify their efforts for general disarmament and to take measures to protect humanity from the terrible consequences of the use of incendiary chemical, bacteriological, radio-active or such other agents

India's Constitution

Q When did the Constitution of India come into force? *(I S R June 1956)*

Ans The Constituent Assembly of India was originally designed to frame a Constitution for the whole of the undivided sub continent. With the bulk of members elected by the then Provincial Assemblies of British India, and with nominees from the Princely States and the Chief Commissioners Provinces, the Assembly first met on December 9 1946. It was, however, boycotted by members of the Muslim League which demanded the partition of the subcontinent and the creation of Pakistan with its own separate Constituent Assembly. A resolution on Objectives was adopted by the Constituent Assembly on January 22 1947 and a number of committees were appointed to report on the various aspects of the proposed Constitution. But the Assembly was able to function properly only after the political uncertainty happening. Its work was removed as a result of the acceptance by all the principal parties concerned of the plan of partition put forward by the Viceroy Lord Mountbatten on June 3 1947.

On the basis of the reports of the committees appointed early in 1947 the Drafting Committee of the Constituent Assembly of India prepared a Draft Constitution which was published in February 1948 and presented to the Assembly for general discussion on November 4 1948. Meanwhile the passing of the Indian Independence Act and the transfer of power on August 15, 1947 had freed the Assembly from all the limitations under which it had been born and enabled it to proceed with the task of Constitution-making as a sovereign body. The Constituent Assembly finalised and adopted the Constitution on November 26 1949. The Constitution, as it finally emerged, comprised 395 Articles and eight Schedules.

It came into force on January 26 1950.

Q Describe the preamble to the constitution of the Republic of India *(I N July 1954 Asst Grade 1952)*

Ans The preamble to the Constitution enshrines the resolve of the people of India to secure for all citizens "*Justice* social economic and political *Liberty* of thought expression belief faith and worship *Equality* of status and of opportunity; and to promote among them all *Fraternity* assuring the dignity of the individual and the unity of the Nation

Q Mention the Fundamental Rights that are given to every citizen according to the Indian Constitution *(I A F 1957 I A S 1954 M W 1952)*

Ans Part III of the Constitution (Articles 12 to 35) enumerates seven broad *categories of Fundamental Rights* namely the right to equality the right to freedom the right against exploitation the right to freedom of religion cultural and educational rights the right to property and the right to constitutional remedies which provides that the fundamental rights are justiciable and any citizen can move the Supreme Court for their enforcement.

The right to equality includes equality before the law prohibition of discrimination on grounds of religion race caste sex or place of birth, and equality of opportunity in matters of public employment. Social equality has been secured by abolishing untouchability and making its practice in any form a punishable offence

Article 19 guarantees to the citizen his right to freedom of speech and expression, assembly association or union movement residence, acquisition, holding and disposal of property and the right to practise any profession or to carry on any occupation, trade or business. The Constitution does not however bar the State from making laws prescribing reasonable restrictions on the

exercise of these rights in the interests of the security of the State friendly relations with sovereign States public order decency or morality or in relation to contempt of court defamation or incitement to an offence or in the interests of the general public or for the protection of the interests of any Scheduled Tribe The conferment of the e rights does not affect the operation of any existing law or prevent the State from making any new law relating to the professional or technical qualification necessary for practising any profession or carrying on any occupation, trade or business or the carrying on by the State or by a corporation owned or controlled by the State of any trade business, industry or service whether to the exclusion complete or partial of citizens or otherwise

Three other basic principles of common law which the Constitution has recognised in Articles 20-21 as fundamental rights are (i) No person shall be prosecuted and punished for the same offence more than once (ii) No person accused of any offence shall be compelled to be a witness against himself and (iii) No person shall be deprived of his life or personal liberty except according to procedure established by law The right against exploitation prohibits all forms of forced labour child labour and traffic in human beings

Freedom of conscience and free profession practice and propagation of religion for all and the right of minorities to conserve their own culture language and script and to receive education and establish and administer educational institutions of their choice are guaranteed by the Constitution

The right to property is protected by Article 31 which provides that no person shall be deprived of his property save by authority of law This does not however deprive the State of its right to compulsory acquisition of private property for a public purpose after payment of compensation The Article was amended in 1955 so as to keep outside the purview of law courts the question whether the compensation provided by a specific law is adequate or not.

Q State briefly the Directive Principles laid down in the Constitution of India (A G July, 1955)

Ans The Directive Principles of State Policy though not enforceable through courts of law are regarded as fundamental in the governance of the country These lay down that the State shall strive "to promote the welfare of the people by securing and protecting as effectively as it may a social order in which justice—social economic and political—shall inform all the institutions of the national life These principles further require the State to direct its policy in such a manner as to secure the right of all men and women to an adequate means of livelihood equal pay for equal work and within the limits of its economic capacity and development to make effective provision for securing the right to work education and public assistance in the event of unemployment, old age sickness and disablement or other cases of undeserved want The State is also required to secure to the workers humane conditions of work a decent standard of life and full enjoyment of leisure and social and cultural opportunities

In the economic sphere the State is to direct its policy in a manner as to secure the distribution of the ownership and control of the material resources of the community to subserve the common good and to ensure that the operation of the economic system does not result in the concentration of wealth and means of production to the common detriment The State is also enjoined to guard against the abuse of workers health and strength and to protect childhood and youth from being forced by economic necessity to enter avocations unsuited to their age or strength and against exploitation and against moral and material abandonment.

Among the other directives of State Policy are the organisation of agricultural and animal husbandry on modern and scientific lines, promotion of cottage indus

tries in rural areas; raising the level of nutrition and improvement in the standards of living and public health; prohibition of intoxicating drinks and drugs; provision for free and compulsory education for all children up to the age of fourteen; organisation of village panchayats; separation of judiciary from the executive; promulgation of a uniform civil code for the whole country; protection of [illegible] monuments; promotion of educational and economic interests of Scheduled Castes, Scheduled Tribes and other weaker sections and the promotion of international peace and security, just and honourable relations between nations, respect for international law and treaty obligations, and settlement of international disputes by arbitration.

Q. Describe the role of the President in the Constitution of India. (*Air Force 1955*)

Ans. The President is elected by an electoral college consisting of the elected members of both Houses of Parliament and of the Legislative Assemblies (Vidhan Sabhas) of the States in accordance with the system of proportional representation by the single transferable vote. The President must be a citizen of India not less than 35 years of age and eligible for election as a member of the House of the People (*Lok Sabha*). His term of office is five years and he is eligible for re-election. The President may be removed from office by impeachment for any violation of the Constitution which under Article 60 it is his duty to preserve, protect and defend. In his capacity as the head of the State the President is empowered to make appointments, summon, prorogue, address, send messages to Parliament and dissolve the House of the People, issue ordinances during recess of Parliament, make recommendations for introducing or moving money bills and give assent to bills, and grant pardons, reprieves, respites or remissions of punishment or to suspend, remit or commute sentences in certain cases. The executive power of the Union is vested in him and is exercised by him either directly or through officers subordinate to him in accordance with the Constitution.

Q. How is the Vice-President of India elected? Mention his functions and powers.

Ans. The Vice President is elected by the members of both Houses of Parliament assembled at a joint sitting on the basis of proportional representation by means of the single transferable vote. He must be a citizen of India not less than 35 years of age and eligible for election as a member of the Council of State (*Rajya Sabha*). His term of office is also five years. The Vice-President acts as the ex-officio Chairman of the Council of States and acts as President when the latter is unable to discharge his functions due to illness, absence or any other cause, or till the election of a new President when a vacancy is caused by the death, resignation or removal of the President. While so acting he exercises all the powers and discharges all the functions vested in the President.

Q. What is the Function of the Council of Ministers in the Constitution of India? (*I A F August 1956*)

Ans. Article 74 of the Constitution provides for a Council of Ministers headed by the Prime Minister to aid and advise the President in the exercise of his functions. The Prime Minister is appointed by the President who also appoints the other Ministers on the advice of the Prime Minister. Although the Council holds office during the pleasure of the President, it is collectively responsible to the House of the People. It is the duty of the Prime Minister to communicate to the President all decisions of the Council of Ministers relating to the administration of the affairs of the Union and proposals for legislation and information relating them and if the President so requires, submit for the consideration of the Council of Ministers any matter on which a decision has been taken by a Minister but which has not been considered by the Council.

Q. Write a note on the structure and functions of the [illegible] in Parliament. (*[illegible] July [illegible] June, 19[illegible]*)

'Parliament" consists of the President and the two Houses known respectively as the Council of State (*Rajya Sabha*) and the *House of the People* (*Lok Sabha*)

Council of State (*Rajya Sabha*)

The Council of State consists of not more than 250 members of whom 12 are nominated by the President *and the rest elected*. The elected members are representatives of the States and the Union Territories (the allocation of seats being made in accordance with the provisions contained in the Fourth Schedule to the Constitution. The nominated members are persons having special knowledge or practical experience in literature science art and social service *To fill a seat in* the Council the candidate must be a citizen of India and not less than 30 years of age

The Council of States is not subject to dissolution one third of its members retiring on the expiration of every second year The elections to the Council are indirect the alloted quota of the representatives of each State being elected by the elected members of the Legislative Assembly of that State in accordance with the system of proportional representation by means of single transferable vote The representatives of the Union Territories are chosen in such manner as Parliament by law prescribes

House of the People (*Lok Sabha*)

The House of the People *consists of not more than* 500 members directly elected from territorial constituencies in the States (the representatives of the State of Jammu and Kashmir being appointed by the President on the recommendation of the legislature of the State) and not more than 20 *members* to represent the Union Territories chosen in such manner as Parliament by law provides The number of seats to each State *is so allotted* that the ratio between the number and the population of the State is as far as practicable, the same for all States The President can nominate two members to the House of the People to represent the Anglo-Indian community if in his *opinion* it is not adequately represented

The House of the People unless sooner dissolved has a maximum duration of five years from the date appointed for its first meeting This may be extended by a maximum of one year by a Parliamentary Law while a Proclamation of Emergency is in operation

Q *What is the constitution* of a Provincial Government in India as it exists today ?

(*Engg Roorkee June 1948*)

Ans The system of Government in the States as embodied in Part VI of the Constitution closely resembles that of the Union

Q Describe the position powers and *functions* of Governor of an Indian State (*I S R 1957*)

Ans The Governor of a State is appointed by the President of India for a term of five years and holds office during his pleasure Only Indian citizens above 35 years of age are eligible for appointment to this office The Governor is debarred from being a member of either House of Parliament or of a House of the State Legislature and from holding any other office of profit

The Constitution provides for a Council of Ministers with a Chief Minister at the head to aid and advise the Governor in the exercise of his functions except in so *far as he is* by or under the Constitution required to exercise his functions in his discretion The Chief Minister is appointed by the Governor who also appoints other Ministers on the advice of the Chief Minister The Council of Ministers is collectively responsible to the Legislative Assembly of the State though holding office during the pleasure of the Governor

Q Describe briefly the distribution of legislative powers between the Union and the States

Ans The distribution of legislative powers be-

tween the Union and the States is governed by the provisions of the Seventh Schedule consisting of three Lists—the Union List, the State List and the Concurrent List—under which the known sphere of legislative activity has been mapped out by enumerating as minutely as possible all [illegible] categories of subject matters of legislation. The Union List contains 97 entries pertaining to [illegible] of all India importance such as defence, [illegible] communications currency and coinage [illegible] in regard to which Parliament has exclusive power to make laws. The State Legislatures have exclusive authority to make laws in regard to the 66 entries in the State List which include subjects as maintenance of law and order, administration of justice, local government, public health and sanitation, education, agriculture, forests and fisheries, [illegible] etc. The third or the Concurrent List which consists of 47 entries deals with subjects of [illegible] to the Union and the States such as the [illegible] planning and social security, [illegible] industry, electricity, newspapers, books etc. In regard to which both Parliament and the State Legislatures [illegible] laws.

Territorially the legislative jurisdiction of Parliament [illegible] the whole or any part of the territory of India while that of the legislature of a State to the whole or any part of that State. Parliament also legislates for any part of the territory of India which is not a State [illegible] which fall under the exclusive purview of [illegible].

The Constitution provides that if any law made by the legislature of a State is repugnant to any provision of a law made by Parliament or to any provision of an existing law with respect to any of the matters enumerated in the Concurrent List then the law made by Parliament [illegible] made by the legislature of the State [illegible] the repugnancy [illegible]. [illegible]

usually known as residuary powers' they have been exclusively vested in the Union Parliament

The Constitution further provides that if the Council of State declares by a resolution supported by two-thirds of the members present and voting that Parliament should make laws in respect of any matter contained in the State List Parliament can make laws for these also and such laws will remain in force for a period not exceeding one year unless continued under a fresh resolution and shall cease to have effect on the expiration of a period of six months after the resolution has ceased to be in force. Parliament exercises such a right if a proclamation of emergency is in operation and a law made thereunder shall have effect for six months.

Q What are the functions and duties of the Public Service Commission?

Ans It is divided into two parts —
1 The Union Public Service Commission
2 The State Public Service Commissions

The U P S C. consists of a Chairman and four other members appointed by the President. The chief function of the U.P.S.C and State Public Service Commissions is to conduct examinations for recruitment to various services in the Union and the States respectively. Other functions are (a) to advise the government on methods of recruitment promotion and control of Public Services (b) to look after the interests and rights of services (c) to hear appeals from the civil servants and redress their grievances

Q What policy regarding language has been laid down in the constitution of India?

Ans Article 343 of the Constitution provides that the official language of the Union shall be Hindi in the Devanagari script and [illegible]

for a period of not more than 15 years form the commencement of the Constitution The President is authorised under Article 344 to constitute after the expiration of five years from the commencement of the Constitution and thereafter at the expiration of ten years from such commencement, a special Commission to examine the growth and development of Hindi and make recommendations as *to its progressive* use for all or any of the official purposes of the Union with a view to replacing English completely at the end of the stipulated period The Constitution also provides that the recommendations of the Commission will be examined by a Parliamentary Committee of 30 members (20 members from the Lok Sabha and 10 from the Rajya Sabha) elected by the respective Houses in accordance with the system of proportional representation

The Constitution further lays down that the legislature of a State may, by law adopt any one or more of the regional languages in use in that State or Hindi as the language to be used for all or any of the official purposes For communication between one State and another and between a State and the Union, the language for the time being authorised for use in the Union shall be used The need for the use of the English language in the proceedings of the Supreme Court and the High Courts and in bills enactments and other laws has been recognised and Article 348 makes special provisions *on* the subject The proviso to Article 343 also empowers the President to authorise the use of Hindi in addition to English for any of the official purposes of the Union even during the stipulated period of 15 years

Q What are the changes effected in the Constitution of India by the Consitution (First Amendment) Act 1951 ?

Ans. The Constitution (First Amendment) Act 1951 besides making minor changes in Articles 15 19, 85, 87 174 176 341 342 372 and 375 added two new Articles 31A and 31B and a Ninth Schedule after the eighth Among the more notable features of this Act are (i) the addition of a saving clause to Article 15 (prohibition *of discrimination*) enabling the State to make special provisions for the advancement of socially and educationlly backward classes and (ii) the substitution of clause (2) in Article 19 by a new clause broadening the State s power to impose reasonable restrictions on the citizens right to freedom of speech and expression in the interest of friendly relations with foreign States and in relation to defamation or incitement to an offence besides security of State public order decency and morality etc which were included in the original clause as well The two new Articles added after Article 31 (right to property) provided for the saving of laws relating to acquisition of estates and the *validation of certain* land reform Acts and regulations passed by the States and specified in the Ninth Schedule

Q Mention the important provisions of the States Reorganisation Act, (1956)

Ans The Constitution (Seventh Amendment) Act 1956 necessitated by the reorganisation of States involved not only the establishment of new States and alterations in State boundaries but also the abolition of the three categories of the States and the classification of certain areas as Union Territories This led to the amendment of Article 1 and the First Schedule *to the Constitution Among* the other important Articles which were affected by this amendment were Article 80 (composition of the Council of States) along with the Fourth Schedule dealing with the allocation of seats in the Council to the States Articles 81 and 82 which were substituted by new ones Article 131 on the original jurisdiction of the Supreme Court Article 168 providing for bicameral legislatures in certain States and Articles 216 217 220 222 and 224 dealing with the High Courts Two new Articles 350A and 350B were added with a view to implementing the recommendations of the States Reorganisation Commission regarding constitutional safeguards for linguistic minorities

GENERAL INFORMATION

WARRANT OF PRECEDENCE
February 15 1958

1. President
2. Vice President
3. Prime Minister
4. Governors and Sadar-i-Riyasat Jammu and Kashmir within their respective charges.
5. Ex Presidents and ex Governors General
6. Lieutenant Governors within their respective charges.
7. Chief Justice
   Speaker of the Lok Sabha
8. Cabinet Ministers of the Union
9. Holders of Bharat Ratna Decorations
10. Ambassadors Extraordinary and Plenipotentiary accredited to India.
    High Commissioners of Commonwealth Governments in India
11. Rulers of Indian States with a salute of 17 guns and above within their States
12. Governors and Sadar-i-Riyasat Jammu and Kashmir outside their respective charges.
13. Lieutenant Governors outside their respective charges.
14. Rulers of Indian States with a salute of 17 guns and above outside their States.
15. Chief Ministers of States
16. Ministers of the Union (other than Cabinet Ministers)
    Members of the Pla[illegible]ng Commission [illegible]
17. Rulers of Indian States with a salute of 15 guns or 13 guns.
18. Envoys Extraordinary and Ministers Plenipotentiary accredited to India.
19. Judges of the Supreme Court
20. Visiting Class I Ambassadors of India
    Foreign Ambassadors visiting India
    Visiting High Commissioners of India and High Commissioners of other Commonwealth countries visiting India
21. Charge d Affairs and acting High Commissioners a pied and ad interim
22. Chiefs of Staff and Commanders in Chief holding the rank of full General or equivalent rank
23. Chief Justices of High Courts
    Chairmen of Legislative Councils in States
    Speakers of Legislative Assemblies in States.
24. Ministers of States
    Deputy Ministers of the Union
    Attorney-General.
    Comptroller and Auditor General
    Deputy Chairman of the Rajya Sabha
    Deputy Speaker of the Lok Sabha
25. Chiefs of Staff and Commanders in Chief holding the rank of Lieutenent General or equivalent rank
26. Rulers of Indian States with a salute of 11 guns or 9 guns
27. Chairman Union Public Service Commission [illegible]
    [illegible]

28 Puisne Judges of High Courts.

29 Deputy Ministers of States

Deputy Chairmen and Deputy Speakers of State Legislatures

Chief Commissioners of Union Territories within their respective charges

30 Members of Parliament

31 Officers of the rank of full General or equivalent rank

Secretary to the President

Secretaries to the Government of India and Principal Private Secretary to the Prime Minister

Visiting Class II and Class III Ambassadors of India

Commissioner for Scheduled Castes and Scheduled Tribes

Officiating Chiefs of Staff and Commanders-in Chief holding the rank of Major General or equivalent rank

Visiting Ministers Plenipotentiary of India and foreign Ministers Plenipotentiary visiting India

Chairman of the Railway Board.
Financial Commissioner for Railways
Solicitor General.
Political Officer in Sikkim.

32 Members of the Railway Board
Ministers of foreign and Commonwealth missions other than ministers Plenipotentiary

Officers of the rank of Lieutenant General or equivalent rank.

33 Additional Secretaries to the Government of India

Chairman Tariff Commission
Chairman Central Water and Power Commission

Vice Chairmon of the Indian Council of Agricultural Research

Financial Adviser, Ministry of Finance (Defence)

Chairman Central Board of Revenue
P S O s of the Armed Forces of the rank of Major General or equivalent rank.

34 Chairman of the Public Service Commission of a State

Chief Secretaries to State Governments
Financial Commissioners
Members of the Union Public Service Commission

Rear Admiral Commanding, Indian Naval Squadron
Members of a Board of Revenue.

35 Director General Health Services
Director General Posts and Telegraphs
Director Intelligence Bureau
General Managers of Railways
Establishment Officer to the Government of India

Joint Secretaries to the Government of India (including Joint Secretary to the Cabinet)
Visiting Class IV Ambassadors of India
Officers of the rank of Major General or equivalent rank

Surveyor General
Members of the Tariff Commission
Inspectors-General of Police in States

Commissioners of Divisions
Director General of Civil Aviation
Director General of Supplies and Disposals
Director General of Ordnance Factories

Indian Navy Commodores-in-Charge, Naval Reserve Areas

Commanders of Indian Air Force Commands of the rank of Air Commodore

P.S.Os of Naval and Air Headquarters of the ranks of Commodore and Air Commodore

Chief Commissioners of Union Territories outside their respective charges.

Director General, All India Radio

Military Secretary to the President (so long as he also holds the post of Director General Government Hospitality Organisation)

Counsellors of foreign and Commonwealth missions in India

Deputy Comptroller and Auditor General

AWARDS AND DISTINCTIONS

BHARAT RATNA

The award is made for outstanding work for the advancement of art literature and science and in recognition of public service of the highest order

The decoration is in the form of a peepal leaf 2[illegible] inches long 1[illegible] inches wide and [illegible] of an inch thick It is of toned bronze On its obverse is embossed a replica of the Sun [illegible] of an inch in diameter below which the words "Bharat Ratna" are embossed in Hindi On the reverse are the State Emblem and the motto, also in Hindi The Emblem the Sun and the rim are of platinum The inscriptions are burnished bronze.

Recipient of the Award, 1958 Dhondo Keshav Karve

PADMA VIBHUSHAN

The award is made for exceptional and distinguished service in any field, including service rendered by Government servants

The decoration is circular in design, with a geometrical pattern superimposed on the circle The diameter of the circular portion is 1[illegible] inches and the thickness [illegible] of an inch On the obverse there is a lotus flower embossed on the circular space The word "Padma" is embossed in Hindi above and the word "Vibhushan" below the lotus flower On the reverse are the State Emblem and the motto in Hindi It is of toned bronze The inscription "Padma Vibhushan" on the obverse the geometrical pattern on either side and the border around the periphery are in burnished bronze All embossing on either side of the decoration is in white gold

PADMA BHUSHAN

The award is made for distinguished service of a high order in any field including service rendered by Government servants

It has the same design as the "Padma Vibhushan" on its obverse the word "Padma" appears above and the word "Bhushan" below the lotus flower The inscription Padma Bhushan on the obverse the geometrical pattern on either side and the border around the periphery are in burnished bronze All embossing on either side of the decoration is in [illegible]

Recipients of the Award 1958

1 Alauddin Khan Musician
2. Jehangir Ghandy Director in Charge Tata Iron and Steel Company Limited Jamshedpur
3 Hanut Singh, Sportsman
4 Narayan Subrao Hardikar M P Social Worker
5 Ariyakudi Ramanuja Iyengar Musician
6 Shrimati Kamalendumati Shah of Tehri Garhwal.
7 Kumar Padma Sivasankara Menon, Ambassador of India in Moscow
8 Arathil Candeth Narayanan Nambiar Ambassador of India in Bonn.
9 Kuppali Venkatappa Gowda Puttappa, Vice-Chancellor Mysore University
10 Poola Tirupati Raju, Jaswant College Jodhpur
11 Devi Prosad Roy Choudhry Artist.
12 Salim Ali Ornithologist
13 Rustom Jal Vakil Physician Bombay
14 Vijaya Ananda of Vizianagram Sportsman.
15 Surya Naraynn Vyas of Ujjain, Astronomer and Philologist.
16 Darashaw Nosherwan Wadia Geological Adviser to the Government of India in the Department of Atomic Energy

PADMA SHRI

The award is made for distinguished service in any field including service rendered by Government servants

The name of the decoration is embossed in Hindi with the word Padma above and the word "Shri below the lotus flower on the obverse The inscription "Padma Shri on the obverse the geometrical pattern on either side and the border around the periphery are in burnished bronze All embossing on either side of the decoration is in stainless steel

Recipients of the Award, 1958

1 Debaki Kumar Bose Film Producer
2. Shrimati Devika Rani, Film Artist
3 Digvijai Singh Sportsman
4 Punamalai Ekambaranathan Inventor of the Ambar Charkha
5 Shrimati Fatima Ismail Social Worker
6 Kumari Nargis (Fatima A Rasheed), Film Artist
7 Bal Raj Nijhawan Director, National Metallurgical Laboratory, Jamshedpur
8 Benjamin Peary Pal Director, Indian Agricultural Research Institute New Delhi
9 Navalpakkam Parthasarathy lately Director Central Rice Research Institute, Cuttack.
10 Balwant Singh Puri Secretary General Indian Red Cross Society
11 Lakshminarayanapuram Ananthakrishnan Ramdas Agricultural Meteorologist
12 Ram Singh Commander 201 Infantry Brigade
13 Aragula Nagaraja Rao Chief Industrial Adviser to the Government of India in the Ministry of Commerce and Industry
14 Shri Satyajit Roy Film Director
15 Moturi Satyanarayana M P General Secretary Dakshina Bharat Hindi Prachar Sabha Madras.
16 Shambhoo Maharaj Kathak dance artist
17 Shrimati R S Subbalakshmi (Sister Subbalakshmi) Social Worker
18 Ram Chandra Varma, Author and Hindi lexicographer
19 Maganlal Tribhuvandas Vyas Educationist

SCHOLARSHIP SCHEMES

FOR STUDIES ABROAD

Government of India Schemes

1. [illegible] Harrison Fellowship for research work [illegible] Contemporary Indian History at the St. Antony's College Oxford

2. Central O[illegible] Scholarships Scheme for teachers [illegible] colleges and comparable institutions of higher education

3. Central [illegible] Scholarships Scheme for candidates [illegible] or domicile are natives of the Union [illegible]

[illegible] Languages Scholarships Scheme for Arabic, Chinese, French, German, Persian, Russian, Spanish and Turkish

[illegible] Scholarships Scheme for young and [illegible]

Colombo Plan and Point Four Programme Scholarships and Fellowships

11. Colombo Plan Scholarships and fellowships for employees of the Union Ministry of Education and Scientific Research including its attached and subordinate offices and also those who are employed in all India integrated schemes which are co-ordinated in the Ministry for training/study in the United Kingdom, Australia, Canada, New Zealand and Japan

12. Awards for correspondence courses under the Colombo Plan for technical teachers and instructors in polytechnics and training and vocational centres

13. Point Four Programme Scholarships and Fellowships for the employees of the Union Ministry of Education and Scientific Research including its attached and subordinate offices and also those who are employed in all India integrated schemes for specialised training in the U.S.A.

U.N. and UNESCO Scholarships and Fellowships

14. Fellowships/Scholarships under the UNESCO's Participation Programme for Member States for study/training in specific fields

15. UN Social Welfare Fellowships/Scholarships for suitably qualified social welfare personnel to gain additional knowledge and experience in their particular subjects of specialisation.

16. United Nations Technical Assistance Administration programme of Scholarships and Fellowships for the employees of the Union Ministry of Education and

Scientific Research and its attached and subordinate offices for training/study in the United Kingdom Australia Canada, New Zealand and Japan

Foreign Governments Scholarships/Apprenticeships

17 Belgian Government Scholarships for post graduate research in mining metallurgy chemical engineering or naval architecture

18 East German Government Scholarships for post graduate study for engineering/technical teachers

19 French Government Scholarships for post graduate study for engineering/technology

20 French Government Scholarships for specialised training in agriculture veterinary science medicine public health administration, architecture etc

21 Federal Republic of Germany (West Germany) Scholarships for post graduate study/training of engineering/technical teachers and teachers of humanities and basic sciences

22 Federal Republic of Germany (West Germany) and the German Academic Exchange Service Scholarships for post graduate study/research in science engineering and technology

23 Italian Government Scholarships for post graduate study in fine arts painting and sculpture

24 Japanese Government Scholarships for post graduate research in any branch of science or engineering or technology

25 Netherlands Government Scholarship for post graduate research work in science agriculture, medicine, civil engineering etc

26 Norwegian Government Scholarship for post-graduate study in science and humanities

27 North Rhine Westphalia (West Germany) Government Scholarships for technical training in industries

28 Swiss Government Scholarships for post graduate study/research in any branch of science, technology or engineering

29 Swedish Government Scholarships for post-graduate study/research in any branch of science technology or engineering

30 U S S R. Government Scholarships for post graduate study/research in any basic science, agriculture, medicine or technology

31 Yugoslav Government Scholarships for higher study/research in agriculture medicine painting or technology

Foreign Institutions /Organisations Scholarships/Fellowships for study/training

32 British Council Scholarships for research in Commonwealth studies social studies public administration and English phonetics

33 Brush Aboe Group Commonwealth Scholarships for training in mechanical and electrical engineering in U K.

34 Federation of British Industries Scholarships for practical training in different branches of engineering in British Industries in U K

35 Free Hanseatic City of Hamburg (West Germany) scholarships for post graduate study and research at the University of Hamburg.

36 Hamburg Chamber of Commerce Scholarships for [illegible]

37 Hamburg University Students Union Scholarships for post graduate study for engineering technical teachers.

38 International Association for the Exchange of Students for Technical Experience for practical training in the member countries

39 London University Institute of Education Fellowships for investigation in some line of educational problems at the London Institute of Education

40 London Transport Executive Scholarships for practical training in traffic operation and engineering.

41 Philippines University Scholarships for post graduate study in history and political science

42 Royal Commission for the London Exhibition of 1851 and Rutherford Scholarships of the Royal Society London for research in pure or applied sciences.

STEEL UNDER SECOND PLAN

Expansion of the iron and steel industry has been given the highest priority since more than any other industrial product the economy as a whole is dependent on it. Conditions in India are favourable for the production of this vital material at lower cost than in most countries.

The Plan envisages the construction of three steel plants of one million tons ingot capacity each in the public sector and the provision of facilities in one of them for the production of 350 000 tons of foundry grade pig iron. A total amount of Rs. 350 crores is provided for these factories which will be situated at Bhilai in Madhya Pradesh, Rourkela in Orissa and Durgapur in West Bengal. In addition Rs. 6 crores is to be spent for the expansion of production by the Mysore Iron and Steel Works. By 1960 61 these plants in the public sector will together be producing about 2 million tons of finished steel.

In the private sector, the combined capacity of the Tata and Indian Iron and Steel plants is expected to reach 2.3 million tons. Thus the total output of steel from major producers is likely to reach 4.3 million tons per annum by the end of the plan as against the 1955-56 level of 1.3 million tons.

TURMOIL IN MIDDLE EAST

During the middle of July such swift and dramatic developments took place in West Asia that the world was brought perilously near the brink of war. On July 14 an army coup d'etat in Baghdad abolished the Iraqi monarchy, ended the regime of the pro-Western and much despised Premier Nuri es-Said and proclaimed the first Iraqi Republic. This military coup shocked the Western nations and it was branded as the worst blow to Western interests and prestige in the Middle East since the nationalisation of the Suez Canal. Panic stricken the U S landed more than 1500 marines in Beirut on July 15. Strong enforcements followed during the next few days and by July 20 over 10 000 American troops were stationed in the Lebanese capital and its environments. King Hussein of Jordon, fearing a coup d'etat in his own kingdom appealed to Britain and U S for military aid. On July 17 18, more than 2000 British para troops were air lifted from Cyprus to Amman, the capital of Jordan. The armed intervention by Britain and United States in the internal affairs of Arab countries sent a wave of indignation throughout the peace-loving nations of the world. The Soviet Government declared that the Soviet Union could not remain indifferent to events creating a grave menace in an area abutting on its frontiers, and reserved the right to take the necessary measures dictated by the interests of peace and security. While warning the Western Powers of the grave consequences of the step they had taken in Lebanon and Jordan and calling them to withdraw their forces from these Arab countries, the Soviet Union massed its forces numbering 500 000 men on her borders with Turkey and Iran. Syria took fulldress defence measures in preparation for all eventualities. King Hussein of Jordon backed by British military power proclaimed himself head of the Arab Union of Jordan and Iraq and stated that he would crush the Iraqi rebellion. Baghdad radio announced that the Iraqi republic had withdrawn from the Arab Federation with Jordan. President Nasser flew to Moscow and conferred with the Soviet Prime Minister Mr. Nikita Khrushchev in an 'atmosphere of amity and understanding' and according to a Cairo report they had decided to "take certain steps to preserve peace in the Middle East." Iraq and U.A R concluded an agreement to stand as one nation in defence against any aggression. Pandit Nehru declared that if Big Powers intervened in the internal affairs of Iraq it might lead to a world war.

Mammoth anti Western demonstrations raged from Moscow to Pyongyang protesting against the Western intervention in Lebanon and Jordan. In Moscow demonstrators part of a crowd of 75 000 stoned the American Embassy. In Peking the Chinese capital 500 000 people paraded through the Tien An Men Square, carrying banners demanding the

withdrawal of U.S. marines from the Lebanon and British troops from Jordan. A crowd marched to the office of the British Charge d' Affairs and pasted to the building posters which read: "The Yanks and British should go home." In London after Iraqi students proclaimed their support of the new Baghdad regime, demonstrators, among them students and workers from abroad, marched through the streets protesting against military intervention in West Asia. The British Labour Party opposed despatch of troops by Britain to Jordan. In the United States certain Democratic leaders have been very critical of Mr. Eisenhower's action in Lebanon. The Permanent Secretariat of the Afro-Asian Solidarity Council in Cairo sent telegrams to the U.N. Secretary-General and the Chairman of the Security Council condemning the American military intervention in Lebanon which violated the U.N. Charter and might lead to the outbreak of a new world war. The Speaker of the Lebanese Parliament Mr. Adel Osseiran, who holds the second highest position in the State according to country's constitution sent a telegram to Chairman of the Security Council, protesting against the landing of U.S. troops in Beirut. The rebel leaders in Lebanon were angered by U.S. intervention in their internal affairs and had expressed their determination to give a fight to the foreign forces. Even the Government army in the Lebanon was not happy at this development. It became very difficult for the U.S. and Britain to resist the pressure of world opinion for long and they realised that they have been more or less isolated from world opinion in consequence of their armed intervention in West Asia. Both America and Britain tried to show that they had acted in consonance with the U.N. Charter (Article 51).

President Eisenhower said that the stationing of U.S. marines in Lebanon was in response to an urgent request from Lebanon's President Chamoun. Other reasons given for sending U.S. forces to Lebanon were (1) to protect the 2500 Americans in Lebanon (2) to preserve Lebanon's territorial integrity and independence which was being threatened by U.A.R. subversion. All these reasons were a whitewash for the blunder which U.S. had hastily committed. Article 51 of the U.N. Charter says: "Nothing in the present Charter shall impair the inherent right of individual or collective self-defence if an armed attack occurs against a member of the United Nations until the Security Council has taken measures necessary to maintain international peace and security." The ingredients of this Article are not satisfied in either case because there had been no armed attack on Lebanon or Jordan. On July 2 the U.N. Observer Group in Lebanon had despatched its considered report to the U.N. Secretary General Mr. Dag Hammarskjoeld, virtually clearing the United Arab Republic of the charge of massive interference in Lebanon. The U.N. Secretary General had also declared, after touring the West Asian countries that he found no evidence of any mass entry of U.A.R. forces into the strife-torn Lebanon. Mr. Galo Plaza, Chairman of the three-nation observation group on the Lebanon, told a press conference "we have not seen proof of massive interference" by the U.A.R. as alleged before the Security Council by the Lebanese Government. He said "If there was such intervention we should be able to detect it."

Regarding the danger to Americans in Lebanon the chairman of the Lebanon Parliament said: "No danger has ever arisen to the life and interests of the Americans residing in Lebanon. The Lebanon conflict has been in progress for 67 days (on July 17) but not a single Lebanese has intended to threaten the life or interests of Americans." It has not been proved and no substantial evidence had been put forward regarding the outside danger to Lebanon's territorial integrity and independence. The strife in Lebanon is purely a domestic affair and every country has the right to mould its destiny as it deems proper. All the pleas put forward by the United States for an armed aggression in Lebanon carry no weight.

Britain came out with its own version of the reason for sending troops to Jordan. British Prime Minister Mr. Harold Macmillan said on July 17 in the House of Commons: "Our purpose in dispatching a small force is to prevent foreign aggression and, as far as we can to protect the integrity of Jordan and in making that request the Jordanian King and Government assured us that they had no intention that British troops should be used in order to enable Jordanian forces to attack Iraq." He added "There is a broad understanding that we have acted within the letter and the spirit of the international law." Mr. Macmillan told the House of Commons that the British Government had [illegible] information of a [illegible] plot against Jordan which was due to [illegible] on July 17 (the day on which British troops landed in Jordan). The British Foreign Secretary Mr. Selwyn Lloyd said at a Washington [illegible] on July 2[illegible] that one purpose for sending

troops to Jordan) is to try to protect small countries from the threat of aggression direct or indirect and to give these small countries a feeling of security when their independence and integrity is endangered.

Mr Selwyn Lloyd said on July 16 in the House of Commons 'I believe a country had the right to ask for help against aggression, whether direct or indirect I believe another Government has the right to respond to such request—unless countries are prepared to respond to such appeals for help, we shall see one country after another go down to this form of aggression'

The speeches of both the British Prime Minister and the Foreign Secretary are a clear violation of the U N Charter If the countries act themselves without the sanction of the United Nations then for what purpose was the world Assembly created? It is a common knowledge that Jordan was threatened by no one and the British Prime Minister was unable to give any facts or instances testifying to this danger The armed intervention of U K. in Jordan was meant to suppress the national liberation movement in Arab East They went to impose again the yoke of colonialism on the Arab peoples and to retain the possibility for Western monopolies to continue the exploitation of the natural resources and manpower of Arab countries Britain, pretending to help King Hussein tried to regain its colonialist position in the Jordan forfeited to a considerable extent in 1956 when on demand of the Jordanian people and King Hussein the British Military advisers headed by Glub Pasha who actually controlled the Jordanian army were expelled from the country Another purpose of Britain in militarily occupying Jordan was to use the country, along with the American occupied Lebanon as a spring board for the suppression of the popular revolution in Iraq but this purpose was frustrated as the new Iraqi regime was popular from the very beginning and it secured recognition by a number of countries in Asia and Europe

Is the armed intervention by the U S in Lebanon and by Britain in Jordan in keeping with the standards of international law and in particular with the U N Charter as Mr Harold Macmillan tried to present it in the House of Commons ?

In order to reply to this question let us first consider the facts of the case.

In the near and Middle East an active national-liberation movement is now proceeding with the aim of eliminating the remnants of the Arab countries colonial dependence and of attaining their unity In Lebanon this found expression in the uprising of the patriotic forces of the country against the reactionary regime of President Chamoun who sought to force foreign fetters upon the Lebanese people

From the viewpoint of international law, a revolution civil war change of Government or change in the form of Government of any country are purely the home affairs of the people of that country The U N Charter records the sacred right of every nation to self-determination, to free election of its government, according to its own choice. International law and the U N Charter categorically prohibit any intervention in this process not only on the part of any country, but even on the part of the U N

As far as Jordan is concerned no events whatsoever, analogous to the Lebanese—neither uprising nor civil war—took place there Nevertheless British troops entered the country The U.S and Britain acted at their own risk and at their own discretion as though it was a question of landing their troops in one of their overseas possessions and not on the territory of a sovereign state a fullfledged member of the U N They clearly violated the U N Charter and the international law

Oil Politics

A deep-rooted reason for the Western armed aggression in the Middle East is that this area is rich in oil Oil is needed to run the peaceful industrial machines of the West as well as for their military machines of war For U S A and Britain the Lebanon is an important transit point for pumping out Middle East Oil About 30 million tons of oil are pumped out annually through the three pipelines which have been laid on the territory of the Lebanon and which belong to the British Company, Iraq Petroleum Company and the American firm 'Aramco More than 70 per cent of known oil supplies of the so-called free world are in West Asia and America with only 15 per cent of the world's oil reserves cannot go on producing nearly half its crude oil output without falling back on West Asian reserves In the past ten years the West has invested in oil prospecting production and pipelines as much as 150 million pounds (roughly Rs 200 crores) and a good portion of this money has been spent in West Asia The major U K asset in Iraq is the U K share in the Iraq petroleum company for which the latest balance sheet figure showed assets of some 129 million pounds. Iraq is one of the major oil producing countries of Western Asia Oil from Iraq is piped to the Mediterranean

through Syria and the Lebanon. The total production of crude oil in 1956 was nearly 6,50,000 barrels a day. The major part of the oil exports from Iraq go to Western Europe, principally France, Italy and Britain. Other two big oil producing countries in the Middle East are Saudi Arabia and the Sheikhdom of Kuwait. The ubiquity of oil in modern industry is such that the oil flow from Western Asia to West Europe cannot be reduced even fractionally without affecting the industrial structure of Western Europe and ultimately the political society that rests on a viable economy. That is why the revolt in Iraq set alarm bells ringing in London, Paris, Washington and a dozen other capitals. No doubt oil politics played a part in sending United States marines to the Lebanon and British para troops to Jordan in mid-July. But "oil politics" also certainly inspired the Soviet Union's move into the Middle East in the autumn of 1955 and its subsequent military and economic support of President Gamal Abdel Nasser of Egypt.

Arab nationalism or pan Arabism does not exist because of oil. But it feeds on oil in the sense that its leaders understand and are excited by the power that possession of that oil would give them. The extent to which the Western Powers will go to protect their interest in the Mid East oil field cannot be underestimated. They will not stand by and watch the Soviet Union and its West Asian friends take over control of the oil fields.

Security Council Summit & U.N.

A meeting of the United Nations Security Council was called on July 15 to discuss the situation in the Middle East. Three different resolutions were moved by the United States, Sweden and the Soviet Union in regard to Middle East situation but all the three were rejected. The Soviet motion calling for the immediate withdrawal of the American and British troops from the Lebanon and Jordan was defeated with only Russia voting in favour.

The Soviet delegate vetoed the American resolution calling for dispatch of international emergency force to relieve the U.N. observers in the Lebanon after most members of the Council had voted for it.

The Council then rejected a Swedish resolution proposing the suspension of the observation of the United Nations observation team in the Lebanon.

After the Soviet proposal had been rejected, the Soviet delegate Mr. Arkady Sobolev gave a warning that the ... [illegible] Today's vote will rest as a dark stain on the Security Council and to-day will be a dark day in the annals of the United Nations. In the face of the armed intervention in the affairs of the Arab states by the U.S. and the U.K., the council took no steps whatsoever to put an end to these aggressive actions which have posed a threat to peace and security not only in the Near and Middle East but the whole world."

On July 19 Mr. Khrushchev wrote to Prime Minister Macmillan (Britain), Prime Minister Nehru (India), Gen. De Gaulle (France) and President Eisenhower (America) calling for a "summit" meeting outside the U.N.

On July 21 the Soviet Government proposed that European States as well as U.S.A. sign a treaty of friendship and co-operation.

On July 22 the Soviet Union vetoed the Japanese resolution in the Security Council calling for expansion of U.N. observers' activities in the Lebanon.

President Eisenhower wrote to Mr. Khrushchev suggesting that the U.N. Security Council was the proper forum for the discussion of Middle Eastern affairs. Mr. Khrushchev agreed to attend a summit meeting within the U.N. Security Council provided Prime Minister Nehru of India and Arab leaders were invited as well. President Eisenhower agreed to a meeting of the Security Council where the nations involved would be represented by heads of state. In Security Council only the members can vote. Mr. Khrushchev thought he would not have majority in the council. Mr. Nehru who welcomed the idea of the "summit" meeting outside the Security Council rejected the idea of a meeting under the Council. At a press conference in Washington Mr. John Foster Dulles said that any decision to invite India to a West Asian summit meeting would cause serious problems because a flood of other countries also would want to be represented. Mr. Khrushchev accused the United States of obstructive ... [illegible] summit meeting. On August 1, President Eisenhower wrote to Mr. Khrushchev that he was ... [illegible] special meeting of the Security Council ... [illegible] August ... [illegible] Security Council ... [illegible] August ... [illegible] a Security Council ... [illegible]

On July 31 Mr. Khrushchev ... [illegible] Peking ... [illegible] President ... [illegible] Mr. Khrushchev and Mao Tse-tung ... [illegible]

assailing the 'aggressive imperialist bloc headed by the United States monopoly groups On August 5, Mr Khrushchev demanded an extraordinary session of the U N General Assembly to discuss the Middle Eastern situation. Mr Khrushchev regretted that the U K and the U.S did not think it possible to accept the Soviet proposal to convene a conference of the heads of Governments of Russia, U K the U.S France and India with the participation of Mr Dag Hammarskjoeld On August 6 President Eisenhower said he would be ready to personally attend a special U N General Assembly session on West Asia, if it were necessary and desirable Mr Nehru was pessimistic about the U N General Assembly session accomplishing anything useful Mr Sobolov the Russian delegate at U N, accused U.K. of preventing the proposed summit conference as suggested by Mr Khrushchev In a note written on August 8 Mr Harold Macmillan reproached Mr Khrushchev for turning his back on the proposed summit level meeting of the Security Council.

The U N Secretary-General Mr Dag Hammarskjoeld on August 8 placed before an emergency session of the General Assembly a West Asian peace plan calling for a new declaration by all Arab Countries pledging non-interference in each other's affairs The plan also called for a programme of economic cooperation in the area

President Eisenhower proposed to the U N General Assembly on August 13 a six point plan for building up 'enduring peace in West Asia and the Soviet Foreign Minister Mr Andrei Gromyko reacted to it by calling the U.S the main threat to peace in that area

Mr Eisenhower, making his first personal appearance at the United Nations in nearly five years, said that the six elements of his proposed programme should be viewed as a whole They were: (1) U N concern for the Lebanon (2) U N measures to preserve peace in Jordan (3) An end to the fomenting from without of civil strife (4) A U N peace force (5) A regional economic development plan to assist and accelerate improvement in the living standards of the peoples in the Arab countries and (6) Steps to avoid a new arms race spiral in the area

Mr Gromyko while agreeing to some of the points proposed by the U.S President declared that the first step in any constructive programme for West Asian peace should be the immediate and complete withdrawal of U S. and British forces from the Lebanon and Jordan.

Mr Arthur Lall India's delegate to the United Nations said there cannot be a talk of a workable settlement of Near East problems so long as foreign troops remain in the Lebanon and Jordon Mr Saeb Salam leader of the United opposite Front of the Lebanon rejected Mr Eisenhower's six point plan for West Asia Egypt also rejected the plan Mr Nehru, in a statement in the Lok Sabha emphatically declared himself against proposals for enforced neutrality of any of the West Asian countries as the approach of compulsion was unlikely to be accepted by Arab nations, which could not be treated like tender infants' By August 20, Norway was preparing its own draft resolution to be moved before the General Assembly and Pakistan put forth her own proposals for the solution of West Asian problems

Though the U N General Assembly is still wrangling over the solution of Middle Eastern probelms and foreign troops are still stationed in the Lebanon and Jordan the dangers of an armed conflict have receded and the war clouds have dispersed

Present Situation

The situation in the Middle East as on August 20 was as follows

Lebanon—The civil war in this country has virtually been stopped since the landing of the U S marines in Beirut A new president Mr Shehab has been elected on July 31 Mr Chamoun will quit his post on September 23 when the new President will take over Mr Shehab had stated that the primary task before the country was to get rid of foreign troops A token withdrawal of the U S marines from Lebanon has already taken place Mr Chamoun in a press statement on August 19 said that the Lebanon would not press its complaint against U A R. intervention during the present U N General Assembly session It is expected the country will adopt the policy of neutrality under the new President and shall not align with any power bloc

Iraq—The new Republic regime has firmly established itself and almost all the countries have given it recognition Its representative has been admitted in the U N A very big loss to Western Powers Iraq has become a great asset to Arab nationalism

Saudi Arabia—The country has reconciled itself with U.A R. and according to Mr Faisal, brother of King Saud, all misconceptions between the two countries have been removed Saudi Arabia kept its strict neutrality through-

over the Middle East crisis created by Western armed intervention

U A R.— President Nasser's prestige has been greatly enhanced in the Arab countries. He has become a symbol of Arab nationalism Rumours are in the air that Iraq and Saudi Arabia are considering of joining the United Arab Republic

Jordan—There is great restlessness in the country as its King has openly aligned with Western Powers. There is martial law throughout the country and more than 200 high army officers and politicians have been put behind the bars. The Kingdom is propped up with the help of British bayonets. It is fore seen that when the British paratroopers would leave the country King Hussein may meet the same fate as his cousin, the late king Faisal of Iraq

The Solution

Middle East is the cockpit of Power blocs and unless the two opposite Powers Communist Russia and Capitalist Western Powers cease to interfere in the internal affairs of Arab nations and respect their neutrality and national aspirations this area will always be a danger to peace The fear of the intentions of the opponents dominated the minds of the leaders of the major Powers This fear inevitably distorts their perspective and leads to conflicts Speaking at a meeting in New Delhi Mr Nehru deplored the fact that the Western nations had failed to come to terms with the growing nationalist movement of the Arabs which was bound to do away with foreign domination of the region and end the feudal order wherever it existed The invasion of Egypt by Britain and France in 1956 and the landing of U S marines in the Lebanon and British paratroopers in Jordan represented attempts to perpetuate a social and political order which had been condemned to extinction by history Pandit [illegible] that [illegible] was the only way out of the present crisis [illegible] world affairs [illegible] to learn to tolerate those who differed from them and their [illegible]

[illegible] said in the Lok Sabha [illegible] may consider the events in West Asia [illegible] One has to take [illegible] view of developments [illegible] For hundreds of years these countries were under [illegible] domination. [illegible] at the end of World War I. The Western Powers did what they liked with them without any reference to the wishes of the people

Probably there was no organized way for the people to express their wishes [illegible] made, new nations were created [illegible] they were viable or not did not much concern and the contacts of the Western Powers were with the rulers of these own creation [illegible] with the landed gentry of these areas They had few contacts with the people."

The major development in West Asia said Mr Nehru, was the growth of Arab nationalism in a very powerful, [illegible] Egypt took the lead in this matter [illegible] under the wise leadership of President Nasser has played a very important part. President Nasser in fact, became the most prominent symbol of this Arab nationalism and this [illegible] which is patent, was [illegible] by many Powers An attempt was made to split up the Arab countries, to [illegible] fact Arab nationalism"

No military intervention can win the [illegible] of the Arab people Due recognition of the national aspirations of unity and freedom [illegible] the only way for the West to make the Arab countries friends of the Western nations

SOME FACTS ABOUT OUR RAILWAYS

By rail about one per cent of India's population travels daily approximately 1,200,000 miles

On the 1956 57 results, passenger trains covered distances aggregating 3[illegible] miles daily while goods trains [illegible] another 237,000 miles daily

At the end 1956 57 Indian railways had 81 hospitals and 414 dispensaries in addition to the normal medical facilities available to citizens. Three more hospitals and 11 dispensaries have been added [illegible]

To provide recreational facilities to their employees and their families the Indian railways have [illegible] 416 institutes and 51 clubs The [illegible] Railway has the largest number of such [illegible]. The Western Railway has the smallest—3[illegible]

The Chittaranjan Locomotive Works had produced 1625 locomotives by the end of December 1957 — [illegible] new [illegible] produced [illegible]

[illegible] was [illegible] 0 2 million tons

THE PLAN IN PERSPECTIVE

By PROF D G KARVE

THE process of development which started with the First Five Year Plan now over seven years ago was gathering normal momentum In fact when the Second Five Year Plan was being prepared there was an air of general optimism prevalent among almost all sections Things had generally gone so well that almost against our better judgment we seemed to believe that we may actually work the miracle of planning without tears

This however was in the nature of things impossible We have now come up against some of the inherent blocks in our way of progress The Plan is among other things an effort to anticipate and to provide against these blocks We need not therefore be surprised at the vicissitudes of the Plan Instead, we should sit up take notice and co-operate in the further progress of the Plan

An Unpleasant Sensation

The National Development Council which met early in May was informed by the Planning Comission that the available resources for the Second Plan could no longer be estimated at anything above Rs 4 800 crores as against the earlier estimate of Rs. 4 500 crores To be told at the commencement of the third year of the Plan that instead of there being a prospect of a further increase in the size of the Plan it must be severely cut was indeed a jolt That such a check was expected for some time did not take away from the unpleasantness of the sensation when it came.

The National Development Council recognized that the state of available resources of the Plan was such that they could not positively commit the nation to an expenditure of more than Rs 4,500 crores On the other hand the needs of even a moderate tempo of development were so urgent that the country had to be told as to how much further spurt of effort on its part would be called for to take it over the hump in the prescribed period of the Plan The extent of this extra effort was measured by the additional or B Plan of Rs 300 crores

Record Not Discouraging

It is in this light that the action of the Development Council apparently at variance with the advice of the Planning Commission has to be viewed The record of actual effort made by the nation as a whole during the first two years of the Plan is far from discouraging Of all the ways of raising Plan resources the most unpopular and therefore, the most difficult is taxation The schedule of resources of the Second Plan estimated a total addition Rs 450 crores of taxation Actually the revised estimates of the Plan have put the likely figure at Rs 900 crores. This would mean that not only has the tax effort been upto the mark but it has so far exceeded that mark as to more than make up even for the uncovered gap of Rs 400 crores left in the original estimates A democratic nation which has shown itself capable of this strenuous performance need not despair either of its Plan or its institutions of voluntary discipline.

The question then arises as to what it is that had led to a likely trimming of the Plan and general fear of slowing down of the pace of development There are several answers to this question First of all there is the additional cost of defence over and above the Plan estimates which is expected to be of the order of Rs 225 crores Now, it is quite easy with the normal amount of hindsight for a critic to observe that this order of defence expenditure should have been foreseen and provided for by the planners But any one who in the year 1955 would have forecast a rapid deterioration in the internal stability of some of our neighbouring States, would not only have been dubbed a scaremonger but he would actually have been charged with embroiling our relations with a foreign Power The sizeable addition to our defence expenditure is an unexpected block in our way to peaceful development for which we cannot hold the planners responsible

Food Front

We cannot say the same thing about comparatively poor performance on the agricultural front generally and on the food front in particular There are three specific aspects of agricultural planning in regard to which adequate action does not seem to have been taken to safeguard the attainment of production targets finally approved in the Plan First are the obvious vicious udea of seasons No- [illegible]

solid ground for being surprised by bad seasons. They are with us all the while. Rather it is an unusual run of good seasons which should put a planner on his guard and should make him more cautious, not less, for the immediate future. Secondly, while we all demand a spirit of sacrifice and dedication on the part of us all, a comprehensive and long-term plan of investment has to be carefully worked out in specific quantitative terms. In particular if the targets of a plan initially worked out are for some reason raised by 20 or 25 per cent, it would be utterly unrealistic to expect that mere dedication and better organisation would produce the overall improvement. Even as a wish this would be too good to be true. As a plan procedure it just would not register.

Planning performance has been found to be in need of further attention in one basic area of agricultural development. The First Five-Year Plan was characterised by a high content of irrigation and power schemes. Some other schemes of rural development such as minor irrigation works, fertilisers and seed multiplication were also calculated to add to our potential for agricultural production. And yet two of the most vital links in the chain of an integrated agricultural plan were seen to be only incompletely forged.

Active Price Policy

Any productive activity on the part of the cultivator beyond what has traditionally been described as a way of life has to justify itself in terms of assured profit. An assured market at reasonable prices must be within reach of a farmer to justify his active interest in progressive farming. The Government generally and the Food [illegible] in particular are becoming increasingly aware of this truth. But [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]. More [illegible] [illegible] importance of [illegible] [illegible] [illegible] [illegible] [illegible] system of [illegible] and [illegible] an adequate [illegible]. This [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]. In the meantime [illegible] greatest gain.

Farmers' Cooperatives

But by far the greatest need felt under intensified and sustainable [illegible] has been found to be in the setting up of proper institutions to make the most economic use of the small patches of land which have been and which are being distributed among our farmers. As a part of our democratic and socialistic order we have decided to [illegible] [illegible] of small peasant proprietors. If the [illegible] of land by a large number of small holders is to be made compatible with the success of an ambitious agricultural plan, farmers' cooperatives including what are called service societies as well as joint cultivation societies, must be established at a [illegible] [illegible] rate of [illegible] activity. The Second Plan appeared at its inception to have been fully appreciative of this need. But the [illegible] progress of land reforms as well as of cooperation seems to have been totally inadequate to justify the hope that the targets of the agricultural plan will be reached, or that the vast potentialities created by irrigation and power projects as also by the development expenditure of an overall nature such as Community Development will be fully or expeditiously realised in the form of actual production.

Apart from the quality of planning [illegible] [illegible] [illegible] of qualitative [illegible] is badly needed. Without [illegible] [illegible] [illegible] [illegible] [illegible] the large capital investment in the [illegible] sector will be [illegible] [illegible] [illegible] [illegible] [illegible]. Here also, it is only an [illegible] [illegible] [illegible] [illegible] [illegible] can make the [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]. A [illegible] of cooperative [illegible] [illegible] [illegible] the [illegible] as well as the [illegible] levels has already been created. What is now needed is a greater [illegible] in the face of [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] irrigation and power [illegible] and [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]. We are [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] in this [illegible] [illegible] [illegible] [illegible] we have [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible].

Foreign Exchange Position

[illegible] [illegible] [illegible] of [illegible].

eign resources While some aspects of our foreign resources gap can indeed be traced to avoidable lapses a large part of the explanation of this unwelcome experience is again, to be found in the incompletely refined stage of our tools of planning One hopes that the lesson of the still continuing unbalance of foreign payments has not been lost on us

In contrast with the agricultural sector the manufactures especially of consumer goods seem to have done well in fact better in some respects than the Plan had contemplated As, however the cost structure of industry has become somewhat rigid the effect of increased production on prices is negligible On the other hand Plan expenditure financed partially out of created money is running at a fairly high level The Planning Commission has kept in view the operation of these tendencies in redrawing its programme of further investment Even in the reduced total allocation of Rs 4 500 crores, allotment for agriculture and village industries has been kept at the old figure while the investment in industry and transport is stepped up by Rs 190 crores Both irrigation and social services have been correspondingly slowed down It is obvious again that agriculture is still without its legitimate share of national investment and if the much desired targets of agriculture production fail to be reached it will be for the lack of adequate resources and of organizational planning

State Government Record

A feature of the recent appraisal of the Plan is the generally unsatisfactory record of State Governments in the matter of raising resources The State Governments have not only failed by over Rs 50 crores in reaching their targets of taxation increase but most of their gains amounting to Rs 170 crores from recent redistribution of resources between States and the Centre have been utilized for non plan and even non development expenditure It may be that States have some explanations of their own to offer But broadly it is true that unless the States who are near the spending end show greater determination both for raising revenues and for instituting economies planning is likely to prove an improvident process

Even to carry out the modest target of Rs 4 500 crores the Planning Commission has urged the immediate need of raising additional resources of Rs. 240 crores To attain this figure further taxation by State Governments of about Rs 60 crores additions to small savings of about Rs 60 crores and economies in non plan expenditure of about Rs 80 crores are necessary These are stiff tasks but they are no stiffer than what are prescribed for the absolute minimum of internal investment which must be incurred to keep up even a reasonable rate of development. The extent to which we are able to help ourselves, will also determine the extent to which other friendly nations will be ready to help us A critical but determined and helpful attitude on the part of the people and an increasingly competent leadership on the part of Government are called for if the momentum of our planned development is not to be lost.

EXPORT OF HANDLOOM FABRICS

The handloom industry today occupies an important place in Indian economy as an earner of much needed foreign exchange to meet the country's development requirements

Foreign exchange earnings from the export of handloom fabrics have been rising steadily in the course of the last two years While in 1954 55 earnings from the export of handloom fabrics were of the value of Rs 822 lakhs by 1955 56 it had arisen to Rs 846 lakhs

The principal foreign markets for Indian handloom cloth are Ceylon Aden Iraq South Arabia Sudan, British West Africa and Malaya Among the rest U S A offers a good potential market for Indian handloom fabrics

The Government of India have from time to time sponsored schemes for stepping up export of handloom goods (The All India Handloom Board set up in November 1952 is implementing an external marketing scheme to expand and establish foreign markets for Indian handloom fabrics.

Under this scheme four handloom cloth marketing officers have been appointed at key centres in the Middle East and the Far East Handloom cloth emporia have also been set up at Aden Bangkok Chittagong Colombo Karachi Rangoon and Singapore Besides Indian Trade Representatives in different countries of the world have been asked to take special measures to promote the interest in Indian handloom cloth in their respective regions

The All India Handloom Board also recently decided to introduce a scheme for inspection and quality marking of goods intended for export An organisation for this purpose is being set up at Madras

INDIA'S UNION TERRITORIES

NESTLING in the north and east of India are the country's four Union Territories Himachal Pradesh, Delhi, Manipur and Tripura—almost equal to Ceylon in area, 24,143 sq. miles, and to Ghana in population, 45 lakhs.

People in the territories, (except in Delhi) share the same mountainous life, the same difficult conditions and the same backward economy. Their requirements are many, ranging from a road to an improved plough. But their incomes are limited. The leeway had to be made from somewhere. Therefore the Centre has brought them under its own umbrella.

The Parliament administers the areas directly through the Union Home Minister, who has an advisory committee of MPs and a few others in each territory to assist him in matters of general policy, legislation and budget. The territories have larger representation in Parliament, unlike the other federal Governments which have virtually disfranchised the directly administered areas.

Centre's Share

To the territories the *fostering* care of the Centre has ensured liberal grants. For instance, the local revenues of Himachal Pradesh, Manipur and Tripura do not contribute even 35 per cent towards their total expenditure. In Himachal Pradesh, the Centre's share is almost 65 per cent, in Manipur about 70 per cent and in Tripura more than 90 per cent. The Second Five Year Plan's allocation has trebled, Rs 4,641.7 lakhs from Rs 1,630.3 lakhs in the First Plan.

The per capita expenditure has also gone up. In Himachal Pradesh it was Rs 36 in 1956-57, but it went up to Rs [illegible] in 1957-58 and will be almost Rs 62 in 1958-59. [illegible] In Manipur it came to only Rs 29 in 1956 but it was raised Rs [illegible] 1958-59.

More Roads

One of the main needs of territories like Himachal Pradesh is a quick [illegible] which [illegible] roads. [illegible] the [illegible] [illegible] to bring them nearer [illegible] [illegible]. In Himachal Pradesh [illegible] 250 lakhs were spent on road [illegible] in the First Five Year Plan. In the Second [illegible] [illegible] of which Rs [illegible] lakhs have been spent during the first two years of the Plan.

Tripura which at present is cut off from the rest of the country is being linked by road with Assam through the Assam Agartala road. More than Rs 300 lakhs are to be spent on road development. In Manipur the work is [illegible] on the Cachar road and there is a provision of Rs 190 lakhs in the Second Five Year Plan for roads and other means of communication.

Several Schools

As the outside world reaches nearer to the territories their needs [illegible] of education [illegible] increasing. Manipur is now one of the few States in India where 80 per cent of the children population is attending schools. In the last year alone the total enrolment increased by 10,000 students. In Tripura the percentage of school-going children has gone up to 81 per cent as against 50 per cent in 1951. A polytechnic with civil and engineering courses has also been established.

In Delhi last year 34 *new secondary schools* and 46 new primary schools were opened. This year more schools will be added at an estimated cost of Rs 70 lakhs. Schools [illegible] are being provided [illegible] buildings, [illegible] of which were completed last year and 31 will come up during this year.

Stipends are being offered to train the local personnel. The Himachal Pradesh Administration is giving scholarships in different courses in engineering to 121 students, Manipur to 159 students and Tripura to 41.

Hospital facilities are also [illegible] rapid expansion. In Delhi a new medical college is to start during the current year. Already the territory's hospitals have [illegible] [illegible] 4,127 beds. In Tripura a Rs [illegible] lakh hospital is being built.

Deficit In Food

Even though mostly hilly, the territories are making every effort to achieve their food production [illegible] at present. More [illegible] better seeds and improved implements are being distributed [illegible] [illegible]. In Himachal Pradesh the [illegible] [illegible] Rs 21 lakhs in the First Five Year Plan [illegible] the [illegible] [illegible] [illegible] Rs [illegible] lakhs. In Manipur it has gone up from Rs [illegible] lakhs to Rs [illegible] lakhs and in Tripura from Rs [illegible] lakhs to Rs 31 lakhs.

Co operative societies have also been started in all the villages of Delhi and Himachal Pradesh In Tripura a State Co-operative Bank has been set up and 51 credit societies have been organised

Land Reforms

Side by side land reforms are being effected and one of the schemes has already been introduced in Himachal Pradesh Similar measures are under consideration for Tripura and Manipur A comprehensive scheme for cadastral survey in Tripura at an estimated cost of Rs 133 7 lakhs has also been put in operation The rehabilitation of displaced persons is taking place through 27 schemes costing Rs. 1 crore

All along the effort is to let the people themselves take the responsibility of implementing welfare schemes Therefore the institutions like Councils and Panchayats elected through adult franchise have been set up For instance Delhi has now a municipal corporation enjoying vast powers and embracing a large area In Himachal Pradesh Manipur and Tripura territorial councils have been established and they have been entrusted with the administration of welfare activities such as education medical services agriculture etc. In villages, panchayats are taking shape Himachal Pradesh has completed the job while Manipur and Tripura are starting on it. Delhi will follow soon

Island Territories

In addition to four Union Territories India has some island territories Andaman and Nicobar and Laccadive Amindivi and Minicoy They are also the direct responsibility of the Parliament and therefore, they are being given liberal grants for development In Andaman and Nicobar islands, the Centre is spending about Rs 2 000 *per capita* on the welfare of the people In Laccadive and Minicoy islands the expenditure has gone up from Rs 3 55 lakhs in 1956-57 to Rs 10 13 lakhs in 1957 58

The purpose of Centres indulgent and liberal attitude is to help the people in islands and Union territories to make up the leeway of generations and come to the level of more developed areas

---

DID YOU KNOW ?

Comets are so tenuous it has been estimated that 10 000 cubic miles of their tails contain less matter than a cubic inch of air These tails, as in the case of the Great Comet of 1843 may be 200 000 000 miles in length.

A light year a term used in expressing stellar distances is that distance traveled by light (speed 186 239 miles per second) in one year and is 5 873 185 800 000 miles Most of the stars are more than 100 light years away from the earth.

April 1958 marked the fifth anniversary and end of the first term of Sweden's Dag Hammarskjold as Secretary General of the United Nations New York the UN's host city paid tribute to him as he started his second term Its mayor Robert F Wagner described Mr Hammarskjold as the foremost diplomat of the world.

THE INDIVIDUAL AND SOCIETY

By J. B. KRIPALANI

THE mutual relations of the individual and society have ever been a theme of controversy. The controversy has increased since the beginning of modern times with the development of the analytical method used in the investigation of natural phenomena. Objects in nature are rarely given in their pure and simple form. For instance such a simple object like water when analysed is found to be a compound of hydrogen and oxygen in certain proportions. This discovery was made through analysis by breaking water into its simpler components. Having discovered its component parts through scientific analysis certain laws were discovered and water can be artificially manufactured. The 17th century scientists analysed matter into its component parts and were satisfied that it was made up of atoms. It was then said given the atoms and movement the whole world could be reconstructed. This naive belief may no more be considered scientific and something even more elementary of which matter is composed may have been discovered. But the analytical method by which laws of nature [illegible] formulated and discoveries made and the objects refashioned is the scientific method of knowledge of the phenomenal world. This method [illegible] certain and precise knowledge about nature. The method was first used in the [illegible] of physical science. It was [illegible] that [illegible] definite and certain knowledge the method would be fruitfully used in the [illegible] of social phenomena. [illegible] Hobbes was the first [illegible] in the social field. He thought that he had discovered the [illegible] which [illegible] society. [illegible] the voluntary [illegible] [illegible]

accepted this analysis of society and [illegible] theory of the social contract. [illegible] theory to justify [illegible] He held that the [illegible] by the ruler was [illegible] used the theory to justify [illegible] Government.

All these theories implied that [illegible] was some kind of artificial creation fashioned by individuals for certain purposes of their own. However further [illegible] into ancient [illegible] a specialty of [illegible] societies and the [illegible] soon exposed the fallacies of the social contract theories about the [illegible] society and the state. They were speculations not based upon [illegible] of existing or past societies. [illegible] study showed that everywhere the individual was born and nurtured in some kind of society. No society had ever been formed by a voluntary combination of human individuals. However the question [illegible] society did predate the individual [illegible] to be discussed. Today so far as [illegible] society is concerned [illegible] to be given up. It is as insoluble as whether the egg came first or the hen.

However, controversy yet persists whether the individual is of greater worth and value or society, whether the individual exists for the good and advancement of society or society for the good and advancement of the individual. [illegible] the controversy has [illegible]

nd human suffering. In the event both have been inimical to any well considered and balanced view of the crucial question of human liberty. The primacy of the individual adopted by the liberals made them justify or tolerate the glaring evils of the capitalist system with all its brutalities and inhumanities.

Slum conditions of living, low wage, long hours of work, child labour, disease and ignorance were tolerated, nay justified, on the ground of the freedom of the individual. Even compulsory primary education was opposed on the plea that it interfered with the liberty of the people. The anarchist view of the primacy of the individual has not yet been put in practice any where or it would have resulted in the disintegration of all organised authority producing chaos where each was the enemy of each.

In the contrary direction we have the fascist and the communist. The deification of society is the key note of Hegel's philosophy. The state according to him is the incarnation of the Divine Idea on earth. He says, "It is in the organisation of the state that the Divine enters into the real. Individuals have their worth and value in the state." This value was fulfilled in the Prussian state of those days. This philosophy was the basis of German absolutism, militarism, imperialism and the idea of world domination.

With a little twist in Hegelian thought, by making it stand as it were on its head, Marx expressed the same idea. But for him not the Divine Idea but concrete objective social relations produce the individual and give him whatever worth he has. According to him, "The individual is the ensemble of social relations." These social relations change by a dialectical process culminating in a classless society through a previous stage of dictatorship of the proletariat. In actual practice the Marxist twist given to Hegelian thought as it has unfolded itself in Communist countries has produced its own crop of suppression and tyranny with its power politics, its purges, liquidations, concentration camps, militarism and national expansion.

We have seen how unhistorical and fanciful analytical thought has created this dichotomy between the individual and society and how disastrous this artificial opposition has been in practical life. The more historical and scientific view would be to recognise the fact that the individual and society are intimately and organically connected with each other. One cannot think of the human individual without positing society. There is no such animal as an individual human being apart from society. What we meet everywhere is the social individual born and bred and having his being and finding his fulfilment in society. Everywhere what we meet is the social individual. Again, there can be no society but it must consist of such social individuals. Society and the individual act and react upon each other. What injures the social individual must ultimately harm society. After all it is the social individual who by his imagination, initiative and will has been responsible for all the new discoveries and inventions whether in the physical, intellectual, artistic, moral or cultural field. Even when such a social individual works in a team a new idea can occur either to one individual or simultaneously to a number of individuals in the team. Further, apart from whatever the individual suffers or enjoys as a member of the animal world, his pains and pleasures are intimately connected with the workings of society. It is only such a social individual who has rights, duties, obligations and responsibilities. When we talk of the liberty of the individual we do not talk of the liberty of the blond beast called man. Such a one can only have power but not liberty. Only the individual in society can have liberty in the real sense of the term. Here liberty is intimately connected with responsibility. On the other hand it would be a grave error to miss the wood for the trees. Social arrangements can depress or elevate the social individual, enhance or curtail his liberty. It can make him useful or useless as a producing unit. It can make for his prosperity or his poverty, unemployment, ignorance, ill health and premature death. A fine balance must therefore exist between the individual and society finding their real fulfilment in each other. This can be done when humanity gets rid of the idea of the dichotomy of the individual and society. A good man in a good society has ever been the dream of the poet, the philosopher and the prophet. It is only when the two mutually help each other that Rama Raj or the kingdom of heaven can be established on earth. (Courtesy *The VIGIL*)

HOW TO MAKE A SPEECH

YOU have been [illegible] to make a speech and have come to me with [illegible] questions. I'll try to answer them.

"[illegible] the [illegible]?" Yes. It will be a lot of fun and prove one of the most thrilling experiences of your life. Indeed, if I were you I wouldn't even wait for an invitation to make a speech. For the good of my soul I'd seek the first opportunity to make one [illegible] and every few [illegible] thereafter [illegible] church gatherings [illegible] meetings. [illegible] speaking is a sure way to leadership. I know hundreds of men who have [illegible] by one five-minute talk than they had by five years of [illegible] work. Once successfully master an audience with a short talk and thereafter you'll be a better man [illegible] yourself.

You won't make a brilliant speech. But don't let that worry you. Few people do. If you do [illegible].

"But I have never faced an audience [illegible]." Oh [illegible]. During the past 24 years I have watched 10,000 business men and women face audiences for the first time. Only one [illegible]. [illegible] that [illegible] for weeks [illegible]. He [illegible] years.

Of course you will [illegible] at first. [illegible] were [illegible]. [illegible] when I [illegible] years [illegible] that [illegible] will [illegible].

[illegible]

is to [illegible] that [illegible] of [illegible] before an audience. Good [illegible] merely enlarged conversation [illegible].

Remember nothing [illegible] yourself. [illegible] "Do the thing you fear to do" [illegible].

"What shall I talk about?" Talk about what interests you [illegible] Julius Caesar [illegible] that happen [illegible] man who could [illegible] people [illegible] of collecting [illegible] Funds than anyone else in the [illegible] this may be a [illegible] everybody [illegible] your [illegible].

"How [illegible] speech?" The [illegible] the secret [illegible] of the [illegible] will [illegible] Harry [illegible] the [illegible] a 10 minute talk and 20 hours [illegible].

[illegible]

interview the manager Go to your public library Spend an hour of preparation for every seven seconds you expect to talk Get ten times as much material as you can use You will then have an inner urge, a conviction—and your talk will almost make itself

'*Shall I memorize my talk?* No! Never! If you do you are likely to forget and the pangs of inflammatory rheumatism seem mild in comparison with the agonies endured by the speaker who suddenly forgets his canned speech But even if you do remember your talk you will be thinking of words not ideas Consequently you will have a far away look in your eyes and a far away sound in your voice The whole performance will lack life colour and intimacy No one will pay much attention to it

But if you *Think* out what you are going to say—think it out over and over again make a *few notes* and then *trust* to *Allah* to give you the words you need—your performance will be human and natural True your talk may be crude in spots your phraseology may be awkward you are almost certain to leave out some of the things you intended to say but what you do say will get over far better than a memorized oration

'*What gestures shall I make?* As far as the audience is concerned it won t be necessary to make any gestures But gestures will help you to let yourself go I use lots of gestures while speaking especially when I am talking on the radio I need them to help me warm up before the unresponsive microphone Similarly you can force yourself to speak with enthusiasm before an audience by merely forcing yourself to make any sort of emphatic gestures But don t plan them in advance Don t let any elocutionist drill you to gesture with graceful curves in front of a mirror Remember you are trying to instruct entertain or move an audience to action A speech is a psychological process not a physical exhibition of grace and you should no more be thinking of gestures than of words You ought to be thinking only of your ideas your message and your audience

Shall I put my hands in my pockets? The best place for your hands is at your sides They look well there, and they are in position to gesture easily when the urge comes But if your hands feel like a bunch of bananas hanging at your sides your mind won't be free and easy And the the condition of your mind is far more important than the position of your hands So put your hands in your pockets if that puts you more at ease You are trying to make something happen in the other man s head and heart If you can do that it doesn t matter what you do with your hands

How shall I deliver my talk? Speak sincerely from the heart You may make blunders but you can hardly fail to make an impression The most difficult problem I face in training me is to blast them out of their shells and inspire them to speak with genuine earnestness That is probably the most important rule in delivery Your audience must feel that you know what you are talking about that you mean it and have an intense desire to tell them about it

How can I tell whether I am being heard? One famous speaker used to put a friend in the back row with instructions to signal with his cane if he couldn t be heard Not a bad idea for you Remember your voice can t carry unless you have plenty of air in your lungs So breathe deeply Don t talk to the people in the front row Talk to the people in the back row Think your voice reaches the rear of the room Speak with energy Open your mouth You don t have to shout Even a whisper when it is made correctly, will carry to the back of a large hall

Shall I tell funny stories? No! By the beard of the prophet No! In the whole realm of speech making humour is the most difficult thing to achieve If you aren t a natural humorist—if you try to be funny—you may easily fail And if you fail you will only afflict your audience with pity and embarrassment

How long shall I make my talk? A famous editor once told me that he always stopped a series of articles when they were at the peak of their popularity That is a good time to stop a talk, too Stop when people are eager for you to go on Stop before they want you to Unless you are very much better than you think you are and unless your subject is very important ten minutes only should see you through

(From the *Psychologist Magazine*)

Growth Of Arab Nationalism

THE landing of American Marines and British troops in the Lebanon and Jordan has [illegible] the explosive [illegible] of the West Arab World.

It is a [illegible] of [illegible] which [illegible] the [illegible] on the crest of the [illegible] wave of nationalism. From tribe to [illegible] is a long road but the people of West Asia have been compelled to cover it [illegible] within a quarter of half a century.

The term "Middle East" is a [illegible] [illegible] in the military [illegible] created during the course of World War II. Now often called West Asia the area comprises the regions of the Fertile Crescent and the Arabian Peninsula and is the home of Islam and Arab nationalism the two dominant forces which have shaped the course of its history. Taken in its more general sense the [illegible] is complex covered by the term Middle East stretches from Morocco to Persia.

This area has witnessed the rise and fall of great civilisations. Egypt, Assyria, Babylon, Persia, Greece and Rome all of these have contributed [illegible] to the making of the [illegible] history of the Middle East. In its heartlands arose Islam [illegible] [illegible] the [illegible] of the [illegible] [illegible] large parts of [illegible] Asia.

Under the influence of Islam [illegible] [illegible] the [illegible] East [illegible] between Asia and Europe and [illegible] the role of a [illegible] between the two continents. In its extended sense the term Middle East is a vast area of an area covering some 3,700,000 sq. miles [illegible] [illegible] people. [illegible] the area [illegible] [illegible] and the [illegible] [illegible] [illegible] [illegible] of [illegible].

After [illegible] Ottoman [illegible] the [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] the [illegible] of the [illegible] when the [illegible] [illegible] came in 1918—the European powers were ready to take over.

The [illegible] in the [illegible] [illegible] of the [illegible] of the [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] in 1914 [illegible] that the Turkish [illegible] [illegible] military and [illegible] [illegible] [illegible] [illegible] [illegible] that the very [illegible] which was so enthusiastically [illegible] [illegible] [illegible] [illegible] [illegible] the Ottoman empire is today [illegible] Western [illegible] of the area. With the fall of the Ottoman [illegible] in 1918 Britain and France had the [illegible] the area under their control through the system of protectorates, condominiums and [illegible] [illegible]. Thus Iraq, Transjordan, [illegible] Egypt and the [illegible] African countries came under either British or French control. The system of [illegible] and [illegible] [illegible] [illegible] [illegible] [illegible] for over three decades.

Arab nationalism had already [illegible] and had begun to [illegible] [illegible] western [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] the Anglo-[illegible] Treaty [illegible] [illegible] [illegible] [illegible] [illegible] British [illegible] through the [illegible] of the [illegible] of [illegible] [illegible] in the first [illegible] [illegible]. The [illegible] World War II [illegible] [illegible] [illegible] [illegible] [illegible] it was only in 1946 that the [illegible] [illegible] [illegible] [illegible] [illegible] in 1947 [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] Arab [illegible] [illegible] [illegible] [illegible] [illegible] Arab nationalism.

[illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] in 1956 [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] Iraq [illegible] in 1958 [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] Lebanon was under

a French mandate until 1941 when it was declared independent in the teeth of Syrian opposition. Saudi Arabia was the creation of King Ibn Saud (1882-1953) who had seized the Emirate of Riyadh in 1901 and by 1914 had conquered all of Nejd and Hasa and proclaimed himself King of Hejaj and Nejd in 1927. Five years later the entity we know now as Saudi Arabia had come into its present shape. In Persia an army revolution had brought into existence a new state when in 1921 Reza Shah Pahlvi seized power and founded the Phalavi dynasty in 1925.

The interests of Britain and Russia came into conflict in Iran and in 1941 the country was occupied by Allied troops. The end of the war saw the termination of the Allied occupation and by 1951 a grave oil crisis was brewing when Mossadegh decried the nationalisation of the giant Anglo Iranian Oil Company. Mossadegh was ousted by a coup in 1953. Relations between Britain and Iran were then normalized. Britain holds today the Colony and Protectorate of Aden, the Baharain island and controls in varying degrees the numerous Sheikhs in the Persian Gulf and Arabian areas.

In the meanwhile the new force of Zionism had entered the world of Middle Eastern politics. Zionists claimed a part of Palestine as the homeland of the Jews and found occasional sympathy from Britain. Migration of Jews from Europe into Palestine continued through the years and with the end of the British Mandate in Palestine in 1948 the Zionist dream came true. The independent state of Israel was proclaimed in the same year and this was opposed by the Arabs and bitter fighting went on for a year when an armistice called a halt to the carnage. Israel is still not accepted by the Arabs and a state of undeclared war continues.

The dismemberment of the Ottoman empire was expected to bring freedom to the Arab world. What actually followed was a system of hegemony and mandate which only thinly disguised British and French State. Western domination provoked intense nationalistic reaction and this first acquired a religious appearance.

Thus began the movement of Pan Islamism in which the Muslim clergy appealed to the religious sentiments of the Muslims of the Middle East for a Jehad against the former. Along with Pan Islamism Pan-Arabism was also growing in strength and though the movement began as a cultural revival it very soon acquired a strong political mind.

The Western impact on the area had led to the establishment of the Western system of education in the great cities and the ideas of the French Revolution and British Liberalism roused in the young Arab a passionate love for Arab culture and the Arabic language. This cut across religious and tribal boundaries. The leaders of the movement belonged to the higher strata of society and the young students were in prominence in most of the manifestations of Arab nationalist movements in the inter war years.

In the interval however Britain had befriended the feudal elements in Arab society for the purpose of the effective dismemberment of the dying Ottoman empire. In 1918 it was Prince Faizal of the Hashmite dynasty of Hijaz who helped by the British troops entered Damascus. British relations with the ruling circles in Egypt, Iraq, Jordan and Saudi Arabia were so contrived that there was an element of mutual dependence between the various Kings of the area.

Two Tiers

In the Middle East society comprises only two tiers with the peasantry and the desert folk forming the base and the serveral Emirs, Sheikhs and princes forming the apex. In between are scattered elements from the few urban areas. These elements are too few and unstable to form a proper middle class and under the circumstances many of the promising and educated youngmen found that in the army careers alone did they have any chance of rising somewhere near the top. It was therefore inevitable that the army should form the class of the elite in the Middle East and it is not without significance that most of the coups and revolts have been led by army officers.

The Middle East is an area of vast deserts and a few fertile regions. The pressure of the desert has always shaped the contours of Middle Eastern economy through the ages. Trade though flourishing was often of marginal nature in the overall economic picture and the location of the area on the main trade route between the East and the West brought the valuable carrying trade into Arab hands over a number of centuries.

In recent times trade and commerce on a large scale had attracted considerable Western interest but it was not until the discovery of oil that the full scale Western economic invasion began. With the opening up of the Middle Eastern oil areas there has been first a scramble for concessions and

a fight to maintain the position of the [illegible] on the [illegible] of the [illegible]. The Middle East contains more than half of the oil [illegible] of the entire world. The principal deposits are found in the Persian Gulf and the Euphrates-Tigris valley. The discovery of oil in the area began in the closing decades of the last century [illegible] was not until the opening decade of the present century that serious efforts at [illegible] were started.

The time was the heyday of the British and French imperialism and vast areas were acquired as concessions for the prospecting and extraction of oil. In 1907 was formed the Anglo Persian (now Anglo-Iranian) Oil Company and by 1914 British [illegible] began in earnest. By 1919 the production of Iranian oil was 8,500,000 [illegible] a year [illegible] 1939 it was 202,[illegible] but [illegible] by 1951 it had reached the 242,475,000 barrels mark or 1/15th of the total world production.

In Iraq the Iraq Petroleum Company had begun [illegible] on a large scale and by 19[illegible] Iraqi oil production was [illegible] barrels a year. In Saudi Arabia the Arabian American Oil Company (ARAMCO) had found [illegible] deposits [illegible] barrels in 1951. In other areas like Bahrain, Kuwait [illegible] produced [illegible] in 1953 [illegible] Qatar 1953 produced [illegible] have been made out of the [illegible] and marketing of oil.

Oil is in great demand all over the world and the United States [illegible] 30 million barrels a year and [illegible] from the Middle East. Western Europe [illegible] depends on Middle East oil.

Between 1939 and 1952 [illegible] of oil from the area [illegible] of the other [illegible] British [illegible] [illegible] of the [illegible] Arab [illegible] the [illegible] there [illegible]

[illegible]

with obvious targets. The [illegible] the Middle East [illegible] the Soviet Union [illegible] influence [illegible] Soviet Union.

These [illegible] the volatile world of the Middle East [illegible] are Western [illegible] [illegible] the Arab [illegible] and the present [illegible] of the West [illegible] all its past [illegible] Whatever [illegible] are [illegible] the Western [illegible] them [illegible]

Arab nationalism [illegible] [illegible] The [illegible] [illegible] The Middle East [illegible] any democracy of the Western type. Most of the [illegible] are backward and [illegible] and [illegible]

Army's Role

The [illegible] the army [illegible] and [illegible] the present [illegible] The Arab [illegible] has been [illegible] The [illegible] partly out of the [illegible] of the [illegible] of [illegible] Arab [illegible] The [illegible] growth of Western influence [illegible] the Middle East [illegible] and [illegible]

[illegible]

IRAQ : LAND AND ITS PEOPLE

WHATEVER may be the ultimate results of the present coup in Iraq more harm than good will be done by getting into hysteria. The revolt is not necessarily 'another triumph for Nasser and Khrushchev' as the "Daily Mail fears Nor will the British influence in Iraq be as dead as the Pharaohs as the journal suggests But these gloomy predictions would come true if the new situation is not studied and approached objectively and attempts made to come to terms with new Arab nationalism There is no evidence to suggest that the present coup was inspired by Col Nasser Indeed as a writer points out in the Daily Express men behind the uprising have been in the business much longer than the Egyptians They are tried revolutionaries not raw officers Russia had much less to do with it 'It is Iraq's own enterprise And very likely there would have been a revolt even if there had been no Colonel Nasser Of late discontent had been mounting up in Iraq Since 1954, political parties have remained suppressed in the country The Press is tightly controlled In addition the Iraq Government had been pursuing policies that hurt the Arab nationalism of the people. It dragged the country into the Baghdad Pact And according to the News Chronicle Nuri es Said Pasha, the Premier of Iraq had in secret urged Britain to carry out the ill fated Suez attack He wanted it done quickly cleanly The Arabs will soon forget it he told the British And in the Lebanese crisis he had been the staunchest advocate of military intervention All these factors appear to have prompted the uprising As the 'Scotsman points out its apeal is primarily to the younger generation and the new elite the embryonic middle class which has grown up in the more advanced Arab countries Among them are Army officers and those are in the most powerful position to take a lead in realising their aim The Western position in the Middle East has been founded on an alliance with the older ruling classes and dynasties The West has never come to terms with the new forces That is why it meets rebuffs so often These forces though nationalist in extreme are not necessarily anti West. Their main object is as Sir John Glubb who for years built up and guided the military forces of Jordan says in the Daily Mail" is to be independent progressive and modern And there is no fundamental reason he adds, why the West should be opposed to such development On the contrary the Arabs will be less likely to fall under Communist domination if they believe both the U S and Britain to be sympathetic to their hopes Initially an Iraqi revolution may assume an anti West complexion But in the long run as Glubb Pasha says it is as important for Iraq to sell her oil to the West as it is for the West to buy it The Arabs after all are free to choose whatever form of government suits them best Their economic interests however tie them to the West Whatever form of Government is established in Iraq economics will inevitably assert their influence provided the Iraqis are convinced that the West does not wish to dominate them and will not support Israel against them It is to be hoped the words of the experienced General will be listened to before it is too late If the Iraqis want to remain neutral in the cold war they should not be forced to take sides Indeed many of their present troubles are largely due to the Baghdad Pact Nothing as the Scotsman says isolated Iraq (from Arab movement) more and gave a greater handle to attacks than her membership of the Pact which also provided very favourable ground for Soviet peaceful penetration elsewhere The coup adds the journal attacks the foundations of the Baghdad Pact and whatever the outcome of the upheaval, it seems unlikely it can ever be restored

Not much would be lost if the Baghdad Pact is given a burial but a good deal would be lost if the bonds of friendship between the West and Arab countries are in any way weakened

1920 Uprising

Iraq is an independent State in Arabia, between the rivers Tigris and Euphrates and was formerly known as Mesopotamia Formerly a Turkish province it became a State in 1919 designed as kingdom for Prince Feisal who had helped Britain in the first world war against Turkey The Iraqis had expected full independence but under the terms of San Remo Treaty Britain was given a mandate over Iraq [illegible] them and there was an uprising in 19[illegible] which lasted for nearly three months This was followed in 1922, by a treaty between Iraq and Britain It fell far short of Iraqi aspiration Britain retained

[illegible] of Iraq [illegible] together [illegible] the [illegible] finances. [illegible] with the King [illegible] the British High Commissioner. However the principle of Iraq's independence had been accepted and the [illegible] for [illegible] future [illegible]. By 1930 the mandate was terminated and in 1932 Iraq became a member of the League of Nations. The only [illegible] on Iraq's independence were that [illegible] British [illegible] in the event of war. Many Iraqis protested against even these conditions [illegible] were overruled by Nuri es Said, who had [illegible] totally [illegible]. [illegible] in the country [illegible] Turkey and Persia [illegible] another. The period between 1936 and 1941 has been described as [illegible]. Seven times [illegible] the Government was changed [illegible].

War Against Britain

In 1941 there was internal [illegible] three months war against Britain [illegible] known as Golden Square [illegible] with [illegible] Rashid Ali al Gailani, to make [illegible]. The Regent and [illegible] were placed under [illegible]. But the Regent [illegible] from Baghdad. The Regent took refuge in the American Embassy and [illegible]. After the British had crushed the revolt he returned to Baghdad with [illegible] Pasha determined to [illegible] Britain and [illegible] who had caused trouble. He gave every assistance to Britain in the prosecution of war and in 1943 declared war on the Axis Powers.

However Iraqi nationalism [illegible] for the removal of [illegible] British [illegible]. In 1947 negotiations were opened with Britain [illegible] the revision of the treaty of 1930 [illegible] at [illegible] 1948 [illegible].

The draft treaty provided for [illegible] mutual help in war [illegible] for Iraq were to be [illegible] the Iraqi Government. However the [illegible] the treaty was published in [illegible] the Arabic translation of it was [illegible] Baghdad. And this happened [illegible] was still in London. This [illegible] and the Government [illegible] not only the [illegible] the [illegible] of the Government. The [illegible] was only averted by the Regent having at first approved the treaty [illegible] the [illegible]. The Treaty of Portsmouth was thus [illegible]. A new Anglo-Iraqi treaty was [illegible] 1955. Under this treaty [illegible] the help of Iraq only [illegible] the Iraqi Government. In the same year was formed the Baghdad Pact. [illegible] Iraq [illegible] the pact [illegible] whether [illegible] to [illegible].

In the post war years Iraq has [illegible] from [illegible]. In 1952 the Iraq Petroleum Company, which [illegible] Iraq's oil production, paid to it about 50 million as its share of [illegible]. This year, the [illegible] were expected to be [illegible]. The revolt has come at a time when the Iraqi Government was negotiating a new contract with the Iraq Petroleum Company which would be more favourable to Iraq. It is not known if the new government would give Iraq [illegible] the percentage of Iraq's share of revenue. [illegible] there have been demands for the nationalisation of oil. What the effect the new [illegible] will have on these negotiations remains to be seen. But so far the [illegible] have not interfered with the production of oil.

What [illegible] as a result of the [illegible] is that the [illegible] Baghdad Pact [illegible].

[illegible] The [illegible]

THE HISTORY OF LEBANON

THE geological past of Lebanon goes back to the days when the old Tethys Ocean enveloped the entire area between India and Syria. The present Lebanon is nothing but the flooring of that ancient ocean whose only remnant is the Mediterranean. Precisely speaking Lebanon is the medial part in a chain of mountains and plateaus that originate from the Amanus in the northern Syria and end in the Sinai. It is a mountainous country with a total area of 3 400 sq. miles. Its very name Lebanon is a derivative of a Semitic word meaning white as milk, the reference is to the snowy peaks which look milky white for the major part of the year. Lebanon's neighbours are Syria in the north east and Israel on the south. The area between the two parallel mountain ranges of Lebanon and anti Lebanon is known as Bikka and possesses a very rich soil.

The population of Lebanon is equally divided between the Moslems and the Christians and totals about 1 500 000 persons. Maronites Armenians, Greeks and Romans are the major race-groups. The principal towns are Beirut Tripoli Zahle Saida (Sidon) and Tyre. Beirut the capital of the country has a population of over 100 000 persons.

Vegetation and Produce

Lebanon has been famous for the richness of its flora since ancient times. The old Testament makes occasional references to the fragrance or the smell of Lebanon. Daisy, Cyclamen, asphhodel and rhodalendron are predominant among the flora. The forests of Lebanon thrive in both the deciduous as well as evergreen trees. Cedar, cypress and olive are the important forest trees. The green and majestic cedars have rather become a part and parcel of the Lebanese life. This sentimental association is represented by the imprint of a green cedar tree in the centre of the Lebanese national flag. The horticultural produce of the country mainly consists of fig, banana, orange, date, grape and the mulberry. On the agricultural side wheat, barley, maize and vegetables are the main cultivable crops. Sericulture and animal husbandry are the other two major occupations besides agriculture. Sheep goats, donkeys and cows are the important domestic animals.

Arabic is the official language of the country but French is also widely understood and spoken. Commercial circles mostly use French in their business dealings. Greek, Latin and English are the other popular languages.

Lebanese dress no longer bears a colourful oriental look. A visitor hardly comes across a Lebanese in baggy trousers and brilliant coloured qinbaz of the past. Most of the Lebanese nowadays dress in European style. Arabic dress is, however, still worn by certain tribes in the interior.

History

Lebanese culture is one of the oldest in the world. They are said to be first people to work out the alphabetic system of writing. The discovery of implements of the earliest known types testify to the occupation of Lebanon by man in the pre historic era. However the historical era dawns with the appearance of Semitic Canaanites on the littoral of Lebanon. This Canaanite culture later on formed the basis of the Israelite culture of Palestine and the Armean culture of Syria. Canaanites lately came to be known as Phoenecians by the Greeks. Phoenecians evolved a remarkable social and political set up. The country was a federation of city states each having full independence of action. Illiad the famous classic of Homer so often refers to the city states of Bablus, Aradus, Sidon and Tyre. The Bible also refers to a number of these city states. As a matter of fact the very word Bible is a derivative from Bablus, a flourishing Lebanese town of that time.

This era of independence continued till the appearance of Egyptian Pharaohs on the political scene of the area. The Egyptian suzerainty was however, interrupted for about 150 years by the Hysko domination. Hyskos were by and large Semites with elements of Hurrian Hittite and Mitannian blood. Incidentally they were the first people in the area who introduced the horse as an animal useful for mounted combat. The Egyptian suzerainty was again resumed on the downfall of Hyskos in 1573 B.C. However it fell to Thutmose III the Great Pharaoh to bring the entire area from Syria to Lebanon under the Egyptian empire. The Egyptian rule was followed by the Hittite, Armean, Philistine and Hebrew dominations. These successive changes in the political arena had their reaction on the cultural life as well. The Lebanese culture became prismatic, reflecting the beauties of all these variegated stocks. Hebrews in reality

Golden Age

Invasion Of Alexander

Advent of Christianity

Ottoman Domination

Having securedly established himself he began to consolidate his Lebanese empire In the matter of administration and justice he was very secular and impartial His justice became so legendary that bards readily made it a popular theme for the country ballads However he could not hold the country very long against the European intruders The era of peace and tranquillity ended with his death (1850) in banishment

Communal Trouble

Bashir s rule was followed by a brief interlude of uprisings and disorders ending the age of Emirs and ushering in the era of the internationally recognized autonomous Mutasarrifiyah of Lebanon By this time the European powers especially the English and the French, had come out as the major rivals in the race for political supremacy This Mutasarrifiyah rule as a matter of fact was under the concert of these European nations the Ottoman Governor being just a nominal head To achieve their selfish ends these colonial powers thrust Lebanon into the cockpit of international politics The British exploited the Druzes and the French exploited the Christian population This mischievous policy resulted in the first open conflagration between the Druzes and the Christians in the autumn of 1851 The gulf between the two communities was further widened by the subsequent vivisection of the country on communal lines. The northern portion was put under a Christian *qaim maqam* (sub-governor) and the southern under a Druze *qaim maqam* However this system did not continue very long the country was reunited on June 9 1861 During the Mutasarrifiyah rule Lebanon made great progress in the economic field To the scientific knowledge from the West the response from Lebanon was more spontaneous than from its neighbours This accounts for the fact that economically and industrially present day Lebanon is more advanced than other neighbouring countries Christian missionaries also contributed a great deal to this all round economic activity The American University at Beirut is one of many such missionary contributions

Mandate Territory

This position continued till the end of the 1st World War Turkey having been defeated the Ottoman empire was dismembered And as a result of the deliberations of the League of Nations Lebanon and Syria were put under the charge of France as mandate territories. The Mandate Act drafted by the League of Nations was a hasty document setting no specific time for making the mandatory dispensable However despite this drawback in the Mandate Act, the heroic Lebanese continued their struggle for self determination On May 23 1926 their sacrifices bore fruit and the state of Lebanon was proclaimed a republic A constitution guaranteeing the democratic form of government was adopted The Lebanese Republic was the first in that area and the Lebanese constitution was more liberal than the constitution of all the neighbouring countries Besides it promised a secular form of government with freedom of worship to all

With the end of Mandate on November 26, 1941, full freedom was ensured to Lebanon French educated Bishrah al Sulh was declared the first President and Riyad al Sulh the first Prime Minister of the Republic of Lebanon The new Republic Al Jamhouriya Al Libnaniya declared Arabic as the official language of the country and established friendly and cultural relations with the neighbouring Arab States She very soon became an active member of the Arab League As a result of this policy pro Arab feelings received great incentive. In pursuance of this pro-policy a contingent of 5 000 Lebanese soldiers was despatched to take part in the fighting against Zionists in Palestine

Present Trouble

Cordial relations with neighbouring states, especially Syria and Egypt could not last long These two states which stood for a neutral and independent foreign policy began to object to the growing pro-west tendencies of the Government in Beirut President Chamoun s pro-west policy not only aggravated the Lebanese-Syrian relationship but also divided Lebanese public opinion itself The political split became a virtual crisis with the acceptance of the Ike Doctrine by the Chamoun Government The Muslim population especially the Druzes came out with open opposition to the Government s pro-west policy They clamoured for co operation with the neutral states in the neighbourhood The emergence of strong and neutral Egypt played a dominant part in influencing Lebanese public opinion The subsequent victory of the Nasser Government over the Suez crisis and the establishment of the United Arab Republic of Egypt and Syria gave further impetus to the pro-Arab and anti-west sentiment in Lebanon The present attitude of the Christian President of Lebanon has not only widened the political gulf but also has developed into a communal trouble Pro Arab

HISTORY OF

Anglo-Jordanian Relations

RELATIONS between the United Kingdom and what is now the Hashemite Kingdom of Jordan date from 1916. In that year, during the Palestine campaign against the Ottoman Empire, an Arab revolt led by Sherif Hussein of Mecca (great-grandfather of King Hussein of Jordan) [illegible] with British arms and support the liberation from Turkish rule of large areas including the region of Transjordan.

Transjordan was included in the territories [illegible] by the League of Nations to the United Kingdom in 1922, but since it was regarded by the United Kingdom Government as falling within a region in which the United Kingdom had promised to recognise Arab independence, [illegible] from the mandated territory [illegible] of the [illegible] which [illegible] the establishment of a national home for the Jews.

In 1921 the United Kingdom Government accorded temporary recognition to Amir Abdullah, [illegible] of King Hussein of Hejaz, as [illegible] of Transjordan. The United Kingdom Government confirmed this arrangement in 1922.

In April 1923 it was announced that, subject to the [illegible] of the League of Nations, H.M. Government would recognise the existence of an independent Government in Transjordan under the rule of His Highness the Amir Abdullah, provided that such Government was constitutional and placed H.M. Government in a position to fulfil their international obligations in respect of the territory by means of an agreement to be concluded between the two Governments.

Independence Proclaimed

[illegible]

The Amir [illegible] guided by British advisers in [illegible] of foreign [illegible] [illegible] certain [illegible] [illegible] to the United Kingdom Government [illegible] through the High Commissioner for Palestine who was represented in Transjordan by a British Resident.

The mandate [illegible] ended [illegible] when an Anglo-Jordanian treaty of alliance was concluded under which Transjordan achieved full independence and the Amir Abdullah assumed the title of King. [illegible] the name of the country was changed to "The Hashemite Kingdom of Jordan". In 1948 the 1946 treaty was replaced by another [illegible] [illegible] were more [illegible] [illegible].

In the treaty of 1948 each had agreed to provide all [illegible] and assistance to the armed forces of the other in the event of either being engaged in war. [illegible] [illegible] Royal Air Force [illegible] at Amman and Mafraq [illegible] [illegible] for the [illegible] Jordan.

Other clauses provided for the [illegible] of a [illegible] defence board to [illegible] [illegible] training, equipment and [illegible]. The [illegible] took [illegible] [illegible] of Jordan [illegible] [illegible] to the treaty [illegible] [illegible] [illegible] of the [illegible] which the Arab Legion was formed [illegible] commanded by a British [illegible] had [illegible] always received from the United Kingdom.

End Of Mandate

[illegible]

[illegible]

[illegible] King Abdullah [illegible]

was shot and killed by a Palestinian youth on July 20, 1951, when entering a mosque in Jerusalem He was succeeded by his elder son, Talal, whose brief reign was marked by the coming into force of a new constitution in January 1952 Talal who had been undergoing treatment for a mental disorder when his father was assassinated was deposed in August 1952 because of the increasing severity of his illness His 17 year old son Hussein came to the throne a Regency Council being formed to carry on the affairs of State until his formal accession on May 2 1953

Late in 1954, the question of the revision of the Anglo Jordanian Treaty of 1948 came up for discussion Eventually the 1948 Treaty which was to remain in force for 20 years was terminated in March 1957 at the request of the Jordanian Government Earlier in March 1956 King Hussein issued a decree dismissing General J b Glubb from command of the Arab Legion General Glubb, a British officer had been Chief of Staff of the Arab Legion since 1939

Aid From Britain

Throughout the period of the treaty the United Kingdom maintained the spirit of friendship which the treaty of alliance was intended to foster It consistently reaffirmed its treaty obligation to defend Jordan and has given Jordan support in the United Nations

Britain has also furnished considerable economic assistance Apart from the subsidy to the Jordan Army—as the Arab Legion has been called since May 1956—which amounted to nearly £8 800 000 in 1955 56 Britain has since April 1949 made interest free loans and grants in aid of Jordan s budget In all these totalled £7 450 000

In addition down to June 1956 Britain had contributed $43 000 000 to the funds of the UN relief and Works Agency and its predecessors which have borne the main cost of maintaining the Arab refugees from Palestine about half of whom are in Jordan This is a contribution second only to that of the United States

The 1948 treaty was terminated in the words of the then Jordanian Prime Minister in an agreed manner and at the same time to preserve peaceful and friendly relations between our two countries

Speaking on the subject in the House of Commons on May 6 1957 the Parliamentary Under Secretary for Foreign Affairs said As the Foreign Secretary stated in the House on March 14 we wish King Hussein and his country good fortune and hope our friendly relations will continue Her Majesty s Government regards the continued independence and integrity of Jordan as essential elements in the maintenance of peace and stability in the Middle East '

—o—

FOREIGN CAPITAL IN INDIA

The present value of foreign business investment in India has been unofficially put at Rs 6?0 crore—Rs 170 crore over the figure for the end of 1955

In 1914 foreign capital invested in India was roughly estimated at £ 298 million (about Rs 450 crore) An estimate by the *Financial Times* (London) in 1930 put it at £700 million (Rs 933 crore)

The Reserve Bank of India undertook a census of India s foreign liabilities and assets in 1948 According to this Survey —tentative and incomplete—the foreign business investment in India (excluding the foreign liabilities of the official sector) amounted to Rs 288 crore at the end of June 1948

The value in crores of foreign business investment in India at the end of December 1955 was Manufacturing—163 3 crore Trading—102 3 crore Utilities and Transport 53 1 crore Mining—9 6 crore Financial (a) banking—20 2 crore (b) others 19 1 crore Plantations—87 2 crore and Miscellaneous 25 9 crore

The foreign business investment in India was valued at Rs 287 7 crore at the end of June 1948 It rose to Rs 419 5 crore at the end of December 1953 and to Rs 490 7 crore at the end of December 1955

THE HISTORY OF LEBANON

(*Continued from page 705*)

Druzes and other Muslim elements are coming into clash with the pro west Christians President Camille Chamoun s recent move for amending the constitution for getting an extension of the Presidential term has put the country on a civil war Hordes of Druzes are onpouring the Government forces in the streets of Tripoli and Beirut

The future of Lebanon in the prevailing conditions seem to be bleak and disturbed Only fresh election and a neutral foreign policy can restore peace and stability to the political life of that country

Anglo-Jordanian Relations

RELATIONS between the United Kingdom and what is now the Hashimite Kingdom of Jordan date from 1916. In that year during the Palestine campaign against the Ottoman Empire an Arab revolt led by Sharif Hussein of Mecca (greatgrandfather of King Hussein of Jordan) effected with British arms and support the liberation from Turkish rule of large areas including the region of Transjordan.

Transjordan was included in the Palestine mandate granted by the League of Nations to the United Kingdom in 1920 but since it was regarded by the United Kingdom Government as falling within a region in which the United Kingdom had promised to recognize Arab independence, Britain separated it from the mandated territory west of the River Jordan where her commitments included the establishment of a national home for the Jews.

In 1921 the United Kingdom Government accorded temporary recognition to Amir Abdullah, younger son of King Hussein of Hejaz, as Administrator of Transjordan. The United Kingdom Government confirmed this arrangement in 1922.

In April 1923 it was announced that subject to the approval of the League of Nations H.M. Government will recognize the existence of an independent Government in Transjordan under the rule of His Highness the Amir Abdullah provided that such government is constitutional and places H.M. Government in a position to fulfil its international obligations in respect of the territory by means of an agreement to be concluded between the two Governments.

Independence Proclaimed

In May 1923 Amir Abdullah proclaimed Transjordan independent. In spite of internal difficulties complicated by Saudi Arabian moves across the border, negotiations continued and resulted in a treaty signed in February 1928 in Jerusalem. In conformity with the requirements of the League of Nations [illegible] Mandates Commission, the 1928 treaty provided [illegible] the powers of legislation and administration [illegible] to the United Kingdom [illegible] to be exercised by the Amir through a constitutional government.

The Amir agreed to be guided by British advice on questions of foreign relations and to submit certain laws of a fundamental [illegible] to the United Kingdom Government, acting through the High Commissioner for Palestine, who was represented in Transjordan by a British Resident.

The mandatory regime lasted until 1946 when an Anglo-Jordanian treaty of alliance was concluded under which Transjordan achieved full independence and the Amir Abdullah assumed the title of King. [illegible] the name of the territory was changed to "The Hashimite Kingdom of Jordan". In 1948, the 1946 treaty was replaced by another whose terms and wording were more acceptable to nationalist opinion.

In the treaty of 1948 each side agreed to provide all facilities and assistance to the armed forces of the other in the event of either being engaged in war. In peace time Jordan allowed Royal Air Force units to be based at Amman and Mafraq airfields and agreed to afford transit facilities, on request, for British forces across Jordan.

Other clauses provided for the setting up of a joint defence board to co-ordinate strategic training, equipment and security measures. The British undertook to provide for the training of Jordanian forces and in an exchange of letters attached to the treaty provided for the continuance of the annual subsidy which the Arab Legion—a force formed at the end of 1920 and commanded by a British officer—had hitherto always received from the United Kingdom.

End Of Mandate

Two months after the treaty was signed the British mandate in Palestine came to an end. This was followed by a war in which the Arab Legion fought side by side with the armies of the other Arab States against the emergent State of Israel.

The final modification in Jordan's position came in 1949 when Britain recognized formally the extension of the boundaries of Jordan to include that part of Palestine which remained in Arab hands, excluding however what is known as the Gaza Strip.

The next few years were marked by a number of internal changes. King Abdullah

was shot and killed by a Palestinian youth on July 20, 1951, when entering a mosque in Jerusalem He was succeeded by his elder son, Talal whose brief reign was marked by the coming into force of a new constitution in January 1952 Talal who had been undergoing treatment for a mental disorder when his father was assassinated was deposed in August 1952 because of the increasing severity of his illness. His 17 year old son Hussein came to the throne a Regency Council being formed to carry on the affairs of State until his formal accession on May 2 1953

Late in 1954, the question of the revision of the Anglo Jordanian Treaty of 1948 came up for discussion Eventually the 1948 Treaty which was to remain in force for 20 years was terminated in March 1957 at the request of the Jordanian Government Earlier in March 1956, King Hussein issued a decree dismissing General J b Glubb from command of the Arab Legion General Glubb, a British officer had been Chief of Staff of the Arab Legion since 1939

TROUBLED CYPRUS

By JOHN HATCH
Commonwealth Officer British Labour Party

AS recently as July, 1954 the people of Cyprus were living a quiet, peaceful and a comparatively contented life. Greek and Turkish Cypriot families would take their picnic baskets together under the shade of the trees whilst their children played happily around them. It is true that they had been directly ruled by the British since 1931 and were not prepared to accept any new constitution which did not provide for Enosis (union with Greece) but this was not a burning issue, rather it was vague ambition of the Greek community in the island and the equally vague fear of the Turkish section.

At the end of July the whole situation was suddenly changed and within a few months Cyprus had become an army camp, roused into frequent outbreaks of violence and terrorism ruled over by a Military Governor. Shortly afterwards the same Greek and Turkish families were looking at each other with suspicion and hostility and barricading their doors against the threats of communal attacks.

The event which so suddenly destroyed the peace of the island, occurred in the House of Commons on July 28 1954 when immediately following the British Government's announcement that British troops were to be withdrawn from the Suez a further statement was made on Cyprus. Nervous of the Tory back bench reaction against the abandonment of the Suez base the Government chose to appease their reactionary elements by announcing that there was no question of any change of sovereignty in Cyprus. No statement could have been better calculated to arouse the fears and hostility latent in Cypriot minds.

Tragic Mistakes

From that fatal moment to the present the British Tory Government has an unbroken record of continually tragic mistakes in its Cyprus policy. When the issue was raised at U.N., the British Government declared that Cyprus was a purely domestic issue. Yet in 1955 Greece and Turkey were brought into a tripartite conference making it an international issue and exacerbating Greco-Turkish relations. Although self-determination had been [illegible] in the 1954 statement [illegible] the British Government then [illegible] to declare that there was no prospect of self-determination [illegible]

and later to accepting the principle "some time and in certain conditions." This retreat in the face of violence naturally encouraged the Cypriots to believe that they could only achieve their aims by pursuing the path of force.

After abortive discussions between the Colonial Secretary and Archbishop Makarios, the accepted leader of the Cypriot people, early in 1956 the British Government made an even greater mistake by deporting the Archbishop to the Seychelles, thus inflaming Cypriot feelings still further and removing the one spokesman capable of conducting negotiations. Even when in August 1956 the terrorist organization known as Eoka suspended its campaign and offered a truce so that discussions could be resumed, the only answer of the Governor was a demand for surrender.

Final Blunder

The final blunder lies at the door of Mr Lennox Boyd, the Colonial Secretary. In 1956 he had asked Lord Radcliffe to study the constitutional situation and make proposals for a form of government. While announcing these proposals at the end of the year, Mr Lennox Boyd made the fatal mistake of declaring that partition of the island between the Greek and Turkish communities could not be excluded. This was the first time that partition had been mentioned by the British Government. It offered an obvious inducement to the Turkish minority to obstruct any attempt to introduce genuine democratic self government for the island's development.

During the past 18 months the situation has continually fluctuated. In March 1957 Makarios was released but prevented from returning to Cyprus and no attempt was made to re-introduce him into negotiations. The appointment of Sir Hugh Foot as Governor, in place of Sir John Harding, an Army man, offered a ray of hope but by now relations between the Greek and Turkish Governments and the Greek and Turkish communities in the island were so bad that it seemed unlikely that any compromise was possible.

Civil Strike

It was in these circumstances [illegible] degree of civil war in the island and [illegible] potential war between Greece and Turkey [illegible] the Government [illegible]

in June This placed the Labour Party in a difficult position It had consistently attacked the British Government for its policy right from 1954 and had called upon "the British Government to give a firm guarantee of democratic self determination within an agreed period with safeguards for minority rights, and to convene immediately a conference of representatives of the different sections of the Cypriot people to discuss the development of representative institutions It was in September 1955 It had insisted, since the crisis began in 1954 " that the people of Cyprus like all other peoples have a right to determine their own future. this right should be exercised after an agreed interim period of self-government

It had called for discussions between the British Government and representatives of both the Greek and Turkish communities in Cyprus "to reach agreement on the functions and powers of the interim government the arrangements for its election and the safeguarding of minority rights In entering into such discussions the British Government must recognize that the major responsibility for the affairs of the island will rest in the hands of the Greek Cypriots but that the legitimate rights of the Turkish minority must be safeguarded The establishment of representative government in Cyprus is a necessary first step towards the fulfilment of the principle of self determination in a democratic way It was in November 1957 It had continually appealed for a cessation of violence so that the issue could be settled by discussion

The Government's new Plan whilst not excluding self-determination laid down an interim period of seven years during which two Houses of Representatives, elected by the Greek and Turkish communities, respectively would deal with communal affairs whilst a Governor's Council with four elected Greeks and two elected Turks would manage other internal affairs of the island At the same time the Greek and Turkish Governments were to be invited to send a representative each to sit on the Governor's Council Matters suspected of discrimination were to be referred to an impartial tribunal Cypriots were to be allowed to hold dual nationality as Greek or Turkish citizens as well as British subjects and at the end of the seven-year period the suggestion was made that Greece and Turkey might share sovereignty with Britain

There appeared to be a dangerous inclination towards accepting a permanent division between the two communities in this plan The introduction of Greek and Turkish representatives was calculated to polarize the outlook of the two island communities whilst dual nationality might well lead to legal open intervention by the Greek or Turkish Governments There were many features of the plan which Labour members disliked intensely At the same time, the situation, created by Conservative policy was highly inflammable. The Labour Party could criticize but had not the executive power of government and intemperate words might provoke civil and international warfare

Labour Opposition

In the debate which followed the publication of the plan the party spokesmen pointed out that responsibility for the situation and for its solution rested entirely with the Government and not with the Opposition. They strongly criticized many details of the plan and the attitude taken by the Conservative members Mr Aneurin Bevan, winding up for the Opposition made the party's position very clear in these words "It has always been our position in the Labour Party that full self government is the same thing as self-determination but self-determination is the last phase in the development of self government It is a contradiction in terms to say that a nation can have full self government and yet not have self determination because with full self government go all the complete sovereign rights As has been said on several occasions the Statute of Westminster laid it down quite clearly that the members who belong to it are sovereign States who can leave the Commonwealth if they wish

The fundamental basis for fellowship inside the Commonwealth resides in the right of each one of them to go out if it wishes to We believe that every dependency inside the Commonwealth using the term Commonwealth in its widest connotation has the right to look forward to full self government, carrying with it the right of self-determination"

Having reaffirmed the absolute position of the Labour Party on the principle of self determination Mr Bevan then went on to criticize the Conservative assumption that the two Cypriot communities could never again be brought to live together in peace He suggested that it was not sufficient to have two communal assemblies but that there must be a national assembly where Greek and Turkish Cypriots could meet together and discuss the common affairs of the island. He

MIRROR OF THE U.N. AT WORK

By FERNAND POUEY

DIRECTLY you cross the threshold of the United Nations Pavilion at the Brussels Exhibition you are struck by twelve multicoloured spheres revolving round a central sphere under a sky blue cupola. Whether you take this to symbolize the atomic era or the interdependence of the U.N. and its Specialized Agencies, the fact remains that from the outset your attention is caught in a most ingenious way.

A glance round the whole exhibit further strengthens this first impression with the feeling that everything here is well-ordered, bold and precise like the architecture of the building and its dome of concrete, powerful and aerial, with a span and lightness that are unique in the world. Blue, white and light grey are the dominant colours. There are no dark corners. And here in this international meeting ground of Brussels, the light, modern surroundings are ideally suited to display all that the U.N. has undertaken so that man's age-old dream of peace and progress may become a reality.

As the Commissioner for the Exhibition, Mr. Henri East has pointed out, it was difficult to treat so broad and complex a field as the work of the U.N. and its agencies within the framework of an exhibition which, whatever its scope, is bound to be limited. Yet the result is undoubtedly a success.

To keep the promises set forth in its Charter, it is essential for the U.N. to create an atmosphere of friendly relations between peoples, to promote social justice, establish the rule of law between men and nations, encourage economic expansion, wage war on sickness, ignorance and poverty, and work for the development of education, science and culture. Between the countless activities which stem from these aims all over the world and the reflection of them that can be given in exhibition halls, the difference is inevitably as great as between a [illegible] and its [illegible] model, between a [illegible] and his likeness on a photograph.

[illegible]

[illegible]

the exhibition hall. Big panels present [illegible] campaigns with discussions between [illegible] parties, recalling historic precedents such as the Thirty Years War and the Treaty of Westphalia, the Napoleonic campaigns and the Congress of Vienna, the First World War and the Treaty of Versailles followed by the setting up of the League of Nations.

Perhaps the most remarkable thing about the signing of the U.N. Charter in June 1945 was that sixty nations should have wanted to lay the foundations of peace even before the fighting ended. But how was a peaceful community to be established? First of all by drawing up an agreement on disarmament so that "the money, materials and human efforts devoted to armaments and the armed forces might serve the cause of humanity." The prime object of the Security Council is to preserve mankind from the scourge of war; that of the U.N. Economic and Social Council is to plan and coordinate the development of world economy.

The problems which face present generations cannot be solved by isolated groups of [illegible] nations. They can only be settled by cooperation between states, a need which the exhibit illustrates by a series of striking examples. For example, there is a display on the *International Civil Aviation Organization* which [illegible] safety measures and recommends uniform standards for the aircraft of all nations; on the *International Telecommunication Union* which has made it possible to set up communication networks between the most distant points on earth; on the *Universal Postal Union* which establishes standard regulations in all countries thereby facilitating the exchange of correspondence; and on the *World Meteorological Organization* which concerns itself with the exchange of weather information through international collaboration, and also studies [illegible] [illegible] for rain and fine weather [illegible] boundaries.

After a [illegible] [illegible] in the [illegible] [illegible]

devolving upon three Agencies—the *Food and Agriculture Organization* the *World Health Organization* and *Unesco* which in addition to their common mission are each pursuing aims in their own special fields Thus the WHO is striving to make the world a healthier place to live in by preventing the spread of sickness helping nations to stamp out mass diseases and to build up public health services As for Unesco—the United Nations Organization for Education, Science and Culture—it has laid particular stress in this exhibition on the Universal Declaration of Human Rights the free flow of information and the mutual appreciation of the cultural values of Orient and Occident

Money is not only one of the sinews of war It can and must serve the cause of peace The *International Bank for Reconstruction and Development* and its affiliate the *International Finance Corporation* are contributing to the economic expansion of Member States Already more than 500 development schemes have been carried out with the help of these agencies In the section devoted to the *International Monetary Fund* a display of coloured bank notes from 64 nations recalls the work undertaken by this agency to stabilize currency The *International Labour Organization* offers prospects of better working conditions in years to come *GATT* (the General Agreement on Tariffs and Trade) is also contributing to raise living standards for a country cannot prosper in a vacuum The *International Atomic Energy Agency* has the task of increasing the contribution of atomic energy to health prosperity and world peace. *UNICEF*'s campaign for the world's needy children are known on the five continents while the Office of the U N High Commissioner for Refugees is responsible for more than a million displaced persons Examples of the work of all these Agencies displayed under one roof at the Brussels Exhibition underline the unity of the great U N family

The visitor to the Pavilion will long remember this work which one might call the daily epic of the United Nations Should he wish to share these memories with his friends in other lands he can stamp his postcards and letters with one of the 16 special United Nations stamps issued by the Belgian Postal Administration It will not only be a friendly gesture but a useful addition to the stamp collector's album (UNESCO)

Troubled Cyprus

(*Continued from Page 709*)

did not approve or commend the plan but suggested that if such vital amendments were made, Cypriot representatives might take the opportunity to begin discussions as to what form of self government would be acceptable to them He demanded that the British Government be prepared to enter into such negotiations with a flexible mind

New Basis

All that can be said therefore is that the British Cypriot deadlock has been broken to the extent that the people on both sides are again talking about the basis of a solution Although the Government plan has been rejected by all sides willingness has been expressed to start discussions again This may be hopeful but only if three conditions are fulfilled (1) Confidence has to be re established between the Greek and Turkish communities in Cyprus (2) The Greek and Turkish Governments have to be prepared to act and speak temperately and constructively instead of pursuing nationalistic policies and is that (3) the Cypriot people as a whole must be assured that they will have the right to determine their own future The whole of Labour Party policy over the past four years has been concentrated on these objectives The tragedy is it has had to speak as an Opposition and that although its influence is perhaps even wider than that of the Government it has not had the power to put its policy into governmental practice That opportunity may soon come, but unfortunately it will then have to act in a situation bedevilled by the Conservatives and though its principles are assured and sound it may well take considerable patience to create the harmonious circumstances in which they can be applied with common consent. • •

Economy is half the battle of life it is not so hard to earn money as to spend it well

—Charles Haddon Spurgeon

• • •

The right thinker and worker does his best and does the thinking for the ages He imp[illegible] to him [illegible] and [illegible] hoards th[illegible] capital to distribute again

—Mary Baker Eddy

Ere you consult fancy consult your purse

—Benjamin Franklin

(Below are given some questions to test quickness of your mind and intelligence. It does not matter that you attempt all the questions. What matters is the time taken by you to find the correct answers. The whole paper should not take more than 30 minutes to a fairly intelligent person. Try now and find out.)

—QUESTIONS—

1. Read the following passage carefully and try to find a solution

In the Land of Nowhere on a beautiful little hill there once stood a small luxuriant tree whose leaves were as sweet as nectar. To this tree there flew one day a Whiffle bird. Tired from a long journey to the setting sun he lighted on one of its branches and pecked at one of its leaves to refresh himself. It was delicious beyond compare and he decided to remain there for ever.

The next day he ate double the number of leaves he had eaten the first day and the third day double the number of leaves he had eaten the second day. And so on for thirty days till all the leaves were gone, and the beautiful little hill was crowned with a bare thorny stump.

The Whiffle bird did not tally his depredations but you are asked to tell on what day half the foliage was gone.

2. Look this over and see how many errors you can locate?

Mrs. Jones was having a gala affair that evening. She had invited the Mayor and his wife to be guests of honour. Only the cream of society were to be present. The town Gazett had printed a picture of her. She was referred to as "Our Town's Social Leader".

Mrs Jones was deciding where she should place the guests at the table.

"[illegible] let me see [illegible] Mrs. Smythe [illegible] be sitting on the left of the Mayor [illegible] next to [illegible] put the [illegible] to his right [illegible] to the left of the centre of the table."

Just then the doorbell rang. A few minutes later the butler came [illegible] and [illegible] Mrs. Smythe [illegible] and her mother were in the library. Mrs. Jones rushed to the library and [illegible] Mrs. Smythe-Smythe.

"Mrs. Jones may I present my mother. Mother this is Mrs. Jones" said Mrs. Smythe-Smythe.

"Pleased to meet you" said Mrs. Jones.

The three woman sat down and [illegible] in excited voices about the coming party.

"It's going to be quite a [illegible]" [illegible] quired Mrs. Smythe-Smythe. "I've [illegible] new evening gown from my modiste [illegible] those [illegible] black gowns with that [illegible] decolletage."

Her mother interjaculated with a [illegible] about the disgraceful depths of the [illegible]. The two younger women laughed [illegible]. They exchanged [illegible] these old fashioned [illegible] look [illegible]. During the [illegible] the butler served tea.

"Mrs. Jones, this here tea set is perfectly lovely. I really am quite envious of [illegible]" [illegible] Mrs. Smythe-Smythe.

"Thank you" said Mrs. Jones. "It happens to be a family ancestry. It's about [illegible] hundred years old."

Finally after about another half [illegible] pleasantry had passed, Mrs. Smythe-Smythe and her mother prepared to leave. [illegible] thanked Mrs. Jones for her [illegible] and passed out.

3. Here are some well known quotations in each of which one word has been changed. Which word is it and what should it be?

1. [illegible] pressed their [illegible]
   And [illegible]
2. The [illegible] day [illegible] the [illegible]
   [illegible]
   [illegible]
3. [illegible]
   He sat [illegible] at the [illegible]
4. O for [illegible] that has been
   Kept a [illegible] in the [illegible]
5. "My name is Ozymandias [illegible]

Look on my deeds, ye Mighty, and despair!

6 Fair daffodils we mourn to see
You haste away so soon.

7 Here with a Loaf of Bread beneath the bough
A cup of Wine a Book of Verse—and Thou

4 How many faces edges and corners are there on the following solid figures? (A face need not be flat, thus a cylinder has 3 faces, 2 edges, and no corners)

(a) A cub
(b) A pyramid with a square base
(c) A tetrahedron (pyramid with triangular base)
(d) A cone
(e) A sphere
(f) A hemisphere

5 Here is the dispatch which Henry V receives about the French losses at Agincourt. Is his arithmetic correct? If not by how much is he wrong?

This note doth tell me of ten thousand French
That in the field lie slain of princes in this number
And nobles bearing banners, there lie dead
One hundred twenty six added to these
Of knights esquires and gallant gentlemen
Eight thousand and four hundred of the which
Five hundred were but yesterday dubb'd knights
So that in these ten thousand they have lost
There are but sixteen hundred mercenaries

6 Explain in one sentence why it is that some people:

1 Tie a knot in a handkerchief
2 Count imaginary sheep going through a gate
3 Wear spectacles
4 Wear hats
5 Smoke
6 Refuse to walk under a ladder
7 Iron clothes after washing them
8 Learn foreign languages
9 Play football
10 Read newspapers

7 Choose the correct word from those in brackets in the following to complete the comparison

1 Coal is to mine as water is to (well tap tank drink)
2 Tame is to wild as friend is to (cousin, foe, ally comrade)
3 Arm is to body as branch is to (turning ork tree elm)
4 Stream is to river as grain is to (grass sand pound particle)
5 King is to crown as bishop is to (hat robe mitre surplice)
6 Song is to singer as do is to (door, done did doer)
7 Sweet is to sugar as bitter is to (gall, pill cane oats)

8 The following are questions on codes For example if WSDRE means DWARF then it is easy to see that SMDRE means WHARF, M meaning H which can be guessed Now do these

1 If DFNMTY means CINDER MYFNP means——
2 If TMY means SEA TMM means——
3 If SDAK means DEAN SAKD means——
4 If LSXYZ means ROUND, XYZBL means——
5 If 12274 means POOLS, 47221 means——
6 If a3b means NOW b3a means——
7 If ERTYUD means STRING TYUD means——
8 If SENTRY is represented by V54TOJ O51T means——

9 Choose from the words in brackets the correct one which answers the question that comes before the brackets

1 Which word has the least consonants? (good find eave night)
2 Which word has the most vowels? (perform amaze height peep)
3 Which is the most bitter? (milk vinegar lemonade peppermint)
4 Which is the nearest to 100? (103 98 111, 105 96)
5 Which is played with sticks? (flute drum organ cornet)
6 Which is the sharpest? (chisel saw axe knife razor)

10 Read very carefully through the following poem at least twice and then answer the questions

The Silent Field

The evening comes the field is still
The tinkle of the thirsty rill
Unheard all day ascends again
Deserted is the new reaped grain
5 Silent the sheaves! the ringing wain
The reapers cry the dogs' alarms

All housed within the sleeping farms !
Th[illegible] bu[illegible] of the day is done
The last belated gleaner gone
10 And from the thyme upon the height
And from the elder blossom white,
and pale dog roses in the hedge
And from the mint plant in the sedge
In puffs of balm the night air blows
15 The perfume which the day fo goes

1. At what time of the day is the field still ?
2. What is the word which describes the noise of the rill ?
3. Why is the rill said to be thirsty ?
4. Why is it that the rill is heard at night but not during the day ?
5. About what time of the year is the poet writing ? How do you know ?
6. What are 'sheaves' in line 5 ?
7. A 'wain' in line 5 means a waggon. Suggest a word other than "ring ing" which would describe it ?
8. What is meant by the "dogs alarms" in line 6 ?
9. What does "housed" mean in line 7 ?
10. Whom does "All" mean in line 7 ?
11. What do you think was the business of the day ? (line 8)
12. What do you think "belated" means in line 9 ?
13. Where does the thyme grow ?
14. What colour is the elder blossom ?
15. Where does the mint plant grow ?
16. What is "balm" in line 14 ?
17. What workers on farms are mentioned here ?
18. Does the poem say that perfume is smelt during the day ?

ANSWER

1 Astounding as it may be half the foliage was gone no earlier than the thirtieth or last day. Since each day twice as many leaves were eaten as on the previous day, on the thirtieth day twice as many leaves were eaten as were consumed on the twenty ninth day.

[illegible] the total number of leaves eaten on the thirtieth day was greater by one than total number of leaves consumed on the first 29 days. This can be demonstrated by [illegible] (let us say) 5 days. On the first day 1 leaf was eaten. On the second day [illegible]. On the third day 4. On the fourth day 8 and on the fifth day 16. The total number of leaves eaten during the first four days equalled 15 leaves while on the fifth day the [illegible] was 1[illegible] [illegible] than all the [illegible]

2 Mrs Jones was having a party after that evening. She had invited the Mayor and he wife to be guests of honour. Only the cream of society was to be present. The [illegible] Gazette had printed a picture of her. She was referred to as "Our town's Social Leader."

Mrs Jones was deciding where she should place the guests at the table.

"Now, let me see. Mrs Smythe-Smythe will sit at the left of the Mayor. John will sit next to me. Oh yes the flowers are to be just a little to the left of the centre of the table."

Just then the doorbell rang. A few minutes later the butler came into the room and announced that Mrs Smythe-Smythe and her mother were in the library. Mrs Jones rushed into the library and enthusiastically greeted Mrs Smythe-Smythe.

"Mother may I present Mrs Jones? Mrs. Jones, this is my mother" said Mrs Smythe-Smythe.

"It is a pleasure too meet you" said Mrs Jones.

The three women sat down and conversed in excited voices about the evening party.

"It's going to be quite a fete, isn't it?" inquired Mrs Smythe-Smythe. "I've ordered a new evening gown from my couturier. One of those svelte black gowns with that divine new decolletage."

Her mother interjected a remark about the disgraceful depths of the necklines. The two younger women laughed tolerantly. They exchanged a "these old fashioned women look" amusedly. During the tete a tete the butler served tea.

"Mrs Jones this tea set is perfectly lovely. I really am quite envious of you," said Mrs Smythe-Smythe.

"Thank you" said Mrs Jones. "It happens to be a family heirloom. It's about two hundred years old."

Finally after about another half hour of pleasantry had passed Mrs Smythe-Smythe and her mother prepared to leave. They thanked Mrs Jones [illegible]

3 1 [illegible] [illegible]
2 [illegible] [illegible]
3 [illegible] [illegible]
4 [illegible] [illegible]
5 [illegible] [illegible]
7 [illegible] [illegible]
[illegible] [illegible] [illegible]

4 (a) 6 faces 12 edges, 8 corners
(b) 5 faces 8 edges 5 corners
(c) 4 faces 6 edges, 4 corners
(d) 2 faces, 1 edge, 1 corner
(e) 1 face no edges no corners
(f) 2 faces, 1 edge no corners

5 The account adds up to 10 126 dead He has miscalculated the number of mercenaries

6
1 To help them remember something
2 To try to get themselves to sleep
3 To aid vision
4 To keep head dry
5 To soothe nerves
6 Because they are superstitious
7 To get creases out
8 To help them when they travel
9 For pastime
10 To learn about everyday affairs

7 (1) Well (2) Foe (3) Tree
(4) Sand (5) Mitre (6) Doer
(7) Gall

8 (1) Drink (2) See (3) Dane
(4) Under (5) Sloop (6) Won
(7) Ring (8) Rent

9 (1) Eave (2) Amaze (3) Vinegar
(4) 98 (5) Drum (6) Razor

10
1 Evening
2 'tinkle' (line 2)
3 Because it always needs water to make it run
4 It has only a faint noise in the day time and other sounds drown it At night it can be heard because other things are then quiet
5 Summer (2) (i) new reaped grain (line 4)
(ii) elder blossom (line 11)
(iii) dog roses (line 12)
(iv) mint plant (line 13)
6 Bundles of corn cut and bound
7 Rattling
8 Dogs barking in anticipation of hares in th corn, or when rounding up sheep
9 Shut in
10 The reapers and dogs
11 Harvesting
12 Working late until darkness over takes them
13 Upon the height (line 10)
14 White
15 In the sedge
16 Perfume
17 (i) gleaners (1) (ii) reapers
18 No

DID YOU KNOW ?

A U S firm now mass produces industrial diamonds synthetically which experts call as good as natural ones The process used creates in a few minutes what it takes nature millions of years to accomplish

U S farm productivity has doubled in the past 18 years In 1940 a U S farm worker pro duced enough to meet the needs of 10 S persons Today he is producing enough to meet the needs of 20 8 persons with less efforts due to improved machinery, irrigation etc. By con trast a Soviet farm worker produces only enough to meet the needs of four persons

Two hundred years ago in the Tyrolean Alps (Innsbruck) artists developed the technique of painting pictures on cobwebs Today the art is lost and experts say it is hard to believe that such fragile canvases could ever have been used but over 100 cob web paintings exist to prove it

Ans The personnel of the U.P.S.C. as on April 1953 is

Chairman. V.S Hejmadi

Members 1 S V Kanungo
2 J.S Pillai
3 C. V Mahajan
4 J N Mukherjee
5 P L Verma
6 S H Zaheer
7 G S. Mahajani

ABBREVIATIONS

Q What do the following abbreviations stand for ?

(1) T V (2) U.S.I.S (3) Y.M.C.A (4) I.T.U.C. (5) I.S.T (6) SCUA (7) U.N.R.R.A (*Amarendra Nath Saha Cuttack*)

Ans (1) Television (2) United States Information Service. (3) Young Men's Christian Association. (4) Indian Trade Union Congress (5) Indian Standard Time (6) Suez Canal Users's Association (7) United Nations Relief and Rehabilitation Administration

FOREIGN WORDS

Q Please mention the meanings of the following foreign words :

(1) Facsimile (2) In Sano-Sensu (3) Belles-Letters (4) Au Fait (5) Ignorantio (6) Volte Face (7) Matinee (8) Sub Judice

(*Miss C S Vijaya Lakshmi Elankulam...*)

Ans. (1) A close imitation (2) In proper sense (3) Literature that has aesthetic value (4) Well acquainted with (5) Ignorance of the point under discussion (6) A change of front (7) A morning recital or performance (8) Under considera ion.

EAST EUROPEAN SECURITY PACT

Q What is meant by East European Security Pact ? (*P Gopalakrishnan Barsat*)

Ans. On 14th May 1955 at Warsaw the seven Communist countries (U.S.S.R., Bulgaria, Albania, Czechoslovakia, Poland, Rumania, Hungary) entered into a defensive alliance. It provided for a unified command for all the powers with headquarters at Moscow. Peoples China has also promised to send help in case any of these powers is involved in war. This pact is also referred to as Red N.A.T.O. or Warsaw Pact

ECONOMIC TERMS

Q Please explain the following terms briefly : (a) Inflation (b) Deflation (c) Hard Currency (d) Legal Tender

(*Prak ... Chaudhury Ludhiana*)

Ans (a) An increase in the quantity of money in circulation without any corresponding increase in goods which leads to an abrupt rise in the price level

(b) A state in money market when money in circulation has decreased and as a result there is low price unemployment etc.

(c) The Currency of a country in relation to which we have an adverse balance of trade i.e. which is hard to be obtained Canada U.S.A. etc are hard currency areas

(d) Any form of money which is a legal quittance of a debt and which cannot be refused by the creditors

Q What is the difference between : (a) Death Duty and Estate Duty (b) Customs duty and Excise Duty ?

(*Suprakash Banerjee Calcutta*)

Ans. (a) Death Duty is a kind of tax imposed on the property inherited at the death of its previous owner Estate Duty is a form of Death Duty and is a method of direct taxation imposed when a property is transferred on the death of its owner

(b) Import Duties and Export Duties constitute customs duties Excise Duty is the duty charged on goods manufactured within the country

NATIONAL CADET CORPS

Q Please explain the objective and working of National Cadet Corps

(*Harendra Pr... Singh Rewa*)

Ans The basic aim of National Cadet Corps is to arouse the interest of young men and women in armed forces There are three divisions (1) Senior Division intended for the colleges (2) Junior Division for School boys. (3) Girls Division which is separately organised. There is no liability for military service The senior and junior Divisions are composed of three wings—Army, Air Force and Navy and the present strength is over one and a half lakh.

BALKAN STATES

Q Which countries constitute Balkan States ?

(*... Allahabad*)

Ans. Whole of Albania, continental Greece, Bulgaria, European Turkey, Yugoslavia and Ru...

pean Turkey constitute the Peninsula which also occupies most of Ugoslavia and Rumania These six countries successors to Ottoman Empire are called the Balkan States

WORLD OF BOOKS

Q Who wrote the following books ?

(1) A Beginning (2) History of Hindu Chemistry (3) Ends and Means (4) Rama nan' (5) 'Childhood Playmate' (6) Venomous Virgin (7) A Passage to India (8) In Memoriam (9) The Life Divine (10) Sunflower' (*B Raghavan New Delhi*)

Ans (1) Dom Moraes (2) P C Ray (3) Aldous Huxley (4) Changampuzha Krishna Pillay (5) Mohammed Basheer (6) S K Pottekkat (7) E M Forster (8) Tennyson (9) Shri Aurobindo (10) G Sankara Kurup

JOURNALISM

Q Kindly mention the Institutes in India where Journalism is taught

(*Bepin Behari Lal Hazaribagh*)

Ans The following Institutes provide diploma in Journalism

1. University College of Arts Calcutta
2. Department of Indian Economics Madras University Madrass
3. Department of Journalism, Punjab University Camp College New Delhi

INFLATION

Q What is the cause of the abnormal rise in the general price-level in India ? How can this tendency be checked ?

(*Bhogram Baruah Assam*)

Ans The unabashed policy of deficit financing pursued by the Government has resulted in the emergence of inflationary tendencies in the economy These have now begun to manifest themselves in the form of an abnormal rise in the general price level

The following specific measures can be adopted by our government to check inflation successfully

1. Physical control on production distribution and price of goods
2. Reduction in the amount of deficit financing
3. Expansion of industrial and agricultural production
4. Elimination of wasteful public expenditure

QUALIFICATIONS OF A GOVERNOR

Q What qualifications make a person eligible for the post of the Governor ?

(*Amal Paul Anara*)

Ans The constitution lays down the following qualifications for a governor. He should be a citizen of India and must have attained the age of 35 He cannot hold any other office of profit during his term of office Nor can he be a member of either House of Parliament or of any State Legislature.

CAPITALS

Q Please name the capitals of

(a) Siberia (b) Liberia (c) Libya

(*Pulak Mukherjee Chinsura & Ravi Sharma Mhow*)

Ans (a) Irkutsk (b) Monrovia (c) Tripoli and Benghazi are joint capitals

ON LOVE

Q "Man's love is of man's life a thing apart
It's woman's whole existence",
—Do you agree ?

(*Miss A P Suseela Trichur*)

Ans Sentiment is the very being of woman Analysis of feminine psychology has revealed that woman derives infinite pleasure and delight from brooding over apparently trivial experiences of life—experiences which a man considers hardly worth remembering ! Of all the sentiments love is perhaps, the sweetest and no wonder it has become the very life blood of woman indeed her very existence And the moment the flame of love that brightens up the soul of a woman is extinguished she ceases to exist But not so with man Power enough he has to keep off love from merging itself in his being if he so wills

Nothing is cheap which is superfluous, for what one does not need is dear at a penny —Plutarch

• • •

There are but two ways of paying a debt increase of industry in raising income, or increase of thrift in laying out —Thomas Carlyle

• • •

Peace is the golden cup that binds the sheaf of blessings —Katherine Lee Bates

Ans The personnel of the U.P.S.C. as on April 1958 is

Chairman V.S. Hejmadi

Members 1 S.V. Kanungo

STUDENTS' EMPORIUM

NATIONAL DISCIPLINE SCHEME

A widespread mood of indiscipline among the youth expressed in many acts of defiance and lack of respect for academic authorities and lack of sense of direction and idealism has caused general concern in the country recently.

Some consider it a passing phase, a development which time will correct. This however is only a partial explanation. There are, social scientists agree, definite causes involved. And they can be remedied.

First among them is the apparent inadequacy of leadership by teachers. Too engrossed in problems of their own, the teachers have not the grip which is basic to the right education of the students. Again we find the growth of sectional loyalties which naturally destroy the sense of greater loyalty to the country and its common heritage. A third aspect is the increasing and active, at times morbid, interest which the students display in the political and economic problems and developments.

Political and economic issues, instead of being the subject of academic study and debate among them, have become the subject of agitation in which young people still preparing for life take an active part without realising the full meaning and implications of their action. There are other factors too, such as the general condemnation of the present "clerk producing" educational system. It demoralises the youth.

One [illegible] factor which has also come into play often is that the young men—full of life and energy—are [illegible] to [illegible] themselves. [illegible] to the [illegible] the problem can be solved. The [illegible] has to be to [illegible] the [illegible] and energy of the youth of the country and to [illegible] it for the welfare of the country as well as for the [illegible] [illegible] leadership.

This is precisely what the National D[illegible] Scheme [illegible]. In concrete terms the [illegible] [illegible] [illegible] [illegible] the child [illegible] [illegible] [illegible] [illegible] through drills, parades and [illegible] to discipline [illegible]. The [illegible] course will be a regular part of child's school life and even during the vacations children will be encouraged to join excursions and community work consistent, of course, with their capacity. There would be all necessary cautions against the danger of regimentation.

Secondly, the movement seeks to foster, consistent with the child's capacity to imbibe, through lectures, demonstrations and [illegible], a sense of tolerance and understanding, the spirit of give and take.

Stress at every stage is to be laid to make the instructor recede into the background and allow the child to learn through observation and experience.

With the help of this training the future citizens will become less inhibited, less [illegible] and self assertive, more tolerant and understanding, yet fit to render national service.

The idea of launching such a scheme of national discipline took shape after the Prime Minister Shri Nehru in an address early in 1954 to N.C.C. cadets in Delhi exhorted them to be ready to defend the country in times of emergency. To give shape to the scheme its organiser Shri J. [illegible], the then Deputy Minister for Rehabilitation, drew on his study and experience of Japan and other countries and the methods used there to teach students to value discipline and how national greatness has been built on that sense of discipline [illegible] spirit of sacrifice that flows from it.

To begin with, Shri [illegible] introduced the scheme in Kasturba [illegible] [illegible] in [illegible] [illegible] and [illegible] and their [illegible] and [illegible]. The Prime Minister had a chance to witness the results achieved when later in 1954 he [illegible] a [illegible] of [illegible] in Kasturba [illegible]. He was [illegible] and he suggested the extension of the scheme [illegible].

Encouraged by the [illegible] public response the scheme was [illegible] [illegible] in Dec[illegible] [illegible] [illegible] [illegible] [illegible] [illegible] (D[illegible]) and [illegible]. [illegible] the [illegible] [illegible] [illegible] lakh of rupees for 1956 [illegible] start was made in [illegible] [illegible] [illegible] [illegible].

[illegible] with the grant [illegible] to [illegible] [illegible] [illegible] [illegible] Patiala.

Gurgaon, Panipat and Saurashtra were drawn in so that, at the beginning of 1956 57 40 000 children were being given this training Of these 15 000 were in Delhi 10 000 in Punjab 2,000 in PEPSU, 2,000 in Saurashtra, 4 000 in Bombay and 7 000 in West Bengal By the end of 1956 about 60 000 children were getting the benefit of the National Discipline Scheme Subsequently, the Planning Commission, after carefully examining the expansion proposals allocated fifty lakh rupees for the Second Plan period

The scheme is now in operation in the Punjab Bombay West Bengal, Delhi, Madhya Pradesh, Jammu & Kashmir and a few schools in Uttar Pradesh By the end of the current year, the number of schools covered would go up to 200 and the number of students well over one lakh Two training camps have been started to train instructors one at Malviyanagar in Delhi and the other at Faridabad Running three months courses, these training centres have already sent in the field nearly 600 instructors.

To extend the scheme throughout the country in a real sense a tremendous amount of work organisation and funds will have to be harnessed but going over the progress already made and the good work done in less than four years one can see that the scheme is here to stay It has found roots and the growth is healthy and vigorous.

FRIENDSHIP THROUGH PEN FRIENDS' LEAGUE

Presiding at the fourth International Pen Friends Convention in New Delhi on August 4 Shri Humayun Kabir Minister for Scientific Research and Cultural Affairs said that never in history was the need for emotional unity of mankind so great as today, for in the ancient past the world was divided not only geographically but also emotionally and culturally

Referring to the significant role of the League of Pen Friends in promoting friendship among the peoples of the world he said In fact in a world where the only alternatives today are common survival in peace prosperity and progress for all or one common destruction through atomic and nuclear disaster the values of friendship sympathy and understanding stressed by the Pen Friends ideal and implicit in our history seem to offer the only reasonable basis of human life and conduct.'

The following is the brief text of Shri Humayun Kabir's address

Established sometime after the first World War the League of Pen Friends serves a very real need in the modern world Difficulties of communication prevented any large contacts between people belonging to different countries and traditions and hence chances of conflict or clash were much less than today Even then intrepid spirits crossed the barriers of mountains and oceans in response to a deep urge of fellow feeling for human beings in other parts of the world Ideas spread far and wide and in course of time the intellectual moral and spiritual insight of a few became the proud possession of many in many lands

"The whole world is today literally a neighbourhood Neighbourood without neighbourly feelings is however fraught with danger The terrifying development of instruments of destruction makes it all the more necessary that the neighbourhood of the world should be inhabited by people with neighbourhood and friendly feelings

'It is a common experience that we are afraid of what we do not know International jealousies and fears like jealousy and fear on the individual plane, arise out of suspicion born of ignorance We generaly form in our minds a stereotype of the people of other lands Very often such a stereotype is completely wrong but nevrtheless these stereotypes mould our feelings and influence our action Men and women are much the same all over the world but the stereotypes tend to put people of different countries into sharply differentiated classes Such stereotypes should therefore be corrected by contact with real individuals

' It is a paradox of human life that once we know a person as an individual we very often cease to think of him as belonging to a particular country race or creed It is here that the League of Pen Friends can play a great role by helping to establish human contacts among individuals of different countries and nations

I have often felt that if men could travel freely in one another's countries one of the major causes of conflict and war would disappear The ordinary man everywhere is generally kind and friendly If a sufficient number of ordinary men and women of one country came into contact with a sufficient number of ordinary men and women of another country it would be one of the

[illegible] foundations of international understanding and peace. Unfortunately, however, it is not possible for every one to travel everywhere. Pen friends can, to a large extent, help in this situation for even when people cannot meet physically they can establish personal contacts through the League of Pen Friends.

"The League of Pen Friends brings young and old in different countries into direct contact with one another through the written word. I know that the spoken word is sometimes more powerful but I would not for a moment underestimate the power of the written word. In fact I am great believer in the power of words whether spoken or written. If ideas can overcome the barriers of mountains and oceans and conquer continents they do so through the medium of the spoken and sometimes even more the written word.

"Pen Friends can utilise the power of the written word in establishing immediate and intimate personal contacts among men and women in different countries of the world and more particularly among the younger generation everywhere.

Indian religion, Indian philosophy and Indian social organisation are based on the acceptance of the principle of unity in diversity. In many ways India is an epitome of the world and if through the last five or six thousand years we have slowly evolved in India a principle of "live and let live," we are confident that the same principle will today enable us to live in friendship in the larger context of the modern world.

TRAINING FOR BUSINESS LEADERSHIP

Practical experience in operating a business is sometimes hard to come by even for an adult but, an organisation known as "Junior Achievement", in the United States offers this opportunity to High School students.

It is an after-school project and free of charge. [illegible] purpose is to give [illegible] personal experience [illegible] the young business leaders to be. [illegible] adult advisers who work with the teen-age students throughout the year are volunteers.

Each company [illegible] three advisers, one for production, one for sales and one for accounting. After choosing the product to manufacture or a service to sell, the young people then [illegible] stock in their company [illegible] a share. [illegible] and [illegible]. They [illegible] their [illegible] wages. At the end of an [illegible] business year the company is liquidated.

The young people are now through with the co-operation of High School and [illegible]. Companies are formed numbering from 15 to 20 boys and girls. Each company has three adult advisers and they meet together one night a week during the school year at the "Junior Achievement Workshop" in their neighbourhood.

They elect a president and other officers. They determine the amount of working capital the firm will need to begin production. After the stock is sold, a bank account is opened and the necessary raw materials are purchased. The company applies for its Junior Achievement charter, pays rent (usually $1 a month), buys the small tools it needs. Heavy machinery is leased from the organisation by a deposit of capital proportionate to the value of the machinery used.

The company's products are sold on the open competitive market. Complete books are kept and the average gross sales of a company are $300 for a company year of eight months.

If a company has ended up with a deficit, its assets are prorated among stockholders as in any business that fails. Reports are made by all companies to their stockholders.

Through this experience boys and girls learn, not only the meaning of hard work, but the financial risks of running a business, the hazards of competition and the unexpected losses that sometimes occur. They also find great satisfaction when a business is successful through their own good efforts.

UNRECOGNISED TECHNICAL INSTITUTIONS

It has come to the notice of the All India Council for Technical Education that while inviting applications for admission, some institutions have been stating that they are running the courses of the Council when in fact the institutions have neither been affiliated to the Council nor recognised by it for the purposes of running the courses.

[illegible] a number of such institutions are in Uttar Pradesh. These are (1) [illegible] Engineering [illegible], Allahabad; (2) [illegible] Engineering School, Allahabad; (3) [illegible] Engineering [illegible] Meerut [illegible]; [illegible] Meerut; (5) [illegible]; (6) [illegible]; (7) [illegible]

(8) D J Engineering Institute Baraut (Meerut) and (9) M P Engineering Institute Gorakhpur

Information relating to Institutions, affiliated to or recognised by the Council for the purpose of running National Diploma/Certificate Courses, can be had from the Secretary, All India Council for Technical Education C/o Ministry of Scientific Research & Cultural Affairs New Delhi or from the Secretaries of the respective Regional Committees of the Council in Kanpur, Madras Bombay and Calcutta

GUIDE TO CAREERS
THE ELECTRICIAN

An Electrician s Work is to install assemble, test repair and maintain electrical fittings fixtures equipment and apparatus Electrical wiring of all types is fitted and switch boards, control panels batteries etc. are installed in residential houses, public buildings factories workshops hospitals and offices Existing wiring fixtures and motors are repaired and in the process armatures and coils may be wound and new brushes or commutators may be installed

Electric motors generators transformers machinery having electrical equipment (such as electrical lifts cranes pumps air compressors etc) and electrical instruments (such as ohmmeters, voltmeters house meters signals etc.) are installed tested maintained and repaired under proper supervision. New electrical installation are inspected with a view to ensure observance of electrical fire and safety regulations Proficiency in soldering and a working knowledge of carpentry are essential Occasionally estimates of cost of installation or repair jobs have to be worked out.

An electrician has to work independently or with others indoors as well as outdoors Surroundings of work may be noisy He may have to work on night shifts especially when he is employed in power station or factories running continuous shifts Most of the States require an electrician to hold an electrical licence issued by their Public Works Department

To Qualify as an electrician training can be obtained in one of the following ways depending on the age and qualifications of an individual —

(a) *Apprenticeship Method* Most of the electricians start as helpers or mates to experienced electricians working in power stations factories electrical firms or under contractors Basic electrical knowledge and training is obtained on the job under the supervision of an experienced hand It takes about three years to become a trained electrician This period may vary according to the ability of an apprentice to grasp and handle the job Some apprentices are paid nominal wages or are unpaid until they have gained enough experience to show some output of work to the employer No rigid educational qualifications or age limits are prescribed for apprentices, and it is not uncommon to find apprentices of all ages with varying levels of education

(b) *Trade Schools* Training can also be obtained in a trade school or a training institute Most of the trade schools and training institutes admit boys who have attained middle school standard The duration of the training varies from one to two years These schools charge tuition and other fees ranging from Rs 5/ to Rs 10/ per month

Many training institutes run by charitable societies educational trusts and missions charge only nominal fees

(c) *Government training schemes* Some Central ministries and almost all the State Governments run institutes for the training of electricians The duration of training varies from one to two years and usually persons who have passed or attained matriculation standard are selected for such courses In most cases no tuition fee is charged Deserving students are in some institutions given a stipend during training

Trade Schools or Training Institutes generally impart theoretical training in the following subjects —

Drawing elementary arithmetic, theory of the trade; allied courses (carpentry and fitting) first aid and safety precautions Electricity Acts and Rules installation materials estimating and costing etc.

Emphasis is laid on practical training which may include fitting cable splicing electrolysis electroplating repair of electrical appliances and fixtures winding and repair of dynamos, transformers and armatures overhauling and servicing of generators rectifiers converters and motors measuring of voltage current and energy battery charging testing and replacing wiring and installation of lighting and heating systems.

Personal Qualities Necessary For The Profession are a liking for manual work and confidence and a sense of responsibility for carrying out the work entrusted with thoroughness and within the scheduled time Steady

nerve and careful habits are necessary for accurate performance of work as carelessness can lead to danger through electric shocks.

To Enter The Profession application may be made direct to an employer e.g. electrical goods manufacturer, repairer, contractor etc. Often vacancies are advertised. In the case of Government vacancies, which are usually filled through the Employment Exchanges it would be advisable to register at the nearest Employment Exchange. Many vacancies in the private sector are also filled through the Employment Exchanges.

Openings for electricians exist over a wide field. A large number of electricians are engaged in maintenance, repair and manufacturing work. Employment can be found under Government as well as private employers: Railways, Military, Public Works Departments, power houses, thermal and hydel stations, manufacturers of electrical equipment, fixtures, appliances, wireless and telecommunication stations, cinema houses, hotels, aero, auto and diesel engine manufactories, repair shops etc. are a few of many places offering openings.

For Further Information regarding training or employment you may contact:

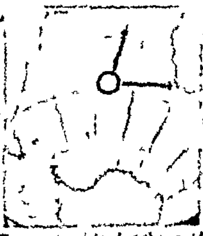
(i) The Director of Industries of your State

(ii) The Managers of Training Institutes

(iii) The Employment Exchange nearest your home.

The Employment Outlook India is engaged on a mighty venture to increase the production of electric power. The total installed generating capacity in the country has been raised during the past four years from 1.7 million kw to 2.9 million kw. The future programme of development aims at providing 3.5 million kilowatts of additional power. This would mean more opportunities for electricians.

Out of a total of about 560,000 villages in India only about 3,700 are electrified. Increased power production is bound to result in the electrification of more villages and towns and consequently the demand for qualified electricians is bound to increase substantially. A large number of electricians will also be needed to construct and maintain power stations and electric lines.



Household electrical appliances are also becoming increasingly popular and the work of their manufacture, installation and repair will also offer employment to youngmen who have the necessary training.

60 000 TEACHERS TO BE APPOINTED

The Government of India have approved a scheme to relieve educated unemployment and expansion of Primary Education to be launched during 1958 59

Under the Scheme 60 000 teachers will be appointed during the next three years beginning from 1958 59 About 15 000 teachers will be appointed in 1959 58 20 000 in 1959 60 and 25 000 in 1960-61 These teachers will be utilised mainly for opening Junior Basic or Primary schools in school less villages preference being given to relatively more backward areas in a State

Since the problem of education at the Primary stage in most of the States at present is largely that of bringing girls to schools special efforts will be made under the Scheme to recruit as many women teachers as possible, and therefore, while making appointments preference will be given to women teachers

The Government of India will pay financial assistance on a 100 % basis for the following purposes

(1) Emoluments of teachers (2) Equipment grant at the rate of Rs 250/ per teacher, (3) Cost of training of the teachers (4) Residential quarters for women teachers that may be appointed under this Scheme in areas at the rate of Rs 2 500/ per quarter The scheme provides for the construction of 6 000 quarters in the whole country Out of these, 12 00 will be constructed in 1958 59 2 400 in 1959 60 and 2 400 in 1960 61 and (5) appointment of Inspecting Officer e g Sub-Inspectors or Sub-Deputy Inspectors as they may be designated in different States

For supervising the work of teachers to be appointed under the scheme, it will be necessary to strengthen the Inspectorate Provision has, therefore been made to appoint about 1 200 inspectors of the lowest rank 300 in 1958 59 400 in 1959 60 and 500 in 1960 61

The Government will pay State Governments 100% grants on the emoluments of these officers for 3 years from the year of appointment in accordance with existing salary scales in the States After expiry of the period of of three years for which Central assistance will be available the entire responsibility for continuing the service of these teachers and inspecting officers will be born by the respective State Governments

The programme of expanding facilities of Primary education envisaged under the scheme will not replace or reduce the magnitude of the programmes which the state Governments are to undertake under their Second Five Year Plans

The minimum academic qualifications of persons to be appointed as teachers would, generally, be Matriculation or Post Basic. Preference will be given to persons who are already Basic trained wherever possible Wherever it is felt necessary some relaxation in these respects may be made in the case of women teachers or in special circumstances and areas

During the current financial year the scheme will be treated as Centrally-sponsored scheme for which the Government of India will meet the full cost

Under the scheme teachers have been allocated to various States and Union Territories for the year 1958 59 If any State Government however can implement the scheme faster and feels the need for more teachers during th year the Government of India would consider their request for allocation of additional teachers on merits if teachers are available as savings from other States or otherwise

The scheme also incudes Central assistance at the rate of Rs 10 per trainee per month for organising short orientation training courses where untrained teachers are recruited

STUDENTS TOUR OF PROJECT SITES

The Union Education Ministry has decided to liberalise grants to students for purposes of tours to places of historical importance scenic beauty cultural interest architectural grandeur and to places where big national projects are being undertaken

The scheme is an integral part of the Ministry's youth welfare programme Under the scheme the Ministry has been giving grants to educational institutions recognised by a

State education department or affiliated to a university, for tours organised for their students. This grant was till now limited to the extent of 75 per cent. of the expenditure incurred on third class rail bus fare at students concession rates.

Keeping in view the economic condition of the students and the great educative value of these tours the Government of India has now decided to increase the amount of grant to 100 per cent. of the expenditure of third class rail bus fare at students concession rates.

Under the scheme grants are admissible for small and manageable batches consisting of not more than 32 students (within the age-limit of 15 to 24 years) and three teachers for tour in the country.

RE-ADJUSTMENT OF EDUCATIONAL SYSTEM

Inaugurating a "Seminar on research in the system of examination" in Hyderabad on July, Shri Chintaman Deshmukh Chairman of the University Grants Commission stressed the need for re-adjustment of educational techniques to meet the present-day requirements of the nation.

The seminar, one of the four regional seminars, was sponsored by the Examination Committee of Specialists set up by the University Grants Commission and is being attended by representatives from various universities. At the end of these seminars some general principles are expected to be evolved on the basis of which further action would be taken for reforming the examination system.

Shri Deshmukh said "We stand at a significant point in the socio-economic development of Indian society." He stressed that purposeful planning was essential. Shri Deshmukh said that the U G C. like every other responsible educational authority was convinced that reform in the field of examinations had become overdue.

Shri Deshmukh thought that the recommendations made in the report on the evaluation in secondary schools were workable and hoped that early steps would be taken to implement the work of reform of evaluation techniques in schools so that the improvement brought about at school stage could be [illegible] fully related to [illegible] the higher education level. He said that the seminars being held in this connection should come to a definite [illegible] as to how reform of examinations at the two levels could be integrated.

FINANCIAL AID BY U G C

The University Grants Commission and the Union Ministry of Education will each give by way of grant one half of the additional amount required for universities to switch over to the three year degree course.

A spokesman of the Commission said that it was estimated that an additional amount of Rs. 15 crores would be required to enable the universities in the country to introduce the three year degree course. The Union Ministry of Education and the University Grants Commission had agreed to sanction grants to the tune of Rs 5 crores and Rs 2.5 crores respectively. The balance of Rs. 7.5 crores would have to be found by the state governments, universities and the institutions concerned.

The spokesman said that already a few universities had introduced the three-year degree course and a few more had recently decided to introduce it.

The Commission, the spokesman added, had also offered financial assistance to raise the salaries of college teachers. At present, college teachers in some areas were paid as low as Rs 100 basic pay and in certain cases even below Rs. 100. The Commission had offered to give financial assistance to raise teachers' salaries to a minimum basic pay of Rs. 200 P.M. as recommended by it. The scale of pay was to be fixed in accordance with the local conditions the maximum varying from Rs. [illegible] to Rs. 700. The Commission would meet one half of the additional expenditure and the balance had to be found by the institutions themselves or by the state governments concerned.

In the case of women's colleges, the Commission had offered to meet 75 per cent. of the additional expenditure resulting from the enhancement of teachers' salaries as recommended by it.

The status of teachers, the spokesman said was a vital part of the improvement of university education standards. There was great recognition of the need for raising college teachers' salaries. A number of colleges of Bombay, Poona, Mysore and Madras Universities had agreed to take advantage of the University Grants Commission's offer.

DIGNITY OF THE TEACHING PROFESSION

Addressing the golden jubilee session of the South Indian Teachers Union whose three-day [illegible] Conference at Trivandrum concluded on

May 30 Mr Humayun Kabir, Union Minister for Scientifi Research and Cultural Affairs, said that the efforts of teachers themselves could restore the dignity and prestige of the teaching profession to its pristine glory

While it was necessary for teachers to exert themselves to raise the status of their profes s on, no Government, calling itself a free and democratic government could afford to ignore the status of school teachers he said To expect millions of primary school teachers who would be functioning in this country when all the children would be in school to live like the ancient *gurus* of India or as mis sionaries without caring for wordly comforts was utopian

If the teachers status in society had deter iorated he said teachers themselves were to be partly blamed They too thought that their profession was a rejected one in society and advised their children and their friends children never to take to it. If that was their attitude toward their profession how could they expect others to respect th m, he asked

Mr Humayun Kabir deplored the practice p evalent among some teachers organisations in th country to differentiate between the primary and secondary school teachers and the secondary and university teachers and said such a distinction would only disrupt their unity and harm their cause

If they achieved a sense of unity in the teaching profession, a time would come when society would recognise the role and function of the teacher in the new order about which much was being talked but little was being done

Mr Kabir voiced his opposition to teachers participation in politics and said he was particularly against elections being held among teachers for various offices It was his experience that elections not only diverted teachers from their work as preceptors but resulted in two other major evils They creat ed divisions and factions, abruptly ending long standing friendships. B fo e the wounds of one election were healed the next elections came to aggravate them still further Much worse than this was the loss of loyalty of a large number of students who might also be actively interested in politics It was their right to hold political views strong views even But for teachers or pupils to be involv ed in politics in the sense of fighting elections was wrong the Minister s id.

While this was one side of the picture the other side was that it was the duty and obliga tion of the State society and community to ensure to teachers their legitimate rights and see that they had no cause for grievance

Mr Kabir wanted teachers not only to dis seminate knowledge but also expand the front iers of their own knowledge

TUTORIAL SCHEME OF DELHI UNIVERSITY

The tutorial schemes of Delhi University started functioning from early August

The scheme which will provide tutorial instruction to final year students has been financed by the Ford Foundation

Early this year the Foundation gave a grant of $426 600 to the University for implement ing the proposal

Mr K C Nag form rly of St Stephen's College, has been appointed officer on special duty to look after the implementation of the scheme

Mr Nag has already set up an advisory committee and an executive committee to h lp him in the execution of the schem

The advisory committee consists mainly of the heads of departments and principals of colleges concerned The executive committee consists of eight members of whom three are deans of faculties and two are principals of colleges

Eleven colleges with honours students, six in the campus and five outside will benefit from the scheme Out of 1 050 final year honours students about 900 will attend the tutorial The required number of tutors for the scheme have already been secured

Fifty eight teachers will conduct classes in the first term of the current academic year and 21 tutorial fellows have been appointed for one y ar

To acquaint tutors with the scheme a two-day orientation programme was held on July 30 and 31

FILM WORLD

First Indian Cartoon Film

The first non-commercial colour cartoon film in India, being produced by the Films Division is in the final stages of making and is expected to be released soon after completion.

Titled "The Banyan Deer" the one reeler is based on an ancient Jathaka fable and is designed primarily for child audiences.

A pure animated cartoon, "The Banyan Deer" is in Eastman Color and is being made by the Cartoons Department set up by the Films Division in May 1956.

The Department is advised by Mr C. H. Weeks noted animator from Walt Disney Studios, whose services were lent to the Government of India by America's International Co-operation Administration, known here as the Technical Co-operation Mission.

Nearly 15 Indian artists are now being trained in cartoon technique at the Films Division studio. During the last two years of its existence, the bulk of work of the Cartoons Department consisted of making inserts in the form of animated charts and graphs for a large number of Films Division documentaries.

Raw Film Plant in India

Certain new proposals have been put forward by the Government of India in its discussions with the East German Government on the setting up of a raw film plant with the latter's assistance it is learnt.

Details of these proposals are not known but it is understood that the talks between the two Governments are in a concluding stage. It is known that East Germany had offered to provide the necessary foreign exchange for the raw film project on deferred payment terms.

East Germany has also offered to manufacture a certain part of the machinery locally. This would mainly consist of boilers needed for the manufacture of raw film. East German experts would also train Indian personnel in India as well as in their factories in East Germany.

[illegible] was [illegible] as a [illegible] for the raw film plant which has been included in the list of projects that are due to go into production early in the third Five Year Plan period.

A change in the schedule of production, it was thought, might need further consideration of the raw film project both in New Delhi and Berlin. An agreement, however, is expected to be signed soon with East Germany on this project.

• • • •

Kodak's Offer For Plant

A multi-million dollar investment offer from Kodak to produce raw films in India is being considered by the Union Government, it is learned.

The offer was conveyed to the Government by General E. P. Curtis, vice president of Kodak in the United States some time ago.

The offer envisages meeting all foreign exchange needs of the proposed raw film plant with Indian participation in the capital and management of the project which may cost in all above Rs. 50 crores.

The firm has also offered to provide all the technicians required for the project. The plant will be owned by the firm according to the offered terms.

The move has come in the wake of Indian negotiations with East Germany. Meanwhile an experts' team from East Germany is to arrive here soon to complete the deal.

• • • •

Foreign Producers in India

The Government of India has asked all State Governments to consult it before granting facilities for the production of films in the country by foreigners.

The Union Ministry of Information and Broadcasting will arrange for a preliminary examination of the script before entertaining any proposal by a foreign film company to shoot in India or even sending it to a State Government for granting any facilities.

These new instructions follow certain cases brought to the notice of the Government of India where facilities have been given to foreign producers without any reference to the [illegible].

In one such case a film company has [illegible] [illegible] of the facilities given by a [illegible]

Government in the credit title but, on the merit of its contents the film was refused the certificate of public exhibition in India by the Central Board of Film Censors

The attention of State Governments has also been invited to directions given earlier where it was made clear that the facilities asked for sometimes also involved security considerations

The Government is of the view that since there has been criticism both in and outside Parliament about the production of unfavourable films by foreigners it is necessary to examine the script of all such films so that they do not contain anything objectionable

* * *

Indian Films in Foreign Lands

The Asian Film Society of London is planning to organize a Festival of Indian Films in the U S A early next year to promote commercial exploitation of Indian films in that country

Mr E A Pochee secretary of the society, said that the society would arrange similar festivals in West Germany and Britain at the same time

The Asian Film Society, which exhibits Indian films to British audiences has already organized a number of festivals of Indian films in London and has promoted commercial exploitation of Indian films in European countries

Mr Pochee also revealed that the society has finalized details for regular exhibition of Indian films in a number of towns in the United Kingdom These film shows will be a weekly feature in places where Indian and Pakistani citizens stay in large numbers.

An increasing number of Europeans have been showing keen interest in the Indian films exhibited in the United Kingdom by the Asian Film Society

Mr Pochee who has distributed many films in Europe and the Middle East, stated that the market for Indian films in these areas has been largely spoilt by unwise methods of sale and distribution by Indian exporters and their agents

'As soon as a new market for Indian film is created it is spoilt by all sorts of pictures being dumped into it he added

Berlin Film Festival Awards

Rajkamal Kalamandir's President's Gold Medal winning film "Do Ankhen Barah Hath received international recognition when it was awarded two prizes at the Berlin Film Festival—the prize of the International Catholic Film Bureau and the Festival jury's special prize

The Catholic Bureau said in its judgment it was 'a film whose profound and poetic symbolism transcends all difference of culture and shows the redemption of the most rigid of men through complete charity, self sacrifice and trust in God

The film received the Festival jury's special prize for 'an especially valuable achievement in depicting a significant social problem as exists today in many countries with poetic feelings

'The film not only has great charm, it is also honest in treating the experiment of a prison reform in accordance with the teachings of Mahatma Gandhi

"The End of the Day Ingrid Bergman's Swedish picture won the Golden Bear as the best film The best director award went to Tadashi of Japan for his work in 'Story of a True Love'

Italy's Anna Magnani was adjudged the best actress for her performance in Wild is the Wind The best actor award went to Sidney Poitier for his performance in 'The Defiant One.

Britain's war film Ice cold in Alex won the International Film Journalists Association prize for the way it handled a 'deeply human theme The Association also made a special mention of Ghana's film, Jagaur,' for its artistic quality

* * *

Afro-Asian Film Festival

An international film festival of Asian and African countries is scheduled for between August 20 and September 3 of this year in Tashkent the Uzbek capital The festival organisational committee including prominent Soviet workers in arts from Central Asian and Trans Caucasian republics has been set up in Tashkent

The festival will continue the noble traditions of the Peking Film Festival of Asian countries held in September 1957

In their final communique the participants of the Peking Festival—the representatives of 14 countries—expressed the wish to hold such festivals yearly This year, film workers from African countries will also take part in the festival

The festival will include full length feature films as well as short, popular science and

documentary reels and animated cartoons. Each country is given the right to send in one or two feature films and as many short reels. Countries which have no film industry of their own are invited to attend the festival as guests.

• • •

Grand Prix Czech Film

The Czechoslovak Film "Devilish Invention" won the Grand Prix at the International Film Festival which ended at the Brussels World Exhibition on June 15.

Awards were also conferred on both the Soviet films shown. One of them "The House I Live In" won the prize for best production and "And Quiet Flows The Don" for best colour photography.

"The House I Live In" also won the prize of the Commissioner General of the United Nations Section at the exhibition.

• • •

Catholic Church Blesses Films

The Catholic Church will give a blessing to secular films in a drive to beat the western cinema slump and encourage audiences back to the movies.

This is the effect of a decision taken by the International Catholic League Film Office at a conference in Paris.

For long Church bodies like the Catholic League of Decency in the United States have exercised censorship on behalf of their faith by giving or refusing seals of approval to motion pictures.

Now this sort of function will be developed more positively by offering active cooperation to producers in exploiting worthy films. This will be done through national Catholic Film Offices and equivalent Church machinery.

The conference agreed that films qualifying for such support need not be religious in subject but must attain high technical and moral standards.

"We desire to help the film industry recapture its lost audiences for good films and then encourage their production," a source at the [illegible] conference explained. It was apparent that large numbers of people had ceased to be cinema-goers because they felt that moral and intelligent standards had been defeated by so many [illegible] films.

As a part of the drive to encourage good pictures [illegible] the League and Catholic Film Offices award prizes to films at international festivals.

The Indian picture "Do Ankhen Barah Haath" at the Berlin Film Festival is the latest recipient. At Brussels, the Spencer Tracy film "Old Man of the Sea", received the Awards.

• • •

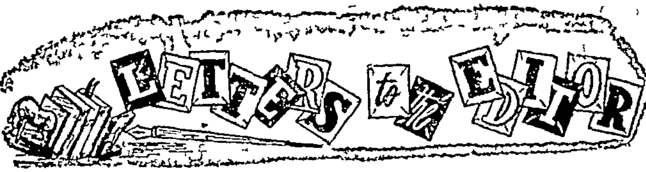
New Film Projection System

When the sponsors of the Brussels World Fair announced some time ago that a contest would be held in connection with the Fair to find the best new and unusual motion picture process, they had no idea how enthusiastically the idea would be received. Competing nations are vying for the attention of the judges by offering them some odd and extravagant motion picture spectacles.

A projection system installed at the Italian pavilion carries the wide screen idea very close to its absolute limits. The Italian system, called Aroterama, requires one screen tilted toward the viewer to be placed in a hole in the floor. Another screen occupies a normal vertical position and a third, also tilted towards the viewer, is fastened to the ceiling. Three projectors are needed to fill the three screens.

When a spectator at the Aroterama theatre looks up, straight ahead or down he sees part of a composite image that makes up an aerial view of Italian landmarks. The inventor of the triplescreen process is a Rome architect A. Moretti.

But before any laurels are handed over to the Italians, the projection system at the Czechoslovak pavilion will have to be considered. It uses eight screens—in an unusual way.



These screens are of different shapes and sizes and are scattered over a large background. Average size of the screens is about six feet by four feet. The result is a projection of related but separated motion picture scenes to obtain an overall effect somewhat like that sought after in abstract art.

• • •

Indian Films in China

The Chinese Government has so far imported nearly a dozen Indian films including "Jhansi ki Rani" and "Do Bigha Zamin" said Mr Lin Lin of the Embassy of the People's Republic of China. He added that Indian films were popular in his country and their music was on the lips of the people in the streets.

A large number of Indian documentaries was imported into his country which enabled the people to know about the development in this country, he added.

Letters from the readers giving their own opinion or point of view on all interesting subjects are published in these columns Letters should be brief to the point neatly typed double space They may be written under a pseudonym but must be accompanied by writer's name and address The views expressed here do not necessarily reflect editorial opinion or policy

JAI JAGAT

Sir

I crave the hospitality of the esteemed columns of your journal to support an idea of Acharya Vinoba Bhave

Sometime ago at press conference Acharya Vinoba said that the national greeting 'Jai Hind' should be replaced by 'Jai Jagat Elaborating his point Acharya Bhave added "India has a mission and duty towards the world The message of unity must be spread to all nations That is why I feel that even the slogan 'Jai Hind' is narrow and has to be replaced by 'Jai Jagat "

I fully support his idea. India is one of the few nations on earth which have retained their ancient glory India can boast of a very rich culture She has left behind illiteracy social evils poverty and class hatred to a very large extent Indians think in terms of universal brotherhood and also contribute to the peace and progress of the world. India takes every country as her friend

Keeping in view these points, we must wish the whole world good

Jullundur — Yours etc

FOREIGN POLICY OF INDIA AND PAKISTAN

Sir,

Foreign policy of any country can be judged commended and condemned, only when it is a free nation We can rightly attack the people when their government goes wrong only if that government is chosen by the people But contrary to that, if that nation is colonised by another nation or ruled by any foreign country or if it is dependent either economically or politically or militarily on any other country its foreign policy is bound to be contrary to what the people expect it to be especially people of keen sense and perspicacious mind

India and Pakistan are both economically backward countries. But the primary differences in their policies come out of the outlook and abilities and personal qualities of their leaders India, though economically backward if not politically, when compared to many countries with the exception of a very limited few, never wished itself to be completely tied to and be dependent on some other country which in course of time may become an inextricable bond Besides that the great leaders of India found it after due and scrupulous observation better to be amicable with one and all that neutrality gains than partiality that it is advantageous to have co operation and help than to have bonds strings and dependency And so India followed an independent foreign policy Hence are the people of India able to move with pride heads lifted high, independent of all and subservient to none

But Pakistan followed quite a different path. It wanted military equipment rather than economic self sufficiency and political stability As wrath creates rashness which cannot contemplate calmly, Pakistan threw itself into the hands of a party from whom it found too late to be unable to extricate itself Pakistan having gone mad because of this is doing all sorts of clumsy and annoying things so as to aggravate and provoke India and make it fire the first musket

The existing differences between India and Pakistan at present are the outcome of the policies pursued by both the countries which are contrary in nature and widely different and incompatible in outlook.

Yours etc.

LEADERS AND MASSES

Sir,

I crave the hospitality of your columns to ventilate a view on the aversion that our leaders have, of la[illegible] developed towards criticism of any kind which is surely one of the reasons why our leaders have marched miles apart from the people. It is common experience that in the speeches and utterances of the leaders can be spelt an utter ignorance of the pulse of the people, the current problems that the latter suffer from and the way in which solution lies. But for all intents, it is necessary that the leaders should come down from their ivory towers of imagination to a contagious contact of the people whom they represent. Without a conjunct correlation democracy can, at best, be an academic exercise.

Too much reliance on official statistics does not help seeing the truth because the time lag that intervenes makes the whole show disposed to only a *post mortem*. [illegible] statistical manipulation results in blurring our vision in the face of contrary experience.

Time is ripe that we realised that it is not only a correct and proper diagnosis that is important; medicine administered in proper time also counts very much. In many of our current problems an emergence of proper outlook is an essential necessity for solution. For instances we need not have to grope in darkness—prices, investments, production, politics, education and employment, all these are burning questions begging solution in the proper way.

Calcutta-21 — Yours etc

THE DUTY OF A NEWSPAPER

Sir,

Indian News Papers as distinguished from those of Western countries are found lacking in catering news of Indian origin, news from countryside and suburban areas where lives the bulk of the community.

Most of the Indian population lives in the villages. If a newspaper cannot provide the readers with news of the [illegible] living in the villages [illegible] the news [illegible] that the newspaper has failed to perform its duty?

Getting up from bed early in the morning the readers [illegible] are [illegible] eyes [illegible] news [illegible] of U.[illegible] or U.[illegible] or [illegible] or [illegible] other foreign countries. I [illegible] that we [illegible] readers [illegible] the news of those countries. But what we have got to do with the trifling matters of those nations? Our news agencies are such as [illegible] news from far off lands and these news, not all of course, are of least importance to us.

Most of the news found in our newspapers are uncalled for speeches of leaders and so called V.I.Ps. who have found these papers to be the proper medium for their individual publicity.

Recently a journalist from one of the Western countries came to Delhi and he after carefully going through some leading Indian dailies commented that Indian newspapers were weighted only with the speeches and activities of Sri Nehru who according to him required no more publicity.

I think, the newspaper authorities would do a great service if they publish the news about the sorrows and sufferings of our sisters and brothers living away from us in remote villages.

Late Mr Thomas Jefferson once told "were it left to me to decide whether we should have a government without newspapers or newspapers without Government I should not hesitate a moment to prefer the latter." But this is not the case with the newspapers of India. A newspaper has to fight for the cause of the general masses.

As a son is the living link between father and mother so a newspaper is the only link between the men in authority and the people.

This is why a newspaper must not fail to do bounden duty—to stand and fight for the authentic cause of the people. It is the duty of a newspaper to place before the Government the public demand, and at the same time it is the essential duty of a newspaper to [illegible] or apprise the people with all steps taken by the Government to meet their demand. To do this duty successfully a newspaper should always give vent to the sufferings and demands of the common people who are living away from big cities.

I DEVELOPMENT OF TRASNPORT

For proper and planned development of transport and to ensure co-ordination between the various modes of transport on the one hand and the Central and State transport policies on the other the Union Government has decided to set up three new transport bodies

They are the transport development Council the Road and Inland Water Transport Advisory Committee and the Central Transport Co-ordination Committee These are to replace the Transport Advisory Council constituted in 1935 the Central Board of Transport and the Standing Committee of the Central Board of Transport

The Development Council will be a high level body to advise the Government on all matters of policy relating to roads, road transport as well as inland water transport The Council will also advise on problems relating to co ordination between different forms of tran port that may be referred to it by the Government of India

Membership of this Council will be restricted to Transport Ministers of the States and Lt Governor or Chief Commissioner of the Union Territories From the Centre the Minister of Communication Commerce and Industry and Railways, Minister of State in the Ministry of Transport and Communications Deputy Minister of Transport and Member Incharge of Transport in the Planning Commission will be its members

The Union Minister of Transport and Communications will be the Chairman of the Council and the Transport Secretary will act as its Secretary The Council will meet at least once a year

The Transport Advisory Committee will be set up to discuss problems relating to roads road transport and inland water transport and to make recommendations to the Development Council for final decisions The Committee will consist of official and non-official members and the Minister of State in the Ministry of Transport and Communication will be its Chairman

The Co-ordination Committee will be constituted in place of the Standing Committee of the Central Board of Transport and will deal with the day to day transport problems confronting the different Ministries of the Government The Transport Secretary will be the Chairman of this Committee

II NATIONALIZATION OF BANKS

The Economist of London in a leading article in its issue of June 14th makes the following terse observations on Mundhra affair and its probable repercussions :

On the one hand there are those who say that the whole affair has demonstrated the State s inability to manage large investment operations, that an intelligent clerk would have perceived the warning lights that eluded the minister and the senior officials concerned with the purchase by the Life Insurance Corporation of million pounds worth of share in the Mundhra Group of companies After all, was not the ostensible motive for nationalisation of Life Insurance to protect the policy holders against the risk of fraud, and incompetence on the part of the private insurer ? On the other hand there are those who say that the remedy for this sort of malpractice is not less but more State control on the investment operations Thus far from resolving the issue the Mundhra affair has intensified and confused the controversy over the relative merits of Governmental and private activity in trade and finance The Editorial recognises that it would be no more practicable for the Indian Government to unscramble the omlette in which such nationalised institutions as the State Bank and the Life Insurance Corporation are principal elements than it would be for the British Government to hand back the railways and the coal mines to their former owners The real point at issue is whether the Government will seek to regiment and supervise the banking system and the capital market still further or whether it will decide that collectivist policy has gone far enough for the foreseeable future and that it should rely upon the co-operation rather than the coercion

II NATIONALIZATION OF BANKS

The Economist of London in a leading article in its issue of June 14th makes the following terse observations on Mundhra affair and its probable repercussions

On the one hand there are those who say that the whole affair has demonstrated the State s inability to manage large investment operations, that an intelligent clerk would have perceived the warning lights that eluded the minister and the senior officials concerned with the purchase by the Life Insurance Corporation of million pounds worth of share in the Mundhra Group of companies After all was not the ostensible motive for nationalisation of Life Insurance to protect the policy holders against the risk of fraud and incompetence on the part of the private insurer? On the other hand there are those who say that the remedy for this sort of malpractice *is not* less but more State control on the investment operations Thus, far from resolving the issue the Mundhra affair has intensified and confused the controversy over the relative merits of Governmental and private activity in trade and finance The Editorial recognises that it would be no more practicable for the Indian Government to unscramble the omlette in which such nationalised institutions as the State Bank and the Life Insurance Corporation are principal elements than it would be for the British Government to hand back the railways and the coal mines to their former owners The real point at issue is whether the Government will seek to regiment and supervise the banking system and the capital market still further or whether it will decide that collectivist policy has gone far enough for the foreseeable future and that it should rely upon the co-operation rather than the coercion

Wide spread surplus persisted in respect of clerks untrained teachers from schools and colleges motor drivers peons carpenters un skilled office workers and unskilled labourers

A good number of Exchanges reported an excess of supply in respect of fitters cleaners motor mechanics chowkidars attendants post men, trained teachers primary school teachers, wiremen electricians blacksmiths ayas and dais

There was also a surplus of tailors at Udaipur Agra Lucknow and Shahjahanpur turners at Poona Barrackpore and Calcutta compositors at Allahabad and Lucknow and weavers at Lansdown and Barrackpore Ade quate number of vacancies were also not avail able for radio mechanics at Calcutta

The above survey brings to the limelight some of the significant issues confronting the planners of our nation The Report clearly reveals that with respect to some trades there is surplus supply of technical personnel and that with respect to other trades there is an alarming shortage of qualified hands. The authorities should take note of these problems and mould their employment policy in such a way as to do away with this imbalance in the employ ment market. Establishment of more and more technical institutes to impart training in those fields where there is a deficiency of qualified hands along with the provision of more emp loyment opportunities to surplus technical personnel will go a long way in easing the situation

IV STATE RESOURCES FOR SECOND PLAN

The Planning Commission, it is reported has taken a serious view of the delay on the part of most of the States in submitting their estimate of financial resources for the remain ing Plan period

In a recent communication it has asked the States to expedite these estimates as the out lays in the various States for the last two years of the Plan can be worked out only with re- ference to the resources which each State can provide

Even if the Plan outlay is ultimately limited to Rs. 4,500 crores—covering only Part A—it still leaves a gap of Rs 250 crores in th re- sources Unless the Planning Commission is reasonably certain of the ability of the States to raise their resources beyond the level agreed to when th Plan was originally drawn up it may be forced to further curtail the size of the Plan in terms of finances

Already apart from the bifurcation of the Plan into Part A including the hard core and Part B there has been a substantial curtailment of the Plan in terms of physical targets owing to the rise in costs

It is however, pointed out that at the present rate of Plan expenditure in most States which show considerable shortfall some of the States at least may not be able to spend their Plan allocations To that extent the pressure on raising additional resources may be reduced

According to a recent review of the progress of the State development plans the *Planning* Commission has come to the conclusion that only Bombay and Madras will be able to realize the target of Plan outlay In most other States there is likely to be a shortfall owing to their inability either to raise the necessary resources or to increase the rate of Plan expenditure

The States have also failed so far to submit a list of projects, which have either not yet been started or on which comparatively small outlays have been incurred arranged in a broad order of priority At the time of the reappraisal of the Plan in May they were asked to submit such lists by the middle of July

As the total outlay on Part A of the Plan has to be limited to Rs 4500 crores the Com mission has again reminded the States tha no new commitment should be accepted in regared to any project which had not yet been under taken without specific reference to it Nor are they expected to proceed with projects on which comparatively small outlays have been incurred so far without first fixing an order of priority with the Planning Commission's ap proval

SCIENCE & INVENTION

X RAY MICROSCOPE SHOWS INTERIORS OF DENSE OBJECTS

A new X ray microscope has been perfected in the United States which will enable scientists to study the interior structure of opaque objects and materials and quickly identify their chemical composition It can penetrate dense materials that cannot be studied with standard light microscopes or even with electron microscopes

The manufacturer says that it should be especially useful in the metallurgical paper textile plastic and food industries and in the medical biological field It will be effective for example, in showing the interiors of biological specimens such as lung tissue when a pathologist wishes to identify silicon and observe its distribution in the study of silicosis

Said to be the first commercial instrument of its kind the new X ray microscope is made by Philips Electronics Inc, at Mount Vernon New York.

• • •

NON-SMUDGE CARBON PAPER FOR TYPEWRITERS

A typewriter carbon paper that uses no carbon and does not smudge is now being manufactured by the Mittag division of the Burroughs Corporation at Park Ridge New Jersey in the United States.

In making the new paper a plastic coating containing ordinary ink is applied to paper stock instead of using a waxy carbon coating The ink is 'trapped' in the plastic like water in a sponge and is released a little at a time as the typewriter keys strike the paper The plastic coating permits the ink to flow from one area to another

• • •

SHATTERPROOF PLASTIC WINDOWS

Plastic windows that are shatterproof and non inflammable have been developed by the Seiberling Rubber Company of Akron Ohio in the United States They are made of a rigid high impact vinyl plastic, and are intended especially for factories and industrial plants. The plastic material can be machined sawed planed drilled nailed cemented or welded It can reduce the sun's glare by as much as 80 percent the manufacturer says.

• • •

GOLD FROM SEA WATER

You will hardly believe it but when you drink a glass of ordinary water you drink down some pure gold with it True the amount is so small that it can be detected only with the aid of extremely sensitive instruments.

'Gold is also to be found in the water of the seas and oceans says Soviet scientist Dovankov The average content of it in sea water is about 5 milligrams to the cubic metre The first grains of sea gold have already been obtained.

Sea water contains the salts of many other metals such as platinum silver palladium, and of such rare metals as radium, titanium and germanium.

' People have for long attempted to obtain gold from sea water realising that, like other metals, it is washed into the sea out of the continental rock by ground waters and mineral springs These attempts were unsuccessful but the idea of the possibility of getting gold out of water continued to occupy the minds of scientists And this is not surprising for if all the gold was extracted from the world ocean there would be two kilograms of this precious metal per every inhabitant of the earth !

"The Moscow Institute of Chemical Technology has evolved a cheap and convenient method of extracting gold from sea water The initial experiments were conducted with sewage waters The trapping installations with resin exchangers for extracting gold already working in Moscow Leningrad Tallinn Odessa and other cities have fully justified themselves But the Soviet scientists continued to search ways for extracting gold from the sea water

' Numerous experiments were continued with resin exchangers capable of selectively absorbing various elements For practical tests of the possibility of extracting gold from sea water a filter with resin exchangers was taken on board a research ship cruising in the Pacific Ocean

When it was brought back to Moscow and processed, it gave up pure gold recovered from sea water

"There is a real possibility of wide scale development of this new and interesting industry The task is to launch the manufacture of sufficient quantities of resin exchangers which become virtually saturated with gold when water is let through them. But the use of resin exchangers for gold extraction is only one of numerous fields of application for them They will soon find application in practically every branch of technology and for utility usage

NEW MECHANICAL BRAIN

A mechanical brain a veritable electronic egghead that like human beings is supposed to grow wiser and more accurate with age was recently demonstrated by the U S Navy

This brain called 'Perceptron' is so far ahead of other computors that it does not have to be fed facts and figures When the full scale model is completed it is claimed it will recognize and identify its surroundings without any human training

Proudly as if speaking of a brilliant recruit the Navy said Reading print and responding to verbal commands are within reach of Perceptron

It is the child of Dr Frank Rosenblatt research psychologi t at Cornell University Aeronautical Laboratory who says it is built essentially on a model of th human brain

Perceptron is regarded as one of the great breakthroughs in science It goes far beyond earlier electronic marvels and enters the realms previously dreamed up only by science fiction writers

In addition to reading and possibly writing it is expected to act as automatic translator from one language into another The Navy says It is the first non biological system capable of perceiving recognizing and identify ing its surroundings without human control It doesn t recognize forms by mat hing them against a stored inventory Instead recogni tion is direct and essentially instantaneous.

What will Perceptron be used for? The Navy naturally is interested in its military potential and already it is being prepared for new type automatic landing systems and automatic pilots for aircraft, automatic unearthing of scientific and other information buried in library books On the side it will take on rapid fire recognition of musical composition with all the accuracy of a learned music critic.

Dr Rosenblatt added Its ev ntual uses might mean the difference between destruction and survival in a nuclear war and might include sending the mechanical brains to explore remote places in space

RADIOACTIVE COCKTAIL

A silver haired scientist drank a radioactive cocktail fresh out of an atom smasher yesterday smacked his lips and announced ' It tastes all right

Dr Wallace D Armstrong 52 year old University of Minnesota medical man drained a cup containing radioactive fluoride in the first reported experiment of its kind on humans He u ed water as a wash

Dr Armstrong Head of the Minneapolis University s Physiological Chemistry Depart ment conducted the test as the first in a series he plan on other human guinea pigs

I feel I have a moral responsibility to try it first myself before asking others to do it' he told a news conference before drinking the potion

The hot fluoride was manufact red only a few hours earlier in the University s big atom smasher called a linear accelerator It was made by bombarding a beaker of water containing a large amount of heavy oxygen with 10 million volts of electricity

Dr Armstrong said the main purpose of the experiment was to learn the exact rate that fluoride is absorbed and excreted from the human body The radio active substance was used for measurements far mo e accura e than possible through chemical analysis

He estimated it would take about a week to calcula e all the results of the experiment.

Foreign Events

Iraq Becomes Republic

A major international crisis broke out in the Middle East on July 14 as a result of an Army revolt in Iraq in which King Faisal, the Crown Prince Abdul Illah and General Nuri el Said (Prime Minister of the Arab Federation of Iraq and Jordan) were assassinated and a Republican regime was proclaimed.

The first news of the Iraqi revolution was given in a broadcast from Baghdad Radio in the early morning of July 14. This declared that, "with the aid of God Almighty and the support of the people and the armed forces" Iraq had been "liberated from the domination of a corrupt group ins[illegible] by imperialism". After saying that there was complete unity between the Army and the people, and calling upon the population to maintain order and discipline, the broadcast announced the creation of an "Iraqi Republic which will preserve the nation's unity, maintain brotherly ties with other Arab countries, and fulfil all treaties and obligations which are in the interests of Iraq and which comply with the principles of the Bandung Conference and the U.N. Charter." It was also announced that a three-man Council of Sovereignty would carry out presidential duties pending the holding of general elections in Iraq.

As the new republican Government imposed martial law throughout the country and closed the frontiers and as all aerial, telephone and telegraphic communications with Iraq were temporarily suspended, it was not until some days later that fuller details of [illegible] be [illegible].

The exact circumstances of the murder of King Faisal, Prince Abdul Illah and other members of [illegible] were not definitely known [illegible] an official [illegible] broadcast on [illegible] [illegible] the [illegible] and the Crown Prince were [illegible] [illegible] [illegible] [illegible]

[illegible]

achieved success with no [illegible] [illegible] was encountered [illegible] population [illegible] from Army units [illegible] the provinces. [illegible] were [illegible] ed throughout all railway and telecommunication services were operating normally on the day after the [illegible] and there was no [illegible] ruption of normal economic life.

In the first hours of the coup [illegible] British Embassy in Baghdad was [illegible] and burned down by rioting mobs [illegible] Ambassador (Sir Michael Wright) and [illegible] were forced to take refuge in an hotel together with their families—some 40 persons in all. One member of the embassy staff—Colonel Patrick Wright, master of the household—was killed by a stray bullet during the attack on the embassy but there were otherwise no British casualties. The [illegible] were dispersed by armoured cars and the new Republican [illegible] (Brigadier Kassem) [illegible] assured Sir Michael Wright [illegible] steps would be taken to protect British nationals. Brigadier Kassem also expressed deep regret at the attack on the embassy and promised that compensation would be paid for the damage done. Anxiety had [illegible] in London about the fate of the [illegible] British [illegible] and [illegible] members of [illegible] at the R.A.F. base at Habbaniyah, but on July 2[illegible] it was announced that all were safe and well and that there had been no [illegible] the Iraqi [illegible] in the [illegible].

The new Iraqi Government was [illegible] by a three-man Council [illegible] [illegible] and a Cabinet headed by Brigadier Kassem. [illegible] [illegible] [illegible] [illegible] [illegible] for the Republican Government which [illegible] [illegible] [illegible] [illegible] [illegible] a general [illegible]

The Council [illegible] Sovereignty [illegible] [illegible] Abdul [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]

Mohammed Mahdi Kubba (52) was president of the Istiqlal (left wing nationalists) party, which was dissolved by General Nuri in 1954 he is a Shia Moslem and a member of a well known Baghdad family

Khalid Nakhshabandi, a Kurd is one of the younger generation of Army officers and Military Commandant of Baghdad he was lately Governor of Erbil Province, in Khurdistan.

The membership of the Iraqi Republican Cabinet was as follows

Brigadier Abdul Karim Kassem	*Prime Minister Minister of the Interior, and Minister of Defence*
Colonel Abdul Salam Aref	*Deputy Premier*
Dr Abdul Jumar	*Foreign Affairs*
Mohammed Hadid	*Finance*
Dr Mustafa Ali	*Justice*
Dr Ibrahim Kubba	*Economics*
Dr Jabir Omar	*Education*
Baba Ali	*Works and Communications*
Brigadier Naquib Talib	*Social Affairs*
Rashid Mahmoud	*Agriculture and Health*
Fuad Rikabi	*Development*
Siddiq Shanshal	*Information and Press*

In an interview on July 22 to the Baghdad Correspondent of *The Times*, Brigadier Kassem emphasized that the Iraqi national movement was not directed against the West, that Iraq desired friendship with all countries on the basis of equality and that oil production would be not only fully maintained but expanded

The new Foreign Minister (Dr Jubar) and the Minister of Information (Mr Shanshal) also gave assurances that there would be no nationalization of foreign property that the Iraqi Republic would honour all agreements and treaties concluded before the revolution and that the new Government intended not only to maintain the flow of oil but to increase it Dr Jubar said that the resumption of diplomatic relations with the Soviet Union did not imply any bias towards the Soviet bloc but only the desire to establish normal relations with the East such as those already existing with the West.

The Republican Government proclaimed a provisional Constitution on July 27 pending the drawing up of a permanent Constitution which would be submitted for popular approval in a referendum

Brigadier Kassem announced on the same day that the first elections for the Republican Parliament and a freely-chosen Government 'would not be a long way off' he added that the 'revolutionary phase' of the Republic had been succeded by a new phase of law and order

The first country to extend diplomatic recognition to the Iraqi Republic was the United Arab Republic, which did so immediately after the revolution By the end of July the Iraqi Republic had also been recognized by all the Communist countries including the Soviet Union, the Soviet bloc countries of Eastern Europe Yugoslavia and the Chinese People's Republic by a number of uncommitted countries including India Burma Ceylon Indonesia Malaya and the Sudan by the three Moslem members of the Baghdad Pact (Turkey Pakistan and Persia) by four NATO countries (Belgium Greece, German Federal Republic, and Italy) and by Japan

The Republican Government announced that diplomatic relations would be established with the Soviet Union and the Chinese People's Republic

* * *

British Plan for Cyprus Self Government

The British Government announced on June 19 a seven year internal self government plan for Cyprus under which Greece and Turkey would help her administer the Colony

Announcement of the plan originally due on June 17 was held up until June 19 to give the NATO Council in Paris a chance to influence Greece and Turkey in favour of the proposals

The Prime Minister, Mr Harold Macmillan, promised in the House of Commons that if the plan worked Greece and Turkey might eventually share Britain's sovereignty over the Island as a lasting solution

The plan would give the Island a system of representative government with the Cypriot Turks and Cypriot Greeks each having autonomy in their own communal affairs

The Greek and Turkish Governments—which have been in dispute about the future of the Island would be invited to co-operate with the British Governor in carrying out the plan

He described the new plan as an adventure in partnership between the communities in the Island and between the Governments of Britain, Greece and Turkey "I have myself sent a personal appeal to the Prime Ministers of Greece and Turkey to approach the plan in a spirit of co-operation and moderation

To allow time for the new principle of partnership" to be fully worked out, the

in[illegible]nal status of the Island would remain unchanged for seven years This meant that it would still be under British sovereignty

To [illegible] the desire of Greek and Turkish Cypriots to be recognised as Greeks and Turks Britain would welcome an arrangement giving them Greek or Turkish nationality while retaining the British nationality

There would be a separate House of Representatives for each of the two communities and these Houses would have final legislative authority in communal affairs

Authority for internal administration other than communal and internal security would be undertaken by a council presided over by the Governor who would have reserve powers to ensure that the interests of both communities were protected.

The main features of the plan were

1 Top rule in the Island would be by a three-man Commission consisting of the British Governor and a representative each from the Greek and Turkish Governments

2 The Governor would have veto powers in matters of external defence foreign affairs and security

3 The 400,000 Greek Cypriots and the 100,000 Turkish Cypriots would each have an elected Assembly of their own with complete authority over their separate communal affairs.

4 Internal administration other than communal affairs and internal security would be by Council equivalent to a Cabinet. This would include representatives from Greece and Turkey and also six elected Ministers from the Assemblies—four Greek and two Turkish Cypriots

5 The Greek and Turkish Cypriots—[illegible] respectively demanding union with Greece and partition—would be allowed to [illegible] Greek or Turkish nationality in addition to their British status

6 [illegible] sovereignty over the Island would remain unchanged for the seven years of the plan. If [illegible] shares sovereignty with Greece and Turkey the [illegible] military bases in Cyprus.

The T[illegible] have [illegible] partition of the Island between [illegible] Greek [illegible] and [illegible] Turkish Cypriots

A [illegible] on June 19 that Turkey [illegible] a tripartite conference between [illegible] Turkey

and Greece on Cyprus despite the [illegible] of Britain's latest plan for the [illegible]

A Greek Government spokesman [illegible] Athens on June 19 that the British plan for Cyprus was "fundamentally unacceptable" to Greece without alteration

It can be claimed that this latest of the many efforts to solve the [illegible] problem of Cyprus takes into account three major factors. The first is that Cyprus is an island of great strategic importance being only 40 miles off the [illegible] coast of Asia Minor and 250 miles from the [illegible] to the Suez Canal. the second that roughly 80 per cent of its population is of Greek stock and 20 per cent of Turkish; the third that while the Island is 500 miles from Greece it covers the vital sea [illegible] to Turkey

It is essential to the North Atlantic Treaty Organisation that Cyprus remains [illegible] that Turkey, Britain and Greece—all members of NATO—should not be drawn into open conflict

But [illegible] that Britain as the [illegible] Power must in the last resort [illegible] solution if the views of Turkey and Greece continue to remain so widely apart that they offer no prospect of compromise. At present these views are clearly irreconcilable the Turks want partition of the Island, the Greeks have long demanded Enosis—that is complete union with Greece

For long the Turks both in Cyprus and in Turkey itself, were content to leave Cyprus in the hands of the British. It was only when the Greek pressure for Enosis culminated in a campaign of terrorism directed by [illegible] Greeks that Turks finally turned their minds to partition and in their turn [illegible]

It is clear that the partition of so small an Island ([illegible]) [illegible] with a population of just over half a million) would be a [illegible] operation

The [illegible] truth is that neither the Greek nor the Turkish [illegible] [illegible]

Alaska—[illegible] U S State

[illegible] on July [illegible] which [illegible]

Alaska "the land of the midnight sun"

will be incorporated as a full fledged state of United States of America by late autumn or early winter

Congressional approval came on June 30 when the Bill was carried through the Senate with a thumping majority, 64 20 The measure has previously been passed by the House of Representatives

A territorial referendum to signify the willingness of the Alaskans themselves to join the Union is the only formality which now remains to be gone through after the President signs the Congressional enactment. The outcome of this referendum is a foregone conclusion an overwhelming 'yes in favour

The inclusion of Alaska will be the first addition to the Union since February 1912 when Arizona was taken in The formalities over Alaskans will enjoy the same rights as other American citizens They will help choose the President and elect representatives to the national legislature in Washington

Although Alaska has had territorial status since it was purchased by the U S from Russia in 1867 for $7 000 000 its elected delegation to the Congress did not have voting rights on legislations Local territorial government has been administered by elective officials

Alaska s proximity to the North Pole is about that of Scotland Norway, Finland and Sweden Across the 586 400 square mile land mass of Alaska warm Asiatic currents temper the climate of the coastal and south central areas Precipitation varies from five to 150 inches and the growing season ranges from 52 to 193 days The chief farming areas are in the Matanuska Valley north of Anchorage and in the Tanana Chena Valley around Fairbanks New agricultural lands continue to be cleared each year often under difficult conditions

The great wealth of Alaska, however is counted in terms of enormous timber stands, great mineral reserves including oil and coal, and vast sources of hydroelectric power Fishing and related industries are today the primary source of income for Alaska

Alaska has been part of the United States since its purchase from Russia in 1867 The population of this territory as of July 1956 was estimated at more than 161 000 persons Most of them have come from the United States The native peoples are Eskimos, Aleuts and Indians

Juneau with a population of 7 000 is the capital city Included among other modern Alaskan cities are Fairbanks, site of the University of Alaska Anchorage the territory s largest city (population 30 000) with one of the world s busiest airports Ketchikan with its great salmon packing and lumbering industries and Sitka the picturesque former Russian capital of early Alaska

Alaska long a self governing territory, has a government closely patterned after that of the 48 State governments of the United States, the chief difference being that the Governor is appointed by the U S President. The Territorial Legislature consists of a Senate of 16 members and a House of Representatives with 24 members Alaska has had 15 Governors the first of whom was appointed in 1884 The present Governor, Michael A Stepovich appointed by President Dwight D Eisenhower on June 8 1257 is the first native born Alaskan to hold the office. His father who emigrated from what is today Yugoslavia arrived in the territory in 1898 and settled near Fairbanks where Governor Stepovich was born in 1919

U N Report On World Population

A special U N report published on June 29 pointed out that the world s population had increased since the beginning of the 20th century at a rate unprecedented in human history and that this trend if continued at its present pace would cause serious problems for the future of mankind ' While it took 200 000 years for the world s population to reach 2 500 million ' said the report ' it will now take a 30 years to add another 2 000 million Never in the history of mankind have members of the human species multiplied so rapidly as in the present century nor can it be easily conceived that the peopling of the earth will continue at similar pace in the century to follow

After pointing out that the world's population might have risen to 6 000 or 7 000 million by the turn of the century the report stated The year 2000 is no farther in the future than the year 1914 is in the past Not only technical achievement, but progress in international co-operation and organisation, will have to be more effective than during the past 43 years if the expected numbers of mankind are to be organizationally and technologically accomodated to the minimum conditions required for human dignity .. Forecasts for a still more distant future are hazardous. Yet given a continuation of the present rate of increase and looking far her ahead to an age some 600 years from now, the population on this globe

might have expanded so much that in a world crowded with human beings, only about one square metre of soil might be left for each of them to live on. It goes without saying that this can never take place. Something will happen to prevent it."

Apart from the total increase in world population, the ensuing changes in distribution over the globe also received close attention in the report. It was anticipated that a continuous decline in the relative importance (from the point of view of population) of Europe including the Soviet Union would be paralleled by a great corresponding increase in the population of Asia thus, whereas there was one European for every two Asians at the beginning of the 20th century, the ratio might have become one to four at the end of the century. For Latin America a tenfold population increase was forecast between 1900 and 2000; by contrast, Europe would have slightly more than doubled its population over the century while for the remaining continents a fourfold increase was forecast for the century as a whole.

"Fully one half of the world's people live in monsoon Asia." The report pointed out: "Within this general region the concentration in particular areas is already outstandingly great. Current economic and social conditions even now present the greatest challenge to human ingenuity in seeking effective remedies to existing poverty. The problem is all the more because of the large increase in baffling population which must be expected." After recommending close attention in the rest of the world to the policies designed to slow down population increase in India and China, the report gave the warning: "Where population threatens to outstrip resources, the only alternative to fertility decline would seem to be an eventual return to permanent high mortality; emigration at best can be only a temporary relief."

The growth of world population in the present century was indicated by the following figures: (a) in 1850 it was estimated at 1,094 million, and in 1900 at 1,550 million, an increase of 42 per cent in 50 years; (b) by 1925 it had risen to 1,907 million, an increase of 23 per cent in 25 years; (c) by 1950 the figure stood at 2,500 million, an increase of 31 per cent in 25 years. If a further 1,250 million were added [illegible] by 1975 (d) between 1975 and 2000 the world's population would increase by another 1,250 million [illegible] according to the low assumption. By 2000 [illegible] to a "medium" assumption and

by 3,000 million at a "high assumption." The the growth of world population over the next 25 years "has an importance which transcends economic and social considerations; and it is at the very heart of the problems of our existence." The report was prepared as part of a U.N. programme devoted to the study and analytical appraisal of world population trends. Entitled "The future Growth of World Population," it was compiled by the U.N. Department of Economic and Social Affairs.

Explorer IV put into orbit

The U.S. Army put into orbit on July [illegible] 1958 Explorer IV—its fourth earth satellite—as part of the I.G.Y. programme.

The satellite is the heaviest yet launched by the United States, weighing [illegible] lb. [illegible] The rocket carrying the satellite was a Jupiter. The weight of its instruments is [illegible] lb.

Explorer IV is equipped to [illegible] space radiation. It is a cylindrical tube [illegible] similar to previous Explorer satellites.

This was the Army's fourth attempt to get an Explorer into orbit around the earth. Two of the first three attempts succeeded.

The Jupiter—C rocket was launched in a north easterly direction. Explorer IV [illegible] a course which will take it over the [illegible] densely populated areas of the globe [illegible] the Soviet Union.

The weights of the other U.S. satellites were 30.8 lb. for Explorer I, 31 lb. for Explorer III and 3.25 lb. for Vanguard. "Sputnik III" weighs almost a ton and a half.

The extra weight is accounted for by the increase of [illegible] performance of the last two stages of the rocket which will give the rocket more velocity and [illegible] the satellite a higher orbit, officials explained.

In all other respects Explorer IV is a [illegible] of the previous three Explorers fired from Cape Canaveral. One of those—Explorer II—failed to orbit.

Explorer IV is equipped with [illegible] radiation [illegible] and [illegible] an [illegible] carried out and the [illegible] will be Explorer [illegible].

The [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible].

Agitation for High Court Bench at Jaipur

The Rajasthan Cabinet decided on July 4 to abolish the Jaipur Bench of the Rajasthan High Court and to locate the unified High Court at Jodhpur

The abolition of the Jaipur Bench was recommended by the Capital Inquiry Committee appointed by the Government of India with Mr Satyanarayana Rao as Chairman to consider whether the shifting of Rajasthan s capital from Jaipur was advisable in view of Ajmer s claim to be the State s capital

The Committee had been asked additionally, to recommend regarding the continuance or otherwise of the present system of having a High Court Bench at Jaipur The Committee while recommending that Jaipur should continue to be the State s capital had expressed the opinion that a unified High Court should be located at Jodhpur, and that its bench at Jaipur should be abolished

The report touched off an acute parochial controversy between the protagonists of Jaipur and Jodhpur, the former insisting on retention of Jaipur Bench and the latter demanding the immediate implementation of the Committee s recommendation

The Jaipur bar, on July 5 turned out in full strength to parade the streets as a protest against the decision to abolish the High Court bench at Jaipur About 350 lawyers from various courts including seniors Government advocates marched in a procession shouting slogans Mr Mohanlal Sukhadia, Chief Minister made a fervent appeal to the people of Rajasthan to help implement the report of the Capital Inquiry Committee in sportsman like spirit Pandit Pant, Union Home Minister, advised that the recommendations of the Committee should be accepted as a whole

Jaipur City observed a token strike on July 7 to protest against the State Government s decision to abolish the Jaipur bench of the Rajasthan High Court and to transfer the seat of the Board of Revenue to Ajmer The lawyers of Jaipur kept away from High Court the district courts and the Board of Revenue On July 8 a deputation of prominent citizens and lawyers held talks with the Chief Minister Mr Mohanlal Sukhadia but they did not come to any agreement Later on the action committee of the lawyers met and decided to continue their struggle and abstain from courts till their demands were met by the Government On the same day Jaipur City Congress Executive adopted a unanimous resolution reiterating its previous demand for maintaining the status quo as regards the High Court bench and the headquarters of the Board of Revenue The Jaipur Municipal Council where the Congress party holds the majority also passed a resolution against the Rao Committee s decision and congress members also unanimously decided to resign from the Municipality and if need be from the Congress party if their demand was turned down by the State Government On July 9 and 10 all shops remained closed in Jaipur City Two persons went on hunger strike as a protest against the State Government s decision regarding abolition of High Court bench in the city Rajasthan s Home Minister Ram Kishore Vyas and the Revenue Minister, Damodar Vyas, threatened to resign from the Ministry if they failed to get the Jaipur peoples demand for a High Court accepted within three days On July 10, a deputation of the Jaipur traders and lawyers left for Delhi to meet the Union Home Minister Mr Pant, and to urge him to reconsider his award on the Rao Committee s recommendations Meanwhile the agitation spread to other towns of Rajasthan The lawyers abstained from courts in Kotputali Tonk Bandikui Dausa Jhunjhunu and other places where the public also observed strike

On July 12 the police arrested eleven lawyers near the Jaipur Secretariat building for defying Section 144 In the afternoon a section of agitators took out procession carrying an effigy of Chief Minister, Mr Sukhadia The effigy was later burnt in the burial ground

The police fired more than a dozen tear gas shells on July 13 to disperse a procession of lawyers and members of the public which attempted to defy section 144 Cr P C to enter the Civil lines area A number of prominent people were arrested

All shops in Jaipur city remained closed on July 15 and lawyers did not attend the

court. On the same day the entire record of the Jaipur Bench was taken to Jodhpur in trucks. The Board of Revenue also ceased functioning in Jaipur from July 15, to resume working in Ajmer from July 22.

On July 17 the Jaipur City Congress workers decided to participate openly in the agitation against the State Government. This decision was taken after a reply to their letter had been received from the Chief Minister, Mr. Sukhadia, and the State Congress Chief, Sardar Harlal Singh, in which they had expressed their inability to reconsider the issue and had appealed to the Congressmen not to participate in the agitation.

On July 21, Mr. Sukhadia called local leaders in a bid to bring about a settlement of the 17-day-old agitation. The Chief Minister admitted that the Jaipur's demand was right and added that more than half of the population of Rajasthan benefited by it. But since the decision had already been taken in the matter by the Government no other way was open to him. The local representatives refused to accept the position and added it was the Chief Minister's job to find out a new just and right solution.

The 19-day-old strike against the abolition of the Jaipur Bench of the High Court was suspended on July 24 and all shops opened on that day. The lawyers, however, remained on strike and boycotted the courts. Later in the day demonstrations and meetings defying the prohibitory order were held. Women also joined the agitation. In spite of the warning of the R.P.C.C. President, Congressmen participated in the agitation and courted arrest. By July 31, about 3,000 resignations from Congressmen were believed to have been received by the Action Committee to be forwarded to the Congress President, Mr. U. N. Dhebar. The Rajasthan P.C.C., however, ignored the threat and appointed Mr. Balkrishan Vyas to investigate [illegible] indiscipline among congressmen. The Action Committee appealed to the people to observe August 9 as a "[illegible] day".

On August 8 the working Committee of the Jaipur City Congress asked [illegible] local congressmen to keep aloof from the agitation against the removal of the High Court Bench from Jaipur.

On August 9 [illegible] Johri Bazar [illegible] made which [illegible] from [illegible] [illegible] were [illegible] of the public were [illegible] arrested in the [illegible] charge by the police. Ten persons were injured. By August 9, 105 lawyers and about 25 other persons had been arrested.

On August 10 the police used tear gas to disperse a threatening crowd which gathered at Johri Bazar. Thus made, the situation worsened; clashes began between the police and the crowd who resorted to stone-throwing. The police used the lathis and tear-gas [illegible] houses, shops and by lanes to [illegible] the crowds.

Students started participating in the agitation for the location of a bench of the Rajasthan High Court, thus intensifying the agitation. Students of local colleges and schools abstained from their classes and took out a procession through Johri Bazar, the city's main trade centre.

About 3,000 students belonging to various educational institutions took out processions through the main streets against the arrest and "indiscriminate beating" of their leaders by the police.

Earlier they held a meeting at the Maharaja College ground, and decided to continue the agitation till their demands were accepted. Their demands included unconditional release of their leaders, a judicial inquiry into the incidents, suspension of police officials responsible for the beating and compensation to injured students.

The police did not interfere with the students' procession and meeting.

Police fired teargas shells a number of times to disperse crowds of students and others in Jaipur on August 11. Sixty-three persons including 31 students were taken into custody on that day. The Education Department closed all schools and colleges in Jaipur for eight days.

Fourteen members of the Lok Sabha representing Rajasthan, in a joint statement on August 13, appealed for an immediate end to the agitation for the retention of the Jaipur Bench of the Rajasthan High Court "in the interest of mutual harmony and goodwill and the greater good of Rajasthan".

The Rajasthan Government on August 14 ordered the unconditional release of all persons [illegible] arrested in Jaipur since August 9.

[illegible] it was announced that the Rajasthan Pradesh Congress [illegible] had [illegible] [illegible] a hundred [illegible] against the [illegible] of [illegible] Kumar Singh [illegible] [illegible] [illegible] [illegible]

The Action Committee's withdrawal of the agitation and the Government's release of the arrested student agitators followed days of protracted negotiations between the Committee's representatives and the State Chief Minister, Mr Mohan Lal Sukhadia.

The High Court agitation, however continues

Students' Strike In Lucknow

Thousands of Lucknow students screaming and shouting walked out of their classes in Lucknow on Wednesday July 30 1958 to protest against the refusal of the State Government to concede the demands of the students of the State Ayurvedic College who were squatting in front of the Council House for the last two days In sympathy the two main markets of the city Hazratganj and Aminabad also remained almost completely closed There were no shows at the various cinema houses

A deputation of the students met the State Health Minister Mr Hukam Singh on July 29, and presented their demands which were turned down. The strike decision, which was arrived at earlier, was then implemented readily

One person was killed and three others including two students were seriously wounded in a police firing on August 2 The Police authorities said they used 11 rounds of bullet firing The firing took place in front of the Chhitwapur police chowki on Station Road following a veritable pitched battle between student-demonstrators 2 000 strong and a posse of about 100 steel helmeted armed policemen. The police intercepted the demonstrators In the *melee* the demonstrators resorted to brickbatting and the police to a lathi-charge Nearly 50 persons received minor to serious injuries About a dozen of them were policemen and the rest students and spectators Five student demonstrators and a motor-cleaner were arrested by the police on the spot

Later in the evening the district magistrate promulgated Section 144 Cr P C. in the whole city

All the city markets were closed in response to an appeal by various student organizations Four students were on hunger strike at the Students Union Office protesting against the Government's refusal to meet their demands.

The U P Government announced on August 3 the closure of all intermediate colleges high schools and primary schools within the municipal limits of Lucknow city for a week This step was taken to check the widening of the students agitation launched by the Lucknow University Student's Union and various other youth organizations on July 30

Till the evening of August 3,28 students had been taken in police custody the total number of arrests in the agitation being 34

In a joint statement the Presidents of the Lucknow University D A.V College Kanpur, Allahabad University and Christchurch College students union on August 3, condemned what they described as the brutal and repressive attitude of the U P Government towards the peaceful agitation being carried on by the students in favour of the B M.B.S students They demanded the immediate appointment of a judicial inquiry to investigate incidents in Lucknow immediate release of the arrested students cancellation of warrants against student leaders compensation for the families of those killed and wounded and resignation of the Home and Health Ministers

Twenty three students were arrested in Lucknow on August 4 taking out processions and organizing meetings banned under Section 144 Cr P C.

While the demonstrations in Kanpur and Allahabad, held with the permission of the authorities, passed off peacefully in Lucknow and in Banaras incidents of lawlessness were reported Allahabad and Bara Banki observed complete hartal

The seven day old students agitation in Lucknow was suspended on August 5, following assurances of amicable settlement of the Ayurvedic College students demands given jointly by all the leaders of Opposition parties in the *State* Vidhan Sabha

The four students who were on hunger strike also broke their fast and were admitted to the Medical College Hospital

The success of the compromise talks being conducted by the Opposition leaders was indicated in an interview by Mr Hukum Singh Health Minister Mr Singh said the Government had agreed to the Opposition leader's proposal that all the 87 students of the State Ayurvedic College now studying the B M.B.S course should be admitted to the first year class of the M B B.S course provided the University agreed to the proposal.

Mr K.A.S Iyer Vice Chancellor told the representatives of the students action committee that he would consider the proposal sympathetically

The compromise formula it is learnt, envisages certain financial benefits to the present

students of the Ayurvedic College who have spent one to three years in the B.M.B.S. course. The students are believed to have agreed that no further concession was possible. The financial benefits are reported to be stipends for one year to the first year students, for two years to the second year students and for three years to the third year students. The age limit for eligibility in Government service may also be raised in the case of these students.

The compromise formula was evolved by the Opposition leaders as it was found that the B.M.B.S. course students could not be given the rights of the M.B.B.S. degree as demanded, on technical grounds over which the Government had little control. The integrated course of modern and ancient medicine on which the B.M.B.S. degree is based had never been regarded as a total failure by the Ayurvedic Education Committee set up by the Government. It was not therefore considered worthwhile for the Ayurvedic College students to pursue the course.

The undergraduate and postgraduate students of the K.G.W.M. Medical College of Lucknow went on a one-day strike on August 6, as a token protest against the Government's decision to recommend admission of the 37 Ayurvedic College students to the first year M.B.B.S. course. The teachers of the Medical College in Lucknow jointly supported their students' protest against the proposed admission of 37 Ayurvedic College students to the first year class of the M.B.B.S. course. The Lucknow branch of the Indian Medical Association also supported the medical students' stand.

The trouble in the Ayurvedic College is as old as the college itself. But the present agitation owes its origin to a speech delivered by Mr. Hukam Singh, State Health Minister, before the students of the college in February. The Minister criticised the students, [illegible] [illegible] for their [illegible] [illegible] [illegible] and [illegible]. The students [illegible] the speech because they were already [illegible] [illegible] the [illegible] [illegible] arrangements in the college. [illegible] [illegible] when the students of the college had a [illegible]. [illegible] had [illegible] [illegible] [illegible] [illegible] of the Lucknow University [illegible] that there would be [illegible] [illegible] Ayurvedic [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] of [illegible] [illegible] and [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]

modern medicine and [illegible] with Ayurvedic studies. The degree they were [illegible] ally to get from the university was to [illegible] called B.M.B.S.

The integrated course [illegible] [illegible] training in modern medical subjects [illegible] [illegible] — surgery, gynaecology, pharmacology and so on, but the [illegible] [illegible] [illegible] on Ayurvedic [illegible] subjects. [illegible] years after the college was started, the teaching staff of the college [illegible] [illegible] to [illegible] [illegible] [illegible] [illegible] who [illegible] [illegible] [illegible] Ayurvedic subjects only. The college [illegible] consists of a single lecture hall, with [illegible] part serving the purpose of a [illegible] bed [illegible] [illegible] hospital and a 12 bed [illegible] [illegible]

For receiving lessons in modern [illegible] [illegible] the students are supposed to pay daily visits to a local Government hospital where the [illegible] (if any as they are) are expected to work as honorary lecturers. The students were thus thoroughly dissatisfied with the affairs of the college when Mr. Hukam Singh delivered his speech. It was the last straw on the camel's back. They went on strike and, in retaliation, the Government closed the college indefinitely.

It is surprising that the Government [illegible] [illegible] the college hastily in 1943. Even more surprising is the series of actions the Government has taken between the opening of the college and the students' strike. To begin with, the B.M.B.S. students were allowed to [illegible] the King George Medical College which taught the students only [illegible] medical subjects. Then came the realisation that there must also be some arrangement for the teaching of Ayurveda. Eventually, the course was dropped in 1953 and the students merged with the M.B.B.S. [illegible] of the [illegible] [illegible]. After a year's gap the course was restored in the present [illegible] with decided [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]. The arrangements failed for a second time and the first batch of the [illegible] [illegible] college was also merged with the M.B.B.S. class.

Thereafter there was a change in the [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] the [illegible] [illegible] modern medical subjects [illegible] [illegible] the [illegible] [illegible] [illegible] of the [illegible] [illegible]. This [illegible] however [illegible] [illegible] [illegible]

It is [illegible]

shed colleges of Ayurvedic studies or those of modern medicine ccording to their choice

World Assembly of Youth

Prime Minister Nehru inaugurated the third international general assembly of Youth at Vigyan Bhavan New Delhi on Sunday August 3 1958 The session began with a welcome song by a chorus of Girls Delegations from the Soviet Union, China and East European countries were conspicuous by their absence

The Chairman of the India Committee of WAY, Mr Ramkrishna Bajaj spoke of the vital contribution the youth of the world could make in promoting international understanding and preservation of peace A beginning in that direction could be made through adherence to the five principles of co-existence

Mr A Lawrence President of the Assembly spoke of youth and progress being a harmonious association and a symbol of the future and of hope

WAY he said, had a three fold programme—to train responsible leaders base action on the Universal Declaration of Human Rights and to call upon all young people to join it in the constructive tasks which would help mankind along the road to progress.

Mr Lawrence said the world owed a deep debt to India for its message of brotherhood and tolerance at a time when so many problems shook the world

Dedicated to the welfare of youth, the World Assembly of Youth (WAY) is the only international organization which is completely non-sectarian and non political in its character and has accepted the Declaration of Human Rights as the basis of its activities

Composed of national committees representing the youth of the world WAY works with the object of seeking constructive solutions to the probelms of the youth in th spirit of international concord and co-operation It serves the needs of youths everywher fights for their rights, while remaining mindful of their responsibilities as citizens

WAY is made up of national committees from indep ndent as well as non self governing countries all having equal voice and voting power National committees in turn are composed of various youth organizations in the countries where they function WAY is thus assured that all interests in each country are effectively represented and that one movement of a particular tendency does not speak in the name of all the youth organizations of that country

The General Assembly the suprem organ of WAY, has up to 25 delegates from each country It meets every four years and formulates the general policy

The legislative body is the council composed of four delegates from each national committee It draws up the programme to be implemented on the lines suggested by the Assembly It meets every two years and elects an executive committee of 17 which is responsible for the day to-day functioning of the organization.

In August 1948 the Internationl Youth Conference meeting in London took the momentous decison to found an international organization of youths Representatives from 25 countries decided to have a world youth organization to look after their interests The organization was later on named the World Assembly of Youth

The word WAY—formed by the initials of the World Assembley of Youth—has been chosen as the name and slogan of the organization It conveys a forward sense of direction destination and movement which is the spirit of WAY

Though the foundation of WAY in India dates back to 1951 the organization actually started functioning in 1953 when the second National Committee was constitut d In 1954 WAY had withdrawn recognition from the first National Committee as it had failed to secure the co-operation of the major national youth organizations in the country At the request of WAY the Youth Department of the A I C C took the initiative and a new national committee was formed in 1955 Since then many national youth organizations have affiliated themselves to it thus lending it a representative character

The Indian committee comprises the Youth Congress Congress Seva Dal the Akhil Hind Yuvak Sangh, the YMCA the Catholic University Students Federation and the Young Farmers Association

Dr Radhakrishnan is the chief patron of the organization and its board of patrons includes Mrs Indira Gandhi Mr G L Nanda Yuvaraj Karan Singh Mr Jagjivan Ram Kaka Saheb Kalelkar Mr [illegible] and Mrs Kamala Devi Chattopadhyaya.

PROMOTION OF TEA EXPORT

India's foreign exchange earnings [illegible] mainly on the export of a few commodities. Tea is one of the most important of these foreign exchange earners.

During 1957 production of tea in India amounted to [illegible] million lbs. out of which as much as [illegible] million lbs. were exported.

During the Second Plan period the average annual earnings from the export of tea are estimated to be over about [illegible] crores of rupees.

An export promotion drive for tea has been launched by the Indian Tea Board through the establishment of Tea Councils and frequent participation in trade fairs [illegible]. At present Tea Councils and [illegible] [illegible] [illegible] tea [illegible] are functioning in U.S.A., Canada, West Germany, [illegible] and Netherlands. During 1957-58, the Tea Board participated in [illegible] [illegible] [illegible] [illegible] trade [illegible]

In August last year the Chairman of the Indian Tea Board paid visits to [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] of the [illegible] Fair

SCIENTIFIC RESEARCH

Q Explain the policy of the Government of India with regard to Science

Ans The policy of the Government of India with regard to science was announced on March 13 1958 in a resolution placed before both Houses of Parliament The aims of this scientific policy are

(i) To foster promote and sustain by all appropriate means the cultivation of science and scientific research in all its aspects—pure applied and educational

(ii) To ensure an adequate supply within the country of research scientists of the highest quality and to recognise their work as an important component of the strength of the nation

(iii) To encourage and initiate with all possible speed programmes for the training of scientific and technical personnel on a scale adequate to fulfil the country s needs in science and education agriculture and industry and defence

(iv) To ensure that the creative talent of men and women is encouraged and finds full scope in scientific activity

(v) To encourage individual initiative for the acquisition and dissemination of knowledge and for the discovery of new knowledge in an atmosphere of academic freedom

(vi) And in general to secure for the people of the country all the benefits that can accrue from the acquisition and application of scientific knowledge

Q Describe the set up and working of the Council of Scientific and Industrial Research.

Ans. Scientific research under State auspices in India is carried out mainly through the Council of Scientific and Industrial Research and the various national laboratories or institutes set up under its control The Council also awards grants-in aid to scientists in research institutions and university laboratories in the country grants fellowships to qualified persons who wish to pursue science as a career and disseminates scientific knowledge and information It also maintains a National Register of Scientific and Technical Personnel in the country In general the Council is the chief vehicle of Government s policy for the promotion and co-ordination of scientific and industrial research in India

Finance

The activities of the Council are mainly financed by the Union Government Besides other sources of income such as income from royalties and premia on processes leased out sale of publications fees and charges levied for consultation testing etc the Council receives gifts of land buildings and finances from State Governments and others and donations from industrialists The recurring expenditure of the Council stood at Rs 2 67 crore during the year 1957 58 and the estimated capital expenditure for the same year stood at Rs. 1 16 crore

Administration

The Council is administered by a Governing Body with the Prime Minister as President and the Minister for Scientific Research as Vice President Other members include prominent representatives of science industry and Government The Governing Body is advised by a Board of Scientific and Industrial Research consisting of eminent scientists industrialists and others The Board in its turn is assisted by a number of research and other advisory committees

National Laboratories

Since the advent of Independence a number of national laboratories and institutes have been set up by the Council at various centres in the country A list of these is given in Table

NATIONAL LABORATORIES INSTITUTES

S. No.	Name of Institution	Location	Function
1	National Chemical Laboratory	Poona	Fundamental and applied research covering the whole field of chemistry [illegible] The National Collection of Type Cultures is housed in the Laboratory
2	National Physical Laboratory	New Delhi	Research on problems relating to physics both fundamental and applied. Maintenance of Standards. Testing facilities are also available
3	Central Fuel Research Institute	Jealgora (Dhanbad)	Fundamental and applied research on fuels [illegible]
4	Central Glass and Ceramic Research Institute	Jadavpur	Research on different aspects of glass and ceramics [illegible] of the materials used in the [illegible] industry
5	Central Food Technological Research Institute	Mysore	Food processing and conservation of foods [illegible]
6	National Metallurgical Laboratory	Jamshedpur	Fundamental and applied metallurgical research [illegible]
7	Central Drug Research Institute	Lucknow	[illegible]
8	Central Road Research Institute	New Delhi	Research on road materials [illegible]

No	Name of Laboratory	Location	Functions
9	Central Electro-Chemical Research Institute	Karaikudi (Madras)	Research on different aspects of electro-chemistry, including electro-metallurgy, electro-deposition and allied problems
10	Central Leather Research Institute	Madras	Fundamental and applied aspects of leather technology
11	Central Building Research Institute	Roorkee	Engineering and structural aspects of building and human comforts in relation to buildings
12	Central Electronics Engineering Research Institute	Pilani (Rajasthan)	Design and construction of electronic equipment and components and test equipment
13	National Botanical Gardens	Lucknow	Collection introduction and large scale cultivation of economic and medicinal plants of industrial importance Maintenance of a herbarium of economic plants
14.	Central Salt Research Institute	Bhavnagar	Investigation of production of pure salts, reduction of cost of production economic utilisation of byproducts of salt manufacture
15	Central Mining Research Station	Dhanbad	Research in methods of mining safety in mines and mine machinery
16	Regional Research Laboratory	Hyderabad	Research in problems specially relating to the industries and raw materials of the area
17	Indian Institute for Biochemistry & Experimental Medicine	Calcutta	Research in various aspects of biochemistry as applied to medicine bacteriology etc
18	Birla Industrial & Technological Museum	Calcutta	A museum to depict the scientific and technological advancement
19	Regional Research Laboratory	Jammu Tawi (Jammu & Kashmir)	Research in problems specially relating to the industries and raw materials of the area and research specially directed to medicinal plant of the Himalayas (Kashmir Region).

NATIONAL LABORATORIES/INSTITUTES

No	Name of Laboratory	Location	Functions
1	National Chemical Laboratory	Poona	Fundamental and applied research covering the whole field of chemistry for which other specialised Institutes have not been set up. The National Collection of Type Cultures is housed in the Laboratory
2	National Physical Laboratory	New Delhi	Research in problems relating to physics both fundamental and applied. Maintenance of Standards. Testing facilities are also available
3	Central Fuel Research Institute	Jalgora (Bihar)	Fundamental and applied research on fuels—solid liquid and gaseous. Physical and chemical surveys of Indian coals are conducted through six coal survey stations under the Institute
4	Central Glass and Ceramic Research Institute	Jadavpur	Research on different aspects of glass and ceramics pottery porcelain refractories and enamels development of processes for glass and ceramic articles, standardisation of raw materials used in the ceramic industry
5	Central Food Technological Research Institute	Mysore	Food processing and conservation of foods food engineering and all aspects of food technology
6	National Metallurgical Laboratory	Jamshedpur	Fundamental and applied metallurgical research.
7	Central Drug Research Institute	Lucknow	All aspects of drug research including evaluation and standardisation of crude drugs discovery of substitutes for pharmaceutical drugs and plant pharmaceutical and synthetic chemicals biochemistry and biophysics infection, reproduction, pharmacology chemotherapy and experimental medicine
8	Central Road Research Institute	New Delhi	Research on road materials testing of road material and road surfaces

No	Name of Laboratory	Location	Functions
9	Central Electro-Chemical Research Institute	Karaikudi (Madras)	Research on different aspects of electro-chemistry, including electro-metallurgy, electro-deposition and allied problems
10	Central Leather Research Institute	Madras	Fundamental and applied aspects of leather technology
11	Central Building Research Institute	Roorkee	Engineering and structural aspects of building and human comforts in relation to buildings
12	Central Electronics Engineering Research Institute	Pilani (Rajasthan)	Design and construction of electronic equipment and components and test equipment.
13	National Botanical Gardens	Lucknow	Collection introduction and large scale cultivation of economic and medicinal plants of industrial importance Maintenance of a herbarium of economic plants
14.	Central Salt Research Institute	Bhavnagar	Investigation of production of pure salts reduction of cost of production economic utilisation of byproducts of salt manufacture
15	Central Mining Research Station	Dhanbad	Research in methods of mining safety in mines and mine machinery
16	Regional Research Laboratory	Hyderabad	Research in problems specially relating to the industries and raw materials of the area
17	Indian Institute for Biochemistry & Experimental Medicine	Calcutta	Research in various aspects of biochemistry as applied to medicine bacteriology, etc
18	Birla Industrial & Technological Museum	Calcutta	A museum to depict the scientific and technological advancement
19	Regional Research Laboratory	Jammu Tawi (Jammu & Kashmir)	Research in problems specially relating to the industries and raw materials of the area and research specially directed to medicinal plant of the Himalayas (Kashmir Region)

Plans are under way for the establishment of a Central Mechanical Engineering Research Institute in eastern India and a National Aeronautical Research Laboratory at Bangalore.

Sponsored Research

Through a liberal system of grants in aid scientists [illegible] other research laboratories and universities are enabled to pursue fundamental and applied research and develop their own special fields. The research schemes sponsored by the Council cover a very wide variety of subjects including various branches of physics chemistry technology and engineering, dealing with not only fundamental problems but also problems concerning processing of raw materials and utilisation of commodities. There are at present more than 340 such schemes in progress in over 70 research centres in the country. Apart from the results achieved the schemes provide opportunities of training young research workers and the development of active centres of independent research work.

An important item of work during the year was the inauguration of a systematic and integrated programme of [illegible] for the International Geophysical Year.

Pilot Plant

Lately there has been greater emphasis in the national laboratories on pilot plant investigations leading to industrial production. An experimental coke oven plant has been set up at the Central Fuel Research Institute. Jet pits and a pilot low-shaft furnace is being set up for the production of iron without the use of coking coal at the National Metallurgical Laboratory, Jamshedpur.

Liaison

Liaison between research and industry has been strengthened by the establishment of regional offices for industrial liaison at Bombay, Calcutta and Madras. A [illegible] has been set up to [illegible] the results of research achieved [illegible] the [illegible]

Development Wing of the Ministry of Commerce and Industry on the other in regard to topical problems concerning industrial development.

The Council of Scientific and Industrial Research maintains a Directorate for dissemination of scientific information addressed to various types of readers. The Indian National Documentation Centre at Delhi is also maintained by the C.S.I.R.

Some Achievements

A survey of the coal resources of the country by the Central Fuel Research Institute has led to the discovery of large reserves of coal suitable for coking and blending besides helping coal producing and coal consuming industries.

Investigations on the washing possibilities of various types of coals have shown that by judicious processing in coal washeries it is not only possible to provide the coals required for the iron and steel industry but also to obtain products utilisable for power generation and manufacture of chemicals and fertilisers.

Studies on the sintering characteristics of iron ore fines of Madhya Pradesh have shown that the fines can be employed for steel production after processing. Studies on the L.D. process have revealed that Indian pig irons can be successfully processed in one step to give steel. Noteworthy among other projects studied in the National Metallurgical Laboratory is the one relating to the replacement of nickel in stainless steel by manganese. The result of beneficiation studies on low-grade manganese ore available as dumps at pitheads in manganese mines is of great value to the industry. Useful work has been done in the beneficiation of chromite, wolfram, graphite and uranium ores.

Studies directed to the production of refractories have shown that forsterite and dolomite can be profitably utilised as raw materials.

The Regional Research Laboratory, Hyderabad, has

developed processes for the production of active carbon of high grade

Two processes namely, production of manganese sulphate from low grade manganese ores and cuprous oxide from copper scrap have been leased out for commercial development from the Central Electro Chemical Research Institute Karaikudi

Cheap grain substitutes with good nutritive value, based on indigenous materials have been developed at the Central Food Technological Research Institute Mysore A protein rich multi purpose food, which can be used with advantage along with other foods to correct deficiencies in proteins minerals and vitamins, has been formulated from groundnut flour and pulses.

The Central Leather Research Institute has undertaken a series of demonstrations of improved tanning processes developed at the Institute for the benefit of tanners It has successfully replaced wattle bark by indigenous tanstuffs and a process for preparing tanning extracts has been worked out A number of industrial leathers and tanning auxiliaries have been produced in the Institute

A light weight multi-cellular material with excellent heat insulation and mechanical strength properties known as *Foam* Glass has been produced by a process developed at the Central Glass and Ceramic Research Institute Jadavpur (Calcutta)

Investigations carried out at the Central Building Research Institute have shown that bricks of good quality can be produced from black cotton soil

The method of all weather road construction in which locally available soil and aggregates are utilised developed by the Central Road Research Institute, New Delhi, is now being tried in some States as pilot plant projects.

A batch process for the production of table salt from crude Sambhar salt has been developed at the Central Salt Research Institute Bhavnagar

The National Botanical Gardens, Lucknow has collected a large number of plants of economic and medicinal value from various parts of the country the distribution of economic plants is being correlated with topography and other edaphic factors.

Q Sketch the measures adopted by the government of India to promote nuclear research and atomic energy generation

Ans Nuclear research is of recent origin in India Pioneering work in this field was done by the Tata Institute of Fundamental Research, Bombay which carries on fundamantal research and advanced study in the field of nuclear physics and mathematics. It is also an important centre for cosmic ray research and has made notable contributions to the theory of elementary particles. The Institute is entrusted with the training of personnel in the field of Atomic Energy

Another institution connected with nuclear research is the Institute of Nuclear Physics Calcutta which was founded by the late Dr Meghnad Saha F R.S and was formally inaugurated in 1950

Atomic Energy Commission

A decision has recently been taken by the Government of India to establish an Atomic Energy Commission with full executive and financial powers Headed by the Secretary to the Government of India in the Department of Atomic Energy the Commission will be responsible for formulating policy preparing the budget of the Department and implementing Government s policy in all matters concerning atomic energy

Department of Atomic Energy

The scientific aspects of the work entrusted to the Department under the Atomic Energy Act of 1948 are carried out by the Atomic Energy Establishment and the Atomic Minerals Division

The Atomic Energy Establishment Trombay is

the chief centre for research and development in the field of atomic energy and consists of three main groups—the Physics, the Chemistry and the Engineering groups, in addition to the Biology, Medical and Health Divisions.

The most important functions of the Atomic Minerals Division are (a) geological survey, prospecting, exploration and mining of minerals useful in the production of atomic energy, (b) working and development of atomic minerals on an industrial scale, (c) [illegible]

India's first atomic reactor "Apsara", which is of the swimming pool type, went into operation on August 4, 1956. Designed, engineered and built entirely by Indian personnel except for the fuel elements which were obtained on hire from the U.K., it is the first reactor to go into operation in Asia outside the U.S.S.R.

Work is also in progress on a reactor of the Canadian NRX type which has been given by the Government of Canada as a gift to India under the Colombo Plan. The reactor is expected to go into operation about the end of 1958.

A third reactor which will enable the study of the effect of different lattices, shapes and sizes of fuel elements in natural uranium or plutonium [illegible] is also under construction.

Assisted by a Board of Research in Nuclear Science and Advisory Bodies for Chemistry, Physics, Geology, Biology and Medicine, the Department has been providing grants for work on specified research projects at various university laboratories and research institutes. Special mention may be made of the Physical Research Laboratory, Ahmedabad, the Bose Institute, Calcutta and the Indian Institute of Science, Bangalore.

On the industrial side it is proposed to produce all the materials required for the full atomic power programme. The Indian Rare Earths (Private) Ltd., established in August 1950 has set up a plant at Alwaye which processes monazite sands and produces rare earth chlorides and carbonates as main products and tri-sodium phosphate as a by-product. The Thorium Uranium Plant of the company at Trombay treats the residual cake which is left over after the rare earth content of monazite has been extracted.

The Travancore Minerals (Private) Ltd. was set up in October 1956 to take over the mineral sand industry of South India.

A small uranium plant which will turn the uranium salt into reactor grade uranium metal is being constructed at Trombay and is expected to go into operation by the end of 1958. A small plant for the fabrication of fuel elements is in the course of construction. A pilot plant for the extraction of uranium from copper tailings is in operation in Ghatsila. Heavy water will be produced in quantity as a by-product at the fertilizer plant which is being built at Nangal. It is also intended to set up a pilot plant for producing beryllium oxide of nuclear purity and sintering it into bricks. Studies are also in progress for the erection of a plant to produce automatically pure graphite.

Q. Briefly mention the working of the research Institutes run by Government Departments and private agencies.

Ans. There are eleven Hydraulic Research Stations under the Central Board of Irrigation and Power. The Central Water Power and Irrigation Research Centre, Khadakvasla (near Poona), is the pioneer hydraulic research station in India.

A Research and Development Directorate has been set up under the Ministry of Communication (Directorate-General of Civil Aviation). It is concerned with type certification, manufacture of aircraft and development of specifications for aircraft material.

The Forest Research Institute, Dehra Dun conducts research in the utilization of timber for constructional purposes.

The All India Radio maintains a research unit in New Delhi to investigate problems related to the propagation and reception of radio waves and the design and performance of radio receivers.

The Railway Board has established a research centre at Lucknow with sub-stations at Lonavla and Chittaranjan to investigate problems referred to them by the railway workshops and the Central Standards Office (Railways)

The problems of road development and road materials highways and bridge engineering ports and harbours etc. are dealt with by the Roads Organisation functioning under the Ministry of Transport

The Indian Standards Institution, functioning under the Ministry of Industries lays down standard specifications for materials and products.

OTHER INSTITUTIONS

A number of research organisations financed by private endowments and Governmental assistance are engaged in the field of scientific research. The more important of these are dealt with in the following paragraphs

The Bose Institute Calcutta is engaged on research in physics chemistry plant physiology plant breeding cytogenetics micro-biology and zoology

The Birbal Sahni Institute for Palaeobotany Lucknow carries on research in the fossil flora of India and related problems.

The Indian Association for the Cultivation of Science Calcutta one of the oldest research organisations in the country conducts post graduate research in fundamental and applied aspects of physics and chemistry

The Indian Institute of Science Bangalore founded in 1909 provides for advanced instruction and conducts original investigations in all branches of scientific knowledge

The Physics Research Laboratory, Ahmedabad, is a centre for research in atmospheric physics, cosmic rays electronics and theoretical physics

Co-operative research associations for the investigation of problems pertaining specifically to industry have been brought into existence Associations of this type have already been formed by the Ahmedabad textile industry the silk and art silk mills of Bombay and the jute mills of Calcutta An association for the rubber industry is likely to be set up soon

The Shri Ram Institute for Industrial Research in Delhi renders valuable research service to industrial concerns.

Several colleges universities and research institutions provide courses of study and research facilities in the various branches of science

Q Give an account of the research activities of the Indian Government in the sectors of Medicine and Agriculture

Ans In recent years medical research in India has gained considerable momentum Problems relating to the control and cure of diseases specially those peculiar to Indian climatic conditions and environment are receiving attention in medical colleges and specialised institutions dealing with medical research Indian research workers have made notable contributions to the study and chemotherapy of diseases particularly malaria leprosy kalazar, filariasis and cancer

The Indian Council of Medical Research, founded in 1912 has contributed greatly to the fostering and co-ordination of medical research in India

Apart from medical colleges and attached hospitals each specialising in some branch of research the country has a number of specialised institutions The All India Institute of Hygiene and Public Health, Calcutta provides training in the use of preventive and social medicine for diseases peculiar to India and ascertains how the results of pure and applied research can be utilised for promoting medical protection and positive

the chief centre for research and development in the field of [illegible] energy and consists of three main groups—the Physics, the Chemistry and the Engineering groups, in addition to the Biology, Medical and Health Divisions.

The most important functions of the Atomic Minerals Division are (a) geological survey, prospecting, [illegible] and mining of minerals useful in the production of atomic energy, (b) working and development of these minerals on an industrial scale, (c) procurement [illegible].

India's first atomic reactor "Apsara" which is of the swimming pool type, went into operation on August 4, 195[illegible]. Designed, engineered and built entirely by Indian personnel except for the fuel elements which were [illegible] from the U.K., it is the first reactor to go into operation in Asia outside the U.S.S.R.

Work is also in progress on a reactor of the Canadian NRX type which has been given by the Government of Canada as a gift to India under the Colombo Plan. The reactor is expected to go into operation about the end of 195[illegible].

A third reactor which will enable the study of the effect of different lattices, shapes and sizes of fuel elements [illegible] uranium or plutonium and thorium is also under construction.

Assisted by a Board of Research on Nuclear Science and Advisory Bodies for Chemistry, Physics, Cosmic Rays, Biology and Medicine, the Department has been giving grants and [illegible] for work on specified research projects at various university laboratories and research [illegible]. Special mention may be made of the Physical Research Laboratory, Ahmedabad, the Bose Institute, Calcutta and the Indian Institute of Science, Bangalore.

On the industrial side it is proposed to produce all the materials required for the full scale power programme. The Indian Rare Earths (Private) Ltd., established in August 195[illegible] has set up a plant at Alwaye which processes monazite sands and produces rare earth chlorides and carbonates as main products and trisodium phosphate as a by-product. The Thorium Uranium Plant of the company at Trombay treats the residual cake which is left over after the rare earth content of monazite has been extracted.

The Travancore Minerals (Private) Ltd. was set up in October 1956 to take over the mineral sand industry of South India.

A small uranium plant which will turn the uranium salt into reactor grade uranium metal is being constructed at Trombay and is expected to go into operation by the end of 1958. A small plant for the fabrication of fuel elements is in the course of construction. A pilot plant for the extraction of uranium from copper tailings is in operation in Ghatsila. Heavy water will be produced in quantity as a by-product at the fertilizer plant which is being built at Nangal. It is also intended to set up a pilot plant for producing beryllium oxide of nuclear purity and sintering it into bricks. Studies are also in progress for the erection of a plant to produce automatically pure graphite.

Q. Briefly mention the working of the research Institutes run by Government Department and private agencies.

Ans. There are eleven Hydraulic Research Stations under the Central Board of Irrigation and Power. The Central Water, Power and Irrigation Research Centre, Khadakvasla (near Poona), is the premier hydraulic research station in India.

A Research and Development Directorate has been set up under the Ministry of Communication (Director-General of Civil Aviation). It is concerned with type certification, manufacture of aircraft and development of specifications for aircraft material.

The Forest Research Institute, Dehra Dun conducts research in the utilisation of timber for constructional purposes.

The All India Radio maintains a research unit in New Delhi to investigate problems related to the propagation and reception of radio waves and the design and performance of radio receivers

The Railway Board has established a research centre at Lucknow with sub-stations at Lonavla and Chittaranjan to investigate problems referred to them by the railway workshops and the Central Standards Office (Railways)

The problems of road development and road materials highways and bridge engineering ports and harbours etc., are dealt with by the Roads Organisation functioning under the Ministry of Transport.

The Indian Standards Institution functioning under the Ministry of Industries lays down standard specifications for materials and products

OTHER INSTITUTIONS

A number of research organisations financed by private endowments and Governmental assistance are engaged in the field of scientific research. The more important of these are dealt with in the following paragraphs

The Bose Institute Calcutta is engaged on research in physics chemistry plant physiology plant breeding cytogenetics micro-biology and zoology

The Birbal Sahni Institute for Palaeobotany Lucknow, carries on research in the fossil flora of India and related problems

The Indian Association for the Cultivation of Science Calcutta one of the oldest research organisations in the country conducts post graduate research in fundamental and applied aspects of physics and chemistry

The Indian Institute of Science Bangalore founded in 1909 provides for advanced instruction and conducts original investigations in all branches of scientific knowledge

The Physics Research Laboratory, Ahmedabad, is a centre for research in atmospheric physics cosmic rays, electronics and theoretical physics

Co-operative research associations for the investigation of problems pertaining specifically to industry have been brought into existence Associations of this type have already been formed by the Ahmedabad textile industry the silk and art silk mills of Bombay and the jute mills of Calcutta An association for the rubber industry is likely to be set up soon

The Shri Ram Institute for Industrial Research in Delhi renders valuable research service to industrial concerns.

Several colleges universities and research institutions provide courses of study and research facilities in the various branches of science

Q Give an account of the research activities of the Indian Government in the sectors of Medicine and Agriculture

Ans In recent years medical research in India has gained considerable momentum Problems relating to the control and cure of diseases specially those peculiar to Indian climatic conditions and environment are receiving attention in medical colleges and specialised institutions dealing with medical research. Indian research workers have made notable contributions to the study and chemotherapy of diseases particularly malaria leprosy kalazar filariasis and cancer

The Indian Council of Medical Research founded in 1912 has contributed greatly to the fostering and co ordination of medical research in India

Apart from medical colleges and attached hospitals each specialising in some branch of research, the country has a number of specialised institutions The All India Institute of Hygiene and Public Health, Calcutta provides training in the use of preventive and social medicine for diseases peculiar to India and ascertains how the results of pure and applied research can be utilised for promoting medical protection and positive

health. The School of Tropical Medicine, Calcutta, carries [illegible] research in diseases peculiar to tropical areas.

The K[illegible] Institute of Preventive Medicine, Guindy, Madras, conducts research in and prepares bacterial [illegible] and therapeutic sera.

Research in tuberculosis and other chest diseases is in progress at the Vallabhbhai Patel Chest Institute, Delhi. [illegible] of the morphology of the tubercle bacilli and the effect on them of the different drugs constitute a special feature of [illegible].

The Lady Willingdon Leprosy Sanatorium at [illegible] and the Silver Jubilee Children's Clinic at [illegible] have been taken over from the Madras Government and converted into the Central Leprosy Research Institute.

The Haffkine Institute, Bombay, undertakes a large-scale manufacture of vaccines, sera and other biological products and carries out research on lines [illegible] in their [illegible]. It has been functioning as the chief centre for research [illegible] connected with the prevention and treatment of plague. The scope of the Institute's work has been enlarged to cover, amongst others, the problems of [illegible], malaria and [illegible] diseases.

[illegible] on cancer are carried out at the Indian Cancer Research Centre, Bombay. Statistical surveys [illegible] of cancer in India have also been [illegible].

[illegible] at the Central Research Institute, Kasauli, [illegible] problems of [illegible], serology and [illegible]. The Institute manufactures pathological [illegible].

The [illegible] Institute located at Coonoor is engaged in research [illegible] [illegible].

[illegible] the Central Drugs Laboratory, Calcutta, [illegible] chemical and [illegible]. The Laboratory [illegible] and [illegible].

AGRICULTURAL RESEARCH

The Indian Council of Agricultural Research, established in 1929, sponsors research in both agriculture and animal husbandry in institutions belonging to the Central and State Governments, the universities and other institutions.

The Indian Agricultural Research Institute, Delhi, is the oldest institution devoted to research in all aspects of agriculture. It has well equipped laboratories and extensive farms for carrying out large-scale cultural investigations on food crops.

The Indian Veterinary Research Institute, Izatnagar, deals with veterinary diseases and their cure, while the Indian Dairy Research Institute, Bangalore, looks after dairy research. The Central Rice Institute and the Central Potato Research Institute devote themselves to problems of research relating to rice and potatoes, respectively. The Institute of Plant Industry, Indore, is engaged in evolving improved varieties of a number of agricultural commodities.

The Indian Central Cotton Committee has a laboratory for research in cotton technology at Bombay and the Lac Research Institute is located at Ranchi (Bihar).

Although it does not undertake research, the activities of the Directorate of Plant Protection and Plant Quarantine under the Ministry of Agriculture help research in many ways.

The Central Marine Fisheries Research Station, Mandapam, carries out biological investigations in edible fish found in the coastal waters of the country. These include the mackerel, the sardine and marine prawns. Research stations are to be set up in Bombay, the Gulf of Kutch, Visakhapatnam and the Andamans.

The Central Inland Fisheries Research Station, Calcutta, deals with inland [illegible] [illegible] and pond fish. The work of the [illegible] [illegible]

EDITORIAL

INDIA'S FOREIGN EXCRANGE PROBLEM

India is experiencing acute difficulties in fulfilling her Second Five Year Plan. Though the Plan has been cut to essentials India still needs Rs 560 crores in foreign exchange for the remaining period of the Second Plan. During the current year large payments are falling due on the orders which were placed earlier for capital goods for our important projects. It has been estimated that such commitments in the public and private sectors together yet to be paid for amounted to Rs. 887 crores approximately as on April 1 1958. We have also suffered in recent months a fall in our exports on account of the recessionary trend in foreign markets. This has been a cause of heavy drain on our foreign exchange reserves. At the beginning of 1956 57 when the Second Plan commenced India's sterling reserves amounted to Rs 748 crores. At the end of March this year our foreign exchange reserves comprised in addition to a gold holding of Rs 118 crores sterling reserves of Rs. 267 crores. As against this our sterling reserves dropped to Rs. 193 crores at the end of July. By the end of August this year India's sterling balances had fallen to Rs 187 crores. Theoretically there are four possibilities before India to meet the foreign exchange problem (1) cutting down our development programme (2) cutting down our imports (3) expanding our exports and (4) obtaining further assistance from abroad.

Cutting Down Development Programme

The discussion whether the Plan is too ambitious or not is now purely academic. The Plan which is being carried out at present consists only of the core, viz the steel projects the power projects the coal projects and the transportation. It is only the Government which have detailed information about each project and which can take a view as to the extent it is possible on the ground of inadequate resources to cut it or slow it down. In this context it has to be remembered that a stage has probably reached in the execution of several of these projects when to stop them would mean an enormous waste of effort and the resources that have already been put into them.

The monetary assistance which we have received from many foreign countries has now made it unnecessary for us to prune the Plan further. We shall be able to complete the core of our Second Plan without imposing more hardship and sufferings on the people. We will now complete all the projects which will add to our financial and economic strength without jeopardising the maintenance of the economy.

Imports

The most effective means of dealing immediately with a difficult foreign exchange situation is a curtailment of imports. This, in fact, is what Government have been trying to do. Our imports have been increasing by leaps. We have been importing heavy machinery for our industrialisation and this fact alone has drained much of our foreign reserves. During 1955-56 India's import bill was Rs 731 crores; in 1956-57 it rose to Rs 1077 crores and in 1957-58 to Rs 1174 crores. But a heavy cut in imports is likely to be self-defeating since the process of development itself might be brought to a halt by a severe reduction in the imports of machinery and capital equipment. Necessarily therefore the main brunt of import reduction for the effective financing of the development must fall on import of consumer goods or raw materials for consumer industries within the country. However, even if food imports can be financed under special arrangements, there is a point beyond which imports of general consumer articles cannot be reduced without giving rise to further inflationary pressures.

There is a limit [illegible] on our imports [illegible] but [illegible] that imports [illegible] [illegible] in the [illegible] [illegible] [illegible] [illegible] of [illegible]. A [illegible] of a [illegible] [illegible] of [illegible] goods has been [illegible] in the country because the [illegible] in the [illegible] market. [illegible] general import policy has tried to [illegible] [illegible] [illegible] [illegible] [illegible] the [illegible] [illegible] [illegible] most [illegible] [illegible] [illegible] ing the last [illegible].

Exports

[illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] the [illegible] [illegible]

building up of our exports and raising them to a level which would enable us as far as possible to cover the import of goods that we must necessarily purchase from abroad."

Our export showed a disturbing decline during the first few months of the current year. The value of our monthly exports which stood at Rs 55.74 crores in November 1957 had declined by stages to Rs 41.42 crores in April 1958. There was a slight spurt in the month of May but then came the dock workers' strike in June which reduced the value of exports in July to the very low figure of Rs 27.78 crores. Compared with the corresponding period of 1957 our export earnings during the first seven months of this year have declined by over Rs 50 crores. The relieving feature is that during the same period a reduction of about Rs 104 crores was effected in the volume of our imports as compared to that during the corresponding period last year.

In view of this substantial reduction in imports the gap between receipts and payments is considerably reduced now but it is still much too wide. We have to fill the gap as far as we can.

Our exports have dwindled due to several unpredictable factors such as the world economic dislocation caused by the [illegible] [illegible] American recession and considerable [illegible] in international competition for exports. China has entered the markets in South East Asia and also Japan is a formidable competitor in this area. Both these countries sell their goods at a lower price than India can afford. There has also been discrimination in foreign trade due to [illegible]. Machinery which was [illegible] ed for manufacturing consumer goods is lying idle due to lack of raw materials and spare parts. Unless India produces goods of high quality she cannot compete with other nations in capturing the international markets.

On August 30 the Government of India [illegible]. The Government hoped that the [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible].

Considerable [illegible] of foreign exchange [illegible]

smuggled out against gold smuggled into India Gold smuggling is extremely lucrative as the Indian price of gold is Rs. 105 per tola which is over Rs 40 higher than its international price Smuggling of gold into India has acquired alarming proportions during the past two years having been estimated at Rs 30 crores in 1955 67 and Rs 40 crores in 1957 58

Foreign Aid

In face of the basic facts of the Indian economy—a low per capita income a very limited margin of savings, the rising pressure of population and the urgent need for large-scale industrial development—there is no escape from sizable external assistance for some years to come. India's external debt is very much moderate in relation to both national income and external receipts compared to other countries The Indian economy can yet bear a considerable addition to external obligation But these obligations have to be of long term character, in view of the fact that India's recent difficulties have been agggravated by accumulation of short term obligations As on April 1 1958, foreign exchange liabilities already contracted by India amounted to Rs 750 crores of which about Rs 110 crores will be repayable during the rest of the second Plan period about Rs 340 crores in the third Five-Year Plan and the rest at a later date

The World Bank called a meeting of India's five leading creditor nations Britain the U.S.A., Canada, Japan and West Germany, in Washington from August 25 to 27, to devise ways of extending to India urgently needed one billion dollars in new credits and to help her meet its immediate balance of payment crisis

According to a report in the New York *Journal of Commerce* the U.S.A agreed to defer until 1967 repayment of about 55million dollars in principal and interest due on a 1951 loan of 190 million dollars to cover Indian purchases of U.S wheat. In addition the U S A. was reported to have offered to make available 200 million dollars worth of farm surplus products to India in exchange for rupees

The report said the U.S.A would also provide credits totalling 100 million dollars from its Development Loan Fund repayable in rupees About 75 million dollars of this would be disbursed by the end of next March and the rest by the middle of 1959

It also said Britain would put up 108 million dollars for India's foreign exchange needs in the next seven months.

India needs 350 million dollars by March 1 next year to cover essential imports and a further 650 million dollors by the end of the second Plan in March 1961

The *Journal of Commerce* also said West Germany would provide 40 million dollars between now and next March and up to another 60 million dollars in the following two years Canada would provide a total of about 45 million dollars of which an expected 17 million dollars would be made available by March next

Japan would provide a credit of 10 million dollars for India's needs between now and March 1959

In addition the report said the World Bank would provide 100 million dollars in the next seven months and was willing to negotiate new credits totalling 225 million dollars for the following two years On September 4 the British Government announced that she would make available to India nearly £40 million in financial aid before March 31 1959 Britain also announced to give continuing consideration to the long term problems of Indian development during the rest of the Second Five-Year Plan which ends in March 1961

The U S A., also gave an assurance on September 9 that 100 million dollars in new Development Loan Fund credits would be forthcoming to India in the nine month period ending June 1959 The U S State Department ratified earlier indications of Loan Fund credits and of 200 million dollars in farm surpluses given at the five-nation World Bank meeting The U S A. also decided to waive all interest and repayment on the 1951 wheat loan until 1957 Under this loan the U S. A. shipped 190 million dollars worth of wheat to India. The deferment of payments on the 1951 wheat loan will save India 3 million dollars in its present fiscal year and a total of about 27 million dollars over the full nine years. The American loans are to be paid for in Indian rupees

On September 12 the World Bank announced that it was lending 35 million dollars to India to help her meet foreign exchange costs of her railways development plan

Though the prospect of foreign assistance seemed somewhat dim in 1956 when the second Plan was launched there has recently been increasing recognition in friendly countries that helping India in her development programme is a matter of vital interest not only to India herself but also in view of her large population and the position she holds internationally to the whole world. Yet

the least important [illegible] of the reasons for the change in [illegible] international [illegible] is the demonstration by India that she can pursue a steady and liberal policy with great firmness [illegible] she does not ask for assistance except [illegible] compulsion of circumstances [illegible] utilise assistance to the maximum public advantage and that she is determined [illegible] problems. The change in international [illegible] highlighted by the resolution recently passed by the U S Senate mentioning specially the need for assistance to India. Because of India's international prestige and [illegible] she has been getting monetary aid from the U.S.A. as well as Soviet Russia. Since the second Plan was launched India has got up to June 30 1958 Rs. 314 crores from the U S A. Rs. 13 crores from the World Bank, Rs. [illegible] crores from Russia and Rs. 35 crores from I.M.F. In addition a considerable amount from the U K., West Germany, Canada and Japan.

India's second Plan is bound to succeed [illegible] of temporary difficulties which have been [illegible] India is [illegible] and also to surmount those [illegible] foreign exchange. India's present troubles are not the result of [illegible] over ambitiousness [illegible] planning but the outcome of a series of unpredictable factors. For the successful execution of India's Plan her own efforts and resources are much more important than the foreign aid. Foreign aid can only support but never substitute our own will, determination and sacrifice to achieve our desired end.

JUTE INDUSTRY IN INDIA

The jute industry has a total of 72,355 looms which represent 53 per cent of the total loomage in the world.

There are in all 112 mills of which 101 are in West Bengal, four in Andhra, three in Uttar Pradesh and one in Madhya Pradesh. Those in West Bengal are all in or around Calcutta on both sides of the river Hooghly. And there are 72 jute mills companies managing these 112 mills.

Their total capacity is about 100,000 tons of jute goods per month on the basis of a single shift of 45 hours a week.

The total value of jute goods produced in a year is about Rs 150 crores.

There has been no Government control on production or distribution of jute goods. The control [illegible] is that exercised by the Indian Jute Mills Association, in the light of the working Time Agreement, the main object of which is to ensure that production and supply are adjusted to world demand.

The production for the year 1957 was 1,049,241 [illegible] for the year was 8,49,000 [illegible] foreign exchange worth Rs. 114 [illegible] was earned during 1957.

[illegible]

PROGRESS IN FLOOD CONTROL

Following the successive floods of unprecedented [illegible] the 1954 monsoon season the Government of India formulated a comprehensive programme of flood control in September 1954.

In the first phase of this programme emphasis was laid on surveys and investigations for the collection of essential technical data. A major portion of this work has been completed.

Considerable headway has also been made in the implementation of the second phase which includes [illegible] flood protection measures such as the construction of embankments and channels.

A number of such schemes have been recently completed giving protection from floods to large areas. Embankments have been built along the [illegible] the [illegible] Gandak and the [illegible] in [illegible]. Embankments have also been [illegible] upper reaches of the Ganges and the level of [illegible] has been raised above the flood level. In addition several [illegible] West Bengal have been [illegible].

[illegible]

RELIGION AND POLITICS

By Dr TARA CHAND

RELIGION and politics are two centres round which the history of man has revolved. Both are protean phenomena There is no age when mankind was not divided into multiplicity of faiths. Every religion has numerous sects, and every sect has history Religions have grown have been promulgated have decayed Some times they have died, some have revived It is not possible to bring any order into this kaleido scopic phenomenon It is difficult to subsume religions under any scientific scheme of classi fication Believers of a religion will not accept any fixed, formula Distinguishing attributes are hard to apply—such as natural, ethical revealed universal for all claim to possess them All regard they are true and pos ess the key to perfection

Different Doctrines

To evaluate religion may be indiscreet, but to explain it is necessary The enterprise is beset with difficulties For what is common to all religions? Are there any general attri butes linking together religions? Early Bud dhism was silent on the existence of God and soul Islam has laid the greatest emphasis upon the unity of God its Prophet has been called God drunk The Christians believe in the triune nature of the divine Man as a compound of actions and their traces, is involved in a cycle of life and death and is dissolved when he attains Nirvana such is the Buddhist doctrine. Man is a creature and slave of Allah and is either chosen by Him for heaven or rejected and condemned for ever holds Islam Man may be saved from punishment for his original sin if he has faith in the Christ whom God sent as the mediator, teaches Christianity There are deep difference about other fundamental doctrines.

Two Aspects

But apart from these there are matters of form attitude and also of content which help in understanding the variety of religions and appreciating some of its universal features For instance all religions have two aspects—focal and peripheral The first is that personal indescribable experience which lies at the core William James and other psychologists have attempted to understand it. But although its characteristics may be grouped under a limited number of types the experience itself seems to differ from man to man In some it has been so intense and so possessive as to make of them persons apart from the gene rality of mankind Such have been the prophets seers and saints The capacity for such experience varies and there are some who seem to have none

Round such experiences have been built up vast structures of religious dogmas and doctrin es Some religions—Christianity and Bud dhism for instance, formulate only spiritual and ethical principles Others have a wider range Hinduism and Islam cover the whole ground of man s life—religious social political and economic

But whether the propositional content of a religion is small or large, there is a peripheral content in each built round its focal insight and intuition of reality This content grows changes and is subject to influences emanating from individuals and groups

Mystic Experience

The mystic experience which constitutes the core of religion is incommunicable It is impossible to say whether labels of particular religions can be attached to it From all that is known about it this appears unlikely

The peripheral content has reference to both supranatural and natural matters Some of its parts may be based upon direct percep tion and therefore demand immediate assent, others would enjoy varying degrees of object ivity and validity depending on the part which reason plays in their formulation. These may indicate ideals of individual and social conduct prohibitions and permissions They may set out the values which ought to be pursued and the destiny which awaits man

Politics is less diverse Human intellect has not been as fecund in producing forms of government and state Ancient philosophers accounted six as the main types each covering several varieties The moderns do not regard the question of classification important. In a sense each state is sui generis

Religion and state both demand the all egiance of man. The demand of the State is accompanied with extreme sanctions In states where differentiation between politics and religion is not recognised temporal punish ments are reinforced with spiritual ones and both Church and State have recourse to them.

The claim upon the obedience of the individual by these two authorities has been a prolific source of conflicts in history. The modern secular sovereign state has arisen out of wars originating in religious differences. There is a great deal of evidence for the view that as mankind has advanced in civilization the power of the State has increased and that of religion has retreated. From a time when religion and politics were identical, society has moved to the position wherein the State has assumed almost unlimited authority.

Divine Kingship

In the early history of man the high priest and king were the same person, and kingship was regarded as divine. Miraculous powers were attributed to him. In the Middle Ages in Denmark mothers brought their infants and peasants their grain for him believing that if he lays his hands on them they both would thrive. The queens and kings of England exercised the gift of healing. King Charles II touched a hundred thousand persons to cure scrofula. That divinity hedged in a king was a widespread belief. The kings of ancient Rome claimed to be embodiments of Jupiter the god of sky. Muslim chroniclers denominated their kings as shadows of God (Zille Allah). Abul Fazl records a saying of Akbar: "indeed to behold the king is a means of calling to mind the Creator." The Dalai Lama of Tibet is even today considered the very incarnation of God.

The kings were not always the heads of the State and of religion. The sacred books of the Hindus, the Dharma Shastras, laid down the duties of the king and the subjects and their injunctions were binding on both.

All the three civilizations have been faced with the predicament involved in the relation between the State and the church or politics and religion.

State And The Church

In the Christian west the struggle continued for several hundred years. The thirteenth century Popes asserted claims to the highest authority upon earth and the climax was reached when Pope Boniface VIII (1294-1303) proclaimed the universal supremacy of the Church. The Emperors of the Holy Roman Empire and the kings of England, France and other countries were treated as subordinates whose duty it was to obey the dictates of the Holy Faith.

This was a challenge. The peoples of Europe were emerging from feudal anarchy and forming consolidated societies under the aegis of centralised governments headed by kings and supported by the middle classes of merchants and entrepreneurs. Both resented papal interference in matters of internal administration which tended to reduce the authority of the kings and to perpetuate divisions of loyalty and also to cause the drain of wealth to the coffers of the Church, mainly at Rome.

Religious Fanaticism

The Reformation was a direct attack upon the Papal conception of religion and power. Many kings and princes and the middle classes found in Martin Luther's movement a powerful aid to their own cause. The struggle that ensued led to war and bloodshed. In France there was a civil war which lasted more than 30 years, and which witnessed a series of brutal massacres till in the end out of sheer exhaustion political leaders established a compromise and the country turned away from religious fanaticism. England had its religious persecutions in which the Roman Catholics and the Protestants burnt their opponents at the stake. On continental Europe the Thirty Years War decimated the population. All this led people to the conclusion that mixing of religion and politics was the source of these conflicts and so from the middle of the 17th century religion began to be depoliticised and religious toleration was accepted as the basic principle of State. Today all western states are secular; wherever there is an established church, it is subordinate to secular authority.

Islamic Countries

The history of Islamic countries has been different. Islam has always been plagued by sectarian wars and persecutions. In the period of the Caliphate much blood was shed because of doctrinal differences and on the question of succession to the Caliphate. In Iran the Safavi Shahs who were Shiahs persecuted the Sunnis. There was bitter hostility against such sects as the Karmathians, the Isma'ilis and in recent times between the Wahhabis and others. Since the Islamic countries have come under western and secular liberal and rational ideas are making headway. The growth of industrialization and the strong bearing of the middle classes promise to reinforce these tendencies.

Even as late as many Muslim countries have [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] tendencies.

Liberal Trend

[illegible] Turkey [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] The Turkish were

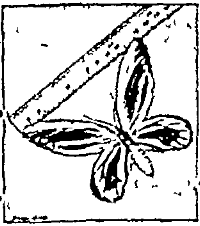
is republican, nationalist populist, etatist, secular and reformist, and article 75 of Chapter V ensures 'no one may be censured for the philosophical creed religion or doctrine to which he may adhere The Iraqi constitution forbids differentiation based on creed or religion The Lebanese law guarantees complete freedom of conscience and respect for all creeds In Syria freedom of belief and protection of all forms of worship is ensured The only concession that it makes to religious exclusiveness is in providing that the religion of the President of the Republic must be Islam, as in England the king must belong to the Anglicam Church. The Egyptian constitution prescribes free exercise of religion and belief and although it still makes Islam the State religion it abolishes religious courts In Indonesia the State is secular and every one is entitled to freedom of religion, conscience and worship

The trend towards secularism or separation of politics and religion is in the interests of both state and faith

Religion is Subjective

The focal aspect of religion is subjective It involves the spiritual relation between the individual and God Obviously it is impossible for any external agency to intervene in the communion of man with the Supreme Being Laws of State and regulations of society have little relevance to this matter The other aspect which is peripheral includes morals laws social affairs which may be related to religious doctrines Now these doctrines are subject to the understanding of man and it is the experience of history that agreement as to their meaning and application is hard to obtain Unfortunately differences lead to violence

Above Controversy



Religion as concerned with spiritual experience and with truths and principles which are absolute and eternal ought to be above controversy and conflict. Religion, dealing with social, economic and political affairs faces a paradox, for these affairs unlike spiritual matters are variable under the pressure of temporal factors If they are treated as unalterable and universal, society becomes stagnant and lack of adaptation threatens it with extinction If changes in temporal affairs are considered as tantamount to change of religion then religion is placed at the mercy of every change in opinion Intellectual freedom objectivity and rationalism which are the distinguishing marks of the modern age suggest the solution for the freedom in the saying of Jesus Christ, 'render unto Caesar the things that belong to Caesar and to God the things that are His

DID YOU KNOW ?

The most primitive of all animals was long thought to be the amoeba but this title is now accorded to the protozoan (first life) of the class Flagellata They are microscopic single celled animals that reproduce by fission.

The world's largest butterfly is the New Guinea bird wing (Troides alexandrae), the female of which has a wingspan of 12 inches (30.5 centimeters).

Steadily growing for years, the influx of refugees from Communist East Germany to free West Germany h increased to about 7 weekly

HOW TO ENJOY YOUR WORK

By GEOFFREY A. DUDLEY, B.A.

A YOUNG man once confided to me that his ambition was to be a singer. He said that he desired this above everything else in the world. When I asked him why it was so important to him, I was rather surprised by the answer he gave. I had expected him to tell me all about music and how much it meant to him. Instead he replied: "Because it will mean being somebody!"

"I really want to make something out of myself," he continued, "something worth while—something to be proud of. I don't want people just to look at me and then not give me a second glance. I want them to notice me!"

When he saw that I was interested he confided in me still further. "When I'm at work," he went on, "I look at the men around me and say to myself: These men have spent the best part of their lives working here. Where has it got them? I want something more than that from life."

He assured me that this frank confession was not "just a passing whim." "This is what I want to do and be," he emphasised, "and I am positive in my own mind that I can do it."

Asked about his attitude towards his present job he replied that he could not get to like it. He admitted the fact that he hated it. "I hate doing the same thing day in and day out," he insisted. "I detest the monotony of it all. It leaves me so utterly worn out and fed up at the end of each day that I do not feel like doing anything about my singing."

He then went on to give a clue as to his real problem. "After all," he said, "I feel that I have an inferiority complex. That may seem a strange thing for me to admit. But it is the one thing that stands between me and my ambition.

"I hope you can try to understand and tell me what you think I should do about my new career, which I want to get started on as soon as possible."

The Wrong Reason

It is not hard to discover this young man's ambition. To make the best of music [illegible] The something he [illegible] want to achieve. [illegible] The trouble [illegible] to be [illegible] he wants to be for the wrong reason. [illegible] because he [illegible] "somebody." [illegible]

The disinterested attitude urges us to do things because we think they are worth doing—not because of what they can do for us.

This young man, if he succeeds at all, could probably be "somebody" just as well by engaging in any other activity. If he is to succeed as a singer, his choice of music as a career should be governed by some attraction that only music holds for him.

A great singer is one who has a genuine interest in music for its own sake. He thinks that music is bigger than himself. He has chosen music because it is the most important thing in the world to him. His choice is not due to the fact that his own personal prestige is the most important thing in the world to him. Indeed he usually values music most as a means of giving pleasure to other people.

If we merely want people to notice us, we can probably find an easier and better way than becoming a singer. The musical profession is so crowded, in fact, that even if our young man were to become a singer he might not be particularly noticed. A craving for the limelight is never in itself a substitute for the hard work of preparing oneself for a really fine musical career.

A careful study of the above case shows us, in fact, where the wish to be a singer has its origin. It [illegible] from the [illegible] inferiority complex [illegible]. The real reason why he wants to be noticed is that he feels [illegible]. He does not value himself properly. He wants to draw attention to himself in order to compensate for his feelings of [illegible]. He has [illegible] the goal of personal importance for [illegible] in society.

If [illegible] the young man [illegible]. The [illegible]

The [illegible]

other people This should be our motive for wanting to be a singer, an engineer an architect, or anything else We should see our work not merely as a means of increasing our importance, but rather as a means of contributing to the welfare of society at large

We should feel that our work matters—that it would be worth doing if we were not doing it. We should believe that society would be the poorer without our efforts, that in a small way the stability of the whole society depends upon how well we are doing our little share.

This attitude helps us to forget ourselves —and foregetting ourselves will help us to be more efficient. Our work will improve because we shall be paying more attention to it than to our own feelings.

Personal Satisfaction

The importance of the right attitude towards one's work is also illustrated by the following case A young married man said My aim has been to work hard to earn more money, and I am spending my life putting this into practice I believe that my work should give a great deal of satisfaction to me'

He went on to complain that a higher position which he had hoped to attain had been given to another applicant This had caused him a great deal of disappointment and he felt that the interest and keenness had gone out of his work

I am itching to get into something where my working hard will reap some benefit and satisfaction for me he added I have thought of many different jobs insurance agent sales representative draughtsman commercial artist even my own business My wife leaves my career to me as she has got tired of my conflicting aims I hope you can help to sort things out for me

What Employers Want

The real problem here as for so many of us, is again an incorrect attitude towards work. If he had not been turned down for promotion when he was he would have met a similar disappointment sooner or later If we have no abiding interest in our job for its own sake it is inevitable that promotion should pass us by Employers want people who are doing their job because of the value they put upon the work itself not because of what the work can do for the worker

Dr Anne Roe defines work as "whatever an adult spends most of his time doing ' If a person spends most of his time say hoeing turnips it ought after all to be because he believes that hoeing turnips is the most important thing in the world to him Otherwise he might just as well be doing something else. '

Do we think of our job merely as a means of making some money of " getting on of bolstering our self-esteem ? If so we have too little regard for the nature of the work itself We might just as well be doing some other job for that might bring us just as much money and enable us to " get on " just as well.

The Welfare Of Others

The correct attitude towards work is to look upon it as a means of contributing something to the happiness and welfare of other people Work is a kind of joint enterprise in which mankind is engaged for the benefit of society as a whole If you try to make sure that your own contribution is the maximum of which you are capable the personal satisfaction you get from your job will take care of itself

Such a point of view widens the rather narrow conception of work expressed by the young married man whose case is described above. 'My aim has been to work hard to earn more money he said "I believe that my work should give a great deal of satisfaction to me. These aims are, of course excellent as far as they go the trouble is that they do not go far enough.

Anyone who is dissatisfied in his career is therefore recommended to look at what he is doing from the above point of view How work can become intolerable when the doer sees no meaning in it is illustrated by the following report For some years before I gave up my job said a man I felt that my work was not worth while Although I always had plenty to do very little of it made any essential contribution to life socially or economically, and much of it was unnecessary

What happens when we take the above advice and try it out in our career ? A young married woman said "I have been offered the chance of not only increasing my wages considerably but of getting a higher position in my present firm. Our manager who chose me as his personal assistant told me that he did so because I always appeared ready and willing to do any job"

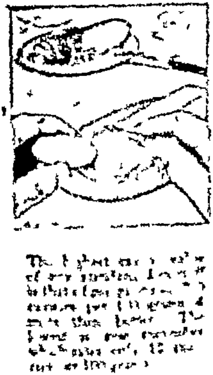
Here is a case of a person who had a

[illegible] interest in her work for its own sake. Her attitude reaped its reward in terms of promotion and more money as well as personal happiness. The willingness that secured this and benefited her [illegible] provides a lesson the others who seek advancement might well take to heart.

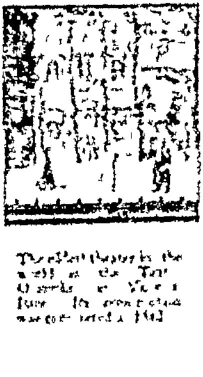
A man at forty said that he did not like his present occupation. He was anxious to establish his prospects of financial success on a more secure footing. "I have from time to time," he added, "tried to break into the profession of salesmanship in which I feel that I could improve my position."

Two months after taking the advice offered he reported, "I now like my job much more than previously. I feel that I am really doing something for the benefit of my fellow men and women. My greatest ambition in life is to serve them to the best of my ability, and I am going all out to accomplish this aim."

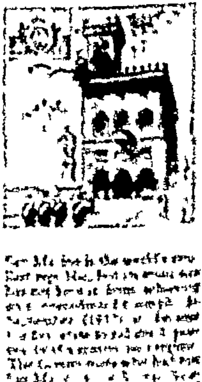
You May Be Worthy Of Better things



Seeing the social value of being, say, a post-man, does not mean that we must remain postmen for the rest of our lives. We can well grow into a wider sphere of service. We may become worthy to discharge a greater responsibility towards society. "Thou hast been faithful over a few things," said the master to the servant in the parable, "I will make thee ruler over many things."



For the time being, however, the cultivation of such an attitude may help us to feel more at peace with ourselves. Later on we may discover that some other job offers us an even better opportunity of making other people happy.



As a business man put it: "Success is the sum-total of achievement. Financial reward, while useful, is by no means the final objective. In fact, this seems to take care of itself if there is solid achievement. To be successful demands the cultivation of a balanced life in all its varied aspects both in business and out of it."

DID YOU KNOW?

The highest [illegible] of any [illegible] is [illegible] 300 [illegible]

The oldest theatre in the world is the Teatro Olimpico in Vicenza, Italy. Its construction was completed in [illegible].

San Marino is the world's [illegible] [illegible]

GRAMDAN AND COMMUNITY DEVELOPMENT

By A W SUHASRABUDDHE
General Secretary, Sarva Seva Sangh

THE Community Development Programme almost as old as Bhoodan started as an experiment in 1952 in 55 different areas The programme has been gradually expanding so much so that it will cover all the five lakh villages of India by 1961 during the Second Plan The objectives of the C.P A have been to lead villages towards unity and progress by building up co-operative organisations in them But it is now obvious that villages could not be approached in the right manner

Thirty years ago Gandhiji gave the nation a call to ' go back to villages Many of the college students responded but only a limited number actually entrenched themselves in villages to serve the rural folk whole-heartedly The relief work carried in villages had a significant effect on the freedom struggle but after freedom it was found that the rural reconstruction was not possible through this approach

The Government set out to discover new approaches American guidance was sought Country wide planning was based on the experience gained at Itawa and Allahabad and the C.P A was raised with the Block Development Officer, Social Education Officer and an agricultural expert in each Block Extension Services were raised to impart scientific know how to villagers New techniques improved seeds and artificial manures were introduced. Soil conservation operations and minor irrigation projects were taken up

Those who had worked with Gandhiji in the rural sphere were also actively thinking in that line and felt that without the basic unity in the village no results could be achieved in spite of the best intentions efforts influence or knowledge at one s disposal There was a close similarity in the objectives of the two approaches but active participation was not forthcoming from the people

The fact remains that 60% of the total land is managed through hired labour There is a larger percentage of owners who don t till Obviously enough it is difficult to achieve much without solving the land problem There are over one hundred laws enacted about the land tenure and management. The President has signed nearly 127 Acts after freedom but the problem still remains unsolved

There is a talk going on in Orissa and elsewhere about ceiling It was estimated that 30 lakhs of landless families would gain by the measure of fixing ceiling on land in Hyderabad but hardly 3 lakhs of landless families got some land. Why? The owners had passed on the title of ownership to their relatives sold away a portion of their estates and enrolled their tenants as farm servants It is obvious that the land problem would evade solution through law and legislation But so long as the right spirit does not permeate the village, these laws will remain only on the statute The C. P A failed to pursue its objectives since land problem remained unsolved

Vinoba started the Bhoodan movement six years ago in Telengana where Harijans approached him for land and a landlord came forward with an offer of 100 acres Gifts followed one after another and he got 18 000 acres in the Communist dominated area There-after he moved on to Delhi and continued his tour in U P Bihar and so on, collecting 40 lakhs of acres in the first six years

In Bhoodan, we got also bad lands in the first round but good lands in th second round Later Vinoba raised the demand for 1/6th but in the end announced his stand for the total abolition of private property

Values Of Life

Bhoodan movement is concerned not merely with land but with much more—the values of life The land problem has been solved in Indonesia Burma and China. In China each family got 7 acres of land but thousands were shot dead to do this. In Japan each family got 2 acres MacArthur got land distributed through the force of law The same thing followed in other countries Brought up under the guidance of Gandhiji we wanted to do it not through bloodshed but through non-violence Bhoodan will strengthen the democratic forces in the country and make villages self reliant

New approach creates an upheaval in thought. We did not welcome Bhoodan as it emerged It was hailed more by the foreign countries than by India A roaming saint is getting gifts of land for the landless wrote the *Manchester Guardian*. The French writer Mr Lanzo de Vasta (Shati Das) who stayed with Vinoba during his *Padyatra* in Bihar stated, ' Vinoba is a greater seer who through Bhoodan is trying not only to solve the land

problem but presenting a path of peace. Bhoodan is a key to solve peacefully and democratically a number of major problems facing mankind. It has a role to minimise social inequalities. Swaraj has brought an awakening in thought. The Adivasi in a village now understands that he can also talk of high sounding philosophies, if fed well.

During the First Plan period there was 18 per cent increase in national income and it is stated, there will be 25 per cent of increase in the Second Plan period. But with our average national income of Rs. 250 per annum there is a wide disparity of income in rural and urban areas. It is Rs. 140 in the former and Rs. 8[illegible] in the latter. This gulf has to be bridged. We must share our comforts with our neighbours and provide equal opportunities to all. After land distribution in China the food production increased 2½ times. It is a lesson for us.

In India the land per capita is only 3/4th of an acre per capita. In America it is 12 acres and in Russia it is 16 acres per capita. In Asian countries where land is comparatively less and population higher the land has to be brought under the public utility service. Buildings in the towns were so managed during the war that the tenants could not be removed from the houses due to scarcity of accommodation. Similarly in our country the population is larger than the availability of land. Our country imports grains worth 10 [illegible] crores every year and our grain is 40% cheaper than the other countries. During [illegible] we imported grains worth [illegible] crores of rupees. For how long can this liquidation of currency go on?

India has decided not to join any power block. In that case we have to pay the price of freedom and become self-sufficient. It will be advisable to declare land as an object of public utility service. Only those who work on it should own it.

During the period of [illegible] we [illegible] 1,500 tractors [illegible]. After [illegible] years the Government [illegible] the West cannot help us [illegible] food problem. An American expert was called to India for advice on [illegible] Rs. 21,000 [illegible] capita [illegible]. He advised that India should take to machines and farming and to [illegible]. [illegible] Government [illegible]. There [illegible] industry [illegible] of [illegible].

To [illegible]

[illegible] capital of Rs. 2,[illegible]. In a [illegible] factory it requires Rs. 10,000 and in cottage capital [illegible] Rs. 3,000 [illegible]. For [illegible] it is Rs. [illegible] head. There is a [illegible] villages. The [illegible] is nearly Rs. 75,000. To electrify a village road it further needs Rs. 2,500 and [illegible] of Rs. 2,500 to each [illegible] house.

We [illegible] this capital [illegible]. Looking at that we must not fail in the [illegible] should not think of providing employment to people through industries for [illegible] 50 years or a century but should [illegible] cottage and handicrafts.

Share In Land

The First Plan proceeded with food production as the basis which would lead to the formation of capital to be invested in industries. Second Plan proceeds with [illegible] as its foundation, [illegible] capital that [illegible] will go into expenditure.

This means that industry will remain [illegible] for capital investment and agriculture will be deprived of it. Seven lakh acres of land can be brought under irrigation through the [illegible] Project. [illegible] the cost [illegible] ment at Rs. 150 per acre even after the water reaches a part of land. Ordinarily it is Rs. [illegible] per acre.

However we have to do away with the economic [illegible] relationship in land. A labourer having no stake in the farm gets wages. He does [illegible] in work and [illegible] the crop. [illegible] the labourer is denied his share according to work and the capital [illegible] in agriculture is neglected, the [illegible] is not satisfactory.

The [illegible] is [illegible] land to all and sharing of income according to work. This means land is converted [illegible] which country [illegible] in [illegible] farming and handicrafts.

After years of [illegible] the Government have now agreed to this [illegible] and have decided that the [illegible] between the [illegible] and [illegible] the [illegible] made [illegible] that land must belong [illegible] the [illegible] who [illegible] has [illegible] as [illegible] the [illegible] and [illegible].

India And The Democratic Tradition

By SATISH KAPOOR

IN the year 750 A D the people of Bengal elected as their king a simple citizen Gopala, renowned for his wisdom and courage

A century earlier the king of Madhya, in Central India having died without leaving an heir the people and elders chose as their sovereign the ruler of a neighbouring state Prince Harsha famed for his victories in battle his justness and wise management of state affairs

Later it is true the people of thes states lost the right to elect their rulers and the monarchy became hereditary Yet the examples of Bengal and Madhya are not isolated instances, for at all periods and whatever the form of government a democratic tradition has existed in India

Describing the invasion of India by the armies of Alexander the Great Greek historians speak of the political conditions existing at that time in the north western states Several of these—Kunar Panjkora and Swat—were then republics and Alexander met with stiffer resistance in these areas than in the neighbouring kingdoms

He was seriously wounded at the siege of Massaga a republican city and only managed to reduce the town by ordering the massacre of the entire population Similarly at Amdaka another republican city the citizens perished in their thousands on the battlefield before surrendering to Alexander This strong attachment of the Indians to a republican government is stressed by the Greek historians.

The existence of the republics is also mentioned in several Indian works The great epic *Mahabharata* (written between the tenth and seventh centuries B C) describes the constitutions of the republican states of that time and offers counsels of wisdom

The Buddhist scriptures speak of the mediation of the Master in a dispute opposing the citizens of the republic of Licchavia This republic was so powerful that Bimbisara the first king to unite a large part of India under his rule in the sixth century B C. took 1[illegible] years to subjugate it

Chanakya (4th century B C) who has been called the Machiavelli of India also mentions the republics in his famous political work the *Arthashastra* An out and out monarchist he discusses at length various m[illegible] ans of weakening the republics

Yet despite the power of the great empires the republics continued to exist up to the 5th century A D Their breaking up was due partly to internal strife and to their failure to unite against the monarchies The main cause however was that their structure was insufficiently democratic.

By their constitutions these states were closer to the republic of Athens than to modern democracies All political decisions were taken by a single military caste the Kshatriyas who met in an open air Assembly The other castes were not allowed to take part in these proceedings The Assembly elected a President and a council to assist him

The Kshatriyas were very numerous Anyone who had a relative belonging to the caste was entitled to a seat in the Assembly and since at that time marriages were allowed between members of the different castes the Kshatriya caste grew continually

Its members were very jealous of their political rights up to the beginning of the Christian era they opposed all attempts to increase the power of the executive But from then on the situation changed Party demagogy gradually turned people away from political life The President of the Assembly became more and more powerful Finally the hereditary principle won the day and the president of the Assembly ceased to be elected This change took place in all the former republics around the 5th century A D with no hope of return

The kingdoms however also had some democratic traditions Prior to the 6th century A D India was made up of a multitude of tiny states most of them kingdoms These states were so small that it was possible for the kings to maintain direct contact with their subjects The people's representatives met in an assembly—the Samhiti—to advise the king and prevent any misuse of power Just how powerful these assemblies were is shown by a saying which is often quoted in the writings of the time Nothing can equal the misfortune of a king who has lost the trust and the goodwill of the Samhiti

In addition to the central Samhiti each village elected a local council or Sabha to settle community affairs The Sabha was the centre of social life in the village and men and women took part in its meetings on an equal footing It was considered a great honour for a man to gain recognition from the Sabha and at a wedding the most pleasant thing one could wish the bride was to become a member of the council (Continued on Page 732)

problem but pioneering a path of peace.' Bhoodan is a key to solve peacefully and democratically a number of major problems facing mankind. It has a role to minimise social inequalities. Swaraj has brought an awakening in thought. The Adivasi in a village now understands that he can also talk of high sounding philosophies if fed well.

During the First Plan period there was 18 per cent increase in national income and it is stated, there will be 25 per cent of increase in the Second Plan period. But with our average national income of Rs 250 per annum there is a wide disparity of income in rural and urban areas. It is Rs 140 in the former, and Rs 850 in the latter. This gulf has to be bridged. We must share our comforts with our neighbours and provide equal opportunities to all. After land distribution in China the food production increased 2½ times. It is a lesson for us.

In India the land per capita is only 3/4th of an acre per capita. In America it is 12 acres and in Russia it is 16 acres per capita. In Asian countries where land is comparatively less and population higher the land has to be brought under the public utility service. Buildings in the towns were so managed during the war that the tenants could not be removed from the houses due to scarcity of accommodation. Similarly in our country the population is larger than the availability of land. Our country imports grains worth 10 million tons every year and our grain is 40% cheaper than the other countries. During controls we imported grains worth 900 crores of rupees. For how long can this liquidation of economy go on?

India has decided not to join any power block. In that case we have to pay the price of freedom and become self sufficient. It will be advisable to declare land as an object of public utility service. Only those who work on it should own it.

During the period of controls we imported 3,900 tractors annually. After 5 years the Government realised that the West cannot help us to solve our food problem. An American expert was called to India for advice on a salary of Rs. 2[illegible] per month staying here for nearly six months. He advised that India should take to mechanised farming and industrialisation. But the Government had to reject his advice. There is no capital for industry to [illegible] a population of 35 crores working on land.

To employ one man in a textile mill it requires a capital of Rs 2,500, in a [illegible] factory it requires Rs 10,000 and in steel the capital investment is nearly Rs 31,000 per man. For cottage industries it is Rs 5 [illegible] head. There is a plan to electrify [illegible] villages. The cost of electrifying one village is nearly Rs 75,000. To electrify a village road it further needs Rs. 2,500 and an additional cost of Rs. 2,500 to electrify a cottage house.

Wherefrom will this capital come? I suggest that we must not talk in this way and should not think of providing employment to people through industry for another 50 years or a century but should lay stress on farming and handicrafts.

Share In Land

The First Plan proceeded with food production as the basis which would lead to the formation of capital to be invested in industries. Second Plan proceeds with industries as the foundation, the surplus capital thus formed will go into agriculture.

This means that industry will get priority for capital investment and agriculture will be deprived of it. Seven lakh acres of land can be brought under irrigation through the Machkund Project but the capital requirement is Rs 150 per acre even after the water reaches a plot of land. Ordinarily it is Rs 25 per acre.

Moreover we have to do away with the employer employee relationship in land with labourer having no stake in the farm except wages. He does not put in work and steals the crop. Since the labourer is denied his share according to work and the capital investment in agriculture is negligible the results are not satisfactory.

The solution lies in allowing share in land to all and sharing of income according to work. This must lead to cooperation which ensures prosperity to those who labour on farming and handicrafts.

After years of experience the [illegible] the Government have now agreed to this view and have declared that the cooperation between the C.P.A. and Gramdan will yield the best results. [illegible] the [illegible] similar objectives but Gramdan made the conditions that land must belong to the community. Fortunately the [illegible] the idea the Government has [illegible] the [illegible] of [illegible] to the Gramdan [illegible].

METRIC SYSTEM IN INDUSTRY AND TRADE

By SHRI B P SINGH ROY

President, Federation of Indian Chambers of Commerce and Industry

THE stage is now set for a change over to the metric system of weights and measures from October 1, 1958 when the system would be introduced in certain specified areas of all the States in some Government Departments and in some industries, both public and private

To begin with this system shall be applicable in some respects to cotton textile mills, iron and steel factories engineering industries and factories engaged in the manufacture of heavy chemicals cement, salt, paper pulp or paper board refractories copper aluminium lead, antimony and tin etc It will also be applicable to the Indian Airlines Air India International and Coffee Board. The system has already been made applicable to the jute industry from July 1, to synchronise with the commencement of the jute year

Gradual Changeover

It is envisaged to introduce the metric system gradually A maximum period of 10 years from the passing of the Act in 1956 has been provided for its complete adoption Even after the introduction of the new system the use of the existing units shall be permitted for a period of two years i.e., till September 30, 1960

The system is to be welcomed in as much as it purports to do away with the prevailing confusion in the field of weights and measures Furthermore it has a scientific basis. It will be applicable to the whole of the country thus giving a unified system which is very essential for the smooth running of industry trade and commerce In this connection one may refer to Col. Strachey's observations made in 1868 in his Minute of Dissent.

> "The true test of what is probable in such a case is to be found in the character of the change which it is proposed to make If the change be one of certain utility it may, in my judgement be considered as one certain to be made in due time and it is because the adoption of the metrical system of weights and measures seems to me of certain utility that I regard its eventual accomplishment as also certain"

The truth of this by a [illegible] is brought home by the fact of the adoption of the metric system by more than 50 countries comprising 3 [illegible] of the world population. The metric system has [illegible] and has practically fulfilled the dream of its founders that "though conceived and created in France it will belong to all nations."

Transitional Difficulties

The change-over to decimal coinage has given us some experience of the difficulties involved in shifting to a new system and we will be able to smoothen out difficulties in switching over to the metric system by utilising the experience thus gained While keeping the basic objective in view, such adjustments will be made as are required to lessen the difficulties Guidance help and assistance will be frequently needed at all levels of technique and operation, such as in regard to new machinery to be installed cheap adjustment and calibration of existing machinery to the metric system, new terms of trade contracts etc

Before manufacturing industries can adopt the system in the purchase of raw materials and sale of products and express the price and quantities in terms of metric units, the markets will have to be prepared so as to be able to quote in metric units All the consuming points will have to change over their measures and weighments to the new system.

In most of the industries at present transactions are effected on the basis of the f.p.s. pound system Elaborate conversion tables will have to be prepared to cover the complex interrelations of Commerce and Industry where a large variety of materials and services go into the manufacture of one line of production.

Flexibility Of Approach

The difficulties will be much more so for the change-over in the actual process of production where for instance, a number of processes are involved in the manufacture of a commodity and different machines are used at the various manufacturing stages. If a new machine based on the metric system is installed to carry out a certain process it would create difficulties of a technical nature It would be difficult to integrate the new machine with the other machines based on the f.p.s. system and to [illegible] various machines based on the new and old [illegible] system

A flexibility of approach [illegible] regarding the [illegible] Government [illegible] long way to alleviate such difficulties

[illegible] a few difficulties [illegible] of the machinery [illegible]

the various stages of the manufacturing process may be different for each particular type Again at any moment of time machines at different stages of life may be employed in the same process Hence every time a machine becomes old or obsolete and has to be replaced by a new one based on the metric system, not only the flow of production between the different stages in the manufacturing process but also the pattern or the volume of production at the same stage is likely to be upset.

Keeping in view the phase of regeneration of the economy through which the country is passing at the moment it would hardly be proper to obstruct the smooth process of production Manufacturing units in such cases should be allowed sufficient time to phase this switch-over to the new programme

Preparatory Work Needed

Further, new machines of production are usually established after research work and experimental production both of which can largely be based on the foot pound system at present Before adopting the metric system in the final production it would be necessary to conduct experimental work also on machines and models based on the metric system The availability of such machines will, therefore be a factor which has to be considered to ensure continued production of new machines of manufacture based on the metric system or when new methods of layout and production are being contemplated

It will, therefore be generally agreed that before the introduction of the system it is desirable that a large volume of preparatory work is undertaken It is possible that when the actual switch-over takes place it might be found that the vast preparatory work already done was insufficient For those accustomed to calculate and think on the existing standards publicity of an intensive nature will have to be undertaken through the various media Sufficient number of new standard weights and measures in all denominations will have to be made so that they can easily replace the existing ones Testing facilities at the mints would have to be improved so that the manufacturers of weights could get their weights tested compared and checked at an early date and their manufacturing programme could proceed smoothly

Tariff Rates In Metric Terms

In the notification issued by the Ministry of Commerce and Industry on June 24 1958 regarding the introduction of metric system of weights and measures the railways have not been included in the list of undertakings which will make a switch-over to the new system as from October 1, 1958 My own feeling is that since the railways are the chief medium of internal transportation their inclusion in the scheme at the initial stage would have been useful Industry and trade is bound to experience great difficulties at various points because of this non inclusion

It is desirable that the system be applied to the railway as early as possible In fact it would be necessary for the railway to revise their published tariff rates and other special rates in terms of metric tons expeditiously The railway tariff rates for general merchandise would also have to be converted on the basis of metric weights as related to the metric lengths the conversion from the existing weights and lineal measures being distinctly indicated in the tariff schedule Besides the railways should admit the claim both from sellers and buyers for shortages on the basis of metric units

Foreign Trade

Another factor which has to be kept in mind is the pattern and direction of our foreign trade Industry in India is at present almost exclusively based on the foot pound system and our trade relations are mainly with countries which manufacture machinery and equipment of all kinds on the foot pound basis.

It is likely that our requirements of new machines based on the metric system will have to be met from the countries which are already on the metric system because possibly some of the countries from which we are at present importing our equipment may not be in a position to supply machinery based on the metric system It is no doubt true that the new system provides us with greater manoeuvrability as regards the purchase of machines and equipments from the countries which follow the metric system, at the same time it would be useful to consider formal or entering into some sort of overall agreement, informal with countries such as the U K and the U S A. for the supply of machinery and equipment so that our large plans for industrialisation of the country are not impeded.

In the successful working of the new system mutual cooperation of Government and industry and trade will be required I fervently hope that with the realisation of the utility of the system this will be forthcoming in ample measure. ***

GANDHI'S PHILOSOPHY OF LIFE

By Prof G JAYACHANDRAN

GANDHI was extraordinary both in the depth and compass of his mind. His knowledge was matched by a character which can be described as heroic in the sublime sense of the term. It is not without reason that his followers felt that Gandhi's real masterpiece was himself. Gandhi's life gives us an interpenetration of discipline which results from the mastery of the fields of knowledge adjacent to human relations. His ultimate presupposition is the existence of God. The Ahimsa principle represented by the developing conscience is nearer to the purposes of God. It is emphasis on both elements, tradition and ethical and political progress without breach of continuity, supported by profound learning in many different fields that constitutes Gandhi's greatness as a thinker. He is one of the deepest interpreters of the spiritual aspect of politics.

Faith is achieved by a deliberate suspense of the critical faculty; the business of a presupposition is not to be questioned but to be presupposed. Many of Gandhi's judgments would require a lifetime's research to examine. This truth is part of his endless endeavour for no book on Gandhi can ever be more than an agenda for further study. It is in Gandhi that the great transition is made [illegible] the deeper level from the negative to the positive concept [illegible] on the human notions of value. Projecting his ideas into the [illegible] field Gandhi maintains that [illegible] the purposes of the world and that private property must be subordinated to social needs. The persons holding and managing such wealth should consider themselves as trustees and spend the amount in accordance with truth and [illegible]. In this Gandhi exhibits in the highest degree the tension and the reconciliation between moral idealism and the facts of history. The sovereignty of the developed conscience is the analogue of the sovereignty. His [illegible] with Truth [illegible] the [illegible] of him [illegible] the [illegible] of [illegible]. This noble [illegible] Gandhi [illegible] the circle of [illegible] and [illegible] of authority and power. His [illegible] with Truth [illegible] the [illegible] of human [illegible].

Gandhi's [illegible] of [illegible] in the [illegible] forms of [illegible] world of [illegible] [illegible] democracy, a [illegible] Gandhism [illegible] the [illegible] [illegible] the masses and the [illegible] [illegible] It is the [illegible] [illegible]

to modern Communism an [illegible] social universalism inspired by the [illegible] experience and governed by the [illegible] of value. It is a true fusion of philosophy and history. It needs a name; it [illegible] termed Gandhian Philosophy. In the [illegible] the subject of Gandhi's study was the [illegible] structure of the universe and what he stood for was the principle of order in the human life. It is ethics which is the real marrow of history. Gandhi's ultimate ethical principle is the [illegible] ity of human life.

Gandhi was an ardent Hindu and what he really believed in was Truth, which with experience and knowledge was the guide to conscience. The [illegible] he [illegible] for [illegible] Truth by which he meant a knowledge which is certain. It is the knowledge of the truth that makes us free. The sovereignty of the developed conscience therefore meant the final authority of conscience resting upon conscience based on certain knowledge. For him, conscience is the [illegible] soul of [illegible] [illegible] conscience cannot prevail in politics unless truth, that is certain knowledge of the true ethics of politics. The true ethics of politics involve effective securities for freedom; this is freedom to do one's moral duty. Moral responsibility entails political responsibility. Politics should embody moral [illegible] and ethical [illegible]. Its [illegible] experience, [illegible] knowledge, morality, education, courage, self restraint.

The outward [illegible] representation [illegible] of slavery, the reign of [illegible] the [illegible] of the weaker groups and [illegible] conscience which [illegible] the [illegible]. The growth of freedom has [illegible] the growth of knowledge as much as the acts of political bodies [illegible] to the [illegible] of human society.

Supreme Moral Principle

[illegible] give [illegible] and [illegible] The [illegible] of [illegible] [illegible]

The supreme moral principle is the sanctity of human life, a principle which can only be violated if absolutely necessary for the sake of freedom because freedom to do one's moral duty is dearer than life itself It was the religious dogma of toleration held by Gandhi and his political programme that was responsible for the victory at political freedom in India He regarded religion as a developing force He devoted the cream of his life to its study and though he explicitly disclaimed any religious mastery he believed he knew the difference between a real religionist and a merely learned writer on religion

Gandhi's ultimate thought is that it is the truth that makes us free And the ultimate truth is that human power is derived from God His philosophy is the philosophy of freedom It might be argued that in the last analysis, Gandhi's system contains two indefinables, freedom which is a thing that grows and depends on innumerable conditions and *Ahimsa* which is charged with interminable consequences. But Gandhi's philosophy is not strictly a system it is a developing spirit It is really the Hindu blending of universalism and human freedom It is the principle of *Ahimsa* which holds the highest place human freedom that occupies the final summit It is the sign and the prize and the motive in the upward advance of the race for which Gandhi was crucified It is the refined essence which draws sustenance from all good things

The establishment of human freedom for the realisation of moral duties is the end of civil society The growth of liberty is identified with cause of morality and is the condition of the reign of conscience Morality is involved in questions of political right. Gandhi reconciles moral duties of the citizen with the authority of the state in his civil disobedience movement Authority is essentially an ethical term but when separated from liberty it is nothing but force Gandhi contends that the state has a moral nature and purpose

The great question in his view is to discover not what government prescribe but what they ought to prescribe for no prescription is valid against the conscience of mankind Before God there is neither Greek nor barbarian neither rich nor poor and the slave is as good as his master for by birth all men are free. They are citizens of that universal commonwealth which embraces all the world brothers of one family and children of God. The true voice is the voice of God who dwells in our souls.

Freedom Of Conscience

Gandhi believed that freedom of conscience is the root of self government individually and collectively for both depend on moral responsibility The cause of liberty is the cause of morality, of duty and rights, for its meaning is freedom of conscience. For him a true principle like *Ahimsa* is more sacred than the most precious interest. Political obligation is determined not by arbitrary maxims of expediency, but by definite and consistent principles. The political law is founded on the divine The supremacy of ethics which is true in the theory of politics should be consistently reflected in practical politics Gandhi made a sincere attempt at this and he was a startling success Human freedom is founded on con cience Practical politics is an affair or principle of morality Human freedom means that morality and the ethical purpose and standard are supreme. But to many of his contemporaries the idea was repugnant that there was a moral question at the bottom of politics

Gandhi's really characteristic doctrine is sincerity Gandhi insisted that the main thing is to discern truth from falsehood certainty from doubt In this Gandhi's conception of freedom was not negative Freedom is the name that the sovereign conscience takes when it emerges to model society in accordance with the rules of justice and the dictates of reason Gandhi's philosophy is ethical by spiritual While it can be described as the spiritual philosophy of politics, it must be added that for Gandhi the marrow of politics is ethical. He does not regard conscience at the same time as infallible But he does regard with all firmness at his command that he who is prepared to commit the least sin against conscience is in principle prepared to commit the greatest Thus the philosophy of politics and history is also a theology Following Ashton Gandhi regarded politics as the art of doing on the largest scale what is just and right.

Gandhi has been compared to Buddha. The judgment is excessive but it is no pointless What Gandhi shared with Buddha is the capacity to think out his thought to the end without flinching and the application of an ideal standard *Bhagvad Gita* was the greatest single influence on Gandhi's thought. He believed that the most powerful social amalgam in the world is true liberalism in a conservative spirit and this is the secret of freedom The supreme quality of his thought is that it is just and upright It is for this reason that he has been universally recognised as the Great Soul—Mahatma (*From The Tribune*)

Fourth the State Bank also aims at providing special facilities for the training of the personnel of the State Bank of India knowledge would be imparted to them on co-operative principles and banking.

Thus, the State Bank of India would act as an agency responsive to the needs of the co-operative institutions connected with the rural credit and especially marketing and processing.

Organization and set up

The State Bank will work in collaboration with the Reserve Bank and undertake a larger programme of branch extension in rural areas. Hence, it has a sufficiently large share capital. The Gorwala Committee has recommended an increase of working capital from Rs. 11.25 crores to Rs. 20 crores.

Government and Reserve Bank together own such amount of shares as would ensure for them a voting power of not less than 51 p.c. The dividend payable on these shares would be limited to 5 p.c.

The majority of the Directors of the Central Board will be nominated by the Government of India and the Reserve Bank. The Chairman would be appointed by the Government of India and the Managing Director and Deputy Managing Director would be appointed by the Board in consultation with the Government of India.

There will be an Integration and Development Fund with an initial investment of Rs. 50 lakhs to meet the additional loss that may be sustained by operating branches which may be unremunerative in the initial stages. A portion of the dividend earned by the Government and Reserve Bank on their shares should be diverted to this Fund.

State Bank in Action

The State Bank has a statutory obligation to open 400 new branches during the first five years of its existence. As a first step 100 places were selected which were confined mainly to District Treasury and the relatively more [illegible] centres.

An essential part of the development of the rural credit programme is the [illegible] of adequate fa[illegible] [illegible] and [illegible] of [illegible] [illegible] [illegible] has been taking [illegible] [illegible] [illegible] Co-operative and State Warehousing Corporations [illegible] [illegible] [illegible] [illegible] This will [illegible] the State Bank to make advances against a suitable security to the rural producers in rural areas.

The State Bank has liberalised the existing remittance facilities available to scheduled Banks (and also to State Co-operative Banks). For this purpose with effect from 1st November 1955 free transfer facilities were increased from once to twice a week.

The State Bank's Schedule of charges for the negotiation and collection of Bills and interest rates on advances have been fixed in relation to the comparative rates charged by other Banks. These rates are however subject to review from time to time in the light of prevailing business and monetary conditions.

The Bill Market scheme of the Reserve Bank of India inaugurated in 1952 was of great help to the State Bank of India. From March 1, 1956 advances under the scheme are being made at 3½ p.c. rate of interest. The scheme has been of considerable assistance to the State Bank, observed Dr. John Mathai in his speech at the First Annual General Meeting of shareholders.

The second plan accords a dominant place to the development of village and small-scale industries. Government is providing greater credit facilities to these industries under the State Aid to Industries Act by liberalising the conditions for the distribution of loans. The State bank has adopted more practical measures to meet the credit requirements of small scale industries and to devise methods to render substantial assistance to them.

The State Bank has evolved a co-ordinated scheme to meet the requirements of small industries. A pilot scheme for providing credit to small-scale industries at certain centres in the three circles of the Bank has recently been drawn up and the arrangements are now in progress to work the scheme. The work of Institutional Agencies will be supplemented by the branch [illegible] of State Bank [illegible] [illegible] branch organization.

Conclusion

"The fact that the State Bank of India has from its inception [illegible] [illegible] [illegible] sector of the [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] The [illegible] [illegible] in the field of Banking credit [illegible] [illegible] expected to [illegible] [illegible] and [illegible] [illegible] of the [illegible] [illegible] [illegible] State Bank of India will [illegible] to [illegible] [illegible] [illegible] and integrated rural [illegible]

The "Old" And "New" In A Child's Education

By BENJAMIN BRICKMAN

OVERCROWDED classes, inadequate salaries and teacher shortages about which we hear so much, are distressing problems and they call for urgent statesmanlike attention But what about the heart of the matter—the subjects taught, the ways of teaching the spirit of learning and the intellectual and social discipline of the children? To be sure better conditions yield better results, but the question still persists Assuming ideal conditions do we have today a satisfying philosophy of schooling, a guiding point of view to help us realise the most on our investment of financial and human resources?

The question takes on special significance because we find ourselves at a crucial juncture in the history of elementary education in the United States where some decision needs to be made relative to the "old" (traditionalism) and the "new" (progressivism) It is the writer's opinion that the decision ought to take the form of an eclectic position The best blueprint is one that amalgamates the strong features of the "old" and the "new"

The "New" Ideas

A quarter of a century ago the influence of Progressive Education had begun to penetrate both school and home Its conception of schooling its views on curriculums, pedagogical techniques and discipline were nothing short of revolutionary The centre of gravity in the educational enterprise was shifted from knowledge to the child and his needs The very name "elementary school" was said to betray a bias in favour of things to be learned it should give way to "school for childhood" The children's creative talents whatever their extent must be drawn out the children's ideas should become the starting points of learning and the pupils should share with the teacher the making of plans for study

Moreover it was said a child can learn better by experiencing Multiplication can be grasped more readily through a measuring activity related to some project What better way of acquiring the virtues of co-operation and of respect for the other fellow's ideas than through group activities? The classroom thus would become a social laboratory In addition points of tangency or relatedness among the several branches of knowledge should be exploited Wouldn't it be well to learn, through demonstration and construction, if possible, the principles of the telegraph and the Morse code in connection with the historical study of the invention?

Finally, discipline should be based not on externally imposed standards (that is the teacher's or the school's) but on group values Under a teacher's guidance the children would realise the need for certain standards In fact the children would formulate standards They would then adhere to these standards much as good citizens keep to the right, stop on red signals and subdue their voices in hospital corridors Adherence to the standards would become a matter of self-discipline. Not the vigilant eye of the teacher but a social consciousness would control conduct. As for the teacher she should be a guide confidante and friend In the official records she might be Miss Caroline Taylor but to the children she would be Caroline

To numberless school men and parents these ideas had a powerful appeal Many welcomed them on broad social grounds Some were impressed with what they regarded as a sound underlying philosophy, as well as strong psychological support

Applying the "New" Ideas

When it comes to describing the period of application of the "new" education the picture one gets is highly complicated There was first of all the natural difficulty of putting theory into practice For example the advocates of progressivism spoke of an emerging curriculum and learning motivated by a felt need Granted that some principles and ideas in arithmetic and geography say can emerge from an enterprise projected by the children What about other principles and ideas? Also where are our fixed moorings? If they are found in children's needs then emerging subject matter will probably not correspond to what many may regard as the demands of society This dilemma is further complicated by accepting as of equal worth the different curriculums emerging in different classes, since the needs felt by one group may not correspond to those of another (such divergence was considered quite proper by the apologists) If the moorings are in the demands of society, or in traditional subject matter then manoeuvring the children in that direction might be rank deception, since they may not have felt the need for that subject matter Neither path leaves the teacher with a satisfied feeling

Other elements in the complicated picture included lack of full understanding of Progressive ideas, difficulty of reorienting teachers who were set in their ways, lip service by principals and teachers, grudging acquiescence by some teachers working under Progressive principals, large classes and sheer inability to apply even some of the workable elements such as correlation of topics from different branches of subject matter.

Thus one came across schools that made an outward show of manual activity (elementary education became a "production" job) and others that dismantled the traditional curriculum but did not know what to replace it with. One would often see children presenting reports not checked by the teacher on the results of their painstaking researches in sources likewise unchecked by the teacher. It was questionable whether the reporters themselves, who deserved an A for effort, understood the material and seldom was it grasped by the audience of children who were hearing it for the first time.

Many Progressives betrayed a conviction that children were more capable than they actually were. They failed to realize that it is difficult enough for children to learn from their teacher, let alone from their classmates. As for classroom discipline, rare indeed was the teacher who, having [illegible] the traditional [illegible], was able to guide the children to self discipline through a permissive system. In most cases anarchy and chaos rushed into the vacuum.

Amalgamating the "New" and the "Old"

It is against such a background that we began to hear rumblings of criticism from the public on all sides. Leaving out of consideration the critics with an ulterior motive, with an axe to grind, we find it seems to me legitimate criticism and substantial dissatisfaction with today's situation. And the way out of the situation lies not in an either-or position, that is not in a [illegible] effort to [illegible] Progressivism [illegible] yet in a complete return to traditionalism.

Progressive [illegible] tends to be viewed as an [illegible] [illegible] of [illegible] character. As such it naturally [illegible] points of view and [illegible] values and practices. [illegible] this [illegible] has [illegible], a [illegible] with a view to [illegible] its [illegible] and merging them with [illegible]. Synthesis and amalgamation are a common pattern in the history of [illegible] and cultural movements. In recent years synthesis and amalgamation mark a great [illegible] program. It is my feeling that this will be true in the case of the "old" and the "new" in elementary education.

Without wishing to convey unqualified endorsement of every item in the traditional curriculum, it had to my opinion the virtue of being formal, systematic and organized. However it was too rigid and [illegible] too much oriented to books rather than to life past and present that it was supposed to represent. The amalgamated view can perhaps be described as vitalized formality. The curriculum needs to have form and system but it ought to become more vital, to be more closely related with the realities of life.

For example, the study of the history of a certain epoch should reflect more fully the actual life of the people involved, their problems, their culture and their aspirations. At times comparison should be made with the present and with other periods studied. Geography, too, should take on a more vital aspect—how a certain people is affected by the physical features of the area and what the nature of their economic problems happens to be.

Wherever feasible music, art, and literature should be correlated with other subjects. But there still remains a large amount of material in each of these fields that stand alone, unrelated to anything else, and are worthy of study. By all means let children write letters, [illegible] of [illegible] trips and learn to [illegible] compose [illegible] members, but these should be [illegible] with the study of form and regulations in writing, with spelling, punctuation and handwriting.

In fact the [illegible] writing [illegible] motivation for correct form. [illegible] the child [illegible] [illegible] [illegible]. In the [illegible] of [illegible] the [illegible] both [illegible] and [illegible] objects of [illegible] in the [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]. We are [illegible] [illegible] [illegible] the [illegible] and [illegible] the facts that the [illegible] strong [illegible] that he [illegible] and [illegible] [illegible] often [illegible] by the [illegible] and [illegible] [illegible] the teacher [illegible] much more.

Traditionalism was also characterised by certain sound pedagogical techniques such as careful explanation of an idea, development of a principle through an improved Socratic method, drill to fix certain facts an inspiring narrative or interpretive reading that held the children's eyes riveted on the teacher These techniques should be retained but there is no inconsistency or contradiction in occasionally allowing the class to plan some creative work linked with the study of a topic in history geography or literature This job may well be further subdivided into several committee assignments involving creative work and "research if you will in sources familiar to the teacher Reports will be prechecked by the teacher Moreover, what the committee will report on will be enrichment of or supplementary to, what the class as a whole has already studied Possessing the necessary background, the pupils will be in a better position to understand the supplementary material

The traditional and the Progressive views on the function of the teacher can thus be combined the teacher's function will be to instruct, to inspire and to guide The teacher ought not to meet a class at the start of the year with the face of a sphinx like martinet or with a schoolmarmish superiority but neither is there any sense in wearing a perpetual chorus girl smile oozing good fellowship ("You may call me Caroline") and assuring the pupils "We shall have wonderful times together I expect to learn a great deal from you as I hope you will from me Let's tell each other something about ourselves and especially how we spent the summer" Forced friendship is as distasteful as a forbidding coldness

Children I have observed, are most impressed on the first day by a teacher with a businesslike approach, who gives a few well prepared inspiring lessons and who shows a calm demeanor and, if called for an occasional smile. Whether the children will get to regard the teacher as a friend will depend upon such attitudes as patience considerateness fairness and encouragement of self expression A spiritual affinity grows slowly and takes time but then, it is not artificial forced or planted in sand Taking a leaf from a book of pragmatism, handsome is as handsome does and friendly is as friendly does (Incidentally exchange of summer experiences is not a must on the first day)

Classroom Discipline

I come now to the matter of classroom discipline which is one of the most controversial and most troublesome features of the 'new' education Certainly the soundness of self-discipline as the ultimate goal cannot be disputed But that from a condition of freedom of action at the beginning of the year can emerge co operatively agreed upon standards of conduct leading to habituation and finally to self discipline is it seems to me theoretically questionable and realistically hardly likely Admittedly it has worked with highly selected groups under a particular type of teaching personality but these cases do not yield an over all theory Be that as it may it is hardly feasible for the generality of children and teachers In most cases a chaotic condition soon develops with all the familiar consequences poor work and bad habits and a distraught teacher

Equally undesirable is the traditional view of discipline rigid teacher imposed regulations a perpetual state of tension between teacher and class leading to unconditional surrender to the stronger side—teacher or class The amalgamated view of an informal condition within a formal framework can be achieved by recognising the need for adult leadership reasonable standards in terms of efficient school work habituation and rational explanation The year starts out with an explanation by the teacher of the standards and routines to be followed After a period of habituation the teacher will find occasion to comment to the children on the fine quality of their conduct

Through judicious comparison with the conduct of good citizens on the outside the teacher can get the class to realise that standards and routines are needed for efficiency safety and smoothness Then certain informal conduct can be allowed at appropriate times While quiet is needed during arithmetic and silent reading movement and subdued conversations are certainly in order during committee work (which incidentally ought not to be introduced until a few weeks after the start of the year)

In conclusion I would like to emphasise the uselessness of polemics on relative merits of the old versus the new the wastefulness of lip service to the new or the grafting of an artificial front on the old What is needed is a synthesis of the strong features of both traditionalism and progressivism not in the spirit of compromise or contention between two divergent systems but rather in the recognition of synthesis as a historical process which in the writer's opinion will yield a blueprint of an improved schooling for our children. •••

WELFARE ECONOMIC IN INDIA

By SUNIL GUHA

IN what may be called a polemical attack on the concept of the Welfare State, a critic has recently argued that all that such a State seems to do is to take money out of people's pockets to put it straight back again. His other criticisms are that in a 'Welfare State,' State action inhibits voluntary action, that in it responsible subsidize the irresponsible and finally that it inevitably leads to inflation as a result of the excessive taxation it makes necessary.

On close examination however these criticisms hardly stand. For the beneficiaries of Welfare State expenditures at any moment of time are individuals different from the contributors — the sick, the injured, the unemployed, the aged, the children and the economically weaker sections none of whom are capable of making a significant contribution. Therefore in a Welfare State, a fair redistribution of income does take place. Secondly in every society—prosperous or backward—there exist a strata consisting of the economically weak whose voluntary efforts for improving their lot need to be supplemented by positive State action. In a few individual cases State action may indeed inhibit voluntary action and initiative but viewed in a national and overall perspective such State action does prove beneficial to the poorer sections and serves as a stimulus for more vigorous individual effort. The Community Development Programme in our own country is an instance. And finally while inflation may result from heavy public expenditure intended to create social overheads and amenities, it is far from true to say that only a Welfare State is exposed to the threats of inflation. What all modern Welfare States are now trying to achieve is to balance the evils of unemployment and inflation and take the least bad choice that can be found.

'Welfare State' Vs. *Laissez faire*

By and large a Welfare State is much more desirable than one in which [illegible] [illegible] is in place as being required by its [illegible] to the [illegible] [illegible] with the nation where there are no [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] where the [illegible] [illegible] on the question of unemployment [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]

These are precisely the reasons why India like so many other countries has chosen [illegible] accepted the ideal of a Welfare State. In meeting our distributive problems we have laid more emphasis on nationwide planning, relied more on public development of [illegible] facilities sought to make up for the absence of uncertainty of the disruptions of competition by subjecting the private sector to strategic controls adopted comprehensive social security legislations and resorted to redistributive taxation. To be precise, planning in India has been directed to achieve three broad objectives:

(i) to limit the acquisitive [illegible] [illegible] society;

(ii) to raise the national income growth [illegible] through [illegible] [illegible] many barriers to growth [illegible]

(iii) to enlarge the social welfare services through increased allocations of resources.

It is not possible nor is it necessary to discuss in detail the many aspects of welfare planning in India to establish the importance of a Welfare State. Suffice it to show how we have sought to bridge the gulf between rural and urban India through State-aided rural programmes, how welfare amenities have been provided to the working class population and their standard of living sought to be raised through comprehensive social security [illegible] time and increased allocations under [illegible] welfare projects in both the Centre and in the States and how the country's taxation structure has been reoriented to reduce inequality and ensure a fair redistribution of incomes at all levels.

Improving the Economic Status of Ruralites

The rural community in India has always been considered as a small, progressive and largely self-governing base in the structure of national planning. Indeed we have always recognised that no scheme for economic rehabilitation of the country can fulfil its social purpose if it fails to embrace the rural economy. In the post-Independence years the efforts the Indian Government have made vigorous efforts to extend the base of [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] rural economy. [illegible] has been [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] perpetual backwardness [illegible] [illegible] [illegible]

the decaying village and cottage industries and to organise new industries to provide gainful employment to the rural masses and raise their income content and to rally the rural folk for an organised effort toward social and economic welfare through the initiation of the community development programme. The pattern of land tenure is being transformed on a just and rational basis. By scrapping feudalistic system of Zamindari and other intermediaries, the biggest hurdle in solving the land problem has been crossed. Attempts are now being made to freeze existing land owners and their right to resumption for personal cultivation, to reduce rents to fix ceilings on holdings and to introduce a co-operative method in the various processes of agriculture. Facilities for cheap credit have been largely extended to the agricultural community. The Government has also sought to assist small scale and village industries through appropriate organisation financial and technical aids and to devise appropriate policies for *protecting and strengthening this* social sector of our industrial structure. *Under the Second Five-Year Plan* a sum of Rs 200 crores has been allocated for the development of village and small-scale industries.

The development of big industries is expected to make an appreciable addition to the production of consumer goods in common demand, it is also intended to achieve certain wider social purposes. It will secure dispersal of opportunities of employment and income all over the country and it will by the same token arrest the processes leading to large accumulation of wealth and countribute towards more balanced development as between urban and rural areas and also between different regions. This is how it will be conducive to the achievement of a Welfare State cast in the mould of a socialist pattern of society.

Community Development Programme

The Community Development Programme by taking the message of scientific research and improved technique coupled with the basic precepts of a Welfare State to the rural areas is fast bringing a new awakening among the ruralites. This colossal constructive programme aims at transforming the entire character of rural life and economy largely by means of guided self help and improved organisation. Thus, it is not a narrow concept. It is not designed primarily to mobilise human and scientific resources in order to bring about agricultural self sufficiency. Its object is wider. It aims at comprehensive development of the rural areas so that the bulk of our population can lead a healthy, contented life. It is recognised that the villages must be revived through the efforts of the villagers themselves, through the dissemination of knowledge among them, through better help and through the acquisition of modern techniques of production. Under the Second Five Year Plan investment outlay (expenditure on building up productive assets) on Community Projects N E S Village Panchayats and local development works amounts to Rs. 157 crores while current expenditure totals Rs. 70 crores. However, what is important is not so much the financial outlay as the psychological push the programme has given to the ruralites for bettering their lot. Judged by the results achieved so far far from inhibiting voluntary action and initiative the Community Development programme has indeed awakened the slumbering masses of rural India to new horizons of hope and endeavour.

Welfare Of The Working Classes

Welfare and progress of the working class has long since been a prime concern of the Government of India. The legislation already introduced in this connection to which we would make a brief reference here has given to the workers greater amenities greater security in the matter of employment and improved machinery for securing the just settlement of their claims. Considerable progress has also been made in social security by the schemes of Employees State Insurance and provident fund. Here it is necessary to make it clear that for an emerging country like India it would take years to evolve a comprehensive social security scheme as in Britain, though we already have a broad based social insurance system.

The fundamental purpose of social insurance is to grant insurance to those who are employed in different occupations against sickness disablement maternity and such other contingencies.

The whole idea behind such a scheme is that the beneficiaries have to pay a certain amount as premium to meet the expenses of the insurance. The workers the employers and the State all contribute to social insurance funds though the contribution by the workers is by no means significant for obvious reasons. Under a social security scheme, on the other hand all people whether gainfully employed o not receive bene[illegible]s. The British type of social security for instance embraces schemes of social assistance such as old age pension, etc.

The first social insurance legislation in India came as early as 1923 when the Workmen's Compensation Act was enacted. Under this Act compensation was payable by the employers in the case of injury caused by accident arising out of and in the course of employment. The amount of compensation payable depended on the nature of injury and the average monthly wage of the workers concerned, but the Act had many loopholes and fell short of a social insurance scheme.

The second step towards social insurance in India was marked by the passing of the Maternity Benefit Act by the Bombay Government in 1929. Similar acts were hurriedly passed by other provinces [illegible] as a result of the recommendations of the Royal Commission on Labour. The Royal Commission on Labour suggested that the Maternity Benefit Act should be brought under a general social insurance scheme. The commission suggested the [illegible] of a pilot scheme of social insurance for particular [illegible] and for particular regions. Unfortunately, the scheme had to be dropped in 1937 as most of the provincial Governments opposed it.

Adarkar Scheme

The next step was taken when after much deliberation the Government of India appointed Prof. B.P. Adarkar as special officer in March 1943 to prepare a health insurance scheme for industrial workers in India. Prof. Adarkar submitted his report in August 1944, which embodied a comprehensive scheme and dealt with compulsory and contributory social insurance measures.

Prof. Adarkar advocated the adoption of unemployment insurance, creation of new employment [illegible] of scheme of old-age pension, introduction of certain pre-medical measures and finally a national health [illegible]. Looked at [illegible] from the [illegible] of benefit contribution, [illegible] or organisational framework, the Adarkar scheme was not without its defects.

On an invitation from the Government of India, M[illegible] and Mr. Rao [illegible] I.L.O. experts came to India to examine the Adarkar scheme [illegible] the [illegible] scheme [illegible] Rao [illegible]

They [illegible] a few changes [illegible] [illegible] and the [illegible]

[illegible] workers on equal terms with [illegible] workers [illegible] of these [illegible], the grouping together of these branches of insurance which called for [illegible] namely sickness, maternity and employment injury.

[illegible] of Adarkar's scheme though original and bold from the general [illegible], was not capable of being implemented. As the [illegible] and Rao modifications they were [illegible] more practicable than the Adarkar scheme. They failed to build the scheme on the existing health conditions and the real resources of medical facilities in India.

In any case, the Adarkar scheme and the Stack-Rao note were discussed at the Sixth Labour Conference in October 1944 and also at the sixth meeting of the Standing Labour Committee in March 1945, and there was general agreement that the provisions for a health insurance scheme applicable to perennial factories and covering employment injury and maternity benefit should be immediately [illegible] by the Government of India.

Employees' State Insurance Act.

Thus evolved the Employees' State Insurance Scheme which combined the Adarkar scheme of sickness insurance, the Workmen's Compensation and the Maternity Benefit Acts. The Bill was passed on April 2, 1948, which following [illegible] among workers during a pilot survey in some States, was amended in 1951 proposing a levy on the employers. The Act came into force in January 1952.

The Act provides for cash and medical benefits for insured persons in cases of sickness, maternity and employment injury. All employees (including clerical staff whose total remuneration does not exceed Rs. 400 per month) and who are working in perennial factories run with power and wherein 20 or more persons are working are covered by the Act.

Out of a total of about 30 lakh [illegible] factory workers, 12.4 lakh have been covered so far. During the period of the Second Five Year Plan [illegible] [illegible] of 1,500 [illegible]

Employees' Provident Fund

The Employees' Provident Fund Act, 1952 which [illegible] to factories [illegible] by [illegible] was amended in December 1953 to extend [illegible]

extended to employees employed in the covered establishments who have completed one year s continuous service and whose basic wages in cluding dearness allowance etc do not exceed Rs 500 per month Each employee is required to contribute to the Fund at the rate of 6¼ per cent of basic wages and dearness allowance including cash value of food concession and an equal amount is required to be contributed by the employer On an average a sum of Rs 2 47 crores is collected every month in the form of provident fund contributions and is exclusively invested in the Central Government Securities

As on the 30th April about 6,558 establish ments employing about 29 72 lakh employees were covered under the Employee s Provident Funds Act, 1952

Menon Committee's Recommendations

Recently, the Committee on integration of social security schemes headed by Shri V K.R Menon Director of the Indian Branch of the I L O has suggested the setting up of a single agency to assume administrative re ponsibility for the Employee s State Insurance Act, the Employee s provident Fund Act the Coal Mines Provident Act and the Assam Tea Plantations Act, the separate operations of which have caused unnecessary duplication of administration and expenditure and an artificial divorce between the two services The pooling of funds, and the economy in expenditure which the proposed integration would result in should help improve the quality as well as the quantum of services which State Insurance and Provident Fund are designed to render The proposal to make the Acts governing both these welfare services applicable to establish ments engaging 20 or more employees—instead of those employing 50 or more—would at the same time broaden their base simultaneously with a view to increasing the resources needed for improving the availability the quality and incidence of the welfare services The Commit tee has recommended an upgrading of the welfare services The Committee has recom mended an upgrading of the contributions of both the employees and employers

It would be interesting to point out that the cost of social security schemes in India has increased from year to year as follows

1950-51	Rs 8 58 million
1951 52	Rs. 9 18
1952 53	Rs 9 43
1953 54	Rs 13 94

Figures for recent years are not available but it can generally be said that the cost of security schemes in India today must be around Rs 20 crores, if not more

States Spend More on Social Services

A casual glance at the budgets of State Governments would show that they are of late paying increasing attention to social services As the Report of the Taxation Enquiry Commission (Part 1) points out. taking the nine Part A states, non-develop- ment expenditure (excluding debt services) fell from 53 per cent in 1938 39 to 45 5 per cent in 1953 54 and expenditure on social services increased from 21 5 per cent in 1938- 39 to 24 per cent in 1953-54 while that on development services increased from 17 per cent in 1938 39 to 26 per cent in 1953-54' The same Report points out that figures of expenditure on social services and economic development of all the Part A states increased from Rs 92.70 crores and Rs. 99 16 crores in 1953 54 (revised budget) to Rs 98 88 crores and 105 87 crores in 1954 55 (budget estimate) respectively those for all part B states increased from Rs 120 82 crores and Rs 134- 46 crores in 1953 54 (revised budget) to Rs. 131 06 crores and Rs 146.20 crores in 1954 55 (budget estimate) respectively Under the impetus of the First and Second Five Year Plans Governments have thus continued to allocate increasing outlays on social services so as to achieve the welfare objectives implicit in the Plans Nor is the Centre s contribution to welfare schemes insignificant. Having access to hardly 8% of the national income the Central Government s allocations un der welfare schemes h ad have increased from year to year This would be evident from the following table showing the distribu tion of Plan outlay under social services

	First Plan Total	Second Plan Total
Social Services	533	945
Education	164	307
Health	140	274
Social Welfare	5	29
Welfare of backwards classes	32	91
Labour and Labour Welfare	7	29

It may be noted that out of a total Second Plan outaly of Rs 945 crores the Centre is to spend Rs. 396 crores against out of the total of Rs 945 crores as much as Rs 455 crores would be investment only which is expenditure on building up of productive assets There is therefore no doubt that even though India is trying to emerge from

The first social insurance legislation in India came as early as 1923 when the Workmen's Compensation Act was enforced. Under this Act compensation was payable by the employer in the case of injury caused by accidents arising out of and in the course of employment. The amount of compensation payable depended on the nature of injury and the average monthly wage of the workers concerned but the Act had many loopholes and fell short of a social insurance scheme.

The second step towards social insurance in India was marked by the passing of the Maternity Benefit Act by the Bombay Government in 1929. Similar acts were formally passed by other provinces largely as a result of the recommendations of the Royal Commission on Labour. The Royal Commission on Labour suggested that the Maternity Benefit Act should be brought under a general social insurance scheme. The commission suggested the formulation of a pilot scheme of social insurance for [illegible] for particular [illegible]. Unfortunately the scheme had to be dropped in 1937 as most of the provincial Governments opposed it.

Adarkar Scheme

The next step was taken when after much deliberation the Government of India appointed Prof. B.P. Adarkar as special officer in March 1943 to prepare a health insurance scheme for industrial workers in India. Prof. Adarkar submitted his report in August 1944 which included a compulsory insurance scheme and dealt with [illegible] and [illegible] social insurance measures.

Prof. Adarkar advocated the adoption of unemployment insurance, creation of employment [illegible] establishment of scheme of old age pension, introduction of certain preventive measures and finally a national health drive. Looked at either from the angle of benefits, the [illegible] coverage or organisational frame work, the Adarkar scheme was not without its defects.

On an invitation from the Government of India, Messrs. Stack and M. Rao of I.L.O. experts came to [illegible] [illegible] the Adarkar scheme [illegible] [illegible] [illegible] endorsed the scheme. Messrs. Stack and Rao suggested [illegible].

They [illegible] [illegible] change by the [illegible] of the [illegible] and the [illegible] [illegible] benefit [illegible] and [illegible] the scheme and [illegible] the [illegible] [illegible] [illegible] [illegible] [illegible] and the [illegible] of non-seasonal workers on equal terms with the seasonal workers in respect of these benefits and the grouping together of those branches of insurance which called for medical help, namely sickness, maternity and employment injury.

Prof. Adarkar's scheme though original and bold from the general approach, was not capable of being implemented. As for Messrs. Stack and Rao's modifications they were no more practicable than the Adarkar scheme. They failed to build their scheme on the existing health conditions and the real extent of medical facilities in India.

In any case the Adarkar scheme and the Stack and Rao note were discussed at the Sixth Labour Conference in October 1944 and also at the subsequent meeting of the Standing Labour Committee in March 1945 and there was general agreement that the proposed [illegible] health insurance scheme applicable to perennial factories and covering employment injury and maternity benefit should be immediately [illegible] by the Government of India.

Employees State Insurance Act

Thus evolved the Employees State Insurance Scheme which combined the Adarkar scheme of sickness insurance, the Workmen's Compensation and the Maternity Benefit Acts. The bill was passed on April 2, 1948 which [illegible] among workers due to a [illegible] in some States, was amended in 1951 proposing a levy on the employers. The Act came into force in January 1952.

The Act provides for cash and medical benefits [illegible] periods in cases of sickness, maternity and employment injury. All employees including clerical staff whose remuneration does not exceed Rs. 400 per month and who are working in perennial factories run with power and wherein 20 or more persons are working, are covered by the Act.

Out of a total of about 25 lakh eligible factory workers, 12.1 lakhs have been covered so far. During the period of the Second Five Year Plan it is proposed to extend the Scheme to all centres with a concentration of 1,500 or more covered [illegible].

Employees Provident Fund

The Employees Provident Fund Act 1952 [illegible] [illegible] [illegible] to factories engaged in [illegible] industries was [illegible] in December 1952 [illegible] [illegible] [illegible] [illegible].

The [illegible] [illegible] [illegible] [illegible]

extended to employees employed in the covered establishments who have completed one year's continuous service and whose basic wages including dearness allowance etc do not exceed Rs 500 per month Each employee is required to contribute to the Fund at the rate of 6¼ per cent of basic wages and dearness allowance including cash value of food concession and an equal amount is required to be contributed by the employer On an average, a sum of Rs 2 47 crores is collected every month in the form of provident fund contributions and is exclusively invested in the Central Government Securities

As on the 30th April about 6,558 establishments employing about 29 72 lakh employees were covered under the Employee's Provident Funds Act, 1952

Menon Committee's Recommendations

Recently the Committee on integration of social security schemes headed by Shri V K R Menon Director of the Indian Branch of the I L O has suggested the setting up of a single agency to assume administrative responsibility for the Employee's State Insurance Act, the Employee's provident Fund Act, the Coal Mines Provident Act and the Assam Tea Plantations Act the separate operations of which have caused unnecessary duplication of administration and expenditure and an artificial divorce between the two services. The pooling of funds and the economy in expenditure which the proposed integration would result in should help improve the quality as well as the quantum of services which State Insurance and Provident Fund are designed to render The proposal to make the Acts governing both these welfare services applicable to establishments engaging 20 or more employees—instead of those employing 50 or more—would at the same time broaden their base simultaneously with a view to increasing the resources needed for improving the availability the quality and incidence of the welfare services. The Committee has recommended an upgrading of the welfare services The Committee has recommended an upgrading of the contributions of both the employees and employers.

It would be interesting to point out that the cost of social security schemes in India has increased from year to year as follows

1950-51	Rs 8 55 million
1951 52	Rs 9 18
1952 53	Rs 9 45
1953-54	Rs 13 54

Figures for recent years are not available but it can generally be said that the cost of security schemes in India today must be around Rs 20 crores, if not more

States Spend More on Social Services

A casual glance at the budgets of State Governments would show that they are of late paying increasing attention to social services As the Report of the Taxation Enquiry Commission (Part 1) points out. taking the nine Part A states non-development expenditure (excluding debt services) fell from 53 per cent in 1938 39 to 45.5 per cent in 1953-54 and expenditure on social services increased from 21.5 per cent in 1938-39 to 24 per cent in 1953 54 while that on development services increased from 17 per cent in 1938 39 to 26 per cent in 1953-54' The same Report points out that figures of expenditure on social services and economic development of all the Part A states increased from Rs 92.70 crores and Rs 99 16 crores in 1953 54 (revised budget) to Rs 98 88 crores and 105 87 crores in 1954-55 (budget estimate) respectively: those for all part B states increased from Rs 120 82 crores and Rs 134 46 crores in 1953 54 (revised budget) to Rs. 131 06 crores and Rs 146.20 crores in 1954-55 (budget estimate) respectively Under the impetus of the First and Second Five Year Plans Governments have thus continued to allocate increasing outlays on social services so as to achieve the welfare objectives implicit in the Plans. Nor is the Centre's contribution to welfare schemes insignificant. Having access to hardly 8% of the national income the Central Government's allocations under welfare schemes head have increased from year to year This would be evident from the following table showing the distribution of Plan outlay under social services

	First Plan Total	Second Plan Total
Social Services	*533*	*945*
Education	164	307
Health	140	274
Social Welfare ..	5	29
Welfare of backwards classes	32	91
Labour and Labour Welfare	7	29

It may be noted that out of a total Second Plan outlay of Rs 945 crores the Centre is to spend Rs 376 crores again out of this total of Rs 945 crores as much as Rs 455 crores would be investment outlay which is expenditure on building up of productive assets There is therefore no doubt that even though India is trying to emerge from

a predominantly agricultural economy to an industrial one the welfare of weaker sections in the economy does not cease to be a major concern of the Government as it ought to be in a Welfare State

Welfare Orientation to Tax Policy

Reduction of disparities in income is an important ingredient of planning for a Welfare State. If the increasing expenditure on social services is making for greater equality in an indirect manner the taxation structure in India has in recent years been reoriented to serve apart from its revenue supply fiscal discipline and anti-inflationary functions, as a method of securing redistribution of incomes. The Second Five Year Plan prescribed income-tax a tax on expenditure and wealth, estate duty and a ceiling on incomes for achieving income equality. We now have all these tax measures following Prof Kaldor's recommendations excepting a ceiling on income. The effect of wealth expenditure and gift tax could be assessed only after these have been in operation for some time. However, with the help of the Lorenz Curve analysis, the *Eastern Economist* has in two of its recent issues shown that as a result of progressive income-tax there has been net redistribution of income to the extent of 10% between 1949-50 and 1956-57. That is the percentage of assessed income that has been shifted from the high to the low income brackets. The journal shows that between 1949-50 and 1956-57 the concentration index of taxable incomes before tax has recorded a decline of 17.5%. It is also contended that growth in income from industrial and tertiary sectors by as much as 23.3% during this period has played a significant part in reducing inequality among the tax paying classes as an effect of income

The journal also shows that the progress in respect of equality of [illegible] recorded an impressive [illegible] el... in respect of income bef[illegible] the concentration index of [illegible] as much as 24%, for income af[illegible] a fall of 20.6 for income before [illegible] been shown that the concentration [illegible] by the top 1 per [illegible] 10 per cent. [illegible] [illegible]

[illegible]

pattern of income recipients the share has declined from 21 per cent to 0 per cent

India is thus well on the road to a Welfare State cast in the mould of a Socialist pattern. The State as the principal agency creating for and acting on behalf of the community has assumed the responsibility for implementing the national Plan and for ensuring the achievements of the broad social and economic objectives embodied in it. The [illegible] Mr Wilhelm Roepke has said about the Welfare State and [illegible] do not seem to have as yet emerged in India and we hope they never would.

(From *AICC Economic Review*)

Progress of Industries in India

With 1951, which was the beginning of the First Five Year Plan as the base, the index of industrial production rose to 107.6 in 1953 and then steadily climbed up to the figure of 137.1 in 1957. For the first three months of 1958, the index stood at 141.7.

The index is based on the production indices of a large number of industries among which the greatest weight is given to cotton and jute textiles which may, very largely have the lowest weight. In other words the index is much [illegible] a rise or fall in the production [illegible] textile industries than in [illegible] industries like machinery [illegible] [illegible] contain features [illegible]

To have a better [illegible] [illegible] it would be advisable to have an index [illegible]. Thus 195[illegible] the index for [illegible] in 1956 and [illegible] in 1957.

[illegible]

WHAT SATELLITES HAVE REVEALED

SATELLITES and rockets are of value for two reasons. In the first place they make it possible to find out about the properties of space some hundreds of miles above the earth by direct measurement not inference. Secondly they can be used as automatic laboratories which can observe more distant heavenly bodies without the hindrance of the earth's atmosphere which makes so much mundane observation difficult. The rockets and satellites which have been launched in the last twelve months have justified themselves on both counts. Three examples, each of which is of high importance, will show how much ground has been covered.

How Hot, How High?

The way in which the earth's atmosphere tails off into the comparative emptiness of inter stellar space is clearly one which is susceptible to study by satellites. Previously inference based on a sensible physical view of the way in which the upper atmosphere was supported by the lower layers and on the scant information provided by rocket fight, had made it possible to pin down with some certainty the way in which the density of the atmosphere decreases with increasing height and of the way in which temperature varies from one level in the atmosphere to another up to a height of about a hundred miles. At greater heights estimates of density and temperature were necessarily more speculative and a sharp conflict between what may be called the hot and cold views of the upper atmosphere became apparent.

The cold view was that the atmosphere's temperature increases fairly steadily above a height of 50 miles where it is about minus 65 degrees Centigrade to an average value of about 300 degrees at 150 miles. The hot view supposed that the temperature increases steadily to a maximum of 1,200 degrees at between 200 and 300 miles.

On both views it was supposed that temperature would remain roughly constant at greater altitudes, though on the cold view large fluctuations of temperature occasionally reaching 1,200 degrees or more were supposed to be necessary so as to explain how helium could escape as rapidly as it does from the atmosphere. The cold atmosphere was supported by a certain amount of experimental evidence mainly concerned with observations of the layers of electrical ionisation in the upper atmosphere. The reason that, on each view the upper atmosphere was supposed to be much hotter than that with which we are familiar was that in a sense it would "skim the cream off" energy producing radiation from the sun.

At extreme altitudes the temperature was assumed to be constant because it would otherwise be necessary to suppose that heat would be conducted downwards into the lower layers of the atmosphere and it was impossible to account for the production of this energy by the absorption of solar energy in the very tenuous layers of atmosphere six or seven hundred miles up.

Satellite's Discovery

On the cold view the atmosphere would tail off much more rapidly than on the hot. Indeed at a height of 200 miles "cold" atmosphere was calculated to have a density only one hundredth of the "hot". This is a point which the satellites have been able to test directly for the rate at which their motion is perturbed by atmospheric drag can be told from careful analysis of their position as time goes along.

In Moscow last week members of the American satellite groups reported on their analyses and announced atmospheric densities at heights of between 200 and 600 miles which correspond to an atmosphere which is if anything a little hotter than the hot atmosphere which had previously been talked about. Moreover they found that there was no point in the range of altitude which their analyses covered at which the temperature of the atmosphere became constant. Instead at a height of 600 miles they have been led by their calculations to suggest that the temperature is as much as 2,200 degrees and that higher it is still increasing.

The significance of this discovery is that the earth is in some real sense embedded in the atmosphere of the sun—90,000,000 miles away. In other words some of the heat which reaches us from the sun gets here by direct conduction through interplanetary space. The earth must be thought of not as a warm oasis in the chill of empty nothingness but rather as a cool spot in what is effectively the outer edge of the sun's hot atmosphere.

In sympathy with this changing view is the American discovery of unexpectedly high temperatures [illegible] covered by their satellites. The Moscow meeting was apparently given a touch of drama by the arrival from the United States of a telegram reporting results obtained between July 26 and

29 with the earlier launched on the first date

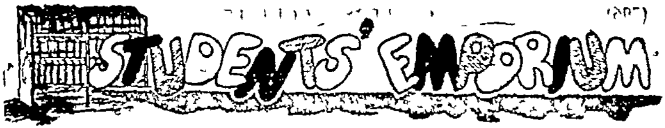
Safe At Sea Level

It is [illegible] the intensity of the radiation [illegible] by a factor of 100 between 200 and 1,000 miles. The rapid increase starts at 250 miles and corresponds to a doubling of the intensity of radiation for every six miles of height. At a height of 1,000 miles the dose of radiation received by an unprotected person would amount to roughly the dose he would receive from natural causes at sea level in about ten years—a sobering thought for would-be astronauts.

The American experiments have shown that a substantial proportion of the radiation is carried by very fast atomic particles. Indeed, in one radiation counter shielded by a quarter of an inch of lead the intensity of radiation recorded was as much as 40 per cent of that recorded in an unshielded counter. [illegible] there appears to be some evidence that these particles consist mainly of electrons, it can be concluded that the energy of the fast [illegible] must be greater than that corresponding to 6,000,000 volts.

The origin of this phenomenon is still obscure. It is presumed that many of the particles responsible for this belt of radiation are trapped in the earth's magnetic field and thus forced to travel to and fro above the earth from a northerly to a southerly latitude. This is supported by the observation that the intense band of radiation is farther away from the earth above the Equator. There are some suggestions that these particles [illegible] from the decay of cosmic rays reflected from the earth's atmosphere, but it may well be that some other mechanism accounts for them.

Ultra Violet "Stars"



The American [illegible] programme has also [illegible] [illegible] to be a new [illegible] [illegible] [illegible] [illegible] [illegible] during the night on March 1957 and when [illegible] [illegible] [illegible] with instruments which could measure [illegible] [illegible] [illegible] ultra-violet light [illegible] [illegible]. These were [illegible] by [illegible] [illegible]

[illegible]

has been possible to [illegible] amount of hydrogen in the [illegible] hundred of the [illegible]. It [illegible] that there is at least one hydrogen atom in each cubic centimetre of space and that there is [illegible] between a hundred and a thousand [illegible] the same volume. These [illegible] the [illegible] would perhaps have been accepted.

More exciting perhaps is the [illegible] is another part of the ultra-violet spectrum the [illegible] [illegible] [illegible] [illegible] emission of ultra-violet in different directions. These appear to [illegible] point to [illegible] which radiate only ultra-violet light. These [illegible] well [illegible] be called [illegible] phenomenon. Because of the [illegible] with which that [illegible] radiation is absorbed in space it is possible to say that the [illegible] must be [illegible] [illegible] far what they are is at present a puzzle. It will take a great deal of [illegible] before it is possible even to guess.

SUCCEED AT INTERVIEW

If you are the ambitious type, bent on climbing into the ranks of the executives then sooner or later you will find yourself running the gauntlet of a panel of interviewers—Commerce and Industry's up-to-the-minute system of executive selection Each of the several interviewers will be armed with a list of questions about you and your personality During the next fifteen minutes or so you will supply the answers to these questions—not by direct answer, but by the way you look the way you act what you say and equally important, how you say it.

If you think it over you will realise that a set of arbitrary but useful rules of conduct can be formulated that will prevent you making silly mistakes Let's try to list them dealing in turn with the four aspects of you that reveal the sort of man or woman you are

First, your appearance. Most interviewers are conservatively minded They distrust the bizarre and eccentric, probably because they fail to understand either So be conventional Wear a quiet business suit and the usual accessories Remember that only an overpowering personality can hope to carry off green corduroys and a goatee beard Bear in mind also that although an impressive appearance will not by itself win you the job carelessness in this respect may well be responsible for losing it.

Next the way you act Be easy and unhurried—when you are asked to sit down make yourself comfortable once and for all. Do something definite with your hands such as crossing them in your lap Above all meet the eye of the person you are addressing or who is addressing you Failure to do this always conveys an impression of shiftiness and lack of self-confidence

What you actually say to the panel is the manifestation of your character and personality that can be altered least at this stage Your answers to questions will be conditioned by knowledge environment, intelligence and past experience But nevertheless some advice can be given.

During the weeks before the interview read regularly and thoroughly some good newspaper such as the *Time* or *Telegraph* Remember that as a potential executive you will be expected to demonstrate wide interests and knowledge This reading will ensure that you are capable of discussing recent happenings with some degree of assurance

Think twice before you contradict an interviewer on matters of fact If he does make an error it will probably be a genuine one, not a trap, and he will not thank you for correcting him

On the other hand do back up any statement of yours that is challenged, with a logical and reasoned supporting case The panel is not looking for yes men and they will respect and approve your readiness to defend your opinion But don't try to browbeat them.

Don't bluff unless you are absolutely certain it will not be found out If you do and express an opinion without knowing the data necessary to formulate it the next question will almost certainly be Why do you think that ? Exposure as a bluffer will not help you

The way you say things is something you can definitely improve Don't mutter and don't dither Don't apologise for real or imaginary shortcomings Say what you have to say clearly and decisively and make quite sure that your voice can be heard easily by every member of the panel Don't be humble and don't boast—aim at the happy medium. When you are asked for an opinion take a few seconds for consideration but once your mind is made up give it to them straight from the shoulder without hedging or faltering

If you stick to the precepts given above you will at least know that you will not fail through any easily avoidable mistakes. And if you find the list of Do's and Don'ts a little formidable don't despair there's a well tried method of improving your performance at almost anything—practice the stuff that makes perfect.

Persuade an acquaintance preferably one you do not know too well—a colleague of your father perhaps, to act as practice interviewer Treat it seriously and try to imagine that he is the real thing You will be astonished how

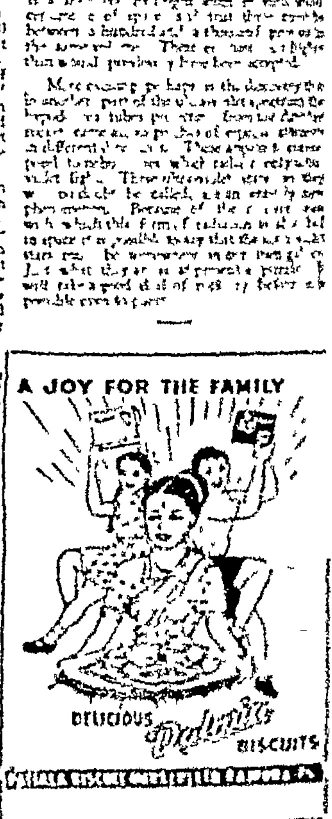
Safer At Sea Level

It turns out that the intensity of the radiation increased by a factor of 1,000 between 220 and 1,000 miles. The record measured at 220 miles ... a doubling of the intensity of radiation for every six miles of height. At a height of 1,000 miles the dose of radiation received by an unprotected person would amount to roughly the dose he would receive from natural causes at sea level in about ten years—a sobering thought for would-be ...

The American experiments have shown that ... of ... of the radiation is carried by very fast ... particles. Indeed in one radio ... shielded by a quarter of an inch of lead the intensity of radiation recorded was as much as 40 per cent of that recorded in ... counter. Since there appears to be ... evidence that these particles consist mainly of electrons, it can be concluded that the energy of the fast ones must be greater than that ... exceeding ... 6,000,000 volts.

The origin of this phenomenon is still obscure. It is presumed that many of the particles responsible for this belt of radiation are trapped in the earth's magnetic field and thus forced to travel to and fro above the earth from ... to a ... This is supported by the observation that the intense band of radiation ... further away from the earth above the Equator. There are some suggestions that the particles are formed from the debris of cosmic rays collected from the earth's atmosphere, but it may well be that some other mechanism accounts for them.



Ultra Violet "Stars"

The American rocket programme has also proved ... what may prove to be a new field of ... comparable in importance with ... An American rocket fired ... March ... 1957 and which reached a height of 190 kilometres, was fitted with ... measure the ... of ... from ... direction. These ... by ... of ...

...

... has been possible to make estimates of the amount of hydrogen in the ... high ... of the earth. It turns out that there is ... hydrogen ... each ... centimetre of space and that there ... between a hundred and a thousand ... the ... than ... been accepted.

More exciting perhaps is the discovery ... in another part of the ... the ... tubes ... from the ... came ... a ... different ... These ... found ... what ... ultra-violet light. These ... stars ... may ... be called, ... some ... phenomenon. Because of the ... with which this form of radiation ... to space it is possible to say that the ... stars ... be ... Just what they are is at present a puzzle. It will take a good deal of ... before ... possible even to guess.

STUDENTS' EMPORIUM

SUCCEED AT INTERVIEW

If you are the ambitious type, bent on climbing into the ranks of the executives then sooner or later you will find yourself running the gauntlet of a panel of interviewers—Commerce and Industry's up-to-the-minute system of executive selection. Each of the several interviewers will be armed with a list *of questions about you and your personality*. During the next fifteen minutes or so you will supply the answers to these questions—not by direct answer, but by the way you look, the way you act, what you say and, equally important, how you say it.

If you think it over you will realise that a set of arbitrary but useful rules of conduct can be formulated that will prevent you making silly mistakes. Let's try to list them dealing in turn with the four aspects of you that reveal the sort of man or woman you are.

First, your appearance. Most interviewers are conservatively minded. They distrust the bizarre and eccentric, probably because they fail to understand either. So be conventional. Wear a quiet business suit and the usual accessories. Remember that only an overpowering personality can hope to carry off green corduroys and a goatee beard. Bear in mind also that although an impressive appearance will not by itself win you the job, carelessness in this respect may well be responsible for losing it.

Next, the way you act. Be easy and unhurried—when you are asked to sit down, make yourself comfortable once and for all. Do something definite with your hands, such as crossing them in your lap. Above all meet the eye of the person you are addressing or who is addressing you. Failure to do this always conveys an impression of shiftiness and lack of self confidence.

What you actually say to the panel is the manifestation of your character and personality that can be altered least at this stage. Your answers to questions will be conditioned by knowledge, environment, intelligence and past experience. But nevertheless some advice can be given.

During the weeks before the interview read regularly and thoroughly some good newspaper such as the *Times* or *Telegraph*. Remember that as a potential executive you will be expected to demonstrate wide interests and knowledge. This reading will ensure that you are capable of discussing recent happenings with some degree of assurance.

Think twice before you contradict an interviewer on matters of fact. If he does *make an error it will probably be a genuine* one, not a trap, and he will not thank you for correcting him.

On the other hand do back up any statement of yours that is challenged with a logical and reasoned supporting case. The panel is not looking for 'yes men' and they will respect and approve your readiness to defend your opinion. But don't try to browbeat them.

Don't bluff unless you are absolutely certain it will not be found out. If you do and express an opinion without knowing the data necessary to formulate it the next question will almost certainly be "Why do you think that?" Exposure as a bluffer will not help you.

The way you say things is something you can definitely improve. Don't mutter and don't dither. Don't apologise for real or imaginary shortcomings. Say what you have to say clearly and decisively and make quite sure that your voice can be heard easily by every member of the panel. Don't be humble and don't boast—aim at the happy medium. When you are asked for an opinion take a few seconds for consideration but once your mind is made up give it to them straight from the shoulder without hedging or faltering.

If you stick to the precepts given above you will at least know that you will not fail through any easily avoidable mistakes. And if you find the list of Do's and Don'ts a little formidable don't despair, there's a well tried method of improving your performance at almost anything—practice, the stuff that makes perfect.

Persuade an acquaintance, preferably one you do not know too well—a colleague of your father perhaps—to act as practice interviewer. Treat it seriously and try to imagine that he is the real thing. You will be astonished how

[illegible]

... speak at all.

[illegible]

BOOKS TO BE READ OVER AGAIN

[illegible]

GIL BLAS while Birkbeck Hill wished it would never come to an end, he lost count of the number of times he had read it 'always with delight.

Edward Fitzgerald only bound up his favourite books in his library, reading them over and over again He was quite inseparable from *Don Quixote* and the works of George Crabbe Cervantes immortal work has been a favourite for centuries Dr John Brown wrote to a friend 'I have been reading slowly Don Quixote, I don't think that I have ever enjoyed anything more", and it was also a great favourite of Dickens

Oscar Wilde declared he never travelled anywhere without Pater s *Studies in the History of the Renaissance* calling it his "Golden Book", Samuel Rogers read right through Marivaux s *Vie de Marianna* six times and Sir William Jones performed the even more arduous feat of reading all the works of Cicero every year Bourdaloue re read Cicero and other authors well over fifty times

When Ford Madox Brown gave Anne Gilchrist a copy of Walt Whitman s then recently published *Leaves of Grass* she announced she could from then on read no other book It holds me entirely spellbound and I go through it again and again with deepening delight and wonder'

When Tennyson s *Maud* first appeared, Birkbeck Hell kept a copy by him at all times day and night while the Prince Regent had a complete set of Jane Austen s all novels in each of his residences *Jane Eyre* is another book with fanatical admirers William Cory said he 'never wearied of it and read it straight through at a sitting on two separate occasions

W C Hazlitt never grew tired of conning over St John s *Montaigne the Essayist* Howell s *Venetian Life* or *Italian Journeys* or Thoreau s *Walden* When a mere youth Mark Pattison read through Gilbert White s *Natural History of Selborne* so many times that he knew it by heart and was so familiar with Gibbon s Autobiography that he could repeat whole paragraphs.

Quite often the favourite books are obscure ones

Frederic Harrison who could read most of Scott at least once every year argues quite convincingly for this dotage on a few favourite books which are constantly re-read A man he claims "can hardly be said to know the 12th Mass or the 9th Symphony by virtue of having once heard them played ten years ago he can hardly be said to take air and exercise because he took a country walk last autumn And so he can hardly be said to know Scott or Shakespeare Moliere or Cervantes when once read them since the close of his schooldays or amidst the daily grind of his professional life

'The immortal and universal poets of our race are to be read and re read till their music and their spirit are a part of our nature they are to be thought over and digested till we live in the world they created for us.

(By *David Gunston*)

HOW TO CROSS 150 FRONTIERS

How to cross the frontiers of 150 countries and territories running, in alphabetical order from Abu Dhabi to Zanzibar, is explained in the newest edition of Travel Abroad—Frontier Formalities published jointly by the United Nations Educational, Scientific and Cultural Organization and the International Union of Official Travel Organizations

The more frontiers a traveller crosses the better his chances of increasing his understanding of his fellow men states the foreword to this publication in handy loose leaf format (to allow for changes) "Frontier formalities are like many administrative regulations their purpose is not to hinder but to supervise For those who have to comply with them however certain problems are inevitable

To solve these problems Travel Abroad offers information on passport and visa requirements custom formalities and allowances health regulations currency regulations and rules governing the entrance of foreign vehicles in each of the countries it covers

It also presents a complete picture of various ways of reducing the cost of travel once you ve crossed the border Generous reductions on rail air and sea tickets accorded to students groups or even ordinary tourists are listed in each country where they exist.

Finally for the student who encounters difficulties away from home 'Travel Abroad' also lists organizations assisting educational travel

THE AVERAGE COLLEGE GRADUATE

More than a decade ago the noted American educator Everett Dean Martin described the average college graduate in his work *The Meaning of a Liberal Education* :

"Whereas the education of the average college graduate falls of its true goals in very great [illegible] be called the danger [illegible] of the [illegible] has been [illegible] of independent judgment formed. The average man shares the [illegible] of his community. He runs with the crowd after the [illegible] of the hour, and shows the same lack of [illegible] as do the [illegible]. He wears the party [illegible] with his neighbours, and puts the same value on material success as do the illiterate. His education has made very little difference in his religious beliefs, his social philosophy, his ethical values or his general outlook on the world. Like all [illegible] and [illegible] people he jumps to hasty conclusions, believes what others believe, does things because others do them, [illegible] the past [illegible] the present."

The present day college student [illegible] according to the results of surveys [illegible] director of [illegible] at the University of [illegible], told the twelfth national conference on higher education that college students were [illegible] [illegible] [illegible] [illegible]

GUIDE TO CAREERS : THE NURSE

A Nurse's Work is the care and treatment of the sick. She may have to be in charge of a number of patients in a hospital ward, nursing home or else may attend to the sick in a private residence.

[illegible] [illegible] [illegible] [illegible]

The Nurse's [illegible] [illegible]

Day and night duty [illegible], however, usually arranged by rota [illegible]. The [illegible] a working [illegible], however, [illegible]. The patient's need [illegible] service is not only [illegible], but the nurse has to be ready to receive [illegible] cases at all hours.

The Way To Qualify : Training in nursing is given generally in institutions attached to hospitals including selected military hospitals. The period of training is normally 3 years. There are about 200 nurses' training centres in India which admit nearly 3,000 students every year.

Candidates for nurses' training should ordinarily have passed the [illegible] examination. A number of the [illegible] schools, however, admit students who have studied only up to the matriculation standard. The minimum age for admission is 17 years. For entry to the Armed Forces women between 18 and 30 years of age are accepted for training if they possess the necessary educational qualifications. For admission to the training course applications should be made to the Nursing Superintendent of the hospital at which the candidate desires to receive training. Specially [illegible] selection [illegible] and teachers the heads of the training schools make the selection.

Married women, unless [illegible] from their husbands, are ordinarily not admitted for training. Trainees are not allowed to marry during the training.

The [illegible] English [illegible]

Nursing Training consists of elementary [illegible] [illegible] [illegible]

Nurses' Training is free During training a student nurse receives a stipend of Rs 15 5-30, (in Military Hospitals the Probationer Nurse receives Rs 30 5 40) and additional allowances for board, uniform and laundry These allowances vary from State to State They live in rent free furnished quarters

In some training institutions the students are required to execute a bond to serve for a specified period, generally of 2 to 5 years after training

Degree Courses are provided in the College of Nursing New Delhi S N D T College for Women, Bombay and the School of Nursing Christian Medical Hospital Vellore

Further Training The College of Nursing New Delhi and the School of Nursing Vellore offer facilities for post graduate training The College of Nursing and the General Hospital, Madras also offer a combined course in nursing administration and teaching in schools of nursing The All India Institute of Hygiene and Public Health Calcutta conducts a course of training in public health nursing

Personal Qualities necessary to make one an efficient nurse are a genial and even temperament, a great fund of patience, tact and sympathy good health good eye sight and hearing friendliness to people initiative good judgment and presence of mind

The Way To Enter The Profession Each State has its own organisation for registration of nurses After successful completion of training a nurse should register her name with the State Nurses Council to be eligible for employment

For nursing Commissions or for training as a Probationer Nurse in the Army Medical Corps applications should be made to the Director General of the Armed Forces Medical Services Ministry of Defence, New Delhi Qualified nurses between 21 32 years of age are eligible for direct Commissions provided they are medically fit and are unmarried or legally separated or widows without encumbrances.

Openings for nurses are readily available in government and private hospitals Vacancies also occur in the Red Cross Many industrial concerns, private maternity nursing homes sanatoria and educational institutions regularly employ trained nurses.

The field of nursing service comprises besides general nursing in hospitals bed side nursing in private residences and industrial nursing in factories. Other special fields include nursing in maternity and child welfare centres psychiatric clinics infectious diseases hospitals and orthopaedic nursing concerned with the correction of deformities

Salaries of nurses vary in different States. The nursing appointments are graded, as also the pay In addition nurses receive dearness allowance as well as allowances for boarding lodging uniform and laundry Central Government scales of pay are

Staff nurse Rs 100 5 125-6 185
Nursing sister Rs. 150 7 185 8 225
Assistant Matron Rs 200 10-300
Matron Rs 320 20-400

Private nursing like the medical practice of a qualified doctor can be lucrative in cities

Prospects For Advancement are not only steady but show good promise in the coming years as nursing is an expanding and well graded service Promotions are made to positions of staff nurse, nursing sister sister tutor assistant matron and matron Public Health Nursing too offers a wide scope in the matter of promotion

In the Military Nursing Service, nurses are promoted to the rank of Senior Sister (equivalent to Captain s rank in the Army) after completing 9 years service Senior Sisters are eligible for promotion as Matron (equivalent to the rank of Major) and Principal Matron (Lieutenant Colonel s rank)

Every training school is expected to assign one sister tutor for a batch of 50 student nurses with a nursing sister to assist for every additional 15 students Opportunities for promotions therefore exist for every qualified and efficient nurse entering the services

For Further Information regarding training facilities State Government pay scales and related matters you may contact

1 The Director of Health Services of your State
2 The State Nurses Council of your State
3 The Secretary Indian Nursing Council Church Road New Delhi
4 The Director General Armed Forces Medical Services Ministry of Defence New Delhi and
5 The Employment Exchange nearest your place of residence

Nurses are required ... the existing hospitals.

child-welfare centres, but also to meet the [illegible] medical and [illegible] needs [illegible] Community [illegible] Administration, the National [illegible] scheme and the [illegible] Five Year Plans.

There is an overall shortage of nurses in the States of Punjab, Rajasthan, Pepsu, West Bengal, Bihar, Orissa, Madhya Pradesh, Himachal Pradesh and Travancore-Cochin. It is estimated that [illegible] nurses are needed to provide [illegible] the country a [illegible] standard of nursing service. There will be then one nurse for every [illegible] representing a [illegible] unit of 4000 persons. The present nursing service is [illegible] inadequate and in some States like Orissa an average population of 9200 is served by one nurse. Even in a highly industrialised city like Bombay there is only one nurse for every [illegible] persons.

There is likely to be a rapid growth of the nursing services in the next few years and a large number of trained nurses will find jobs. There will be, besides, a considerable number of places for higher appointments and in [illegible] departments.

[illegible] has been [illegible] in the ranks of nurses [illegible] being absorbed in administrative posts. The present strength, which [illegible] and 200, is most inadequate.

A [illegible] may be expected in the employment of nurses during the next few years.

Nursing is the [illegible] as well as [illegible] and it makes a career which offers [illegible]. As such it can absorb an increasing number of young women from the [illegible] Schools and Colleges [illegible] the country.

Intelligence Test

(Below are given some questions to test quickness of your mind and intelligence It does not matter that you attempt all the questions What matters is the time taken by you to find the correct answers The whole paper should not take more than 30 minutes to a fairly intelligent person Try now and find out)

—QUESTIONS—

1 Read very carefully through the following passage at least twice, and then answer the questions

What a thrill it is to get ready for the summer holidays ! In fact the expectancy of going to the sea side is often better than the sea side itself for with this English climate of ours we never know when we will get two fine days together Nevertheless packing is a pleasure in itself That is when we are packing for going and not for coming back Often our parents do not take the same view for with them it is a matter of getting as much as possible into the least possible space And when father finds he has left out his razor just when everything is at last neatly packed you may expect squalls

(a) Explain in your own words the meaning of expectancy in line 2

(b) Explain what the author means by saying the expectancy of going to the sea side is often better than the sea side itself

(c) Why does he say this ?

(d) Give one word to describe the English climate

(e) Does the author say that packing is always a pleasure ?

(f) Do our parents always regard packing as a pleasure ?

(g) What do our parents think about packing ?

2 The [illegible] of the underworld lord Dan Sullivan came to an abrupt end when his machine gun bullet riddled body slumped to the sidewalk in front of the National dairy

A merciless killer he was feared not only by the proprietors of businesses from which his gang extracted toll but by his own confederates His arrogance and selfishness increased with his power but when he decided not to split fair with the rest of the mob he signed his death warrant

Even before the inquest Professor Fordney learned that eight of his allies had plotted to 'rub him out' By name they were Bad Palmer Tony Morney 'Dopey' Regent Alex Wood Tom Yerger Willie Hursen Marty Johnson and Steve Patterson—the smartest of the gang—and that one of them had killed Sullivan

Through dangerous investigation Fordney also learned the following

1 Palmer Regent and Sullivan's murderer were the most dissatisfied

2 One of the eight was Sullivan's bodyguard (on the quiet) but that Yerger and Johnson knew who he was

3 That the night before the killing Hursen Patterson Palmer and the bodyguard had lost heavily in a gambling joint

4 That Morney the murderer and Yerger had a week before asked Sullivan for a 'new deal' and when refused Wood and the leader's killer had unsuccessfully tried to get the bodyguard to do the job

5 Also that the leaders in the revolt against Sullivans were Hursen, Patterson and the killer

The eight were eventually rounded up and while they refused to talk all Fordney from the above identified the bodyguard and Sullivan's murderer Who was the bodyguard and who was the killer ?

3 Take the added letter (s) and make a new word out of the other letters [illegible]

(a) HARM with an [illegible]

(b) VERB with an A

(c) WORN with a C

(d) NAME with a T
(e) ERA with a [illegible]
(f) [illegible] with [illegible] R
(g) SLAB with a T
(h) ARMY with [illegible] a T
(i) MIRAGE with a C

4 In the absence of the first [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] the accuracy of the [illegible] here shown [illegible]

GENERAL KNOWLEDGE TEST

Test your knowledge Solve the following questions without any extraneous help When finished look up for the answers and compare

—QUESTIONS—

1 (a) What is the total number of States and Union territories in India after the recent reorganization ? Name them

(b) How has the former State of Hyderabad been dealt with ?

(c) What are the capital cities or towns of East Punjab Madhya Pradesh Andhra, the Andaman and Nicobar Islands ?

2 Who were the following and for what were they noted ? Answer in about 4 lines each

Womesh Chander Bonnerjee Alan Octavian Hume, Swami Dayanand Guru Govind Singh Kautilya (Chanakya)

3 What are the main functions of the Reserve Bank of India ?

Or

In what ways is the establishment of a Communist Government in Kerala a land mark ? Answer in about 6 lines

4 Name any five major industrial towns or townships of India and state the chief industry of each

5 What are the three highest ranks that are actually filled at the present time in each of the following ?—

The Indian Army, The Indian Navy, The Indian Air Force.

6 Write short notes (three or four lines) on each of the following ?—

Marshal Zukhov General Neguib Mr Aneurin Bevan, Mr V K Krishna Menon Ferdinand de Lesseps

7 Where are the Red Sea and the Gold Coast and why have both been in the news in recent months ? Answer in about 10 lines.

8 What do the following stand for ?— WHO UNESCO ECAFE, USSR

9 There has been much discussion of late on the preservation of wild life in India. What steps would you suggest ? Answer in about 10 lines

10 Complete the following sentences, filling in the gaps —

(a) From pitchblende was isolated the metal———

(b) Many lives of miners are saved by Davy s———

(c) Alexander Fleming first discovered———

(d) The tree from whose bark a specific for malaria is obtained is called———

(e) The science which deals with heredity is known as———

(f) The unit for measuring a ship s speed is known as———

(g) The inventor of the electric lamp was———

(h) Variations in atmospheric pressure are measured by a———

(i) The energy which a body possesses by virtue of motion is called———

(j) The transmission of visible moving image by means of electro-magnetic wireless waves is known as———

11 What do you associate with the following ?

Sir Ronald Ross Einstein Harvey Abraham Lincoln.

Were any of them connected in any way with India ?

12. With what sports do you connect the following terms ? (If with more than one name all)

Offside sticks Fault off spinner M.C.C.

In the case of the last also state what the letters mean

ANSWERS

1 (a) Total No of states 14

(b) Total No of Union Territories 7

with Naguib holding the posts both of provisional President and Premier On November 14, 1954 he was deposed

3 *Mr Aneurin Bevan* He is the leader of the left wing group in British Labour Party He was responsible for introducing the National Health Service in England which came into operation in *1948* He was Minister of Labour in the British Labour Cabinet from January to April 1951

4 *Mr V K Krishna Menon* He is the present Defence Minister of India As a distinguished spokesman of our nation in the U N O Mr Menon has acquitted himself creditably In his early career he organized India League at London He was formerly Indian High Commissioner in London

5 *Ferdinand de Lesseps* A famous French engineer and diplomat of the 19th century The opening of a canal across the Isthmus of Suez was first suggested by him and it was he who supervised its construction. Another scheme proposed by him was that of the opening of Panama Canal

7 Red Sea stretches out in between Egypt Sudan and Ethiopia on one side and Arabian peninsula on the other Gold Coast lies on the West Coast of Africa along the gulf of Guinea for 370 miles

The recent developments in Egypt bordering the Red Sea have pitch forked it into prominence The developments in these areas have acquired great significance because of their impact on international events

Gold Coast attained independence on March 6 1957 and it is now known as Ghana This adds another golden chapter to the emancipation of Negroes of Africa. Independent Ghana is sure to play an important role in African Affairs

9 The necessity and significance to preserve wild life in India have now begun to capture the attention of authorities The variety and the number of wild animals which inhabit the wild forests of India have registered an alarming fall in the course of the last few years. The campaign organised by some people to destroy forests and thus increase the land available for cultivation is certainly not a step in the right direction Hence government should enforce laws strictly forbidding the destruction of forests So too *Shikaris* out for hunting should not be permitted to enter forests and shoot wild animals. All this will go a long way in preserving the wild life of India

AN IDEAL STATE

[illegible]

LETTER WRITING

[illegible]

art in letter writing as in other forms of composition

In the past when life was more leisurely, great pains were taken in the writing of letters whereas to day, the tendency is to dispose them off in the shortest possible time. The letters of Lamb Horrace Walpole (in English) Ghalib Kriv'du and others have become classics and they certainly show the heights which can be reached in this art.

A letter whether of a business or a personal nature should be laid out properly. Neat and correct lay-out is pleasing to the eyes whereas an untidy or poor lay out will have the opposite effect.

The general tone of a friendly letter should be intimate and free and characterised by the absence of formal and stilled language. At the same time the general rules of grammar and construction must be regarded. Bad grammar or slipshod construction, is no more permissible in a letter than it is in any other form of composition.

Although the style must be lively slang should be avoided. In order to maintain interest, an abundance of interesting detail should be included. It is really amazing how with a little care in construction, the most common place happenings can be endowed with a very real interest.

Following points should be avoided in writing personal letters

1. Do not boast or say any thing which is likely to hurt the feelings of the receiver.
2. Do not use 'I' excessively.
3. Avoid down right slang.
4. Do not close with a crude excuse such as mother is calling me or I have run out of ink.

In a private letter the degree of friendship between the sender and the recipient will indicate the warmth to be used in the salutation and close. The greater the friendship the warmer should they be.

Kanpur — Yours etc

A USEFUL MAGAZINE

Sir

I have been thinking it my duty for a long time to write to you expressing my hearty thanks for rendering me such a good service. I would like to state that it is since two years that I am purchasing and reading your most instructive magazine and during this period I have never ceased to like it but on the contrary it has attracted my mind and interest very much towards it.

It is since May 58 that I have become a regular subscriber and now I am getting your magazine regularly.

In the end I thank you very much and hope that you will keep on encouraging your subscribers by rendering them a very good service.

Thanking you — Yours truly
4 8 1958 — Yash Pal

DEGREE COURSE IN MINING ENGINEERING

Sir

In the August 1958 issue of "Careers & Courses" you have stated that in our country Banaras Hindu University and Bihar University offer degree courses in mining Engineering. Here in W B both B.E College and I I T offer 4 years course in Mining Engineering. But the degree awarded is B E. (Min) or B Tech. (Min)

Thanking you — Yours faithfully
Sibpore (Howrah) — Chitra Ranjan Ghosh

HUNCH BACK OF NOTRE DAM'

Sir

An error has crept in the September 58 issue of Careers & Courses under General Knowledge Test. In answer to question 6 (a) you have mentioned Alexnder Dumas as the author of *Hunch Back of Notre Dam*. This book came from the pen of Victor Hugo (French Novelist) and not from Alexander Dumas. This may please be verified.

—S Satyanarayana Murthy
New Delhi 5
Y P Thapar Simla

(The author of 'Hunch Back of Notre Dam' is Victor Hugo and not Dumas. The error caused by an overlight, is regreted.
Ed C & C)

WHERE IT RAINS MOST

Sir

In your monthly magazine *Careers & Courses* of April 1955 the answer to the question about Cherrapunji is wrong. Cherrapunji has not the highest rainfall which Mawsynram (village) about 30 miles away from Shillong has today. Mawsynram is a small village in Khasi and Jaintia Hills (Assam).

The following statistics may show your readers fact —

		1956	1957
1	Mawsihram	657	651
2	Cherrapunji	544	375

U C College Shillong — Yours etc
28-7-58 — Ty Rohbawmliangs Pautu

(The question whether or not the world's wettest spot has changed from Cherrapunji to Mawsynram in the Khasi Hills remains unsolved

The Deputy Minister of Civil Aviation Mr Ahmed Mohiuddin, told the Lok Sabha during question hour on September 2, that complete year's data which is available for the five years from 1912 to 1917 and for five years from 1940 show that during these years Mawsynram had an average of about 35 inches more rain than Cherrapunji. But during 1957 for which complete year's data is available Cherrapunji had about three inches more rain than Mawsynram.

The Minister said that it cannot, therefore be stated categorically that the world's wettest spot has changed from Cherrapunji to Mawsynram. He also mentioned that these two places are only 12 miles apart.)

EDUCATED UNEMPLOYED

Sir

Our Government is facing the greatest problem of educated unemployed because with the increase in the number of educated young men, the corresponding number of jobs are not available. Very highly qualified persons offer themselves for minor jobs. When a post for an M.A. is advertised, so many Ph.D.s come forward that it makes difficult for M.A.s to try their luck. The fault lies mainly with the system of education, which is too much academic, divorced from practical training. These days teaching profession is very popular with youngmen because after B.A. or B.Sc. admission to B.T. is an easy affair. Only a few want to take risk by getting apprenticeship in a factory or in a business concern at low pay. Most of the teachers even in government service retire at a basic pay of Rs. 250. But in industry after 3 to 4 years apprenticeship a foreman gets much more as basic pay.

Another drawback with the youngmen is that they hate manual work. Once they are graduates, they feel it below their dignity to work with their hands. They may starve but won't allow their [illegible] with [illegible] which [illegible] youngmen increase unemployment.

Those who want to take to a successful career should not go to the Education Department but start apprenticeship with any factory after graduation. They can again become mechanics and serve the country better. The government will also be free from the problem of educated unemployment.

Pham, (Hoshiarpur) — Yours faithfully
29/8/58 — S.S. [illegible]

SAMPATIDAN

Sir

I was too much impressed by your editorial on 'The Sarvodaya Ideology' in the August issue of the "Careers & Courses". I liked the language of the article and also the method in which this ideology was explained. As soon as I finished the article I made up my mind to contribute something to this so-called Sampatidan movement sponsored by our respected Acharya Vinoba Bhave to fulfil the wishes of The Father of the Nation to see [illegible] a state with economic and social freedom for every Indian living even in the remotest village.

I propose here to put two naye paise in a box every day which on the end of the month will come to nearly 9½ annas or 60np only. I also propose to send this 60 np to Bhave's headquarters. It may be a little amount in comparison with the amount given by other persons but I am a student and I will send this money out of my pocket money. If every student of India made up his mind to contribute two np every day to this movement I hope it will be of great help to the Sampatidan Movement. Although apparently the idea of putting two np in a box every day may seem fantastic, if we think over it seriously we will find that of how much help this can be to Bhave's Movement. Because there are crores of students in India and the contribution of these crores of students will amount to lakhs of rupees every month.

There is one more reason why we specially student community should contribute something to this movement. This is that if we start the coming generation will gain the fruits of this movement and not those old persons who are working day and night to make this movement a success. So morally it becomes our duty to help this movement to the extent we can.

D [illegible] — Yours faithfully
Dt. 16-9-58 — Davendra Singh Pathak

Question Box

In these columns we answer the queries from our readers. It may not be possible to answer each and every question but a considered reply shall be given to selected questions. Letters from our readers are welcome. These should be addressed to the **Editor, Question Box**

FOREIGN EXCHANGE CRISIS

Q. Please mention the cause of foreign exchange crisis in India and suggest means to remedy it.

(*A B Gupta Pandu & D K Bhagat Damoh*)

Ans. Rapid industrialization envisaged in Second Plan involves importing of machinery, equipment accessories etc. to a large extent and for this foreign exchange is indispensable. But the foreign exchange at our disposal is too inadequate to keep up the tempo of such breakneck industrial development. This accounts for the crisis in foreign exchange which our planners are facing to-day.

A rigorous policy of import restriction coupled with an all-out and vigorous effort to promote exports will ease the tension to some extent. Moreover, international monetary institutions should be apprised of the gravity of the situation and the need for more generous help brought home to them. An ultimate solution of the problem depends on the degree of success attained by these measures.

DEGREE COURSES

Q. Kindly mention the names of Institutes in India where Degree Courses in Domestic Science and Music are offered?

(*K C Eipe Bhilai*)

Ans. The following Institutes provide B.Sc. degree in Home or Domestic science:

1. Allahabad University, Allahabad
2. Lady Amritbai Daga College for women, Nagpur
3. Lady Irwin College, New Delhi
4. M.H. College of Home Science, Jabalpur.
5. Queen Mary's College, Mylapore, Madras.
6. Women's Christian College, Cathedral, Madras
7. Faculty of Home Science, Baroda University, Baroda. [There is provision for M.Sc. (Home science) also.]

The following Institutes offer degree Courses in Music:

1. Bengal Music College, 4 Hindustan Road, Calcutta. *Degree*: B.Mus.
2. College of Indian Music, Dance and Dramatics, Baroda University, Baroda. *Degrees*: B.Mus., M.Mus.
3. College of Music and Fine Arts, Banaras Hindu University, Banaras. *Degrees*: B.A. in Mus., M.A. in Mus.
4. Department of Indian Music, Madras University, Madras. *Degrees*: M.Litt. and Ph.D. in Music.
5. Department of Music, Annamalai University, Annamalainagar. *Degree*: B.Mus.
6. Sangita Bhavana, Visva Bharati University, Santiniketan. *Degree* in Music.
7. S.N.D.T. College for Women, 1 Queens Road, Bombay. *Degree*: B.A., M.A. in Music.

ABBREVIATIONS

Q. What do the following abbreviations stand for?

(1) A.I.I.M.S. (2) N.D.S. (3) E.P.T.A. (4) I.C.I. (5) I.A.T.A. (6) O.P. (7) N.E.D. (8) m.s.l. (9) L.D.S. (10) E.B.

(*Miss C.S. Rajalakshmi, Elankunnapuzha*)

Ans.

1. All India Institute of Medical Sciences
2. National Discipline Scheme
3. Expanded Programme of Technical Assistance
4. Imperial Chemical Industries.
5. International Air Transport Association
6. Out of print
7. New English Dictionary
8. Mean Sea level
9. Licentiate in Dental Surgery
10. Efficiency Bar

WORLD OF BOOKS

Q. Please name the authors of the following books:

(1) Engaged In Writing (2) The Fine Art of Reading (3) Thoughts in the Wilderness (4) The Bay I left behind me (5) A Barbarian in India (6) A Greek Experience (7) The Challenge of Co-existence (8) The Perennial Philosophy (9) The Magician (10) Citadel (11) The White Peacock (12) Come, My Beloved
(*P A R. Chandran Karolbagh New Delhi*)

Ans. (1) Stephen Spender (2) Lord David Cecil. (3) J B Priestly (4) Stephen Leacock (5) Ralf Oppenheim (6) C. Maurice Boura (7) Hugh Gaitskell (8) Aldous Huxley (9) Somerset Maugham (10) A. J Cronin (11) D H. Lawrence (12) Pearl S. Buck

BAGHDAD PACT

Q When was the first meeting of Baghdad Pact held ? Which countries took part in it and what was its outcome?
(*N R. Saxena Khurja*)

Ans. The first meeting of Baghdad Pact was held in Baghdad on 21 22 November 1955 under the chairmanship of the then Prime Minister of Iraq Nuri-es Said The countries which took part in the meeting were Great Britain Iraq Pakistan Turkey and Persia

At the end of its discussions the council announced the setting up of a Permanent Council of Deputies a permanent Military Committee and permanent U S Liaison with Baghdad Pact Organisation

CLASSICAL DANCE FORMS

Q Please name the principal forms of classical dancing in India
(*Ajit Singh, Delhi*)

Ans The principal forms of Indian Classical dancing are

(1) Kathakali (2) Bharata Natyam (3) Kathak (4) Manipuri (5) Odissi.

NOBEL PRIZE WINNERS

Q Please mention the names of Nobel Prize Winners (1957) In (a) Literature (b) Peace
(*D Ramiah, Kurnool*)

Ans (a) M. Albert Camus the French novelist and philosopher

(b) Lester B Pearson the former Canadian External Affairs Minister

COST ACCOUNTING

Q What are the facilities available in India for qualifying as a Cost Accountant ?
(*P Gopalakrishnan Trichur*)

Ans Examinations for awarding diplomas in Cost Accounting are held by the following Institutes

(1) Institute of Cost and Works Accountants, 6 Hastings Street, Calcutta

(2) Institute of Cost and Works Accountants 23 Queen Square London, W.C. 1

In order to qualify as a cost accountant one must have passed the Matriculation examination or some examination recognized as equivalent by the two bodies mentioned above.

A number of training institutions in India conduct classes for the examination of the two bodies mentioned, while an equally large number of Institutions, here and abroad, provide valuable training by means of specially prepared correspondence courses.

PAY COMMISSION AND LAW COMMISSION

Q Please mention the function of Pay Commission and Law Commission appointed by the Government of India
(*K. M Khosla New Delhi*)

Ans The function of the Pay Commission is to enquire into the emoluments and conditions of service of the Central Government employees. Law Commission is concerned with (a) the reviewing of the system of judicial administration in all its aspects and suggesting of ways and means for improving it and making it speedy and less expensive and (b) examination of Central Acts for amendment, revision etc.

FIRST BHOODAN VILLAGE

Q *Please Furnish particulars about the first land gift to Bhoodan Movement*
(*S P Kochgaway, Ranchi*)

Ans The first land gift to Bhoodan movement was 100 acres of land donated by Shri V R Reddy of Pochampalli village in Andhra State Pochampalli is a small village of about 700 houses and 3,000 people inhabited mainly by poor Harijans During his tour of Andhra State Bhave halted at this village and the acute misery and privation of the inhabitants pained him intensely Hence he made a fervent appeal to the landlord of the village which resulted in the first land gift to his movement.

RED TAPE

Q What is red tape and how does it hamper progress ?
(*Satya Gopal Ghose Chandernagore*)

Ans The term 'red tape' usually refers to the elaborate official rules and formalities. Almost all Government offices strictly adhere to these superficial formalities and consequently work is hampered at every stage The intricate and complex webs of stereo-typed official procedure usually create a vicious circle and to penetrate it is no easy task The outcome of all this is undue delay in the execution of work and this cuts at the very root of progress

SECURITY COUNCIL

Q Please describe the composition and powers of Security Council

(*Kshiroda Chandra Jena Puri*)

Ans The Council consists of 5 permanent members—U S A., Britain France Russia and China and Six non permanent members elected by the General Assembly from among the member states. Non permanent members in 1957 were Canada, Panama Japan, Iraq Colombia and Sweden. A decision on peace and security requires the agreement of at least seven of the eleven members with no negative vote from any of the five permanent members The President of the Council remains in office for one month only and he is succeeded in alphabetical rotation by the representatives of the member countries comprising the security Council

Security Council functions as the executive body of the U N It is mainly responsible for maintaining international peace It is in session all the year round that it may act quickly

SOMERSET MAUGHAM

Q Please comment on Somerset Maugham's analysis of feminine psychology as revealed in novels

(*Miss A P Susheela Trichur*)

Ans Somerset Maugham perhaps the greatest story teller of this decade shows a rare insight into the quaint and complex workings of feminine heart His analysis of feminine psychology is refreshingly novel and it bears eloquent testimony to his depth of vision and his remarkable grasp of modern psychology All his writings especially his novels reveal unmistakably his profound knowledge of the mind—models and thought patterns of women With the commendable dexterity of a surgeon he rips open and dissects in his novels the mysteries of feminine psychology Witness for instance his characterization of Bertha in "Mrs Craddock" In the delineation of Bertha one notices the gradual, yet steady unfolding of the various characteristics which go into her making He presents a candid picture of the emotional vicissitudes—intermittent phases of tempestuous passion philosophical resignation extremes of horror and loathing delight and anguish—through which Bertha's mind passes So too The Magician The Painted Veil Of Human Bondage , The Razor's Edge etc. switch the spotlight into the dark and obscure corners of feminine heart and the reader is simply enthralled by the beauty and grandeur of the image produced Moreover Maugham analyses the feminine conception of love in all its minute details in an adroit and superb manner In short, Sommerset Maugham's analysis of feminine psychology is unique

C.D PROJECTS AND N E S

Q What is the distinction between National Extension Service and Community Development Projects ?

(*Jitendra P Kaushik Mawana*
D S Sandhu Bhasin)

Ans. Community Development Projects aim at the intensive development of the rural areas. Hence the developmental efforts are concentrated over comparatively smaller areas to ensure successful functioning National Extension Service, on the other hand aims at an extensive development of the villages and hence it is spread over larger area In short Community Development Project is the method and National Extension Service the Agency through which the process of transformation of the economic and social life of the village is to be initiated

AIR CONDITIONING

Q What is air-conditioning ?

(*B Raghavan Madras*)

Ans Air Conditioning refers to the technique adopted to condition air in certain closed spaces. In a special apparatus used for air conditioning we can clean the air give it just the right amount of moisture (humidity) or keep it as warm or cool as we like

There are two types of air conditioning systems For a large place, there is a Central type system and air is carried through the pipes etc. through various rooms The other system is a Unitary type and the apparatus can be fixed in a certain place and is mostly used for air conditioning of the buses aeroplanes or railway coaches.

FILM WORLD

Mr V. K. K. Menon on Films

Mr V. K. Krishna Menon Defence Minister expressed the view that the Indian film industry should be left alone to develop on right lines from within

Mr Menon who was presiding over the second annual conference of the Bengal Cine Art Society in Calcutta said that he did not agree with those who spoke of taking steps to raise "the moral standard of films" A democratic approach to the film industry was the only approach that would maintain its popular appeal and existence, he said

The Defence Minister said that the question of raising the standard of films was similar to that of raising the standards in any other walk of life

"I have often spoken to students of universities as to what should be done to raise their standards and am of the opinion that unless the standard is raised from within, outside influence or interference would not lead them far," he added

Cinema, said Mr Menon was not like other industries which only provided employment to people but it served as a medium of recreation and diversion from the drudgery and dullness of everyday life "Holidays on the calendar all the year round do not provide opportunities for recreation and I strongly feel that the cinema does serve this purpose"

He asked the people to look upon films as a medium which focussed on and reflected in true perspective the culture language and regional habits of the country "We should utilise it as a useful and strong vehicle of understanding in this vast country of ours"

New Films for Children

The Standing Committee of the Children's Film Society which met in New Delhi on Saturday September 6 1955 decided to produce two films for children One is based on the Panchatantra and the other on the experiences of a group of children on a tour [illegible]

Earlier a total production programme of three feature films was drawn up for the year One will be [illegible] and two of them will be shorts These decisions were taken at the meeting of the newly constituted executive council of the Society

The Council decided that the length of the feature film should be about 6 000 ft. and the shorts about 2 000 ft. long The Council also decided to undertake production of filmstrips—an effective medium of audio visual education—as a pilot project. It was suggested that a few outstanding foreign children's films should be dubbed in Indian languages.

The Council accepted the suggestion of U N E S C O for a national film centre in India which will be affiliated to the International Children's Film Centre in Brussels.

The Council also decided to hold a children's film seminar and an international children's film festival to conduct audience research on the influence of films on children and to show children's films through the mobile vans of the Five Year Plan publicity units

London Film Festival

The second London Film Festival will be held at the National Film Theatre from October 6 to 14 next.

Inaugurated last year under the sponsorship of the Sunday Times in collaboration with the British Film Institute, the Festival this year is to be presented by the Institute in association with the London County Council.

At least 20 films will be screened and it is hoped by the organisers that an Indian production can be included.

It is the policy of the London Festival to give cinema-goers an opportunity of seeing within the space of a few days some of the most notable films shown in the previous six months at the major film festivals in different parts of the world.

It is thus a 'festival of festival films' and its composition depends upon the success obtained by international films at established world festivals

Last year "Aparajita" was shown, and 'Pather Panchali' had a special screening at the National Film Theatre in association with the Festival

We certainly hope that an Indian film of high merit will be available for showing in October as a result of having achieved merit, at one or other of this year's international festivals', a spokesman said

* * *

Stratford Film Festival

"Pather Panchali" an Indian film won the first Stratford (ontario) Festival Film Critics Award as the best feature at this year's Festival

Other awards were to Guilette Masina as best actress for her performance in the Italian film Nights of Cabiria and to Nikolai Cherkasov as best actor for his title role performance in the Russian film Don Quixote

Festival Director Mr Louis Applebaum, who announced the awards said they would be an annual event The Festival showed 27 films from 12 countries.

'Orders to Kill from Britain and The Seventh Seal" from Sweden were awarded runners up awards

Manufacture of Cinema Films

The proposal of the National Industrial Development Corporation for setting up a factory for the manufacture of cinematographic and X ray films at Ootacamand in Madras State in collaboration with an East German firm Agfa, has been approved by the Government it is learnt authoritatively

Further negotiations are continuing for implementation of the project.

Raw films are now imported during the current half year by established importers on a quota of 60 per cent general and 60 per cent soft. Certain imports are also effected through the State Trading Corporation on rupee payment. Licences are also proposed to be granted on export promotion basis

The annual requirement of raw films in the country is estimated at 250 million ft The total quantity of cinema films imported in 1957 was nearly 271.32 million ft. as against 262 69 million ft. in 1956 and 297 76 million in 1955

The Government has also approved the scheme of an Indian firm to manufacture synchro-box cameras in collaboration with a German firm This firm will also take up the manufacture of 35 mm side projectors and folding cameras at a later stage.

The East Germans have offered long term credit facilities to the Union Government India is not in a position to pay credit in foreign exchange before 1971 Also financing machinery purchases required for the raw film plant from a third country has to be discussed The foreign exchange involved in such purchases is not considerable but a decision has to be taken by the government.

Another subject to be settled is the training scheme under which Indian engineers will be trained at the Agfa works in East Germany At the same time East German engineers will have to be associated with the raw films plant until production reaches a certain level

East Germans have also to indicate what part of the plant and machinery can be fabricated locally Mention of this possibility was made in the project report submitted last year by experts from Agfa. Certain type of boilers these experts suggested could be fabricated locally

* * *

Keeping Films off T V

British film producers are to be paid to keep their pictures off the screen.

This is no move to deny cinemagoers—for the screen concerned is that of television. Movie men are acting to protect themselves from Suicide

All main sections of the industry have joined the plan for such a protection and have established the Film Industry Defence Organisation Limited which came into operation on August 31. The organisation has the backing of the three producers associations, the exhibitors association and the renters society. Its specific task is to acquire the television rights of old British films and so prevent their exploitation in competition with the cinema. A statement said that FIDO had been set up "so that in appropriate cases British film producers may be paid some compensation for withholding their cinema films from television."

The odd man out is a body of independent cinema owners who call the scheme imperfect and say that they will seek injunctions in the High Court against any contractual change introduced to enforce the levy.

Ealing Films have also reserved its attitude holding that television is not the only reason for the difficult times in the cinema. The company has substantial backlog of pictures suitable for television.

FIDO backers are confident the scheme will prove effective at the present level yielding £500,000 a year and warn that without it the chances of survival of the majority of British cinemas "are remote." The independents however, feel that the farthing rate levied would anyway yield only enough to buy up one producer's television potential and fear increasing demands upon them to swell funds.

• • •

Vancouver Film Festival

Judges at the Vancouver International Film Festival [illegible] top prize for feature length film to the Indian film, "Pather P[illegible]" and [illegible] to [illegible] from Russia and France.

More than 300 films from 2[illegible] countries were entered at the two-week festival which drew some 20,000 people. One hundred [illegible] were selected for public showing.

"Pather Panchali," a black and white study of family [illegible] in India produced and directed by Satyajit Ray [illegible] the top award among feature films.

The Canadian National Film Board production "[illegible]" won the top prize for documentaries and Japan's "[illegible]" was adjudged the best children's film.

• • •

The Conquest Of Atom

[illegible] of atomic research from Lord Rutherford to Sir John Cockcroft are featured in a film shown in London on July 10. It is available to 66 overseas countries and territories.

The film *The Conquest of the Atom* opens with shots of Calder Hall, the world's first industrial atomic-power station, which is feeding electricity into factories and homes in northern England and then switches to fundamental research carried out in British laboratories.

The early days of "string and sealing-wax" apparatus are recalled by shots of J. J. Thomson, who in the year 1897, was experimenting in the Cavendish Laboratory at the time when the atom was believed to be a solid indestructible sphere. Then follows in brief the story of Lord Rutherford whom Sir John Cockcroft in a personal introduction to the film has described as "the founder of the Nuclear age."

The film by diagram demonstrates how an atomic reactor provides a continuous supply of energy. It shows the way this energy is put to man's service in Calder Hall and ends by showing that research is continuing not only in fission but also in fusion processes such as occur in ZETA (the Zero-Energy Thermonuclear Assembly) a reactor designed not to split atoms but to fuse hydrogen atoms into helium at temperatures of more than 5,000,000°C.

• • •

Edinburgh Film Festival

Two features—"Gotama the Buddha" and "Max"—and four documentaries—"Himalayan Tapestry," "Martial Dances of Malabar," "New Life" and "Women and Education"—are the Indian entries at the twelfth International Film Festival which opened at Edinburgh on August 24.

The Edinburgh festival is a non-competitive one and no prizes or awards are declared.

Indian Films in Iran

Indian films are popular in Iran, it was revealed in the Lok Sabha.

Exposed films valued at Rs. [illegible] were exported to Iran during 1957.

University Forum

ASSISTANCE FOR TECHNICAL EDUCATION

Shri Humayun Kabir, Minister of Scientific Research and Cultural Affairs said in the Lok Sabha on September 3 that the proposals for the expansion and development of technical education in India under the T C M (Point Four Programme) had been finalished for the year 1958 59

The assistance to be provided by U.S.A in the current year, he said comprises

(i) 26 U S Experts in selected fields of engineering and technology to develop post graduate studies and research in our institutions and to assist in a programme of training of technical teachers (ii) facilities for the training of 20 Indians in institutions in U.S.A., and (iii) scientific equipment worth $ 80 000

An agreement for the above assistance has been signed by T C M and Government of India

U. S A had also offered this year under T C M 60 fellowships for the advanced studies of 60 Indian engineers and technologists in American institutions who would serve as teachers in Indian institutions after the training Shri Kabir added

UNESCO SEMINAR ON EDUCATIONAL REFORM

The three Committees of the UNESCO Regional Seminar on Educational Reform in South and East Asia concluded their deliberations in New Delhi on August 30, 1958

The General Committee discussed the possibilities of extending the co-operation of UNESCO and other organizations in the development of educational reform An important recommendation was the adoption by UNESCO of a major project on free universal and compulsory education in this region on the lines of a similar project in Latin America.

This Committee also studied the techniques used in the preparation and implementation of reform measures and emphasised the role of research in educational reconstruction The difficulties generally experienced in implementation of reforms were also discussed and among other measures recommended for avoiding wastage was the streamlining of administrative and financial measures to make the best use of available funds howsoever meagre.

The Primary Education Committee, among other problems, discussed the measures calculated to improve the quality of primary education, the problems relating to the financing of education and the problems connected with the education of girls An important recommendation adopted by this Committee related to the need of giving special training to supervisors of schools

Another recommendation related to the close co-ordination of all authorties from the local to the Central in the administration of primary education

The Secondary Education Committee considered some of the technical difficulties affecting the implementation of reforms, such as lack of equipment lack of proper instructional materials and multiplicity of languages In quite a few of the countries in this region, the children have to study three or more languages This imposes a very heavy burden on the children

The place of the external examination in secondary education and problems relating to the reform of the examination system as a whole were also considered The Committee considered it advisable to change the nature of the examination to relate it more intimately to the objectives of secondary education and the learning experiences curricular and co-curricular activities provided to achieve these objectives.

The Committee also reviewed the problems of bifurcation of courses and vocational education Lack of suitably trained teachers was a major problem in the provision of a diversified curriculum specially technical and vocational courses.

• • • •

RAISING TEACHERS STATUS

Dr K. L. Shrimali Union Minister of Education said in the Lok Sabha on August 30 that the Prime Minister has, from time

to time, written to the Chief Ministers about the necessity of improving the status of teachers in various ways

He has suggested that the measures should be taken for increasing the public esteem for teachers and for giving them adequate recognition at State and like functions. He has further suggested that the most important element in a school was the teacher and not so much the building for the school and that therefore money should be saved on building and applied for improving the condition of teachers

• • • •

EDUCATIONAL TOURS FOR TEACHERS

The Union Ministry of Education has formulated a scheme to give grant in aid to State Governments and Union Territories for encouraging teachers to visit places of educational historical geographical and cultural interest. The scheme which is being taken up on an experimental basis will be implemented during the current financial year

Under the scheme the Government of India will meet half the third-class return railway fare, the other half being covered by the railway concession. In such places which are not connected by rail, the actual bus fare would be paid by the Government. The tours may be of approximately two weeks duration but this limit can be relaxed in certain special cases.

The parties of teachers may consist of not less than 12 and not more than 32 persons. The scheme will be confined to the teachers employed in recognised elementary schools both basic and non-basic, teacher training institutions and pupil teachers in such institutions. Preference will however be given to teachers and pupil-teachers of Basic training institutions

During the current financial year each State Government and Union Territory may sponsor one party for such visits. The State Governments of Bombay Uttar Pradesh and Madhya Pradesh may however sponsor two parties each in view of their larger territories. The State Governments and Union Territories can also use the good offices of any recognised and well-established teachers association or educational institution for the actual implementation of the programme

• • •

COLLEGES FOR GIRLS IN DELHI

There are at present six Colleges for girls in Delhi one of which is run by the Government. A large number of girl students who apply for admission cannot be accommodated in the existing colleges. Therefore the University of Delhi has instituted with effect from 1957-58 a scheme for providing tuition classes for girl students who enrol themselves as non-collegiate students for preparatory and B.A. first year degree course under the Advisory Board of Women's (non-collegiate) Education.

This scheme was expected to provide additional facilities for the education of such of the girl students who were not able to secure admission in colleges. During the current academic year all eligible students who applied for admission under this scheme had been admitted.

• • •

RAJKUMARI COACHING SCHEME

Dr K.L. Shrimali Union Minister of Education, outlining the main features of the Rajkumari Sports Coaching Scheme said that the Scheme aimed at the development of sports and games in the country by imparting coaching in the various sports and games

At present the Minister said the Scheme provided for coaching by experts in the following games and sports —

Athletics, Hockey Table Tennis Basket-ball Tennis, Football Swimming Gymnastics Cricket, Badminton and Volley-ball.

The Scheme had achieved considerable success in building up a talented group of players several of whom have distinguished themselves in National and International Events. All medalists in the 2nd and 3rd Asian Games and the last Commonwealth Games had received training under the Scheme he added

The Minister made this statement in the Lok Sabha on August 21, 1958

• • •

INSTITUTE OF ENGLISH EDUCATION

The Government of India have decided to establish a Central Institute of Education at Hyderabad. The Institute had been registered under the Public Society's Act, Hyderabad and would function under the supervision and control of a Board of Governors. The Institute is expected to start functioning some time in October 1958

• • • •

TWO MORE NATIONAL PROFESSORSHIPS CREATED

To mark the Independence Day this year the Government of India have created two more posts of National Professorships

of India with effect from August 15 1958 Professor Satyendranath Bose and Dr K S Krishnan have been appointed to these posts with effect from that date

The first post of National Professor was created in February 1949 and Dr C V Raman was appointed as the National Professor of India which post he still holds

Professor Satyendranath Bose F R S is well known for the Bose Einstein Law in quantum mechanics and Dr K S Krishnan F R S at present Director of the National Physical Laoratory is well known expert on crystallography

The National Professorships carry a salary of Rs 2 500 p m and have been created so that the holders may devote their entire energies to research work, which they may carry on in any university or institution of their choice Professor Bose and Dr Krishnan have been appointed for a term of five years in the first instance

* * * *

NATIONAL DISCIPLINE SCHEME

The National Discipline Scheme is operating at present in Delhi Punjab (including Pepsu) Uttar Pradesh Bombay (including Saurashtra) Madhya Pradesh, Jammu and Kashmir and West Bengal The total number of students under this scheme was about one lakh The total expenditure incurred on this scheme so far by the Central Government is Rs 17 50 lakhs approximately Of this Rs 13 50 lakhs was incurred by the Ministry of Rehabilitation upto November 1957 and Rs 4 lakhs by the Union Ministry of Education so far during 1958 59

* * * *

PUNJAB UNIVERSITY (CAMP) COLLEGE

The Government of India have sanctioned the opening of four evening colleges from the current academic session under the aegis of Delhi University These colleges have since started functioning and have admitted students for the Preparatory (Arts) course of the Delhi University Simultaneously the Camp College has stopped admission to the first year of the Intermediate Course of the Punjab University

Nineteen members of the teaching staff of the Camp College have so far been appointed in the four Evening Colleges of the University of Delhi

The number of students admitted was 666 during 1958 This information was given by Dr K L Shrimali Union Minister of Education in the Lok Sabha

MERCHANT SHIPPING IN INDIA

India has had a glorious maritime history going back to about 5 000 years. The science of ship building developed early in India and the maritime activities of this country spread to the shores of Africa Madagascar, Persia and the farthest reaches of Malayesia

With the consolidation of the British rule in India, however, Indian merchant shipping suffered an eclipse The end of the last century saw British shipping and other interests displaced Indion merchants and acquire a monopoly of India s maritime trade

This state of affairs ended with the end of the British rule, and the Indian merchant shipping entered a period of steady progress.

With the objective of the emplementation of the policy of coastal reservation and securing increased participation of Indian merchant shipping in overseas trade, the First Plad allocated a sum of Rs 18 crores by way of loans to shipping companies and investment in the Eastern Shipping Corporation one of the two shipping companies set up in the public sector

At the end of the Plan the Indian merchant shipping consisted of 126 vessels out of which 90 were employed on the coastal and 36 on the overseas trade The total tonnage attained was 4 79 799 G R T

The target for Second Plan is 9 00 000 G R T to be able to carry 12 to 15 per cent of the country s overseas trade and 50 per cent of its trade with adjacent countries against the present proportion of 5 per cent and 40 per cent

A provision of Rs 45 crores is made for shipping in the Second Plan including Rs 8 crores placed during the First Plan period and Rs 20 crores earmarked for direct Investment in the Eastern Shipping Corporation.

Recently it has been agreed to set up a Shipping Development Fund for financing the acquisition of additional tonnage in the remaining period

I have [illegible] a great [illegible] [illegible] [illegible] [illegible] [illegible] When [illegible] [illegible] do it

— Sir John Lot

Economic REVIEW

I PROMOTION OF EXPORTS

The necessity for vigorous and concerted efforts to promote exports seems to have now dawned upon the authorities. The significant and vital role which a process of export promotion plays in the present context of the Foreign Exchange crisis is self-evident. It is in recognition of this that a number of steps have been taken by the Union Government to promote exports.

Among them are relief in duties, supply of raw material required for goods meant for export, transport and shipping facilities, settlement of commercial disputes, securing of foreign exchange for business tours abroad and on-the-spot assistance at major ports.

A rebate in import and excise duties on raw materials used in export articles is allowed on about 75 commodities. The quantum of the rebate is now equal to the duty actually paid. The procedures have also been simplified reducing to the minimum the time—lag between shipment and the payment of rebate dues. Export duties on a large number of commodities have been abolished and export restrictions have been removed or relaxed.

Special assistance is given to exporters to get import licences for raw materials either under the general import procedure or under special schemes. Additional quotas to replenish the raw materials used are also given. In certain cases indigenous raw materials are being supplied by manufacturers at concessional prices.

Assistance for movement of goods on a priority basis on the railways is provided by the Directorate of Export Promotion. The movement of export goods by rail to ports has been accorded higher priority. Exporters are also helped in finding space.

For speedy settlement of commercial disputes, a standard contract form has been introduced for cotton textile exports. Exporters are encouraged to provide for arbitration clauses in contracts. Individual complaints are also investigated by the Directorate.

Exporters are helped to secure foreign exchange for their business tours either individually or in delegations organised by the different Export Promotion Councils. Foreign exchange is also made available for market surveys, trade inquiries and for publicity schemes in foreign countries.

The field officers of the Directorate in Bombay, Calcutta and Madras help exporters to solve individual problems on the spot. They give personal attention to such problems brought up by exporters and take up the matters, if necessary, with other Government departments at the ports or with manufacturers from whom exporters buy their goods.

Officers of the Export Promotion Directorate maintain liaison with the Federation of Indian Chambers of Commerce and Industry, the Associated Chambers of Commerce and other trade organizations. By frequent and regular contacts with these bodies the questions raised by these organisations are discussed and efforts are made to remove procedural and other difficulties. These measures can certainly make some contribution in warding off the possibility of a Foreign Exchange crisis.

II EMPLOYMENT UNDER SECOND PLAN

The success of Second Five-Year plan depends to a large extent on the contribution it makes to the lessening of the acute unemployment problem. But the record of the Second Plan uptill now, in this respect, is very poor. This is no random statement. The observations of Mr Shriman Narayan, member of the Planning Commission, make the position crystal-clear.

According to Mr Shriman Narayan, progress with regard to provision of additional employment opportunities under the second Five-Year Plan so far was not encouraging at all. The various schemes under the Plan had been able to provide additional employment only to about 2.5 million people so far as against the revised target of 8 million [illegible] the Plan. At the present rate therefore it would hardly be possible to achieve even the revised target brought down from eight million. Every year there was a net addition of about 1.5 million people to the labour force of the country. There [illegible] to the [illegible] conclusion that full employment could be achieved [illegible]

by the use of labour intensive methods through the organization of a network of small village and cottage industries

Mr Narayan said it was true that smaller industries were now being established in the community development blocks, but the progress in this direction was quite slow Much remained to be done

It was therefore of paramount importance that we should turn once again to the fund of experience accumulated by Gandhiji in connection with his experiments of rural reconstruction in India.

Gandhiji he said had taught that the village community must be the basis of all economic planning After five years experience of community projects the country was convinced that the Gandhian approach was the most practical The recent community development conference had decided that economic planning should be carried out through the agency of the village institutions like the panchayat the co-operative and the school As Gandhiji said, attention must also be concentrated on the construction of minor irrigation works

The remedy suggested by Shrimanji may not be the best one to cure the ill that has afflicted the economy But, certainly economic development on Gandhian pattern can result in greater employment opportunities and hence it is worth experimenting

III CURB ON NEW INVESTMENTS

The over ambitious nature of the Second Plan is largely responsible for the varied difficulties that retard its smooth execution Any new investment in the Plan is sure to make its impact felt in an adverse manner on the national economy When viewed against this perspective the World Bank of India's recent warning to avoid new investment responsibilities in mining and industries assumes a new significance. The warning was contained in a report on India prepared by a team of World Bank officials which toured the country in May and June this year

This team according to reports had reached the conclusion that the time had come for India to consolidate her economic gains rather than make fresh investments

In a refreshing and frank analysis of India's foreign exchange position the report pleaded for urgent help to India

Plans for future development must be based on a realistic assessment of resources especially foreign exchange resources.

The report advised the Government of India 'to give serious thought to schemes for the third Five-Year Plan in the light of available resources

The report struck an optimistic note referring to the possibility of inflation in the country The World Bank team thought the rupee will not face a real risk of inflation if foreign exchange was forthcoming

According to the report there was serious deficiency in the administrative machinery especially in the way projects were planned The team felt that the administration was dangerously over strained by the Indian Government embarking on an ambitious programme

The Report advised India 'not to sacrifice efficiency for welfare It also discounted the official zeal often expressed in India to reduce the disparity in incomes

The report ascribed the foreign exchange crisis to the import of capital goods and heavy defence purchases from foreign countries.

Thus the observations made in the report reveal a marked insight into the economic problems of India The warning against any further investment is quite timely and our planners would do well to heed it.

VI RESERVE BANK OF INDIA AND RURAL FINANCE

It is heartening to see that the Reserve Bank of India has begun to show active interest in problems related to rural credit. The recent statement of Mr H V R Iengar Governor of Reserve Bank of India is indicative of this new trend

Mr Iengar revealed that the Reserve Bank had undertaken a follow up survey of rural credit as a sequal to the 1952 survey Addressing a Press conference Mr Iengar announced that the bank had decided to make a departure in regard to informing general public about its working especially in regard to the non-secret and non operational aspects of its functions

Mr Iengar drew special attention to the development activities of the bank which were assuming growing importance These activities had been most [illegible] in the sphere of rural finance in the wake especially of the recommendations of the All India Rural Credit Survey Committee The Reserve Bank has done much to assist in the setting up of an integrated system of rural credit The scale of financial assistance which the bank had been providing to the rural sector primarily through the agency of the State co-operative banks had been rising [illegible] the back of the

advance being made at a concessional rate of two per cent below bank rate

The total outstanding advances of the bank to the State co-operative banks which amounted to Rs. 3 crores on the eve of the commencement of the first Plan now stood at a little below Rs. 30 crores. Besides the bank had made available a sum of nearly Rs. 6 crores to the State Governments to enable them to contribute to the share capital of co-operative institutions.

Along with the provision of more liberal finance Mr Iengar said the Reserve Bank had undertaken since December 1952 a scheme of voluntary inspection of co-operative banks. The Bank's inspection was complementary to that made by the registrars of co-operative societies and was designed to serve the wider purpose of improving the machinery and operations of co-operative credit.

If the agricultural credit Department of Reserve Bank of India keeps up the same tempo of activity in the coming years inadequacies in the system of rural credit can be solved to a large extent.

V STEPPING UP FOOD PRODUCTION

A satisfactory rate of increase in food production is a basic requirement of economic development. But the unhappy position regarding the supply of food in which the country finds itself at this juncture has been the cause of considerable concern and public discussion. The prices of food products, especially food grains have steeply increased. The supply has not been able to keep pace with the demand in spite of the continued heavy imports of rice and wheat. The Prime Minister forcefully put it during the Parliamentary debate on August 21 "There is nothing more important than agricultural production more especially food production."

But the problem is how to effect a marked increase in food production? F.I.C.C.I. in a new brochure entitled "The Food Problem—An analysis" offers some constructive suggestions.

Adoption of and adherence to a "firm [illegible] and long term agricultural policy" and re-examination of [illegible] that adversely affect production are among the suggestions made by the Federation [illegible] of the [illegible] problem.

Other [illegible] the brochure [illegible] the problem [illegible] greater stress [illegible] that would [illegible] increase [illegible] [illegible]

seed farms over other subsidiary programmes of development, encouragement to establishment of fertilizer factories, use by [illegible] of available irrigation facilities, [illegible] large scale and mechanised farming in suitable areas by the right type of persons and production of exportable commercial crops like groundnuts.

The Federation also want a [illegible] of the various uses of cotton seed oil and scheme to plant castor plants (or fruit trees) near the railway tracks.

Greater use of non-cereal foods like vegetables and fruits in the diet of the people, a policy announcement for the control and regulation of the increase in population and the need for collection of accurate statistics have also been recommended by the Federation.

The brochure emphasizes the need of production orientation. It says the policy in the matter of agricultural production in the country which must hold good at least for the next decade should be clarified categorically and adhered to scrupulously.

The brochure says the Government must frankly recognize that agricultural production is related to the economic size of the holding and programmes which are intended to deal with the age-old hunger for land must not adversely affect production. Experience in our country has already demonstrated that fragmentation of land on socio-political grounds has had its repercussions on production. Therefore policies which adversely affect production should be re-examined.

—o—

The Spirit Of Truth

To see the universal and all-pervading Spirit of Truth face to face one must be able to love the meanest of creation as oneself. And a man who aspires after that cannot afford to keep out of any field of life. That is why my devotion to Truth has drawn me into the field of politics, and I can say without the slightest hesitation, and yet in all humility, that those who say that religion has nothing to do with politics do not know what religion means. —Mahatma Gandhi

Order Of The Day

[illegible]

SCIENCE & INVENTION

SPACE-PILOTS MUST MARRY

If you want to go to Mars better take your own Venus along

Sex will be necessary for the space pilots of the future

The space-cuties won t be pneumatic blondes in pressure suits—they ll be young women scientists married to members of a space ship s crew

And the space lovers will be graduates of a co-ed Space Academy which will encourage them to wed before heading for the stars

This picture of the future was drawn by two American scientists Drs. Donald Conover and Eugenia Kemp in a lecture at Los Angeles recently

The doctors said that space crews would have to be husband and wife teams because of the "psychological stresses brought on by the utter isolation of a journey lasting perhaps two or three years

Dr Conover said that in the last war the British found that men and women together at isolated posts performed their tasks more efficiently

* * *

EQUATOR IS GETTING HOTTER

The equator is getting hotter or drier or both That is the conclusion reached by scientists who have returned to Kampala (Uganda) from an expedition into the Ruwenzori mountains on the Uganda Belgian Congo border where they studied the glaciers of the 17 000 foot range

The expedition part of the International Geophysical Year programmes was led by F P Henderson lecturer in geology at East Africa s Makerere College

The Ruwenzori mountains have lost a lot of their ice and snow in the last 50 years the expedition reported. Preliminary measurements indicate that the ice cap is shrinking fast

The scientists discovered that equatorial ice is both harder and more elastic than Arctic or Alpine ice They asked for special drills to make holes for their marker pegs.

They suggest that the rapid and extreme changes in temperature give equatorial ice a a different and tougher cell structure

DRUGS TO STOP GROWING TALL

Doctors offer new hope for girls who look like growing too tall for ready made clothes

The British Medical Journal describes tests which can predict a growing girl s ultimate height with reasonable accuracy and better still a treatment which can be given in time to stop this height being reached if it is too tall

Most mothers would prefer their daughters to be less than 5 ft 10 in so there is likely to be quite a demand for this new keep-me-short treatment

The sex hormone oestrogen, in small doses every day has been given to girls aged 11 and 12, to reduce their ultimate height with apparent success Its action depends on antagonising the growth hormone from the pituitary—the body s master gland

No serious ill effects have been reported with this treatment But conservative gynaecologists and gland specialists have warned that oestrogen should not be given to girls before puberty without proper medical advice.

EXPLORER V

The U S Army failed in a bid to put a 37.5 lb satellite into the orbit around the earth at Cape Canaveral on August 24 1958

The satellite Explorer V, first of the five American satellites to be launched north east, so that it would fly over the Soviet Union was carried in the nose of a Jupiter-C rocket.

An announcement soon after the firing said all stages appeared to have functioned normally Radio signals were being received

But after the first few minutes tracking stations in the orbital band did not pick up any radio signals and an official statement later said the satellite had apparently failed to go into the orbit

* * *

THE EARTH IS EXPANDING

Prof Laszlo Egyed of Budapest University holds the revolutionary theory that the earth is expanding and not as has been generally accepted, slowly contracting it was reported in Venice on August 21 1958.

In an interview published in the *Hungarian Review*, he said "I have computed on the basis of paleogeographic maps that the radius of the earth is increasing by half a millimetre every year."

He claimed that one proof of his theory was that the oceans of the world were getting proportionately smaller compared with the land surface—whereas if the earth were contracting they would tend to cover a proportionately larger area.

The expansion of the earth, he maintained, was the cause of earthquakes. The expansion split the earth's crust.

"We are now in the 30 millionth year of the most recent phase of strain on the earth's crust," he concluded. "This means that cataclysmic changes in physical geography with the birth of *new* continents and oceans can be expected in about 20 million years from now."

* * *

FIFTH ICE AGE

Two leading U.S. scientists were reported at New York on August 25, 1958 to foresee a fifth Ice Age beginning about 100 years from now which may bury much of the U.S.A. and Western Europe under an ice sheet up to two miles thick.

An article in a magazine said Dr. Maurice Ewing, Director, Lamont Geological Observatory, Columbia University and Mr. William Donn, a geologist and meteorologist of Brooklyn College, New York, had completed a new theory on ice ages which explains how the world has alternated between glacial and inter-glacial periods.

The article said the two scientists believe that during the Ice Ages the Arctic Ocean was warm enough to be free of ice—not more frozen than it is today as was formerly thought.

Dr. Ewing and Mr. Donn have observed that the warm water of the Atlantic is moving rapidly northwards, the article said.

They deduce this from such phenomena as the cod fish being driven from Cape Cod to Newfoundland, the rise of the annual temperature in Iceland and Greenland by about ten degrees in [illegible] years, and the fact that the Arctic Ice Cap has been estimated to be 40 per cent thinner than 15 years ago and 1[illegible] per cent smaller in area.

If sufficient warm Atlantic water penetrates the [illegible] [illegible] [illegible] before [illegible] [illegible] [illegible] condensation [illegible] [illegible] [illegible] [illegible] [illegible] at [illegible] [illegible] [illegible] [illegible]

This could begin a catastrophic rise in the sea level throughout the North A[illegible] [illegible] build glaciers that would cover continents, the two scientists believe.

The article said there was independent scientific evidence to suggest that the [illegible] Arctic blizzards that would begin this process might come within the next 100 years.

* * *

MILKY WAY STAR

The Harvard college observatory [illegible] one of the sun's neighbours, the star [illegible] was exploded into great brilliance for the third time in 60 years. The star located [illegible] the constellation ophiuchus astride the celestial equator in our own milky way galaxy, normally has a magnitude of 11.5 and [illegible] [illegible] to the naked eye. On July 14 it was observed to have increased 100 times [illegible] normal brilliance becoming a 6th magnitude [illegible] easily visible to the unaided eye. Both in 1[illegible] and 1933 the star was observed to have [illegible] to a magnitude to 4.3.

* * *

RADIO-WAVE TO MOON

The U.S. Army Signal Corps had bounced an ultra high frequency radio-teletype [illegible] off the moon and back to earth for [illegible] the first time officials announced at Washington on July 23, 1958.

In a series of tests conducted recently [illegible] the army's electronic proving ground at Fort Huachuca (Arizona) a radio-teletype message was sent to Encino, New Mexico, using the moon as a passive relay.

The message travelled nearly 500,000 miles—the distance from earth to the moon and back.

* * *

DRUG TO PUT ENEMY TO SLEEP

Withania, a herb long known in India [illegible] under study in America for the U.S. Army as a possible agent for putting enemy troops to sleep in warfare.

Dr. Arthur F. Schwarting, Professor of Pharmacognosy (the science of crude drugs) at the University of Connecticut, has been awarded a grant by the U.S. Army's [illegible] warfare corps to study [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]

Some samples of the [illegible] were [illegible] here by Dr. Chand Atal, a graduate student from [illegible]. Dr. Schwarting has isolated and identified the "sedative chemicals" in the leaf. He said [illegible] security [illegible] [illegible] not [illegible] [illegible] to say what the dosage [illegible] of the

drug included mass introduction into food and water supplies

Dr Schwarting said withania fed to rats has kept them asleep as long as 36 hours He declined to speculate on possible military application of the drug, but pointed out that normal procedure in study of drugs is to develop antidotes in case the enemy has them

ERUPTIONS ON JUPITER

U.S astronomers have detected volcano-like eruptions on Jupiter the largest planet in the solar system some 446 million miles from the earth according to an announcement in Chicago on July 14 1958

Mr Gerard Kuip r professor of astronomy and director, Chicago University observatory in Wisconsin and his research associate Mr Alan Lenham using a 40 inch refractor telescope first noticed wide variations in Jupiter s normal appearance about a month ago

They said that they believed the outbreaks observed on Jupiter—the first seen for more than ten years—had been caused by the release of large amounts of heat energy on the surface of the planet

They saw a great number of dark spots—of various sizes ranging up to 7,000 miles across—floating into the normal dark belts streaked across the face of Jupiter These spots were assumed to be clouds of ammonia

REVIVAL AFTER DEATH

Dr Jean Henley of the Columbia University Medical Centre New York said on Tuesday July 8, that the Soviet scientists were exploring in an extra-ordinarily comprehensive way ' the problem of death and revival

Dr Henley who returned to New York from a visit to Moscow said the Soviet scientists were carrying on a highly systematic research into the complex bodily changes that occur at death—and seeking means for combating them to restore life

She said she did not know of any comparable programme in the U.S.A

She added ' They are studying every imaginable thing that happ ns from every physiological standpoint Biochemists Neuro-anatomists neuro-pathologists and others are all co-ordinating their skills on the problem

"They are trying to de ermine what happens to the cells the nerv s and r flexes at death what chemical and physical changes occur and to find the maximum limits of revival

Dr Henley who toured Soviet medical institutions with five other U S women scientists said she watched an experiment in which a dog drained of blood and dead for five minutes was brought back to life

' It was a very impressive experiment ' she said But I don t think it was world shaking

Soviet medical reports have told of dogs being revived after being dead for up to an hour through artificial refrigeration But Dr Henley said no refrigeration was used in the experiment she watched

ROBOT WORKS LIKE HUMAN BRAIN

The U.S Navy announced on July 7 the partial development of an electronic robot which it says will be able to match some of and functions of the human brain.

When it is fully developed the machine is expected to be able to perceive, recognise and identify its surroundings without any human training or control It differs from the ordinary computer in that it does not have to be fed with facts and figures in advance.

Among the potential uses to which such a robot eventually may be put the announcement said are these

New type automatic landing systems and automatic pilots for aircraft....automatic reading of the printed or written word responding to verbal commands automatic language translation either in written or vocal form automatic unearthing of scientific and other information buried in library books and even rapidfire recognition of musical compositions with all the accuracy of a music critic

MECHANISED COWS

British scientist are reported to have created a m chanical cow that may point the way to better feeding for millions of people

The scientists were quoted by 'Reynolds News ' of London as saying that their cow is more efficient than nature s version.

The idea is to produce the proteins humans need for a healthy diet direct from grass leaves and other green stuffs

Th newspaper adds Human beings are unable to digest grass

That is why it is fed to cows and other animals who convert it into highly concentrated protein in the form of s eaks milk pork chops and eggs

But we only get out of animals a tenth or 20th of the food they eat The 'mechanical

now extracts five times more protein from plants than we get from animals.

It does so by mashing up green stuffs to produce a juice which on heating becomes solid.

GARBAGE CAN FOR SPACE-MEN

With all the talk about manned space stations there is not much mention of an interesting problem the crew would have — how to dispose of human wastes and garbage. Discussing Willy Ley's views of the problem the book Flight into Space says "Garbage and other undesired material, Ley points out, cannot be merely ejected from the satellite. It will follow the station on its orbit like a homeless but hopeful dog ... (The garbage) will select an orbit of its own closely paralleling the orbit of the ship. Soon the ship will be surrounded by a thin but faithful cloud of disseminated garbage. This retinue will be annoying and it will spoil the sharpness of astronomical observation. So Willy Ley proposes to enclose the refuse as it accumulates in light aluminium containers, each provided with a small rocket.

"When a container is full, it will be shot backward along the orbit, thus destroying its speed. ... Down it will swing in a long flat curve toward the waiting earth. When it encounters the atmosphere at 18,000 miles an hour it will slow and plunge steeply into it. The undesirable material incinerated by speed will be scattered by the garbage meteor through hundreds of miles of air as novel but inoffensive gases."

• • •

ANTI-RADIATION PILLS

Two scientists have disputed claims that new anti-radiation pills would be really effective against wartime doses of atomic radiation.

Dr Walter Gordy an American told the International Congress of Radiation at Burlington (Vermont) on August 14 1958 that people should not be given "false hopes" that they can be immunised against radiation in hydrogen warfare.

They can always make the H-bomb bigger and faster than they can make the better pills.

Dr Raymond [illegible] said he doubted if anti-radiation [illegible] were as protective as their makers claimed.

Earlier this week Dr David G. Doherty of the Oak Ridge National Laboratory [illegible] the Congress about research work on a cheap pill which he said could reduce injuries from given amount of radiation 50 per cent.

• • • •

SPACE TRAVEL NOT ECONOMICAL

The fact that the energy released by a single hydrogen bomb is enough to lift the entire British Navy to Mars and bring it back to earth may or may not be a comforting thought, but this was the illustration used by Mr Arthur C. Clarke, a former chairman of the British Interplanetary Society, in an interview broadcast in the BBC's Far East News reel to indicate that space travel will not be economically practical until atomic energy is available for propulsion. In space, he thought, might be harnessed in fifteen or twenty years' time and the first landing on the moon—probably by conventional chemical means—might be made about twenty years from now.

Mr Clarke said that he thought the first direct impact of space travel on human affairs would be in the field of television and communication. "The range of the television transmitter is limited by the horizon," he said. "When we can put transmitters on satellites thousands of miles up a single transmitter could cover half the earth and you need only two or three of them in space round the earth to provide a global television network. If any one nation were to establish this and to provide good entertainment, news reporting, and commercial facilities that nation could dominate the earth in a cultural and economic sense." The best height for a satellite station would be about 22,000 miles, Mr Clarke said, because at that height the satellite appeared to be fixed in one spot instead of racing across the sky. He thought that man would be ready to set out to reach Mars and Venus something like five years after the first landing on the moon.

The monkey [illegible]

PEOPLE IN THE NEWS

JEAN FREDERIC JULIOT CURIE

Mr J F Juliot Curie noted French atomic scientist, died in Paris on 14th August 1958

Among the pioneers of atomic research Jean Frederic Juliot Curie and his wife will be remembered with much respect. Their efforts were contributed largely to the making of the atom bomb and the peaceful use of atomic energy It was mainly due to the painstaking work of this couple that humanity came to know so much about the mysteries of the atom.

Born of middle class parents in Paris on March / 19,1900 Jean Frederic Juliot made up his mind to become a scientist while he was only ten.

After graduating in engineering in 1923 from the Ecole de Physique et de Chimie Industrielles Paris he spent two years in heavy industry and military service

In 1925 he joined Mme Marie Curie director of the Radium Institute of the University of Paris as an assistant There he met his furture wife Irene (1897 1956) the elder daughter of Pierre and Marie Curie who was his fellow assistant in her mother's Laboratory They were married on October 9, 1926

While working in the laboratory of Mme Marie Curie he became keenly interested in the study of atomic physics and chemistry

He got a second bachelor's degree and in 1927 his Licence es Science by investigating the properties of alpha rays from radioactive elements

On his thesis on electrochemical explorations of the properties of radioactive and inactive elements in extremely diluted solutions he was awarded Docteur es Sciences degree by the Paris University in 1930

Upto this he was carrying his researches independently for the most part . H began to follow the path of his famous parent in law after 1930 Out of respect for the famous name of Curies he placed his name second in the combined nam Symbolised by their hyphenated name Jolio Curie he and Irene worked as a team.

Together they began atomic bombardment experiements They fired Alpha Particles at the light metal beryllium Their researches prepared the ground for James Chadwick's discovery of the neutron in 1932.

Bombarding the element boron with alpha particles obtained from polonium they probed the method of production of the other newly discovered particle known as positron or positive electron

Here it may be mentioned that the radioactive element polonium was discoverd by Mme Marie Curie in 1898 and was named by her after her native land of Poland (called Polonia in Latin)

Their efforts resulted in their own production of artifical radi activity in 1934

In 1933 the Juliot Curies with Mme Marie Curie established the condi ions in which positive electrons develop by means of gamma rays of great quantum energy In 1934 this brilliant group succeeded in artificially producing radioactive elements thus furnishing proof of the possibil ty of transforming elements For this last named achievement the Joliot Curies were awarded jointly the Nobel Prize for ch mistry in 1935

In 1933 and 1934 th y received the Henri Wilde and Marquet prizes of the Academie des Sc ences

Both were in 1940 honoured by the award made only once in five years, of Columbia University's Barnard Gold Medal for Meritorious Service to Science

Frederic Juliot-Curie served various scientific research institutions of France as well as the Paris University as a director and Professor He became a professor of College de France in 1937

He and his wife continued their researches in Atomic Physics and in February 1940 they were among the first experimenters to attain the long sought chain reaction in nuclear fission

He was a great patriot During the Second World War when France was run over by the Nazis the scientist stood in the forefront of underground activities as a leader of the Front National, the Resistance movement in the university circles of Paris

As soon as France was liberated he was honoured by his countrymen

In the post war period he directed the atomic energy researches in his country as well as held several official posts in this connection

In 1946 he was elected to the presidency of the newly formed World Federation of Association of Scientific Workers an organisation dedicated to the initiation of action to insure that science plays its proper part in helping to solve the urgent problems of our time"

Of contemporary French scientists he was the most prominent in political affairs He was a member of the Communist Party which he joined in 1940

He was appointed French High Commissioner for Atomic Energy and alternate French delegate to the International Atomic Energy Commission of the United Nations by Gen. Charles de Gaulle in 1946

Later in 1950 he was removed from all official posts in connection with atomic energy because of his Communist affiliation but he continued to be professor at the College de France and member of the National Committee for Scientific Research In 1956 he was elected to the Faculty of Sciences, University of Paris which post he held till the time of of his death

He and his wife came to India in 1950 They attended the thirty seventh meeting of the Indian Science Congress Association which was held at Poona in January 1950 and visited many cities of our country including Calcutta where his wife opened the Institute of Nuclear Physics (Calcutta University) and the Chittaranjan Cancer Hospital.

He was a great champion of peace He advocated the peaceful use of atomic energy

He was the chairman of the World Peace Congress In 1951 he was awarded Stalin Peace Prize

His wife died in 1956 They have left one son and one daughter and it is hoped that they will maintain the tradition of the Curie family

• • •

MR J G STRIJDOM

A vehement segregationist and a staunch advocate of apartheid policy South Africa's Prime Minister Mr Johannes Gerhardus Strijdom, died in Cape Town on August 24 1958

He was an outspoken republican and it was his Government which [illegible] the Union Flag as the only official flag of South Africa. At the same time it abolished the provision which laid down that the British Flag should be flown side by side with the Union Flag on official occasions He also ordained that only [illegible] the Union National Anthem should be played at official functions, thus ending a tradition under which "God save the Queen" had equal status with it

Mr Strijdom was chairman of Die Voortrekker Pers Beperk the publishers of the Johannesburg newspaper "Die Transvaler"

He was married twice His first marriage to the South African actress, Marda Vanne was dissolved. In 1931 he married Miss Susanna De Klerk, daughter of Dutch reformed church minister They had a son and a daughter

Mr Strijdom—known as Hans—was born on July 14 1893 at Willowmore Cape Colony the son of Mr P G Strijdom, and came of Boer stock

He was educated at the Old Victoria College now the University of Stellenbosch and at the Transvaal University College Pretoria where he took a degree of Bachelor of Laws

In 1917 he joined a firm of attorneys in Pretoria and was admitted to the bar a year later Then he went to Nylstroom Transvaal where he practised as an attorney until 1934 when he retired to devote himself entirely to politics and to the running of his farm on the Springbok Flats in Transvaal

Appointed Secretary of the Nationalist Party in the Transvaal in 1918 he was first elected to Parliament in 1929 as member for Waterberg

In 1948 when the Nationalist Party was voted to office under Dr Daniel Malan, Mr Strijdom went into the Cabinet as Minister of Lands and Irrigation.

In November 1954, the Nationalist Party elected him leader following the resignation of Dr Malan.

The same day the Governor General invited him to become Prime Minister and form a new Ministry

As Prime Minister, Mr Strijdom set out to settle the constitutional struggle started by Dr Malan over the removal of coloured voters from the common roll

His first major step was to introduce a bill increasing the number of Senators from [illegible] to [illegible] and altering the method of election to the Senate as a result of which the Nationalists secured 77 seats in the new Upper Chamber against a combined opposition of 11

Then he called a joint session of both Houses—in which the Nationalists now had an easy two thirds majority—to pass the South African Amendment Act which removed the coloured voters from the common roll giving them communal representation on a separate list with four white Members of Parliament to look after their interests

He was an ardent believer in the pre-eminence of the Volk—the Afrikaaner people A strict votary of apartheid he was convinced that "keeping the kaffir in his place was absolutely essential for the white man to remain the master

In June 1957 he refused to attend the Commonwealth Prime Ministers conference on "personal reasons," but it was unofficially reported that the real reason for his decision was his reluctance to sit with Dr K Nkrumah Ghana's Prime Minister at the same table.

MALIK FIROZ KHAN NOON

Mr Firoz Khan Noon Prime Minister of Pakistan arrived in New Delhi on 9th September 1958 to discuss Indo Pak border disputes with India's Prime Minister, Mr Nehru

Malik Mohammed Firoz Khan Noon who was born in 1893 received his education at the Aitchison College Lahore the Wadham College Oxford and was called to Bar from the Inner Temple London He was first appointed a Minister in the Punjab Provincial Government in 1920 to represent the rural interests.

When the new constitutional reforms were introduced in India he was elected to the first Legislature of the Punjab in 1920 of which he remained an elected member up to June 1936 In the same year he was appointed the non-official High Commissioner for India in London

In 1941, Malik Firoz Khan Noon was appointed a Member of the Governor General's Executive Council in Delhi In the same year he went to the United States of America and Canada visiting many important towns and explaining to the people the role India was playing in the Second World War Later in the year he returned to India as the Member for Labour in the Viceroy's Executive Council.

In 1942 he became the first Indian Defence Member of the Governor General's Executive Council which office he held till September 1945 While a member of the Governor General's Executive Council he went to London in 1941 to represent India on the War Cabinet In the summer of 1945, he represented India at the first United Nations Conference in San Francisco In 1946 he resigned his post as a Member of the Viceroy's Executive Council and joined politics He successfully fought an election to the Punjab Legislative Assembly on the Muslim League ticket

In 1947 he was sent by late Mr M. A. Jinnah as his Special Envoy to the Middle Eastern countries, including Turkey

In April 1950 he was appointed Governor of East Pakistan an Office which he held till the 3rd April 1953 when he was elected leader of the Punjab Muslim League Assembly Party and was appointed Chief Minister This office he held till June, 1955

Malik Firoz Khan Noon who was a member of the Pakistan first Constituent Assembly led the Pakistan Delegation to the ECAFE Conference at Singapore in 1949, and also headed the Pakistan Delegation to the Food and Agriculture Organisation of the United Nations Organisation in the later part of 1949 at Washington

Malik Firoz Khan Noon is the author of four books These are a novel on India called "Scented Dust a comparative administrative study known as Canada and India", a descriptive illustrated book on India called India and a short story book for children named Wisdom from Fools

* * *

MR N V GADGIL

Mr N V Gadgil has been appointed the Governor of Punjab in place of Mr C P N Singh

Mr Gadgil was a member of the Lok Sabha from 1935 to 1957 except for four years when he was in prison in connection with the freedom struggle.

Mr Gadgil was once Minister for Works Mines and Power holding this office for five years from August 1947 to May 1952 He continued thereafter as a member of the Lok Sabha until the last general elections when he was among the major congress casualties to the Samyukta Maharashtra Thereafter he was found a berth in the State Bank of India as its Vice Chairman. This assignment he took up in July 1957 At 62 Gadgil who began as a lawyer and a politician finds himself a Governor

* * *

PRINCE NORODOM SIHANOUK

Prince Norodom Sihanouk, Prime Minister of Cambodia arrived in New Delhi on Monday August, 11 on a one-day unofficial

ment. He left for China next day after having important discussions with India's Prime Minister Pandit Nehru. In a press Conference Prince Sihanouk described the talks with Mr. Nehru as satisfactory and acknowledged the advice he had received from the Indian Prime Minister on many points.

Short, plump, 36 year old Prince Norodom Sihanouk has been one time King and four times Prime Minister of the tiny Indo-China Kingdom of Cambodia.

Immensely popular with the masses, unconventional (he is a writer of popular tunes) and as shrewd a politician as any plebeian agitator, His Royal Highness came to power originally because the French authorities in Cambodia made (for them) an error of judgment.

When King Sisowath died in 1941 the French passed over his successor the Crown Prince Monireth because they wanted someone more malleable. They chose the grandson—Norodom—who turned out to be a fiery nationalist—and have regretted it ever since.

From his grandfather the new crowned inherited the jaw-breaking title of Preah Bat Samdech Preah Sisowath [illegible] Varman Hariraksh [illegible] Kraywre's Sulilay Preah Chan [illegible] Campuchea Tippeday—a remarkable handle indeed even by Indian princely standards. But it meant nothing for the new royal democrat.

Last year Prince Norodom was in Bombay en route by sea to France for medical treatment (he has a weak heart) and said, "It's a beautiful city. I want to come again."

On arrival in New Delhi on August 11, he said, "It is always with a profound emotion that I touch the soil of India to which the world is so much indebted. Bonds closely unite our two countries which, through the centuries, have always maintained fraternal relations."

Silk Industry In India

The Central Silk Board was constituted in 1949 for the promotion and development of sericulture and the silk industry in India.

The Board's programme for the Second Five Year Plan is intended to achieve self-sufficiency in the silk industry by the end of the Plan period.

A provision of Rs. 5 crores has been included in the Second Five Year Plan for expenditure on sericulture by both the Centre and the State Governments, of which a sum [illegible] is earmarked for expenditure on the administration of the Central Silk Board and on the Central schemes implemented by the Board.

During 1956-57, on recommendations of the Central Silk Board, grants amounting to Rs. 37,74,575 and loans amounting to Rs. 20,57,050 were sanctioned to the State Governments against a budget provision of Rs. 50,00,000 for grants and Rs. 50,00,000 for loans.

The pattern for assistance for 1957-58 was liberalised to provide 100 per cent assistance for development schemes (excluding the cost of buildings) [illegible] and 75 per cent of the expenditure [illegible] from the Central funds. In case of other schemes, the [illegible] equally between the Centre and the State Governments but the [illegible] capital is provided as a loan by the Centre.

From 1957 [illegible] the Central Silk Board's programmes have been mainly for improvement of silkworm rearing, mulberry cultivation, silk reeling of raw silk and for an All India Sericultural Training Institute.

An important scheme which the Central Silk Board is pursuing [illegible] is that for [illegible] Race Seed Station at [illegible] which was initially sanctioned in 1956-57.

Another important Central scheme taken up during the year relates to the setting up of an All India Training Institute. Arrangements are under way to start [illegible] the Institute [illegible] in buildings [illegible] located in Mysore.

With the efforts being made by the State Governments of Jammu and Kashmir and Mysore [illegible] Dr. J. Tarbox, an expert [illegible] from Japan, [illegible] the Indian sericultural [illegible] and the services of Mr. [illegible] another expert have been obtained from Japan under the Colombo Plan for a period of one year.

PARLIAMENTARY AFFAIRS

The Monsoon Session of the Lok Sabha began on August, 11, 1958

Indo-Pak Border Incidents

Speaking on an adjournment motion on the opening day by five Opposition Members to discuss the recent Incidents on the Indo-Pakistan border the Prime Minister Shri Nehru said that India was quite alive to the situation and she was going to protect her borders from any kind of incursion Shri Nehru said he did not know whether Pakistani troops were being concentrated on the other side of the border but he did not think there was any danger of fighting on a bigger scale While India should be prepared for any contingency she preferred to solve the border dispute with Pakistan in a civilized way The Speaker declined to give his consent to the motion after the Prime Minister had stated that he proposed to keep the House informed of the situation from time to time if necessary, every two or three days

The Middle East Situation

In a statement in the Lok Sabha on August 14 on West Asian situation the Prime Minister reiterated India's firm view that all foreign troops should be withdrawn from the region He also reiterated India's opposition to the sending of any U N police force to that area Shri Nehru said this was bound to cause resentment in the region.

Shri Nehru mentioned that during the past few weeks he had received many suggestions from friendly countries with whom we are intimately connected in favour of limited conferences or joint statements "It seems to me, Shri Nehru said that in a situation like the one we are passing through any limited action of this kind would not be helpful It is the powers principally involved in the disputes that had to be brought into the area of discussion Any settlement in West Asia Shri Nehru emphasised must have the good will and co operation of the Arab nations The need for oil by the Western European countries is patent There should be no difficulty in arriving at a friendly arrangement which would assure the supply of oil.

India's Foreign Exchange Position

About the foreign exchange position Shri Morarji Desai Finance Minister, said in the Lok Sabha on August 13, 1958 that the Government had been able to bring down the average weekly withdrawal on the country's sterling balance to a little over four crore of rupees in the first seven months of this year This compared with more than seven crores in the corresponding period last years The Finance Minister said that according to the latest estimate India's requirement of foreign exchange would be of the order of 560 crores for the last three years of the current Plan The previous estimate was about 500 cores Shri Desai also mentioned the various measures taken by the Government to develop the country's exports But he pointed out that the task of making an improvement in the export earnings during the current year was likely to encounter great difficulties because of the recession in international trade and the dullness of the outlook for exports.

Earlier on August 11 the Minister for Steel Mines and Fuel Sardar Swaran Singh told the Lok Sabha that no difficulty about foreign exchange was likely for the mining part of the Neyveli Valley Project This had already been included in the core of the Plan

Water supplies to Pakistan

The Deputy Minister for Irrigation and Power Shri Jaisukhlal Hathi re affirmed in the Lok Sabha on August 12 that India stood by her earlier declaration that it would not be possible for her to supply water to Pakistan from the eastern rivers of the Indus Basin beyond 1962 That position he said had been made clear and that position stood.

Legislative Business

The Lok Sabha passed on August 12 the Official Bill seeking to provide for the preservation of ancient and historical monuments archaeological sites and remains of national importance The object of the Bill is to demarcate clearly the Central and States spheres in regard to the protection of ancient monuments. One of the conditions laid down for a monument to be declared as ancient [illegible]

that it should have been in existence for not less than 100 years.

The House also passed on August 12 the All-India Services (Amendment) Bill which provides for the extension of the Indian Administrative Service and the Indian Police Service cadres to Jammu & Kashmir State.

The Lok Sabha passed on August 13 an Official Bill seeking to replace the Ordinance which was issued recently to re-adjust the excise and customs duties in the light of the reduction in prices agreed to by the principal companies distributing oil products in India. Explaining why the reductions had not been passed on to the consumer the Finance Minister said that the price reductions were not of a magnitude which would be reflected significantly in the consumer prices.

Discussion on Food Situation

Opening a debate on the food situation the Food and Agriculture Minister, Shri Ajit Prasad Jain said in the Lok Sabha on August 20 that there were reasons to believe that the food prices should cease to show an upward trend with the prospects of arrival of the *kharif* crop. Next six to eight weeks were going to be difficult and all that he could say was that Government would do their best to cope with the situation. He expressed the hope that with the present stocks of foodgrains at Government disposal and with further imports for which contracts had been entered into Government would be able to meet [illegible] the present rate of [illegible]. He said negotiations with the United States for importing foodgrains under the Public Law 480 would be completed in the next few weeks. When [illegible] supplies were available the Centre would be in a position to increase [illegible] to the States. He [illegible] ed the [illegible] were going on for a better exchange of [illegible] for [illegible].

Shri Jain said Government['s] [illegible] policy about the [illegible] of food would be to maintain [illegible] in the movement of food and to [illegible] control. Fair price shops would continue to operate and wherever necessary [illegible] would be [illegible]. [illegible] trading in food grains would continue to be [illegible]. Government would [illegible] wheat [illegible] [illegible] [illegible] [illegible] market. [illegible] Government had been asked [illegible].

[illegible]

in the country than increasing the [illegible] production. The Government and the [illegible] ing Commission had realised this [illegible] to bring this realisation to all the [illegible] ments as well. He said one of the [illegible] developments in India in the last few years had been the extraordinary dependence of the individual on outside help with the result that people tended to look to Government for all their needs. He added. "Let us not live in an atmosphere of despair, weakness or [illegible] and complain and blame others and not do the job ourselves."

The two-day discussion on the food situation in the Lok Sabha concluded with the adoption of a motion stating that the steps taken by Government so far to improve the situation were generally satisfactory. The House further requested the Government to take more suitable and active steps with a view to making the country self-sufficient in food in the shortest possible time.

Benaras Hindu University (Amendment) Bill

The Lok Sabha on August 18 referred to the select Committee the Benaras Hindu University (Amendment) Bill. This seeks to replace recent Ordinance to improve the day-to-day working and administration of the University.

Intervening in the debate the Prime Minister defended the Government's action in relation to the Benaras Hindu University. He said it was a well known fact that for a considerable time things had not been satisfactory in the University. Shri Nehru pointed out that the Government had no alternative but to accept the recommendations of this highly competent independent and impartial Committee.

Foreign Affairs Debate in Rajya Sabha

Opening a debate on foreign affairs in the Rajya Sabha on August 26, the Prime Minister [illegible] mainly on Indo-Pakistan relations with Pakistan. He said that he was not optimistic enough to suggest that an end to the border [illegible] would lead to a solution of the [illegible] problems between the two countries. But it would lead to the creation of an atmosphere for settling other problems.

The Prime Minister said that the [illegible] [illegible] of partition and the past [illegible] happenings was [illegible] [illegible] [illegible] [illegible] both the countries [illegible] [illegible]. What was more [illegible] [illegible] [illegible] [illegible] the old Muslim League. That was a legacy of [illegible] of [illegible] [illegible] everything that [illegible] [illegible]. Even in the case of [illegible]

questions like Kashmir the canal waters or rehabilitation, one could not go towards a solution without coming up against this solid wall of violent hatred which was nurtured and kept up in the Press and the speeches of the leading men in Pakistan As an instance Shri Nehru referred to a speech by the Muslim League leader, Mian Mumtaz Daultana, in which he had said that it was the duty of Pakistanis to hate everything Indian Mr Daultana had said if any good thing came from India, Pakistan should not accept it.

The Prime Minister said that while Pakistan had denied the existence of any foreign bases on her territory the fact was that military equipment of Pakistan had grown and grown This arming of Pakistan was a matter of some concern to India Pakistan was an independent country and was free to do what she chose but it became a matter of concern to this country when the arming was accompanied by a background that was exhibited in Mr Daultana's speech

Winding up the debate on foreign affairs in the Rajya Sabha on August 27 the Prime Minister welcomed the Anglo-American offer to stop nuclear tests for a year from the end of October He hoped the tests would ultimately be given up for good and that no country would undertake them Shri Nehru also answered criticism about the delay in the *de jure* transfer of Pondicherry He said that he had been assured by the present French Government that they stood by France's earlier commitments in regard to this and that they wanted to give effect to those commitments as soon as possible

L I C's Investment Policy

The new investment policy of the Life Insurance Corporation was announced in the Lok Sabha on August 25 by the Union Finance Minister He placed on the Table of the House a notification making applicable to the Corporation certain provisions of the Insurance Act.

Under the new scheme the investments of the Corporation will be divided into three categories firstly Government and approved securities which generally meant gilt edged securities secondly investments approved under section 27 (a) of the Insurance Act which have been made applicable to the Corporation; and thirdly other investments At least 50 per cent of the total funds of the Corporation would be held in Government and approved securities and not more than 15 per cent in other investments The result will be that about 35 per cent will b held in what is known as approved investments

Working Journalists' (Fixation of Wages) Bill

The Lok Sabha passed on August 25 the Official Bill seeking to replace the Ordinance about the setting up of a Special Committee to make recommendations for fixing rates and wages for working journalists Replying to the debate the Minister for Labour and Employment Shri Gulzarilal Nanda, said that in determining the wage structure the capacity to pay was being taken into consideration The Special Committee would ascertain all the facts before making its recommendations It would be open to the Committee to take into account the regional variations but Shri Nanda pointed out the approach in the industrial fields these days was towards standardised wages so that day to-day bickerings and disputes might be avoided The Committee would also go into the position of small newspapers

Legislative Measures

The Rajya Sabha passed on August 25 two Official Bills one seeking to extend the All-India Services Act to Jammu and Kashmir and the other providing for reciprocal arrangements about service of court summons and warrants between Jammu and Kashmir and the rest of India Both have already been adopted by the Lok Sabha

The Lok Sabha passed on August 26 the Sugar Export Promotion Bill. It seeks to replace an Ordinance the object of which is to provide for the export of sugar in the public interest and for the levy and collection in certain circumstances of an additional excise duty on sugar produced in India

The Lok Sabha passed on August 28 the Central Sales Tax (Second Amendment) Bill, as reported by the Select Committee The House also passed on that day another Official Bill seeking to amend the Industrial Disputes (Banking Companies) Decisions Act

Centre to Supply Foodgrains to U P

The Food Minister Shri Ajit Prasad Jain told the Lok Sabha on September 3 that he had agreed to supply this month 25 000 tons more of foodgrains to Uttar Pradesh This quantity had already started moving by special trains. He was making a statement in connection with a number of motions of adjournment relating to the food situation in U P tabled by a dozen Opposition members. Disagreeing with the contention that Centre was directly

responsible for the supply and distribution of foodgrains as this was a matter specifically mentioned in the concurrent list the Food Minister stated that the relevant entry in the Concurrent List related to trade and commerce in the foodgrains. In this particular case the question was one of supply. The Central Government had not taken an absolute responsibility for the supply of foodgrains. The States were not prohibited for making purchases either in their own territory or in other parts of the country. It was no the exclusive responsibility of the Centre to meet all the requirements of the State Governments.

Ruling out the adjournment motions the Speaker observed that food was primarily the concern of a State Government although the Central Government did not detach itself from the welfare of the States. So far as procurement of food was concerned there was no impediment to a State Government procuring whatever was necessary from its own resources or from other States. Whatever supplies the State Government had been asking for, the Centre had been supplying. The Centre the Centre had not defaulted.

B H U (Amendment) Bill Passed

The Lok Sabha on September 2 passed the Banaras Hindu University (Amendment) Bill as reported by the Select Committee. Intervening in the debate the Home Minister defended Government's action in issuing the ordinance after having seen a chapter of [illegible] failures in the University for the last few years. He pointed out that there was no other course open but to appoint a Committee to enquire into the state of affairs at the University and to follow its recommendations as Government had done.

Earlier on September 1 the Minister for Education Dr Shrimali commended the Bill and [illegible] of the changes made by the Select Committee in regard to the Screening Committee now termed as Reviewing Committee. He [illegible] that [illegible] and independence of the University had to survive the [illegible] that had grown there during the last seven years.

Canal Water Dispute

The Lok Sabha held on September 4 a [illegible] discussion on the canal water dispute. [illegible] the Minister for Irrigation and Power Hafiz Mohammed Ibrahim, said India was supplying water to Pakistan not because she was afraid [illegible] on humanitarian considerations. [illegible] the suggestion that India should not [illegible] link canals in Pakistan, he said India had given no commitment about the [illegible] to Pakistan. She had not taken any decision [illegible]. Hafiz Mohammed Ibrahim also referred to the point made in the debate that India [illegible] stop water supplied to Pakistan after 1962. He said India had already made her [illegible] clear.

Working Journalists Bill Passed

The Rajya Sabha on September 4 passed the Official Bill to provide for the fixation of rates of wages for working journalists. The measure had already been [illegible] by Lok Sabha. Replying to the [illegible] in the Rajya Sabha the Minister for Labour Shri Gulzarilal Nanda, [illegible] a suggestion that India had tried to circumvent the judgment of the Supreme Court about the decision of the Wage Board. [illegible] Government ought to [illegible] the [illegible] ment was fully complied with and the defects pointed out by the Court were removed. Shri Nanda said much had been made of collective bargaining but that had been [illegible] without any success. Those who quoted the Press Commission's report about collective bargaining could as well have [illegible] Commission's suggestion about the [illegible] scales of pay.

Memorial At Rajghat

The Lok Sabha passed on September [illegible] the Raj Ghat Samadhi (Amendment) Bill which seeks to maintain [illegible] provisions of the [illegible] [illegible] [illegible] the [illegible] [illegible] and [illegible] of the Samadhi. In [illegible] the [illegible] Samadhi the Prime Minister said that work would [illegible] start at Raj Ghat in Delhi on the first phase of the [illegible] [illegible] Gandhi. [illegible] [illegible] and he felt that [illegible] first phase of the [illegible] [illegible] of the [illegible] [illegible] of the year.

Foreign Events

STABILITY IN MIDDLE-EAST RESTORED

The U.N. General Assembly on August 21, 1958 gave unanimous approval to an Arab resolution aimed at restoring stability to the Middle East and securing the withdrawal of American and British troops from the Lebanon and Jordan.

The resolution drawn up by the ten Arab members of the U.N. in a surprise move on August 20 and introduced in the Assembly on August 21, gave assurances against interference by Arab nations in each other's affairs and called on the U.N. Secretary General to undertake a new peace making mission in the Middle East.

Eighty nations voted for the resolution. The Dominican Republic was absent when the vote was taken.

The rare unanimity in the General Assembly caused a great burst of applause and relief after seven days of tense and bitter debate.

Iraq, Jordan, the Lebanon, Libya, Morocco, Saudi Arabia, Sudan, Tunisia, United Arab Republic and Yemen were announced as the sponsors of the Arab resolution which Mr. Mahgoub formally introduced in the name of all the Arab States represented in the Assembly.

Presenting the Arab resolution Mr. Mohammed Mahgoub, Sudanese Foreign Minister, said it brought the Middle East family dispute to a happy conclusion.

The Sudanese Foreign Minister said what was required in the Middle East was "to develop and strengthen the League of Arab States and to enable it to play a greater role than it is able to play at the present time. The Arab States should each be given full right to decide for itself and according to the wish and desire of its people to join in a federation, confederation or a union as the case may be—or to remain completely independent," he declared.

"We are in complete agreement that foreign troops should be withdrawn from the Lebanon and Jordan," he said, "but we sincerely believe that such withdrawal will not by itself remedy the situation from which the Middle East has grievously suffered and continues to suffer."

Mr. Arthur Lall (India) said it was with joy and pride that he welcomed the Middle East resolution which the ten Arab nations introduced in the General Assembly's Middle East emergency debate.

"We see in this a beginning of a new era of co-operation and prosperity, a new era of peace in the Middle East in which we as a neighbour will share," he declared. "Their prosperity and their peace is ours. We have friendship for all peoples of the Arab world and all their States."

Mr. Nehru addressing a public meeting at Aurangabad on August 23, 1958 extended his whole-hearted congratulations to the Arab nations who sponsored the resolution in the U.N. General Assembly on the West Asian situation and to the U.N. for its acceptance.

He said the joint Arab resolution had brought about a situation in which the possibilities of a dreaded war had receded. "We have been saved from the tribulations of war," he said.

Mr. Nehru said the situation in the Lebanon and Jordan following the revolution in Iraq had spelt danger of war a few days ago. "These dangers have now very much receded after the acceptance of the joint Arab resolution by the U.N. General Assembly," he said.

PAKISTAN TAKES OVER GWADOR

On the advice of the United Kingdom Government the Sultan of Muscat and Oman returned the territory of Gwador, an enclave on the Mekran Coast of Pakistan, to the Pakistan Government on September 8, 1958. Agha Abdul Hamid, Cabinet Secretary, Government of Pakistan, has under [illegible] vested in him by the President of Pakistan taken over the possession of the port of Gwador and the allied area. Now the territory is a part of Pakistan in the Province of West Pakistan.

Gwador is a sea port situated on the Mekran Coast between [illegible] and [illegible], about 300 miles west of Karachi and about 45 miles from Iran-Pakistan border. It is a natural port and can be developed into a harbour.

The name Gwadar is a combination of two Baluchi words Gwad and Dar which mean the Gateway of Wind. Gwadar has a temperate climate and is considered one of the best places in the coastal towns of the Persian Gulf.

The indigenous produce of Gwadar is fish which provides the main source of livelihood for the inhabitants. There is a great scope for the development of this industry. Trade is mostly in the hands of Hindus and Khojas.

Gwadar is now the main centre for smuggling of goods to Pakistan, Iran and Afghanistan. Large steamers cannot enter the harbour but small vessels ply to Basra, Muscat, Karachi, Bombay and Malabar Coast.

The population of Gwadar is estimated to be 14,000 to 20,000. There are about 8,000 to 10,000 people in Gwadar town proper and 3,400 in the two subsidiary ports of Sur and Pishukan which are in fact small fishing villages. The rest are scattered over the area known as Dasht [illegible] whose boundary with the former Kalat State has never been demarcated. The majority of the inhabitants are Baluchis who call themselves Makranis and have close connections with Makran of West Pakistan and Karachi. Also there are some Arabs and Hindus.

The only source of revenue is from the customs duty on goods imported by land and sea. In pre-war years this amounted to no more than Rs. 30,000 a year. By 1958 it has risen to Rs. 18,00,000 per annum. This large increase is due in part to goods intended for consumption in Pakistan and exported through illicit channels.

Gwadar was known to the Portuguese who sacked and burnt it in 1581. They seemed to have renewed the occupation of the area because they have left behind a masonry dam in the easternmost area of the promontory.

Gwadar came under the control of G[illegible] [illegible] of Makran [illegible] in the early 17th century. In 1735 they [illegible] [illegible] [illegible] of Persia but [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] Kalat [illegible] [illegible] [illegible] [illegible] [illegible]

In 17[illegible] of Gwadar as a [illegible] allowance for the [illegible]

In 1792, on the death of his father, Syed Sultan returned to Muscat and became its Sultan as well as that of Oman. He continued to enjoy the revenue of Gwadar. Ever since that date the Sultans of Muscat and Oman have continued in control of Gwadar. With the creation of Pakistan the Pakistan Government claimed the territory of Gwadar as an integral part of its own country. The Sultan's right to exercise control over Gwadar was not acknowledged by Pakistan who in 1949 raised the question with the British Government of a possible transfer of Gwadar to Pakistan. The U.K. Government undertook to use their good offices in this connection. After prolonged negotiations the Sultan agreed to accede the territory to Pakistan.

RACIAL RIOTS IN LONDON

Racial riots began in Nottingham [illegible] district of West London on August 23, when a mob of Whites attacked Coloured persons living in or passing through that area. Four persons—two Coloured men, one White man and a White woman—were arrested and charged with obstructing the police.

The trouble started when burning waste material was thrown through the window of a house occupied by a Coloured man. Shortly after London's pubs closed down for the night, a mob of 100 youths armed with sticks, iron bars and knives gathered under a railway bridge and marched [illegible] towards the streets where many of the Negroes live. Soon the roads were full of people. [illegible] [illegible] [illegible] the mob, [illegible] and [illegible] [illegible]

More than 500 people fought with [illegible] clubs, stones and broken bottles [illegible] [illegible] [illegible] [illegible] [illegible] against London's [illegible] Negro [illegible] August 31. Terrified men and women barricaded themselves in homes [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]

[illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] One car charged [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] house. A gang of [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] the [illegible] [illegible] [illegible] [illegible]

[illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] More than [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]

in a wild melee A mob of white teenagers stormed down one road where a large number of coloured colonials and Asians live smashing windows in houses and apartments

Flying squads of police with dogs rushed into the crowd to disperse them

Almost exactly 19 years since the outbreak of World War II the Nazi Swastika showed up in town. Youths draped it across a car It was ripped away by a police sergeant

There has been concern in Britain about the heavy, post war influx of West Indians and Asians from the far flung multi racial Commonwealth There is no restriction on immigration into Britain from the Commonwealth and colonial countries

A leader of the Labour Party said that despite the heavy immigration in recent years there were only 190 000 coloured persons in Britain out of a population of 50 million.

The authorities and the public in London were shocked and concerned as children's minds are influenced by the racial virus

Ugly racial phrases such as Niggers will get you lynch the blackies were shouted by hundreds of children in the streets who were bent upon deriving excitement from organised attacks on Negroes

Indians were not involved in the racial outbreak The main target were West Indians and others

According to the News Chronicle reporters ' a plot to stir up racial feelings was responsible for disturbances in the Notting Hill area of London This tends to confirm earlier findings that South African agents and Fascists were backing anti social elements to continue racial riots

Police detectives visited cafes and other places for information about this well-directed anti coloured movement Thugs were moving along the London streets in big cars each containing eight or ten persons and hunting for victims This confirms the affair was well organised and well financed

Amongst the people of Europe the British are said to be the most race conscious Unless prior arrangements have been made about accommodation a non white visitor to London and other British cities may find himself stranded White hotel keepers are reluctant to cater to non Whites and the story is the same in regard to houses of entertainment Intercourse between the whites and the non Whites is strictly limited

What contact there has been between the Whites and the non Whites in Britain has been more of a formal than social nature The Whites have been conscious of their supposed superiority to the non whites while the latter have philosophically endured what they could not help

After attainment of freedom by some Asian and African countries the non Whites have naturally ceased feeling inferior to the Whites either in Britain or elsewhere in the world Emergence of this new attitude of self respect amongst the non whites is something intolerable to general run of white population in Britain which till yesterday treated non whites as subject races and slaves

But Indians and people of some other Asian and African countries are not subjected to the same hostility by the White population of Britain as the non whites from West Indies Asians and people from African countries keep only restricted contact with the Whites of Britain and live in their own groups and clubs That is not the case with non whites from West Indies many of whom are of Indian, African or mixed origin They are accustomed to the same social life as of the Whites in Britain Their contact with American whites makes them at home in Western social life in any other country including Britain They meet the white girls of Britain on the same footing as the white youths. People from West Indies compete with the Whites in all fields when they come to Britain This is said to be the key to understanding of the present flare-up of racial antagonism in Britain

'NAUTILUS' PIONEERS TRANSPOLAR SEA ROUTE

The historic voyage of the 2930-ton nuclear powered submarine *Nautilus* across the Arctic Sea has provided scientists with new data on the Arctic Ocean and has charted a possible and shorter new commercial seaway from the Pacific to the Atlantic

Announcement of the dramatic voyage was made in Washington on August 10 1958 when President Eisenhower personally pinned a Legion of Merit on Commander W R Anderson 37 year-old skipper of the Nautilus Mr Eisenhower also awarded a special presidential unit citation to the officers and crew of the atomic powered submarine for their outstanding achievements

The history making feat opens up a new horizon for world navigation, and a new and cheaper sea route for commerce between east

and [illegible] In the future years it may become possible to use this short route across the top of the world as a commercial undersea line between the world's major oceans.

Beginning the historic voyage, the Nautilus left Hawaii on July 23, and sailed to the Bering Strait, which separates Russia from Alaska where it arrived on July 29. Then it surfaced briefly to inspect the ice pack. On August 1 it moved under the Arctic ice, passed under the North Pole on August 3 and emerged from under the ice at a point between Spitsbergen and Greenland on the morning of August 5. It arrived off Iceland on August 8 and completed its trip on August 12 when it arrived at Portland, England. It sailed nearly 8,000 miles in all and rarely surfaced.

Describing his trip, Comdr. W. R. Anderson said that the Nautilus cruised about 400 feet below the ice pack at a speed of about 20 knots trying to find the best highway [illegible] transpolar route. During the trip the crew of 116 men could look through the periscope and see the ice going by overhead.

It found [illegible] ranging from 300 to 1200 feet deep in the Arctic [illegible]. The Nautilus was under the polar ice for 96 hours sailing 1,830 miles in that time. The commander said that the submarine's [illegible] was entirely through [illegible] waters. While the [illegible] to [illegible] in the air above it for [illegible] its [illegible] under the ice pack. But when the [illegible] under the Ice Cap [illegible] were shown, cheers [illegible] and [illegible] were [illegible] and the [illegible] played [illegible].

The polar voyage of the Nautilus has provided [illegible] data on the Arctic Ocean as well as [illegible] possible and [illegible] commercial seaway from the [illegible] to the Atlantic.

The Nautilus, carrying 10 [illegible] degrees [illegible] data [illegible] and [illegible] for measuring the depth of the ocean [illegible] than 11,000 [illegible] relatively unchartered Arctic Basin. The [illegible] of water at [illegible] Pole at 13,410 feet some 1,[illegible] feet deeper than [illegible]. Scientists [illegible] the [illegible] based on the [illegible] of [illegible] although [illegible] feet [illegible].

[illegible] the Arctic.

Ocean, also were determined during the [illegible] days cruise under the polar [illegible]. A [illegible] made [illegible] enabled the submarine to plot precisely its position at all times without reference to such conventional navigation guides as celestial [illegible].

In order to illustrate the commercial possibilities for cargo submarines that were opened up by the Nautilus's voyage, officials pointed out that the existing surface route from London to Tokyo was 11,200 miles, but the undersea route was only 6,300 miles, a saving of approximately 41 per cent in travel time and cost.

To prove that the feat of the Nautilus was no fluke in the [illegible], another U.S. [illegible] submarine Skate a week later [illegible] the [illegible] trail blazed by the Nautilus. [illegible] traveled from [illegible] surfaced a number of times through [illegible] in the near solid wall of Arctic ice.

Preparations for the under-the-ice [illegible] in the Arctic Ocean began many months before the historic trip. Last year the Nautilus on a [illegible] Arctic exploration, travelled more than 1,000 miles under the ice collecting scientific data on water [illegible] and [illegible] currents and cold weather [illegible] of equipment and machinery.

The world's first atomic powered undersea craft was officially christened Nautilus and launched on January 21, 1954 by Mrs. [illegible]. But it was a year later, on January [illegible] 1955 that the atomic [illegible] power was realized when the [illegible] from her berth at Groton, Connecticut and [illegible] the [illegible] message "Under way on nuclear power."

Since then the Nautilus has broken practically all records held by the conventional submarines. On her first charge of atomic fuel [illegible], the boat [illegible] 60,000 miles and [illegible] twice around the world. [illegible]

The [illegible]

The Arctic [illegible]

from the atom, the ship's turbine is actually driven by conventional non radioactive steam

The *Nautilus* is the U S Navy's veteran atomic submarine She has two sisterships in service—the *Seawolf* and the *Skate*

Three more nuclear submarines—the *Swordfish*, *Sargo* and *Skipjack*—have been launched and are awaiting commissioning Two others will be launched soon—the *Seadragon* and the *Triton*

DETECTION AND CONTROL OF NUCLEAR TESTS

The Geneva conference of nuclear scientists from East and West in a report published in London on August 30 1958 recommended a world wide network of control posts to police a ban on nuclear tests

The conference which met from July 7 to August 20 and was attended by top scientists from the U.S.A Britain France Canada the Soviet Union Poland Czechoslovakia and Rumania decided it was possible technically to supervise an international political agreement to cease nuclear tests

It suggested the establishment of a control system consisting of 160 to 170 ground stations plus about 10 on ships The distance between the control posts would be from 1 000 kilometres to over 3 500 kilometres

They should be divided between continents as follows

North America 24 Europe 6 Asia 37 Australia 7 South America 16 Africa 16, Antarctica 4 Island 60

The scientists did not specify how many control posts they thought should be in each country as, for example in the Soviet Union China or the U.S.A

To perform its job, the scientists thought each control post might require about 30 specialists plus supporting staff

In addition the control system would use aircraft for air sampling They would fly regular north south oceanic routes over the Atlantic and Pacific and also over areas of the oceans remote from surface control posts

Special flights would be sent to search for a radioactive cloud if there was suspicion that a nuclear explosion had been set off

When control posts detected an event which could not be identified but was suspected of being a nuclear explosion the international control organ could send a special inspection group to the site

In special cases the conference thought it would be more difficult to detect nuclear explosions Such cases would include explosions in ocean areas where control posts were few and meteorological conditions were unfavourable shallow underground explosions, and explosions on islands in seismic regions.

The system did not include specific means of detecting and identifying nuclear explosions higher than 30 to 50 kilometres in the air

The main methods of detecting nuclear explosions would be as follows from acoustic waves from seismic waves from radio signals and from radioactive debris

On high altitude explosions the report said that nuclear explosions from 30 to 50 kilometres and more above the earth produce not only gamma rays and neutrons and optical phenomena which are likewise produced by explosions at lower altitudes but also disturbances of the ionosphere For the purpose of detecting nuclear explosions which might occur at such heights the Geneva conference considered it possible to use earth satellites and ground based equipment to record gamma rays and neutrons optical phenomena and ionization of the air

The conference did not include these techniques among those recommended as basic methods for a control system

The scientists said that nuclear explosions, including low yield explosions (one to five kilotons) could be detected and identified. They said that a control system should be directed by an international control organ.

The western delegation to the Geneva talks was led by Dr James B Fisk, of the U.S.A and included Sir William Penney father of Britain's nuclear weapons.

The Soviet side was headed by Prof. E. Fyodorov one of the Soviet technicians who helped put Russia's earth satellites into orbit

HOME AFFAIRS

"MARTYRS' MEMORIAL" AGITATION IN AHMADABAD

A "martyrs memorial" was erected by the Maha Gujerat Janta Parishad on Friday August 9 on a traffic island opposite the Congress House in Ahmedabad. The police removed this "Memorial" early in the morning of August 12 after taking into custody eight Parishad Volunteers who were on round-the-clock watch duty. This action enraged the pro-Maha Gujerat elements who began acts of vandalism in the city. After day long clashes between the crowds and the police, a blanket 24 hour curfew was clamped down in the walled city of Ahmedabad at 9 p.m. The Police opened fire three times, made lathi-charges at 35 different places and burst over 100 tear gas squibs to disperse defiant crowd.

Nearly 12 police chowkis and six sub-post offices were attacked and set fire to or damaged by the crowds before the curfew and a heavy cloudburst drove them home. The police reported 140 cases of vandalism, which included burning of sheds, municipal bus stands and control cabins and retail mill cloth depots.

More than 300 people were rounded up by the police during the day-long disturbances.

Most of the shops, markets and educational institutions remained closed in response to the Parishad to observe hartal in protest against the police action in removing the "martyrs memorial" at Ahmedabad, Kaira and Nadiad.

Mr. Indulal Yagnik M.P. and President of the Parishad announced earlier in the day that he was entering a seven-day fast in protest against the police action and for making good the damage to public property caused by the [illegible].

Mr. Yagnik and other leaders [illegible] a [illegible] the Parishad would [illegible] the Congress House [illegible] the [illegible] 24 [illegible] curfew [illegible] Parishad volunteers would [illegible] the "martyrs memorial" [illegible]

Reports of clashes were also received from Nadiad. The police made a lathi-charge there to disperse a crowd. Both Nadiad and Kaira observed hartal.

Disturbances also broke out in [illegible] where crowds demonstrated against the removal of "martyrs' memorial" in Ahmedabad.

The police fired tear gas shells to disperse the crowds.

The Ahmedabad police opened fire on August 13 at two places in Ahmedabad, Khadia and Panchkuva, where rioting in spite of the curfew was widespread. One man was killed and two were injured in police firing.

Disturbances also spread to the suburban areas. The mob continued to attack and set fire to police chowkis, and [illegible] other properties.

About a dozen policemen were injured in stone-throwing and about 150 people were rounded up from different parts of the city.

Two police chowkis and a police [illegible] were burnt down by mobs and an attempt was made to set fire to a [illegible]. The police chowkies were situated outside the curfew area.

Police fired 26 tear gas shells to disperse crowds on the [illegible] Road. By midday 115 persons had been arrested under [illegible] of the curfew order.

The District Magistrate of Ahmedabad extended the curfew by another 24 hours.

On August 14 a young man was killed by police firing on a crowd [illegible] 2 miles from Ahmedabad [illegible] was clamped down [illegible] stone-throwing incidents and attacks on police and private property.

[illegible]

[illegible] Curfew was [illegible] Ahmedabad where the [illegible] August 16. The police [illegible] opened fire [illegible] at [illegible] different places in the city. [illegible]

Mr. Y. B. Chavan [illegible] of Bombay who [illegible] Ahmedabad

in the morning, of August 14 said that the 'situation in the city seems quieter and well under control today' The Chief Minister said that from what he saw he was convinced that the police had acted with great restraint coupled with firmness where firmness was warranted

Mr Chavan said the Government would not allow a memorial to be erected at any public place even if the Ahmedabad Municipal Corporation were to allow one or decide to build one

He said the State Government would invoke the Bombay District Police Act to prevent erection of any structure in a public place causing obstruction 'There is no political consideration in the State Government s policy It is a matter strictly affecting obstructions in public places the Chief Minister said

Mr Indulal Yagnik President of the Maha Gujerat Janata Parishad announced on August 16 that he would defy the prohibitory order banning assembly of five or more persons and lead a batch of volunteers to offer satyagraha near the Congress House. The 69 year-old Parishad leader who entered the sixth day of the seven day fast notified the district collector of his intention to violate the ban

The Parishad had announced its decision to launch at 8 a m on August 17 a *satyagraha* for the reinstallation of the memorial and called for enrolment of volunteers for the campaign A 24-hour curfew from 5 a.m on August 17 was imposed in the area of about one mile radius from the Congress House

Upto August 16, a total of 1100 persons were rounded up by the police during the three days of disturbances in Ahmedabad The city had returned to complete normality but reports of disturbances poured in from other provincial towns.

Mr Indulal Yagnik and six other Parishad leaders were arrested at Ahmedabad on August 17 when they entered the curfew area and broke a ban on the assembly of five or more persons.

The attempt to offer satyagraha marked the beginning of a prolonged phase of the Parishad s resolve for the restoration of the memorial and the achievement of a separate State of Maha Gujerat, according to the convener of the martyrs memorial action committee of the Parishad

On August 20 Mr Indulal Yagnik and six others arrested with him were sentenced to one month simple imprisonment by the Judicial Magistrate of Ahmadabad

Mr Ahmed Mian Sheikh Bombay M L.A. and a Vice-President of the Maha Gujerat Janata Parishad and seven others were arrested in Ahmadabad on August 19 when they entered the curfew area and violated the prohibitory order on assembly of five or more persons

Mr Chinubhai Chamanlal Mayor of the Ahmedabad Municipal Corporation on August 19 tendered resignation of his office within a few minutes of the Corporation s unanimous decision to permit the Maha Gujerat Janata Parishad to get up a martyrs memorial in the traffic circle opposite the Congress House

Mr Chavan Bombay Chief Minister had declared earlier that the Government would not allow the setting up of a memorial in a public place even if the Corporation permitted it

On August 26 the authorities in Ahmadabad announced the reimposition of a 22 hour curfew in an area of about half a mile radius from the Congress House Meanwhile, the central executive committee of the Mahagujarat Janata Parishad on August 26 decided to broaden the memorial satyagraha and invite satyagrahis from the entire Gujerati speaking region to ensure the re-erection of the martyrs' memorials in Ahmedabad which were removed by the police on August 12.

Shri Maneklal Shah Bombay State Minister for Local Self Government said in Bombay Council on September 4 that the Bombay Government would not reconsider its earlier decision not to permit the erection of a martyrs memorial in the traffic island opposite the Congress House in Ahmadabad

Upto September 16 batches of volunteers of the Maha Gujerat Parishad had been offering Satyagrah in Ahmadabad and courting arrest There seemed to be no hope of any early settlement between the Government and the Maha Gujerat Parishad

BORDER TROUBLE WITH PAKISTAN

On August 4 India lodged a strong protest with Pakistan against the terror tactics of West Pakistan armed patrols adopted in the Ferozepore area on Saturday August 2 In this area the Pakistani armed patrols had opened fire on their Indian counterparts patrolling the right guide bund on the right bank of the Sutlej

Incursions by Pakistan into Indian territory in this area have been going on since 1948 in spite of the fact that the Radcliffe Award had drawn the boundary clearly and the demarca

HOME AFFAIRS

"MARTYRS MEMORIAL" AGITATION IN AHMADABAD

A "martyrs memorial" was erected by the Maha Gujerat Janta Parishad on Friday August 8 on a traffic island opposite the Congress House in Ahmadabad. The police removed this 'Memorial' early in the morning of August 12, after taking into custody eight Parishad Volunteers who were on round-the-clock watch duty. This action enraged the pro-Maha Gujerat citizens who began acts of vandalism in the city. After day long clashes between the crowds and the police, a blanket 24 hour curfew was clamped down in the walled city of Ahmadabad at 9 p.m. The Police opened fire three times, made lathi-charges at 35 different places and burst over 100 tear gas squibs to disperse defiant crowds.

Nearly 12 police chowkis and six sub-post offices were attacked and set fire to or damaged by the crowds before the curfew and a heavy cloudburst drove them home. The police reported 140 cases of vandalism which included burning of shops, municipal bus stands and control cabins and retail mill cloth depots.

More than 300 people were rounded up by the police during the day long disturbances.

Most of the shops, markets and educational institutions remained closed in response to the Parishad to observe hartal in protest against the police action in removing the 'martyrs memorials' in Ahmedabad, Kolol and Nadiad.

Mr Indulal Yagnik, M.P. and President of the Parishad announced earlier in the day that he was entering a seven-day fast in protest against the police action and for atoning for the damage to public property caused by the demonstrators.

Mr Yagnik and other leaders announced at a public meeting that the Parishad would offer satyagraha opposite the Congress House by breaking the ban under Section 144 Cr. P.C. immediately after the 24 hour curfew was lifted. Parishad volunteers would squat and fast at the place from where the police have removed the 'martyrs memorials' they declared.

Reports of clashes were also received from Nadiad. The police made a lathi-charge there to disperse a crowd. Both Nadiad and Kaira observed hartal.

Disturbances also broke out in Borsad where crowds demonstrated against the removal of 'martyrs' memorial' in Ahmadabad.

The police fired tear gas shells to disperse the crowds.

The Ahmedabad police opened fire on August 13 at two places in Ahmedabad, Khadia and Panchkuva, where rioting in spite of the curfew was widespread. One man was killed and two were injured in police firing.

Disturbances also spread to the suburban areas. The mob continued to attack and set fire to police chowkis, shops and other properties.

About a dozen policemen were injured in stone-throwing and about 150 persons were rounded up from different parts of the city.

Two police chowkies and a police wireless jeep were burnt down by mobs and an attempt was made to set fire to a mill. The police chowkies were situated outside the curfew area.

Police fired 26 tear gas shells to disperse crowds on the Gandhi Road. By mid-day 115 persons had been rounded up for breach of the curfew order.

The District Magistrate of Ahmadabad extended the curfew by another 24 hours.

On August 14, a young man was killed by police firing on a crowd in Nadiad town 25 miles from Ahmadabad. A 48 hour curfew was clamped down in Nadiad after several stone-throwing incidents and attacks on public and private property.

Reports of trouble in many other towns in North and Central Gujerat were also received. Curfew was extended for another 24 hours in Ahmedabad where the situation deteriorated after mid-day on August 14. The police had to open fire on riotous crowds at five different places in the city. Three persons were injured in the firing and six including a woman in the lathi-charge.

Mr Y. B. Chavan, Chief Minister of Bombay, who made an air-dash to Ahmedabad

in the morning of August 14 said that the "situation in the city seems quieter and well under control today The Chief Minister said that from what he saw he was convinced that the police had acted with great restraint coupled with firmness where firmness was warranted

Mr Chavan said the Government would not allow a memorial to be erected at any public place even if the Ahmedabad Municipal Corporation were to allow one or decide to build one

He said the State Government would invoke the Bombay District Police Act to prevent erection of any structure in a public place causing obstruction. There is no political consideration in the State Government s policy It is a matter strictly affecting obstructions in public places, the Chief Minister said

Mr Indulal Yagnik President of the Maha Gujerat Janata Parishad announced on August 16 that he would defy the prohibitory order banning assembly of five or more persons and lead a batch of volunteers to offer 'satyagraha' near the Congress House. The 69 year old Parishad leader who entered the sixth day of the seven day fast notified the district collector of his intention to violate the ban.

The Parishad had announced its decision to launch at 8 a m on August 17 a *satyagraha* for the reinstallation of the memorial and called for enrolment of volunteers for the campaign A 24-hour curfew from 5 a.m on August 17 was imposed in the area of about one mile radius from the Congress House

Upto August 16, a total of 1100 persons were rounded up by the police during the three days of disturbances in Ahmadabad The city had returned to complete normality but reports of disturbances poured in from other provincial towns

Mr Indulal Yagnik and six other Parishad leaders were arrested at Ahmedabad on August 17 when they entered the curfew area and broke a ban on the assembly of five or more persons.

The attempt to offer 'satyagraha marked the beginning of "a prolonged phase of the Parishad's resolve for the restoration of the memorial and the achievement of a separate State of Maha Gujerat, according to the convener of the martyrs memorial action committee of the Parishad

On August 20 Mr Indulal Yagnik and six others arrested with him were sentenced to one month simple imprisonment by the Judicial Magistrate of Ahmadabad

Mr Ahmed Mian Sheikh Bombay M L.A. and a Vice-President of the Maha Gujerat Janata Parishad and seven others were arrested in Ahmadabad on August 19 when they entered the curfew area and violated the prohibitory order on assembly of five or more persons

Mr Chinubhai Chamanlal Mayor of the Ahmedabad Municipal Corporation on August 19 tendered resignation of his office within a few minutes of the Corporation s unanimous decision to permit the Maha Gujerat Janata Parishad to get up a martyrs memorial in the traffic circle opposite the Congress House

Mr Chavan Bombay *Chief Minister*, had declared earlier that the Government would not allow the setting up of a memorial in a public place even if the Corporation permitted it.

On August 26 the authorities in Ahmadabad announced the reimposition of a 22 hour curfew in an area of about half a mile radius from the Congress House Meanwhile, the central executive committee of the Mahagujarat Janata Parishad on August 26 decided to broaden the memorial satyagraha and invite satyagrahis from the entire Gujerati-speaking region to ensure the re-erection of the martyrs memorials in Ahmedabad which were removed by the police on August 12

Shri Maneklal Shah Bombay State Minister for Local Self Government said in Bombay Council on September 4 that the Bombay Government would not reconsider its earlier decision not to permit the erection of a martyrs memorial in the traffic island opposite the Congress House in Ahmadabad

Upto September 16 batches of volunteers of the Maha Gujerat Parishad had been offering Satyagrah in Ahmadabad and courting arrest There seemed to be no hope of any early settlement between the Government and the Maha Gujerat Parishad.

BORDER TROUBLE WITH PAKISTAN

On August 4 India lodged a strong protest with Pakistan against the terror tactics of West Pakistan armed patrols adopted in the Ferozepore area on Saturday August 2 In this area the Pakistani armed patrols had opened fire on their Indian counterparts patrolling the right guide bund on the right bank of the Sutlej

Incursions by Pakistan into Indian territory in this area have been going on since 1948 in spite of the fact that the Radcliffe Award had laid down the boundary clearly and the demarca-

tion work has been going on. Close to the Radcliffe Award line lies in the Indian territory the marginal bund. An arrangement was entered into between the engineers of the two countries that Pakistani engineers would look after the maintenance of the bund and India would pay for it. Encroachments by Pakistan began soon after and within a year an area not less than six to seven miles in length and about two miles in breadth was occupied by Pakistan and the encroachment was complete up to the right guide bund lying lower. Several protests were made by India against these incursions.

On October 11, 1950 there was a clash at the right guide bund. On November 21 it was decided that the bund should be patrolled jointly by India and Pakistan.

Eastern Border: Pakistani armed forces on August 7, 1955 made a surprise attack on the border village of Lakhimpur (Tripura), overpowered the Indian police force there and took possession of the major portion of the village.

Pakistanis also moved into and occupied Tukergram village in Cachar district on the Assam border and kept up continuous firing all along the 13-miles long Surma Sector.

The Assam Government lodged a protest with the authorities in Dacca against the Pakistani aggression.

Tukergram, a village about one square mile in area, has a population of about a thousand. *It is only about ten miles from* Karimganj and is near Bhangabazar which experienced heavy Pakistani firing recently.

On August 9 Pakistani armed forces continued firing across the uneasy Cachar-East Pakistan border on Indian territory.

Authoritative reports said Pakistanis were shooting with machine-guns on the Bhanga-Karimganj Road. All traffic between Bhanga Bazar and Karimganj was dislocated as a result.

The Karimganj Merchants' Association, at a meeting held on August 9, resolved to make arrangements for supply of essential commodities to Tripura whose borders had been sealed by Pakistan since August 3, 1955.

Pakistani forces withdrew on August 9 from bunkers and trenches dug by them in Tukergram village occupied by them two days previously.

However on August 10, the Pakistani troops sneaked into Tukergram again and tried to occupy the village. The Indian border police resisted and foiled the Pakistani attempt.

On the entire 13 mile Surma sector indiscriminate Pakistani firing with mortars and machine guns directed against Indian villages was continuing with varying intensity on August 10.

Pakistani armed forces kept up heavy firing from midnight of August 12 till the morning of August 13 in Dawki area, the last Indian outpost facing Tamabil checkpost of East Pakistan in Sylhet district.

Simultaneously, *Pakistani* troops opened fire on Bhangabazar in the Surma sector. Firing in this sector was continuing all day on August 13.

India sent a strongly worded communication to Pakistan on August 13 asking Pakistan that Pakistani armed forces must immediately quit the forcibly occupied Tukergram village.

On August 16 Pakistan agreed to a meeting at official level at Akhaura to discuss the sealing off *by the East Pakistan authorities* of the route from Assam to the Indian Union Territory of Tripura. In violation of an agreement providing for facilities for the transit of goods to Tripura the route was sealed off by Pakistan on August 3 and goods worth many lakhs of rupees were detained at Akhaura.

Pakistani troops on August 16 fired on the border Indian village of La.un about a few miles from Karimganj widening their area of attack.

On Aug. 16 it was learnt in New Delhi that Mr. Noon, Pakistan's *Premier*, had offered to meet Mr. Nehru to discuss the border shooting incidents.

Commenting on Pakistan's activities particularly the sealing of the Tripura-East Pakistan border and the detention of goods meant for Tripura, a spokesman of the Indian External Affairs Ministry said: "It is a technique to change the *status quo* by force." He was obviously explaining how on both the eastern and western borders Pakistan had been trying such methods to grab territory that does not belong to her. In the east the latest attempt reportedly was to establish a claim to Lakhimpur village.

Demarcation of Boundaries: An important border problem is demarcation of the boundaries. On the Assam-East Pakistan border, demarcation of 21? out of 670 miles has been completed. On the Tripura-East Pakistan border 467 out of 522 miles are yet to be demarcated.

On the West Bengal East Pakistan border 1 034 out of a total of 1 350 miles have been demarcated Demarcation cannot be proceeded with over a length of 117 miles in this sector unless the existing disputes are settled On the Punjab-West Pakistan border 158 out of 318 miles are yet to be demarcated On the Rajasthan West Pakistan and Cutch Pakistan side, the entire border of 644 miles and 514 miles, respectively remains to be demarcated

Pakistan re opened East Pakistan Tripura border traffic on August 17 after an Indo-Pakistan officers level conference at Akhaura.

Officials representing the two Governments however could not reach a settlement over Lakhimpur village which was suddenly occupied by Pakistani troops on August 7

The conference agreed that any future border dispute of any nature would be dealt with in the normal agreed procedure instead of concentrating troops In the case of a reported concentration of troops on any side the district magistrate concerned would report to his opposite number and decision would be taken after a joint inquiry

Armed forces from across the border indulged in intermittent firing on Aug 26 compelling the Indian border police in that area to reply in kind and in self-defence

The East Pakistan Government unilaterally sealed the border between Sylhet and Khasi Jaintia Hills on August 25

According to reports reaching Shillong from Sylhet at least 119 prominent and leading Hindus were arrested by the district authorities in Sylhet under the recently promulgated Preventive Detention Ordinance, just on the eve of sealing this important road.

Ceasefire A cease-fire on the Sylhet Cachar border across which Pakistani troops had been continuously firing on Indian territory for the past 20 days became effective from midday of August 26

The suggestion for the cease fire was made by Mr Nehru on August 22 in a message to Mr Noon Pakistan Prime Minister Mr Noon in his reply the next day agreed with the proposal

Pakistani troops fired two rounds each on Latu and Mahishasan and six rounds on Sutarkandi between 12 noon and 4 p.m on August 26 in spite of the cease fire order effective from the noon. The Indian border police did not reply to these firings

KARACHI CONFERENCE ON BORDER DISPUTES

Indo-Pak talks on border issues began in Karachi on August 30 1958 The nine member Indian delegation was led by Mr M.J Desai, Secretary for Commonwealth Relations The Pakistan delegation was led by Mr M.S.A Baig Pakistan's Foreign Secretary

The Secretaries' Conference reached quick agreement in principle on the early release of prisoners taken both by India and Pakistan in the recent border clashes Three sub-committees were set up one to report on questions of exchange of prisoners and the other two to list and report on the nature of the disputes in the eastern and western borders Their findings were to be presented to the Conference on September 1

On Monday September 1, Pakistani Premier Mr Feroze Khan Noon announced in the Pakistan National Assembly at Karachi that the Conference of Secretaries "has almost completely failed to come to any agreement on border issues However the talks between representatives of India and Pakistan continued under cordial atmosphere.

According to a joint *communique* simultaneously issued in Delhi and Karachi on September 3 the conference decided that "prisoners taken by either side during the course of recent border incidents should be released" The first batch of releases was to be effected on September 9

The two Governments also decided to issue instructions to the State Governments and the survey authorities on either side to take all steps that would help in expediting demarcation of the border

The two delegations examined several proposals for the settlement of a number of existing territorial disputes and "some progress" was made at the conference according to the joint communique. Certain principles for expediting the demarcation work and securing an early settlement of disputes was also enunciated.

The joint communique expressed the hope that as many border disputes as possible would be resolved during the meeting of the two Prime Ministers to be held in New Delhi. It stated that "unsolved disputes will be settled in accordance with the procedure accepted by the two Governments viz by reference to an impartial tribunal in terms of the decision of the Indo-Pakistan Steering Committee of March 1955"

NEHRU NOON TALKS IN NEW DELHI

Discussions began in New Delhi on September 9 between Mr Nehru, Indian Prime Minister and Mr Noon Pakistan's Prime Minister on the border problems facing the two countries The Prime Ministers met for over two and a half hours The Indian Commonwealth Secretary, Mr M J Desai and the Pakistan Foreign Secretary Mr M.S.A Baig were present at the meeting of the two Prime Ministers

It is believed that the Prime Ministers first surveyed the ground covered by the joint *communique* issued on the conclusion of the Karachi conference and later took up the proposals which the two delegations to the conference were to have made for the settlement of the existing territorial disputes

The disputes pertaining to the eastern border include the four which were at one time referred to the Bagge Tribunal. But there are differences between the two countries on the implementation of the tribunal's award

Formal talks between the Indian and Pakistani Prime Ministers concluded on September 10 after two separate sessions of about 80 minutes each Mr Nehru told the newsmen that the talks had largely succeeded.

A joint *Communique* on the Conference of the two Prime Ministers was issued on Thursday, September 11 simultaneously at New Delhi and Karachi The following is the text of the communique

"The Prime Ministers had frank and friendly discussions about these border problems They arrived at agreed settlements in regard to most of the border disputes in the eastern region. They also agreed to an exchange of enclaves of the former Cooch Bihar State in Pakistan and Pakistan enclaves in India

Some of the border disputes namely, two regarding the Radcliffe and Bagge Awards in the eastern region and five in the western region require further consideration.

The Prime Ministers agreed to issue necessary instructions to their survey staff to expedite demarcation in the light of the settlement arrived at and to consider further methods of settling the disputes that are still unresolved In regard to the Hussainiwala and Suleimanke disputes the Foreign Secretary of the Pakistan Government and the Commonwealth Secretary of the Government of India, will, in consultation with their engineers submit proposals to the Prime Ministers.

The Prime Ministers agreed that when areas are exchanged, on agreed dates, as a result of settlement and demarcation of the disputed areas, an appeal should be made to the people in the areas exchanged to continue staying in their present homes as nationals of the State to which the areas are transferred.

The Prime Ministers further agreed that pending the settlement of unresolved disputes and the demarcation and exchange of territory by mutual agreement, there should be no disturbance of the *status quo* by force and peaceful conditions must be maintained in the border regions Necessary instructions in this regard will be issued to the respective States and to the local authorities on the border

The Prime Ministers agreed to keep in touch with each other with a view to considering various steps to be taken to further the common objective of maintaining and developing friendly and cooperative relations between their two countries

Mr Firoz Khan Noon in a statement issued in Karachi shortly after his return from Delhi said while agreed settlements had been reached during his talks with Mr Nehru on most of the border disputes in the eastern region one issue on which no agreement was reached was about referring still existing disputes to a tribunal.

Mr Noon said nine out of the 11 disputes on the eastern border had been settled. A dispute relating to the Feni river had been left over for further consideration

"The other unresolved dispute" said Mr Noon "relates to the Kushaira river which was finally settled by the Bagge Tribunal but the award has not been implemented so far"

Referring to the disputes in the eastern region, Mr Noon said it had been agreed that the territories covered by the Bagge Award in the West Bengal East Pakistan sector, where demarcation had been completed should be exchanged by January 15 1959

The question of the East Bengal Railway which passed through a part of Tripura State had been settled by India agreeing to give this piece of land in perpetual right to Pakistan, he said. Pakistan has agreed to the exchange of old Cooch Behar enclaves in Pakistan with Pakistan enclaves in India. This will give Pakistan about eleven square miles of extra territory without having to pay any compensation to India

Mr Noon said as a result of the discussions in Delhi the field of controversy has been narrowed down and the need for immediate demarcation of the boundary and exchange of territory after demarcation has been fully recognized.

25 Mr Siddhartha Sankar Ray who resigned from Dr B C Roy's Cabinet in March last and quit the Congress party re-elected to *the West Bengal legislative Assembly from* Bhowanipore Constituency

Parliamentary Government restored in East Pakistan with the swearing in of Mr Ataur Rahman Khan as Chief Minister

26 A cease fire ordered on the East Pakistan-Assam border, pursuant to an agreement arrived at between Mr Nehru and the Pakistan Prime Minister Mr Firoze Khan Noon

27 A three day conference of India's creditor nations ended in Washington in an atmosphere of optimism.

The U S President Mr Eisenhower told his weekly news conference in Washington that the U S would not shirk its responsibilities to help defend Formosa against attack.

28. Peking Radio announced that China had warned Kuomintang defenders on Quemoy to surrender because the island is "doomed" owing to an imminent landing of its forces

The U S warned Peking against trying to conquer the islands of Quemoy and Matsu off the China mainland.

29 Moscow radio announced that two dogs landed safely from a space rocket which reached an altitude of 281 miles It added that the dogs were aboard a one stage rocket launched in the Soviet Union on August 27

The Government of India decided to ban the export of rice with immediate effect from the entire state of Uttar Pradesh with a view to bring down the high prices prevailing there

President Eisenhower signed a bill in Washington providing $ 3 billion in new military and economic aid to friendly countries during the current financial year

31 More than 500 people fought with knives clubs stones and broken bottles in an outburst of violence against London's mounting negro population

SEPTEMBER

1 Dr Homi Bhabha India's top nuclear physicist challenged in Geneva a French Professor's view that it would not be advisable for under developed countries to look to atomic energy for speedy assistance in their fight for better living standards

Racial fighting broke out in Notting Hill, once one of London's most fashionable districts for the third successive night

2 China urged the Kuomintang forces on Quemoy to surrender immediately and guaranteed the safety of those who returned to the mainland.

The Lok Sabha passed the Banaras Hindu *University (Amendment Bill)*

3 The Prime Minister of Pakistan Mr Firoz Khan Noon told the Pakistani National Assembly that the reckless advocacy of war with India for a solution of the Kashmir or canal waters dispute might have the effect of suspension of further military aid from America

Russia warned the U.S that it would stand by China in any struggle for Formosa or the offshore islands.

4 A racial clash occurred at lunch time in the Paddington area of north-west London which was the scene of disturbances on last two nights

Dr Sampurnanand won the confidence of the U P Vidhan Sabha defeating the censure motion tabled by the opposition members

China extended its territorial waters from 3 to 12 miles offshore covering the offshore islands of Quemoy and [illegible], and warned

foreign ships and aircraft not to enter the limit without permission.

The Pakistan Prime Minister Mr Firoz Khan Noon told the National Assembly that the agreement between India and Pakistan over the provision of canal waters in May 1948 had been subsequently repudiated by Pakistan Government.

The U.S rejected China's extension of its territorial waters from 3 to 12 miles

Britain announced that she would make available to India nearly £ 40 m in financial aid before March 31 1959

5 Russia answered President Eisenhower's warning to China over Formosa with the threat of a devastating counter blow if the U.S intervened with direct military action in the Far East.

Sixty-one P S P Volunteers arrested in four eastern districts of U P in a Government counter-offensive to foil P S Ps bid to launch a civil disobedience movement against its food policy

6 Seventy nine persons including two M Ps arrested in various parts of Uttar Pradesh in connection with the agitation launched by the opposition parties against state government's food policy

The Chinese Premier Mr Chou En lai restated Peking's claim to Formosa but indicated that his government was still willing to negotiate a Far East settlement

7 Mr Triloki Singh and Dr A G Pandi leaders of the opposition in the U P Vidhan Sabha and the Vidhan Parishad respectively arrested along with 12 P S P members in Lucknow in connection with the food agitation.

The Prime minister, Mr Nehru in an address in Delhi described the situation in the Formosa straits as serious and reiterated the view that the off shore islands of Quemoy and Matsu should go to China

Tunisia and Morocco decided to join the the Arab League as full members.

Marshal Nikolai Bulganin removed from his duties as member of the Presidium of Central Committee of Soviet Communist Party

A group of army men took over the Venezuelan government's head-quarters and other key buildings in an attempt to overthrow the regime of President Wolfgang Larrazabel.

Russia warned the United States that "the Soviet Union will consider any attack on the Chinese People's Republic as an attack against the U.S.S.R."

8 In riot conditions a platoon of Provincial Armed constabulary men drove out from Uttar Pradesh Vidhan Saba 13 Socialist legislators punching and kicking them. Police action followed in the wake of the refusal of the opposition leaders to leave the House despite the speaker's order to that effect.

The Prime Minister, Mr Nehru, announced in the Lok Sabha the Government's decision to convene an informal meeting of 25 to 30 M.Ps belonging to all parties in both the houses to discuss the food situation on September 11th.

9 The Indian and Pakistani Prime Ministers sat down to discuss the border disputes between the two countries within a few hours of Mr Firoz Khan Noon's arrival from Karachi

Following a series of exchanges in the U P Vidhan Sabha all the five opposition groups walked out announcing their decision to boycott the rest of the session

Eight hundred and twenty-one persons arrested so far in various parts of U P in connection with the food agitation launched by various political parties in the State

Opposition members of the Rajya Sabha, except a few independents, staged a walk-out to express sympathy with the opposition parties and the people of U P who are suffering privations under the present government

10 Mr Morarji Desai's visit to Washington ended with the announcement of about $303 m in loan and other financial aid from the United States to India

The total number of arrests in connection with the food agitation launched by the opposition parties of U P has come up to 1170.

11 The Prime Ministers of India and Pakistan succeeded in settling all but two of the border disputes in the eastern region and five in the western region, according to a joint Communique issued in New Delhi

The Quemoy island subjected to the most violent bombardment the Chinese have ever carried out against them.

The joint opposition agitation against the food policy of U P Government continued with greater vigour

The Rajya Sabha gave approval to the controversial Banaras Hindu University (Amendment) Bill

China gave its fourth serious warning to the United States over alleged intrusion of China's air and sea space.

An official spokesman of the British Prime Minister Mr Harold Macmillan, said that Britain had no commitment of any kind with the U S. in the East Asian crisis ***

CULTURAL ACTIVITIES

Q Explain the aims of National Culture Trust.

Ans The National Culture Trust was se up to promote art and culture and foster the consciousness of art among the people This is sought to be achieved through the agency of the *Lalit Kala Akademi* (Academy of Art) *Sangeet Natak Akademi* (Academy of Dance Drama and Music) and Sahitya Akademi (Academy of Letters) The facilities for mass communication at the disposal of the State ha e also been pressed into service to make the people conscious of their cultural heritage A number of institutions have actively colla borated in the task of popularising traditional arts and crafts

Q Describe the activities of government in the realm of art

Ans. The activities in the realm of art, sponsored direc tly or indirectly by the *State* aim at the preservation of the traditions of the past their enrichment by the work of modern artists, the improvement of standards in art and the refinement of public taste

Lalita Kala Akademi

The *Lalit Kala Akedemi* set up in October 1954 is devoted o the promotion of the study and research in painting sculpture, architecture and the applied arts. It al o co-ordinates the activities of the regional or State academies encourages exchange of ideas among various schools of art publishes literature and fosters inter-regional and inter national contacts through exhibitions, ex hange of personnel and of art objects.

The Akademi has initiated a survey of the arts and crafts of the different regions of the country The ma... nance of a photographic record of ancient monu ments sculptures and painting and *reproduction* of works of art that have decayed are among other important activities undertaken by it. A beginning has been made in these directions with the *photographing* of the paintings in the Kulu palace and the reproduction of paintings in the Badami Caves in Bijapur district of Bombay State

A seminar on 'Art Education sponsored by the Akad mi in 1956 was attended by a number of distinguished artists and educationists

The holding of annual national exhibitions and displays of exhibits in various art centres in the country has been another activity aimed at enabling artists to reach a wider public than before Four such national exhibitions have been held so far

In furtherance of the objective of establishing inter national contacts through exhibitions of traditional and modern art exhibitions of Canadian paintings Hungarian folk arts Chinese handicrafts Polish and contemporary German art were organised An Indian exhibition comprising samples of contemporary art and classical museum pieces was arranged in Europe in 1956

Publications

Among the art publications brought out by the Akademi are *Mughal Miniatures* a *Portfolio of Contemporary Paintings* a set of 12 picture Postcards in colour consisting mainly of Rajasthani paintings *Krishna Legend in Pahari Paintings* and two *Portfolios of Ajanta and Mattur Paintings* The forthcoming publications of the Akademi are three portfolios of Krishangarh and Bundi paintings and Indian paintings in relation to Indian poetry The Akademi *also brings* out a bi annual art journal *The Lalit Kala*

The Publications Division of the Ministry of Information and Broadcasting has also brought out a number of important art publications These include *Kangra Valley Paintings Indian Art Through the Ages Architecture and Sculpture of India 5000 Years of Indian Art Buddhist Sculptures and Monuments The Way of the Buddha*, and *Buddhist Shrines in India*

National Gallery of Art

(I) The National Gallery of Modern Art, established

in 1954, now possesses works of nearly 100 artists, including Rabindranath Tagore, M A R. Chughtai, Nandalal Bose, Abanindranath Tagore, Jamini Roy, Mukul Dey, Amrita Sher Gill, M.F. Hussain, Kripal Singh Shakhawat, E F Brunner, Avinash Chandra, D P Roy Chaudhury, Sudhir Khastgir, Freda Brilliant, J Sultan Ali, N.S. Bendre, A K. Haldar, G Bhatt, K.S Kulkarni, R D Rawal and Satish Gujral

Q Sketch the progress registered by India in the sphere of dance and drama

Ans. The active promotion of India's dance and dramatic traditions and adapting them to modern conditions has been a significant feature of the cultural activities since the achievement of independence

Sangeet Natak Akademi

The main task which the Sangeet Natak Akademi, inaugurated in January 1953, has set for itself is the survey of and research in the different art forms of the country. In order to preserve them as part of our cultural heritage the Akademi has a plan to record and film them. To develop these arts and to make them popular, it organises and sponsors seminars and festivals and establishes new art institutions

The National Festival of classical, traditional and modern ballet dances, excluding folk dances, was organised by Akademi in Delhi in 1955. The Akademi has taken over the Manipur College of Dance at Imphal in order to make it the main centre of training in the Manipuri style of dance. Recitals by leading classical dancers are being filmed in order to preserve all the important styles of dancing. Books on Indian dance are being collected to build up an up-to-date reference library

The Folk Dance Festival has become an integral part of the annual Republic Day celebrations. To keep a record of the different styles, folk dances are being filmed and recorded by the national and regional academies of dance and drama.

A National Drama Festival was sponsored by the Akademi in 1954 and plays in all the major Indian languages as well as in Sanskrit, English and Manipuri were staged. A seminar on Films and another on the 'Future of Indian Drama' were organised in 1955 and 1956

Among other proposals under active consideration are establishment of a National Theatre in New Delhi and the starting of a National School of Drama

Radio Drama

The National Programme of Plays broadcast simultaneously from different stations of All India Radio in the languages of the regions, has made available to listeners all over India some of the best known plays in Indian dramatic literature of the past 75 years. The presentation of these plays in all the twelve major languages of India has involved a big literary effort by eminent men in their translation and adaptation

Q Describe the sustained effort of Sangeet Natak Akadami and All India Radio to promote music.

Ans A sustained effort to preserve and develop our music—classical, light and folk—and to make it popular is being made by the Sangeet Natak Akademi and All India Radio. While the Akademi has been devoting itself chiefly to survey and research publications, seminars, festivals and training institutions, All India Radio has come to be the biggest patron of music.

Music Festival

The first National Music Festival was held in Delhi in 1954 and the second in Patna in 1956 under the auspices of the Akademi. These festivals will soon be a regular feature of the activities of the Akademi and will be organised in different Parts of the country

Library of Music

In order to build up a library of Indian music, efforts are being made by the Akademi to record select renderings by the leading classical musicians belonging

to all the schools Old gramophone records are also being collected for this purpose Complete classified catalogues of manuscripts on Indian music are to be published A library of books on Indian music is being built up to facilitate research Folk music is being filmed and recorded by the regional academies.

Seminar on Indian Music

At the third seminar of Indian music leading exponents of the Karnatak and Hindustani systems discussed such topics as music education and its future growth and problems of popular music, relationship and affinity between folk and classical music problems of orchestration in Indian music and group singing etc.

Radio Sangeet Sammelan

This annual feature of All India Radio provides an opportunity to people all over the country to hear in one series all the great Indian masters of Hindustani as well as Karnatak music During the 1957 *Sammelan* concerts of Hindustani music at Delhi and Bombay and of Karnatak music at Madras Vijayawada Tiruchi and Hyderabad were held. This regular musical event of the year aims at stimulating appreciations of the principal forms of classical music and presenting a variety of *ragas* and *raginis*. An annual music competition confined to young artists is now a regular feature preceding the *Sammelan* and aimed at discovering new talent Along with the *Sammelan* symposia are organised wherein eminent musicologists discuss the varied problems relating to the development of music and examine possibilities of giving it a new direction Rhythm and Tempo in Indian Music" was the subject of discussion at the symposium held in 1957

National Programme of Music

Started in 1952, the Programme aims at fostering a better mutual appreciation between the two of music forms —Hindustani and Karnatak In this weekly programme listeners have an opportunity to hear top-ranking artists Folk music and operas are also broadcast periodically.

Light Music

The planned development of modern light music is another feature of AIR's music policy Based on classical and folk melodies and making use of old and new lyrics light music is prapared and presented by a number of station

Folk Music

Fully equipped units for on the sport recording of folk music and for their editing and presentation are to be set up soon at a number of stations Selected folk music now forms an important part of both national and local programmes.

Vadya Vrinda

The AIR National Orchestra (*Vadya Vrinda*) set up in 1952 has bulit up a reportoire of 113 compositions The *Vadya Vrinda* has recently attempted thematic compositions such as *Meghadootam* and *Kalingavijayam* Among the new items presented during 1957 were *Jwalamukhi* and *Hanali* on the occasion of the centenary of India's first struggle for independence.

Q Give an account of the varied activities of the government in the field of literature

Ans In the field of letters as in that of art and music, an attempt is being made to improve standards to foster and co-ordinate literary activities in all the Indian languages to create among the people the consciousness of the basic unity of the literatures in various Indian languages and to promote through them the cultural unity of the country

Sahitya Akademi

The *Sahitya Akademi*, which seeks to achieve these objectives, was in March 1954 The publication of a *National Bibliography of Indian Literature* to include all books of literary merit published in the twentieth century in the 14 major languages specified in the Constitution as well as books in English published

in India or written by Indian authors, is one of the important activities in the Akademi. The final text of this bibliography edited at the National Library Calcutta, is now being printed.

Preparation of critically edited texts of Kalidasa's works by eminent scholars has made progress. *Meghaduta* edited by S. K. Dey has already been published. Prof. Velankar's critical edition of *Vikramorvasiya* is in the press. The text of *Ritusamhara* collated by the late P. M. Lad, is being finalised by S. K. Dey.

Bharatiya Kavita 1953, an anthology of poems selected from each of the 14 major languages along with their Hindi translations, has been published. A second volume covering the years 1954 and 1955 is in the press.

Histories of Malayalam literature by P. K. Parameswaran Nair and of Bengali literature by Sukumar Sen are been completed and will shortly be published.

Selections from the *Adi Granth* have been compiled, edited and translated into English by a committee of distinguished Sikh scholars under the auspices of the Sahitya Akademi. The translation, which was sponsored by *UNESCO* will be published shortly. Another publication similarly sponsored by *UNESCO* and prepared under the auspices of the Sahitya Akademi is C. Rajagopalachari's English rendering of selections from the *Kamba Ramayana*.

Twenty-five foreign classics have been selected for translation into all the major Indian languages. Translations of the Chinese classics *Analects of Confucius* and *Wisdom of Tao*, of the Japanese classic, *Tale of Genji*, of Voltaire's *Candide*, of Moliere's plays, and of Thucydides's *History of the Peloponnesian War* are ready for publication.

Hindi translations of well-known works in other Indian Languages published so far are: (i) *Bhagavan Buddha* (Marathi classic by Dharmananda Kosambi), (ii) *Jeli Ka Patla* (Oriya novel by Fakirmohan Panigrahi), (iii) *Kerala Simham* (Malayalam novel by K. M. Panikkar), (iv) *Aranyak* (Bengali novel by Bibhutibhushan Bandyopadhyaya), (v) *Do Ser Dhan* (Malayalam novel by Thakazhi Sivasankara Pillai), (vi) *Vaidik Samskriticha Vikas* (Marathi classic by Lakshmanshastri Joshi), (vii) *Arogya Niketan* (Bengali novel by Tara Sankar Bandyopadhyaya) and (viii) *Amrit Santan* (Oriya novel by Gopinath Mohanti).

Translations of these works in other Indian languages have been taken in hand. *Bhagavan Buddha* has already been published in Gujarati, Hindi, Kannada, Malayalam, Sindhi, Tamil and Telugu. Hazari Prasad Dwivedi's novel, *Banabhatta Ki Atmakatha* has been published in Gujarati, Kannada and Malayalam. Its Bengali translation is in the press. *Mati ki Murten* (rural sketches in Hindi by Rambriksha Benipuri) has been translated into several languages.

Twenty-one short stories and 101 poems of Tagore are being transliterated into Devanagari script and will shortly be published. The two volumes will then be translated and published in other Indian languages. Selections from classics in all the Indian languages are under preparation and will be published in the original language as well as in translations.

Other publications already brought out include a *Russian Hindi Dictionary*, a symposium on *Contemporary Indian Literature*, and the first number of a half yearly Journal *Indian Literature*. A Who's Who of Indian writers is also under preparation.

Gandhian Literature

Early in 1956 a scheme was launched by the Ministry of Information and Broadcasting to publish a complete collection of Mahatma Gandhi's writings, speeches, and letters in chronological order in a series of volumes. These volumes are to be brought out in English, Hindi and Gujerati, the three languages in which Gandhiji wrote or spoke. Work on the collection of Mahatma Gandhi's writings which appeared in *Indian Opinion* in South Africa and other [illegible]

to the period *prior* to 1903 has been completed Translation of the material already collected has been taken in hand The first volume in this series consisting of the writings and speeches of Gandhiji from 1884 to 1896 was brought out on January 26 1958

Literary Broadcasts

Air programmes have also made their impact on contemporary Indian literature. The policy of associating eminent literary men in all the regional languages of India as producers of the Spoken word has helped the evolution of a class of literature which is adapted to the special exigencies of a listening audience.

Select broadcast talks are brought out in the form of a quarterly journal *AIR Selections* in English and *Prasarika* in Hindi They are also published in the form of books on different themes

A National Symposium of Poets, organised for the first time in 1956, is now a regular annual feature providing an opportunity for listeners to listen to the latest compositions of the leading poets in the country

An all India gathering of writers representing different branches of creative writing was convened in 1956 At this *Sahitya Samaroh*, trends in contemporary Indian poetry were reviewed and vital problems concerning Indian literature were discussed. The second *Sahitya Samaroh* meeting in April 1957 devoted itself to contemporary Indian fiction and short stories as also to a discussion on the requirements of language for mass communication.

National Book Trust

The National Book Trust was set up in 1957 with C.D Deshmukh as Chairman to encourage the production of good literature and to make such works available at moderate prices to libraries, educational institutions and the public.

The Trust will also publish standard works on education, science, culture and the humanities Classical Indian literature translations of foreign classics and of Indian classics from one regional language to another and reproduction of the pick of Indian art will receive special attention The universities and other learned bodies can seek the assistance of the Trust for the publication of approved books The Publications Division of the Ministry of Information and Broadcasting will be the principal publisher of the Trust.

Q How does our government endeavour to promote cultural relations with other countries ?

External Relations Division

Ans An External Relations Division has been established in the Ministry of Scientific Research and Cultural Affairs to promote better understanding and good will by means of exchanges of delegations of artists students scholars publications, exhibitions art objects as also through presentation of books selection of Indian teachers for service abroad participation in international congress and conferences cultural agreements construction and maintenance of international students houses and hostels, and subsidising of foreign translations of Indian classics

Delegations

A cultural delegation of six writers led by Humayun Kabir was sent to attend the Pakistan Cultural Conference held at Kagmari Dacca in February 1957 The Madras University Hockey Team visted Kabul on the occasion of the Afghan Jashan celebrations during August 1957 Nalinaksha Dutt and D Valisinha were selected to go to Cambodia and J M Majumdar D Valisinha and Rev J Bikkhu to Thailand to participate in the 2 500th Buddha Jayanti Celebrations on the invitation of the Governments of Cambodia and Thailand respectively A party of musicians and dancers was sent to Nepal to participate in the Gandhi Jayanti celebrations organised by the Indian Embassy in Kathmandu

A delegation of students from Sikkim visited India at the invitation of the Government of India Ten Nepalese students were invited as observers to the Fourth

Inter University Youth Festival A forty member Rumanian Folk Song and Dance Ensemble from Rumania visited India as guests of the Government and gave performances in Delhi, Bombay Calcutta and Madras. A delegation of leaders from Nepal belonging to different political parties and another of prominent women from Russia visited India during 1957 An important writer to visit India during the year was Mr Halldor Laxness, a Nobel Prize winner in Literature

Cultural Agreements

To promote cultural relations, cultural agreements were concluded with Poland and Rumania

Grants

Financial assistance in the form of *ad hoc* grants was given to the following societies engaged in furthering their cultural contacts Indo Egyptian Cultural Association, Cairo; Indo-Iranian Cultural Association Teheran Indo Turkish Cultural Association, Istanbul Indo-German Cultural Society Bombay Indo-Nepal Friendship Association, Kathmandu Tibetan School at Kalimpong Ramakrishna Mission Centre in London School of Oriental and African Studies London Indian (YMCA) Union and Hostel London Indian Students Association, Paris India League Sydney and Indian Students Associations in the United Kingdom.

Indian Council for Cultural Relations

The Indian Council for Cultural Relations was established in November 1949 with the object of establishing reviving and strengthening cultural relations between India and other countries. Although financed entirely by the Government of India, the Council functions as an autonomous body

Amongst the many activities of the ICCR the following are worthy of mention (i) Exchange of eminent scholars savants and students (ii) Maintenance of chairs of Indology in foreign universities (iii) Appointment of lecturers in Indian culture abroad (iv) Presentation of books and films about India (v) Welfare of foreign students in India (vi) Reception and entertainment of distinguished foreigners in India and (vii) Organisation of summer camps, seminars and social gatherings for the benefit of foreign students in India

The Council publishes two quarterly journals, namely *Indo Asian Culture* in English and *Taqafat ul-Hind* in Arabic. Besides it subsidises a journal in Persian and English under the *Indo Iranica*. The Council also sponsors the publication of rare manuscripts and other valuable books about India and undertakes publication of books and brochures relating to different aspects of India's culture.

LANGUAGE AND LITERATURE

The Indian Constitution *recognises* 14 languages. *Hindi* the language of nearly 42 percent of the people has been declared the State language but for a period of 15 years from 1950 English will continue in official use

Origin and Growth

The Indian languages have been classified under four heads (1) Indo-Aryan, (2) Dravidian (3) Austric and (4) Sino-Tibetan. The Aryan languages are descended from the ancient speech of the Indo-European invaders who came to India from their original homeland in the Eurasian plains The oldest form of Aryan speech is to be found in the Vedas the four sacred books of the Hindus which are believed to have been compiled c. 10th century B.C. Vedic Sanskrit gradually evolved to have into what are known as the middle Indo-Aryan dialects Between 600 B.C and 1000 A.D the period of Aryan expansion these dialects gradually spread over northern India The early literature of Buddhism is enshrined in Pali By the 10th century A.D the middle Indo-Aryan dialects gradually developed into the modern Indo-Aryan languages.

The most important of these is Hindi and on the basis of the numbers who speak it it is the third most important language in the world after northern Chinese and English The home districts of Hindi are eastern Punjab and western Uttar Pradesh. It has also come to be accepted as the literary language of the neighbouring areas. Hindi is easily understood by people who speak other Aryan languages such as Bengali Assamese Oriya Marathi and Nepali. It is thus the most representative language of modern India

Though Delhi is reputed to have been the birth place of Urdu it is known that *Persian speaking soldiers* settled down in the Punjab 200 years before the first Muslim Sultan ascended the throne of Delhi They inter married and spoke a variation of the local language heavily interlarded with Persian. The invasions of Mahmud of Ghazni and Mohammed Ghori helped to establish Urdu in Delhi, and within a few years it passed into common speech

Urdu thus evolved as a result of Persian influence on Hindi and came to be written in Persian characters It became current in north western and upper Gangetic India and later in the Deccan

The Dravidian languages spoken by 20 per cent of the people have their home in peninsular India Tamil Malayalam Telugu and Kannada are the most important of them Tamil the oldest member of the group preserves a good deal of the general character and vocabulary of the ancient Dravidian speech it has a most extensive vocabulary Malayalam is closely related to Tamil but has borrowed considerably from Sanskrit

Primitive tribes constituting 1 3 per cent of the population and living in the forest areas of Bengal and Bihar speak dialects of their own and till recently they did not even have a script. These languages are said to be related to those of south-east Asia Along with the latter they are described as Austro-Asiatic languages They are believed to have come to India from the north-east long before the Indo Aryan invasion

Sino-Tibetan dialects are spoken by small tribes along the southern slopes of the Himalayas and in north Bengal and Assam Nawari of Nepal and Meithei or Manipuri of Manipur are the most important These tribes are now learning Bengali or Assamese and are rapidly be coming bilingual They constitute 0 35 per cent of the population

In spite of this variety of languages and dialects in India there is a basic unity underlying them They bear the influence of a commonly shared culture

Literature

Among the *Indo-Aryan languages* the Vedas are the most ancient collection of hymns and religious writings They consist of four books the earliest, the Rig *Veda*, being older than the Homeric poems

By about 600 B. C. the old Indo-Aryan language of the Vedas had metamorphosed into Prakrit (as it later came to be known) just as Latin changed to Italian. The Brahman priests continued the study of the old Vedic language and developed a younger form of Vedic speech known as Sanskrit. It soon became the language of the sophisticated and even if it is not spoken today it has been in use ever since for religious purposes. The two great epics of ancient India, the Mahabharata and the Ramayana, which assumed their present form about the time of Christ were written in Sanskrit as were the Puranas—books on religious and historical traditions. Meanwhile certain heterodox systems of philosophy were founded by Mahavira (Jainism) and the Buddha. Their followers produced a great mass of literature in Pali and various other dialects. To these must be added the older literature of Tamil whose earliest specimens date back to the beginning of the Christian era. In Tamil, beautiful poetry was composed under a different inspiration—that of the ancient Dravidian culture.

From the 10th century onwards Telugu, Kannada and Malayalam developed rapidly and much valuable writing was done in each of them. Modern Indian literature may be said to have begun with the emergence of the new Indo-Aryan and Dravidian languages of the South after the 1st century A.D.

Hindi

The epics and ballads of Rajasthan detailing the exploits of Hindu kings against the Muslim invaders mark the beginnings of Hindi literature. The great work Prithviraj Raso written by Chand Bardai is a landmark in Hindi literature. This was followed by a revival of Vaishnavism and the literature of the period was characterised by an intense extrovert devotion to an omnipresent god who, from time to time, assumed human form to cleanse the world of evil. To the Bhakti (devotional) movement as it is called belong the saintly poets Kabir, Mirabai, Surdas and Tulsi Das. Between the 16th and 17th centuries, Tulsi Das wrote his Ramayana in the old Awadhi form of eastern Hindi. In Rajasthan Mirabai sang the praise of God in ecstatic terms and her rhythm and devotion swayed millions of hearts. Between the 17th and 19th centuries some of the best lyric poetry was written in Hindi, but towards the end there was a decline in its quality. With the advent of printing and English education, Hindi received a fillip and Hindi prose has since developed rapidly. There are a number of writers experimenting with all literary forms.

Bengali and Assamese

Chandidasa was a great Bengali poet of the 14th and 15th centuries. He wrote some fine lyric poetry. A biography of Chaitanya, a religious reformer, by Krishnadasa Kaviraja is an outstanding work in Bengali prose. Narrative tales of heroism and devotion and romantic ballads occupied a prominent place in Bengali. Bankim Chandra Chatterji, novelist and essayist, is considered the greatest writer of modern Bengali literature before Rabindranath Tagore. Ishwarchandra Vidyasagar became a household name in Bengal in the 19th Century and at about the same time Michael Madhusudan Dutt wrote English and Bengali poetry of considerable merit. In 1913 Tagore won the Nobel Prize for Literature. It is to Tagore mostly that modern Bengali is indebted. A standard Bengali is used for prose throughout the province and Bengali has probably been more susceptible to Western influences than any other Indian language. Standard Bengali translations of Shaw, Eliot and Ezra Pound are popular.

Assamese has devotional literature of rare quality in the writings of Sankaradeva and other writers of the 15th and 16th centuries. A striking feature of Assamese literature is the series of prose chronicles known as buranjis. These are imitations of the chronicles of the Ahoms, who had affinities with the Siamese and conquered Assam in 1228. They ruled over the province for six centuries and were subsequently absorbed in the local population.

SUCCESS TELLS ITS OWN STORY

The *Careers Institute* and *Careers & Courses* are serving a great purpose in building careers of youths of India, thus serving a great purpose in the building of Nation as well— There are many pamphlets published by your Institute that are of a great deal to every youth whoever is supposed to be the builder of the nation One pamphlet *Personality Test* is a marvellous one——

Gurgaon — Kundan Singh

• • •

I take this opportunity to thank you for all your kindness in giving me the necessary instructions and guidance in respect of my appearing for the recent *I A S Examination.* I am sure you will be interested to know that I have done well in the examination and I am sure of my successful result

Tuticorin — C S Rajendran

• • •

It gives me much pleasure to announce that your *A Guide to Intelligence Test* and *S S Board Interviews* have helped me a lot to prepare a service candidate a *Jawan* of my own Unit, to appear before a Service Selection Board which ultimately gave him success and as such now he is a full fledged Army Officer

Siliguri (W B) — R A Narayan A S C

• • •

I am pleased to inform you that your tuition for *British Constitutional History* had been a boon to me when I was groping in the darkness of ignorance to locate my path I thank you very much for suggesting to me the books too for the subject when I had inquired for some

Poona — S.M Parande

• • •

In the I A S Examination I found compulsory papers most tricky and illusive The *General Knowledge* papers were the graveyard of many a brilliant candidate But I am glad to inform you that your *Guess Papers* in the Compulsory subjects more than justified my faith in your Institute and I have secured more marks than I otherwise would have done.

Madras — S Subramaniam.

Before I joined your Institute I was not feeling on sure grounds But now the things are different The wavering mind which has been troubling me so much is no more such I am confident of success in the Examination Your *Model Guess Papers* recently received are a boon to the student community The papers are so important and exquisitely solved that not a single examinee can miss them

Muradabad — T Jalani

• • •

I studied your *Lectures on History* and *Political Science* and was much satisfied I got so much material from these which I could not get from many books after a labour of about six months

Gohana (Dt Rohtak) — Shiv Lal

• • •

I had almost despaired of success in the I.A S *Examination before I joined the Careers Institute* They made things so easy and to the point that I was quite at home with question papers To my surprise many of the questions they had discussed had appeared Within a month I was so well equipped that I got very high qualifying marks in the Examination I regret I did not join it earlier

Dehra Dun — S Khosla M.A

• • •

In a Competitive Examination if candidates could just get a couple of marks more than they would otherwise do without going through your guesses, they should think their money invested amply rewarded

Last year I bought your *Guess Papers* in the Compulsory Subjects and Economics and did my papers very satisfactorily

Patna — S S [illegible]ha

• • •

CAREERS make possible what seems impossible A huge portion that was before me was put by them in a nutshell that I could remember all the relevant points easily They give only what is necessary for the Examination They have a knack of doing [illegible] *Careers* is a sure way to success

EDITORIAL

FUTURE OF DEMOCRACY

The establishment of dictatorship backed by the army in Pakistan and the military take over of the parliamentary government in Burma have shocked the lovers of democracy throughout the world. The latest developments in these countries have provided the evidence of the growing decline of democratic institutions in Asia Explaining his action General Mirza said that it was clearly unrealistic to expect healthy democracy on the Western pattern in a country (Pakistan) where only 16 per cent of the population could read and write 'Democracy without education is a hypocrisy without limitation he added Handing over the reins of Government to General Ne Win Burma's Prime Minister, U Nu said that by his timely action he had averted a situation with the ingredients of a potential civil war Parliamentary democracy has become deeply marked up in Indonesia Iraq, France Ceylon Thailand and there are signs of restlessness in India as well The events in Uttar Pradesh West Bengal and Kerala should be a matter of sober reflection for India which cannot afford to ignore the lessons of developments in neighbouring countries Mr J P Narayan the Socialist leader, has also given vent to his views on democracy He had said that President Lincoln's dictum Government of the people by the people and for the people had not been realised anywhere in the world not even in America and very much less in India He said Parliamentary system has its defects and we must try to remedy these defects and see how the system can be better perfected' In almost all the newly freed Afro-Asian countries where parliamentary system exists a new crisis is fast developing and new concepts such as "guided democracy" controlled and regulated democracy are coming up This amply bears out that the present system of parliamentary democracy with its multi party system is proving inadequate to direct the energies of th-

people into constructive channels and meet their aspirations. Parliamentary democracy is under stress and trial all over the world. Even in countries where it has been well-established its exponents are becoming *restive and sceptical* over its future. France is an example of this school of thought. The real test of the parliamentary democracy has come and it is to be seen whether it will survive the new crisis—the growing trend towards military dictatorships.

Is there something basically different in democracy as it is slowly dwindling away from many countries? *Why has democracy failed to function in countries whose constitutions were based on democratic principles?* The answer is that there is no deficiency in a democratic system of Government. The deficiency lies in the people who run the democracies. The parliamentary government was *overthrown in Pakistan because in the words of Dawn* corruption and misrule were playing havoc with the country and unbelievable outrages were being perpetrated in the name *of democracy* and parliamentary system. *The Manchester Guardian* said: "It cannot be said that General Mirza has destroyed Pakistani democracy *for the carryings on in Karachi,* Lahore and Dacca were only a parody of it."

In Burma, a split in the ruling party (A.F.P.F.L.) and the fear of Communists taking over the Government had led to the transfer of power to General Ne Win. There is nothing inherently wrong with Democracy but the lack of honest and strong people to carry out the *rules and regulations of a parliamentary democratic Government* leads to the failure of democratic institutions. In a democratic nation, the people should give up the spirit of factionalism, feuds and struggle for power and they should dedicate themselves to the well being of society as a whole. A country's progress depends on its leaders. If the men at helm of affairs of a State are corrupt and selfish [illegible] Government, whether democratic or totalitarian, can live for a long time. Mr. Nehru recently said at a press conference: "In the final analysis (of causes of failure of parliamentary democracy in certain countries) it is the quality of the people that counts. It does not matter what [illegible]. A strong people will make any theory a success but a weak people will go to pieces even with the best of theories. People should have the quality of living together and of [illegible] [illegible] tolerance. They should be [illegible] [illegible] where they may [illegible]. A sense of [illegible] is not merely to think of yourself or your group even if it is in majority but to think of the larger group, that is, the nation. Tolerance—that is the essential quality. If everybody wants to go his own way, then you may be wise people, *but all the wise people will end in disaster."*

There are different conceptions of democracy to different people. Even the Communist countries where there is a one party totalitarian rule talk of democracy. In a strict sense orthodox parliamentary democracy exists to-day in a very few countries. In under-developed and less educated countries there is little scope of democracy functioning efficiently. People must be educated to know the value of the ballot box. They should be aware of their power to elect an able government or to throw away a corrupt and inefficient government. In a democracy the Government is the joint responsibility of the people and not only of the majority party. One-party rule always leads to corruption and dictatorship. There must be a strong opposition to check the ruling party. Democracy is the rule that the affairs of a community should be carried on in accordance with the general will of the community and not according to the wishes of any individual or group of individuals. Democracy without a parliament as its sovereign organ is inconceivable and a parliament must consist of people of different shades of thought but with one aim. The aim is the same of every party that is to establish a strong government which should do maximum good to largest number of people but the method may differ with each party. For the successful functioning of a democracy it is essential to have a multi-party parliament.

Role of Opposition Parties

A parliamentary democracy necessarily means a government by discussion and is based on a wide [illegible] of different points of view. Parliamentary democracy is carried on by a dual one side querying and the other answering one proposing and the other [illegible] one challenging and the other justifying. If the parties are not two at least, there is no parliament at all. For parliament is speaking and speaking needs a hearer as well as a speaker. There cannot be any democracy without a multi-party [illegible]. A representative form of government is necessarily a party government. Wherever there is a Government Party there must be an opposition [illegible] [illegible] there is no democracy. The only alternative to the one party government is [illegible] [illegible].

Although the party in power and the [illegible]

tion seem to be two hostile factions at war with each other on most occasions yet there must exist agreement between these two camps on fundamentals of democracy Decisions of majorities must prevail ultimately The opposition can seek power to effect the changes it desires but it cannot seek power by means which may result in annihilation of democracy Decisions by majority after free and frank discussion is the soul of democracy Hence the majority would not be justified in stifling criticism

In a democracy there should be no limit to parties contesting for the Parliament In many advanced countries, such as United States and Britain, there are only two main parties in U S.A Republicans and Democrates and in U K. Conservative and Labour The two party system enables the electorate directly to choose its own government, while in the multiparty system the choice of a government is left with the elected representatives Also in two-party system the responsibility for action is fixed to a definite group which is returned in a majority while the multiparty system either makes for coalition government or for minority government which is liable to be weak and ineffective. There is no stability in a coalition government as has been amply demonstrated in France and Pakistan during the last eleven years France had twenty five governments after the Second World War, while Pakistan had eight since it came into existence in 1947

In a democratic structure, party system of Government is essential because this is the only channel by which the people can elect their representatives or change the Government by the ballot. The elections are held at fixed intervals say from three to five years and the people have the choice to oust a corrupt government or re elect a Government which had, during its tenure done greatest good to greatest number of people The people in choosing their representatives can be guided by election manifestos issued by contesting parties These manifestos should clearly set out the line of policy and the action which the parties propose to take if they ever come to power

Is the party system the sine-qua non of democracy? There may have been popular governments in the past without elected parliaments but such governments are non existent to-day The alternative to party-system is dictatorship by an individual or by a group Under no stretch of imagination the Governments in Communist countries can be called peoples governments. They are governments by one party and those who differ from it has no voice in running the affairs of the nation The freedom of speech and thought is stifled which is the negation of democracy, The critics of democracy say that too much freedom to an individual is detrimental to the carrying out of day to-day affairs of the nation When we accept democracy with a party system in which there is freedom to differ and criticise we do so at its own value We are aware that it has certain glaring pitfalls with their eyes constantly fixed on power political parties set man against man striking at the very root of his co-operative spirit technically it is often possible in a democracy for a minority to rule over a majority (the Congress party in India got only forty per cent of total votes cast in the last general election but it came into power in the Centre and the States) partymen are, as a rule bound by party discipline and thus the very purpose of democracy of ruling by discussion persuasion and consent, is defeated; it often lacks a machinery by which public opinion can reflect itself in the policies of the Government. With all these deficiencies howevery, the party system in a democracy has stood the test of time

Nehru and Democracy

India has successfully stood the test of multi party democracy for the last eight years Two general elections to elect the Central and State Governments have already taken place Even the Communists have come to believe in the efficacy of the ballot box as is evidenced by the return of the Communist party to power in Kerala In the Centre the biggest opposition party is the Communist party and so far it has shown a sense of responsiveness. India is the bulwark of democracy in the East and all the world is looking towards this bastion of parliamentary democracy with praise and esteem Comparing the events in Pakistan with the pattern set by other Asian and Arab countries 'who have lost patience with politicians because of their failure to establish a workable democratic system the Sunday Observer of London said that 'India is the only bright spot." The News Chronicle describing India as the only stable democracy left in Asia" said that if democracy failed there the rest of Asia would draw a devastating moral " "Democracy there is the test Asia is crumbling and if India is not saved all Asia is menaced" the News Chronicle said The democracy in India is safe in the hands of Mr Nehru who is the chief architect of democracy as obtains in India.

Mr Nehru's conception of democracy

different from that of the nineteenth century thinkers. According to Nehru there are four ingredients in democracy, viz. individual freedom, representative government, social and economic equality and tolerance of different points of view. There is a possibility of conflict among them. There is also the possibility of conflict between them and the needs and requirements of good government from other points of view. Statesmanship consists in bringing about a solution of such conflicts and maintaining a balance among them all.

There must be, for instance, full freedom for the realization of human values and the creative development of personality. This implies personal freedom and freedom of expression. These are guaranteed by the Fundamental Rights incorporated in the Indian Constitution. But the Constitution also provides for preventive detention and various restraints on freedom of speech and of the Press. It is the view of Nehru that these provisions and restraints are justified because the security of the State is not of less importance than individual freedom. Moreover, freedom of the Press means in the peculiar conditions of today freedom only for the rich proprietors of the Press to mould public opinion and their freedom has to be restrained in the larger interest of society.

Similarly it is to be noted that today what the people want is economic democracy—a rise in the standard of living of the masses and a more equitable distribution of wealth. The nineteenth century philosophers were satisfied with political equality but such an equality is meaningless if it does not lead to economic equality. It is this that has led Mr. Nehru to place so much emphasis on planned economy, on an expanding public sector and [illegible] land reform. But he has not completely abolished the private sector or private property in land. The mixed economy which he advocates is the outcome of his doctrine of balanced [illegible] democracy. As a democrat he stands for the secular state in which all individuals should receive equal treatment irrespective of their [illegible]. This accounts for the abolition of untouchability and [illegible] [illegible] at the same time his theory of balance [illegible] special treatment being accorded to the members of backward classes. The theory of balanced democracy is the [illegible] contribution of Mr. Nehru to the political thought of today.

India is fortunate in having a man like Mr. Nehru at the helm of her affairs. Our democracy is safe in his hands. But it is unwise to depend on one man for ultimate destiny. India should not be complacent with her success in political and economic fields. If within the framework of democracy India can solve the pressing economic and social problems of the day, meet the growing demand of her people for better living conditions, for education and for work, the future of parliamentary democracy will indeed be bright. But if the great expectations raised in the people's minds by democracy cannot be satisfied by the democratic process then naturally people will search for alternative methods. Democracy itself is under trial in India. It will be saved not by faith but only by the vigilance, patriotism and above all the sweat of the people. The people of India with a great past of democratic traditions shall carry aloft the torch of parliamentary democracy for the rest of the world.

—o—

THE WORLD BANK

THE International Bank for Reconstruction and Development (often called the World Bank) was founded at the Economic conference held at Bretton Woods U S A in July 1944 and it began operations in June, 1946 The Bank is an international co operative organisation and is associated with the United Nations as a specialised agency Its aim is to assist the economic development of its member countries and to raise the standards of living of the peoples of the world The Bank may lend to member governments governmental agencies or private enterprises if the borrower is not a government the guarantee of the member government concerned is required for the loan

The Bank's first loans made in 1947 were for European postwar reconstruction A total of $500 million was lent by the Bank for this purpose In 1948 the Bank turned to lending for development an increasing proportion of its funds being directed to the less developed areas of the world By July 1958 the Bank had made some 200 loans totalling over $3 700 million to finance more than 600 projects in 46 countries or territories The distribution of Bank lending between the various regions of the world was as follows Africa, $479 million Asia $948 million Australia $318 million Europe $1 186 million, Western Hemisphere $798 million The Bank s loans are mainly directed to helping its member countries to build the foundations of economic growth Approximately one third of the Bank's development lending has been for electric power and has helped to finance the addition of eight million kilowatts to the world s generating capacity Another third has been for transport improvements—railways highways air and waterways The remaining third of the Bank s loans has been for agriculture especially irrigation for industry especially steel production and for general development purposes

The Bank s membership consists of the governments of 67 countries which are the Bank s stockholders each subscribing to its capital stock in accordance with their economic strength. Each member country nominates a Governor to the Bank s Board of Governors which meets once each year and is holding its Thirteenth Annual Meeting in New Delhi India s Governor is Morarji Desai the Minister of Finance The Governors have delegated most of their powers to the Executive Directors These meet at least once each month and consist of five nominated Directors who represent the five largest stockholders in the Bank and 12 elected Directors chosen by the other member countries India, the fifth largest stockholder has appointed Narahari Rao former Comptroller and Auditor General, as its Executive Director The Executive Directors are responsible for matters of policy and must approve all the loans made by the Bank

The day to-day conduct of the Bank s operations including the making of recommendations to the Executive Directors on loans and questions of policy is the responsibility of its President, who is also Chairman of the Board of Executive Directors The President of the Bank is Eugene R Black an American now serving his third term The Bank has a total staff of about 550 persons representing more than 49 nationalities and including bankers economists accountants engineers and other experts The head quarters of the Bank are in Washington U S A Small offices are also maintained in Paris and New York.

Functions Of The Bank

In addition to making loans the Bank also renders to its member governments a wide variety of technical assistance ranging from full-scale economic surveys of the development potential of member countries—there have so far been 15 such surveys—to regional investigations or advice on particular projects The Bank has also been called on to contribute its good offices toward the settlement of international economic problems such as the sharing of the waters of the Indus Basin between India and Pakistan and settlement of the compensation to be paid by Egypt for the nationalisation of the Suez Canal.

The Bank is not only a lender but also a borrower since the capital subscribed by its member governments was never intended to finance all its operations The rest of its funds have been raised mainly by the sale of its bonds in the capital markets of the world By July 1958 the Bank had outstanding borrowings of $1 [illegible] million mostly in the form of issues of U.S dollar bonds but also including bond issues d[illegible] in Canadian dollars and European currencies [illegible] half of the Bank s borrowed money is owed to investors in the United States the other half being owed to investors in many other countries.

The Bank also enlists the support of private investors by selling parts of its loans and has in this way added over $400 million to the funds available for development financing. The Bank also uses for lending the amounts arising from earnings and from the repayment of earlier loans. The rate of interest by the Bank is based on the rate which it would itself have to pay to borrow money at the time the loan is made plus a 1% annual commission charge which is allocated to a Special Reserve. In practice because of changes in money rates in the main capital markets in which the Bank sells its bonds the long-term lending rate of the Bank has varied between 4¼% and 6%. At any one time however the Bank does not distinguish between borrowers in regard to the rate of interest charged.

The lending operations of the World Bank are conducted on the basis of three main principles: first, that the borrowing country will be in a position to repay the loan; second that the project or programme to be financed will be of such benefit to the economy as to justify the borrowing of foreign exchange; and third that the project is itself well-designed and feasible of execution.

The Bank usually finances only the cost of imported goods and services for development projects and does not lend for expenditures that are going to be made locally. These expenditures, made in domestic currency are arranged by the borrower and they commonly equal or surpass the amount lent by the Bank. While the Bank has lent nearly $4,000 million the total investment in the projects it is helping to finance is more than $12,000 million. The economic value of the projects in terms of new production added by new equipment emerging from improved land, or stimulated by better transportation and wider markets is in the not very long-run going to be worth many times that.

India And The World Bank

The World Bank's relations with India are probably more extensive than with any other of its [illegible] member countries. Late last August the Bank sponsored the International [illegible] which [illegible] to [illegible] the foreign exchange needed [illegible] of the second Five Year Plan. [illegible] the Bank [illegible] $100 [illegible] $15 [illegible] the Indian [illegible].

The Bank has by now, lent $510 million for thirteen public sector and seven private sector projects in India. This is more than the Bank has invested in any other country. All loans given to private sector projects have been guaranteed by the Government of India.

The first Bank loan to India was made in 1949 before the First Five Year Plan. Since then the Bank has given [illegible] support to projects in the two Plans and especially to projects which form the "core" of India's development effort in the Second Plan. Projects financed with the help of the World Bank institution are bringing—and in many cases have already brought—new productive assets to strengthen India's economy: as for instance over half a million kilowatts of capacity to generate electric power, a million and a quarter acres of improved farm land and irrigation works and water storage for a million acres more—the whole to support an added 750,000 tons of rice and wheat production a year; new plant capacity to produce 1,125,000 tons of finished steel, equal to the whole of India's capacity in 1952; and major renewals or additions to the equipment of the Railways, including the improvement or addition of 10,000 miles of track.

On India's side, loans received from the Bank have been faithfully serviced. Government and other Indian borrowers have so far drawn $340 million from their Bank loans, and some $27 million has already been repaid. One loan—$7 million for tractors needed to clear weed infested land in Bhopal—has been paid back in full.

Through the Bank other investors have become interested in India. In March 1957 in conjunction with a Bank loan Air India International borrowed $11 million from five private American banks. This was the first time that any Indian borrower had directly entered the American capital market. In November of the same year nine American and Canadian private banks participated to the extent of $13 million in a World Bank loan to the Tata Iron and Steel Company and this was the largest participation ever arranged in a World Bank loan. In all, the Bank has sold over $37 million of its Indian loans to investors in the United States, Canada and Europe.

Because of this experience [illegible] the [illegible] has been [illegible] many [illegible]. In the normal course of [illegible] Bank [illegible] India [illegible] other countries who [illegible] new loan [illegible] possible [illegible] progress being made on

projects already being financed with the Bank help Since the Bank has made 20 loans in India, such consultations are held frequently To maintain up-to date knowledge of India and its problems Bank economists visit the country from time to time Also a Resident Representative of the Bank is stationed in New Delhi

Aid To India

India is the first country in Asia to receive financial assistance from the World Institution This was in 1949 when the Bank lent $33 million to enable the Indian Railways to import several hundred locomotives from Canada and the United States At the time the loan was made, lack of hauling capacity held up one quarter of all freight offered to the Railways Soon thereafter as a result of the re equipment programme partly financed by the Bank, this limitation disappeared and a major obstacle to our economic growth was temporarily removed The subsequent growth of production and trade, however began once more to exert heavy pressure on the rail system and during the Second Five Year Plan, the Bank has lent various currencies amounting to $175 million for new locomotives, goods wagons and other equipment needed to help increase passenger capacity by one sixth and freight capacity by nearly half

The Bank has also collaborated in projects to improve other transportation facilities It has lent $43 million to improve ship and cargo handling capacity at Calcutta and Madras and thereby relieve congestion and delay at India's first and third ranking ports Finally, the Bank's $5 6 million loan to Air India International was made for new aircraft that will help the airline to maintain its competitive position as commercial aviation enters the jet age.

The Bank has taken a deep interest in both the agricultural and industrial development of the Damodar Valley sometimes called the Ruhr of India. A loan of $18.5 million was made in 1950 for the construction of the largest thermal power plant in Asia at Bokaro, in Bihar A second loan for the Damodar Valley Corporation amounting to $19 5 million was made in 1953 for irrigation and flood control schemes based on dams and barrages at Maithon Panchet Hill and Durgapur All these works are now completed with the result that the lower valley has been spared floods during the high water experienced in the river

One of the Bank's most recent credits of $25 million was made to provide still more power for industry in the Damodar Valley, it will help install a new fourth unit at Bokaro and to construct the thermal power plant which among other things is to provide the electricity needed by the steel plant being built at Durgapur

Second only in size to the Bank's railway loans is its investment in steel making in the Damodar Valley Of the increase of steel capacity scheduled for the Second Five Year Plan a bit more than half is to be accomplished by two private concerns The Indian Iron and Steel Co Ltd and the Tata Iron and Steel Co Ltd The Bank has lent them a total of $159 million in various currencies—$51 5 million to IISCO for an expansion programme which is raising the output of steel products by its Burnpur works to 850 000 tons annually and $107 5 million to TISCO to raise the output of its Jamshedpur installations to 1½ million tons of steel products a year

The Bank has also been active in another industrial area, Bombay The Industrial Credit and Investment Corporation of India, which the Bank helped establish with a $10 million loans has its headquarters in Bombay although its activities are not confined to the area But in the area proper the Bank has beeen helping the Tata electric industries to bring about a much-needed increase in the supplies of electric power The companies erected a new thermal plant near Bombay with the help of a Bank loan in 1954 and are now enlarging it with the help of a second, made last year

Changing Pattern Of India's Foreign Trade

By CHESSNAT GOPALAKRISHNAN

THE problem of India's foreign trade has assumed a new significance in the present context. This is because of the fact that the foreign trade of our nation has a profound and decisive impact on the implementation of Second Five Year Plan. The hard core of Second Plan is Foreign Exchange and the foreign exchange available to India depends on the magnitude of India's Foreign Trade. Therefore the necessity to adjust the pattern of our foreign trade to meet the requirements of Foreign Exchange becomes self evident.

What is Foreign Trade?

The imports and exports of a country constitute its foreign-trade. The difference between the value of merchandise exports and the value of merchandise imports forms the balance of trade of a country. If during a period the value of a country's exports outstrips the value of its imports, the country will be having a *favourable* balance of trade. But if the value of imports exceeds the value of export the country will experience an *unfavourable* balance of trade. Thus in the ultimate analysis the balance of trade and the foreign exchange available to a country depend on the relative proportion of its exports and imports. In other words, they are inextricably tagged on to the pattern of a country's foreign trade.

India's Foreign Trade In the Past

India had trading connections with many foreign countries like Babylon, Egypt, Arabia, Rome, China, Greece and Iran even as far back as 300 B.C. The overland trade of India also flourished during the Mahomedan [illegible] owing to the [illegible] along the North West Frontier. The discovery of a new sea-route rounding the Cape of Good Hope towards the close of 15th century ushered in a new era in the history of India's foreign trade.

India's Foreign Trade underwent a radical change in the *19th century* between 1800 and 1900. The chief exports of India were [illegible] [illegible] [illegible] [illegible]. The main imports were [illegible] and horses.

This pattern [illegible] began to undergo [illegible] changes from 1857 onwards. The factors which brought about this [illegible] the opening of the Suez Canal in 1869, the development of railways linking the Indian ports with the inner regions, the advent of the steamship, improvement in naval and [illegible] [illegible] numerous [illegible] [illegible] [illegible] growth of mercantile marine [illegible] and the adoption of a policy of *Laissez Faire* in India.

Consequently rice, wheat, tea, coffee, hides and skins, raw cotton, raw jute, oil seeds etc. began to dominate the list of our export trade. Bullion continued to occupy a [illegible] among our imports. The other items which entered our import trade were cotton manufactures, machinery and metal products of all description, sugar etc. "Thus, from being a seller of artistic products and costly textiles, India became a source of different raw materials for foreign countries. Again from a purchaser of articles like gold, brass, lead etc., she became the dumping ground of hundreds of manufactures from Europe."

Foreign Trade Under World Wars

The First World War (1914-18) had an adverse effect on India's foreign trade. It resulted in a complete suspension of foreign trade with enemy countries. But the First War had one redeeming feature viz. the stimulus it gave to the manufacturing [illegible] of India like cotton, jute, iron and steel, sugar etc.

There was a marked development of India's trade immediately after the war. But this was short lived. Because the Great Depression of 1929-33 made its impact felt adversely on India's foreign trade.

At the outbreak of the Second World War (1939-45) India was slowly recovering from the Depression. The Second World War effected several changes in India's foreign trade. It resulted in a substantial reduction in imports. Exports however did not reduce much [illegible]. Hence balance of trade continued favourable to India. It also brought about marked changes in the composition as well as the direction of foreign trade. Thus exportation of raw materials declined and exports of [illegible] increased [illegible]. [illegible] trade with Germany and Japan [illegible] [illegible] there was a rise in the volume of trade with England and other Commonwealth countries.

Current Trends

[illegible] [illegible] [illegible] of Second World War [illegible] the Government of India

exercised a rigid control on the foreign trade of the country This was indispensable for the circumstances obtained in the nation did not warrant a relaxation in its policy Apart from this there has been no startling change in the pattern of India s foreign trade since the attainment of independence Against this historical perspective the current trends in India's foreign trade may be analysed

A survey of the current volume of export trade of India shows an unmistakable trend for decline The value of our monthly exports which stood at Rs 58 74 crores in November 1957 had declined by stages to Rs 41 42 crores in April 1958 In the month of May there was a slight rise but the dock workers strike in June reduced the value of exports in that month to Rs 27 78 crores Further another estimate reveals that compared with the corresponding period of 1957 the first six months of 1958 resulted in a fall of over Rs. 50 crores.

American recession was one important factor which effected our export earnings adversely For the period of January May 1958, these earnings were lower by R. 28 crores as compared to the corresponding period of 1957 The declin amounted to Rs 2 5 crores in exports to the dollar area and Rs 25 5 crores to the rest of the world Recessionary trends abroad affected prejudicially the exports of manganese ore, pepper etc

As regards imports The current import policy has succeeded partly in reducing imports and yet maintaining industrial production In comparison with the first half of 1957 a saving to the tune of Rs. 100 crores was effected during the period January to July 1958 Steel, non ferrous metals machinery vehicles raw cotton chemicals and electrical goods each has made its own contribution to these savings Significant reductions have been brought about also in the outlay on textile yarn and fabrics paper photo,raphic materials and many other finish-d products

Changing Pattern

An evaluation of the above trends clearly indicates two conspicuous factors in the foreign trade of our nation—fall in the volume of imports and fall in the volum of exports Of this the former trend denotes a welcome change But wi h the latter the case is just the reverse

Thus here n we find a strong ca. for rapid promotion of our export trade The foreign exchange we receive depends to a remarkably great extent on the volume of our Exports Thus the necessity to promote our exports to as great an extent as possible becomes all the greater

There is another aspect to the problem that of restricting our imports markedly Because if the expansion in the volume of exports is neutralised by a corresponding rise in the volume of imports no benefit is bound to result. Hence along with increasing exports a rigorous effort to reduce imports has to be undertaken

The export promotion Advisory Council and the Import Advisory Council set up by the Government of India are devising ways and means to effect necessary changes in the existing pattern of our foreign trad.

New Possibilities

We feel that there are new possibilities hitherto unexplored in the rector of export promotion. Thus Indian handicrafts universally acclaimed for their quality and artistic splendour if given proper incentive are sure to result in substantial increase in our export earnings Hence government should devise a new policy to revive the production of the fast fading handicrafts of India There is historical evidence to show that Indian handicrafts were in great demand in forei-n markets even centuries back They were the handiwork of our rural artisans endowed wi h a unique aesthetic sense and creative faculty The successors of tho e ma t r craftsm n are to day leading an obscure lif. in the rural areas without any chance to utilise the techniques and talents passed on to them by their ancestors. But their number is fast declinin- and before they be-ome extinct species th. government should step in the seen and give encourage ment and incentive to them to utilise their talents to the full extent

In this connection we may cite some handi crafts which possess vast possibilities of ex pansion Basket makin- in several villages of Jaunpur Allahabad and Banaras Districts lac and toy man ifacture in Meerut Budaun etc coir spinnin- wi ker wo k and mat making in Kerala and Southern Ben al carpet-weaving at Amritsar Mirzapur and m . alia lungees at Saris at Tinnevelly in M l as

A revival of these handicrafts can play a vi al role in bringing about a new pattern in our foreign trade

—o—

THE INDIAN APPROACH TO NATIONAL MINORITIES

By AMIT KUMAR NAG

THE population in India contains a large number of primitive tribes who subsist on hunting, fishing or by simple forms of agriculture. Their total population figure is around twenty million.

There are three distinct zones in which they live, namely North Eastern, Southern and Central India.

In the North Eastern Zone, the tribal people are scattered over a large area in the sub-Himalayan region and the contiguous parts of Assam, including the centrally administered North-East Frontier Agency and the Naga Hills Tuensang Area and also Manipur and Tripura. Broadly speaking, they form a compact block and with minor exceptions are found along the whole of the North-East frontier of India and they even merge gradually into those of Burma and the Chinese province of Yunnan, from which no clear line of demarcation can be drawn.

They show typical Mongoloid characteristics. As in the Middle Indian tribal communities, one of the notable features in the village life of the tribe is the part played by the dormitories for unmarried people. They have separate dormitories for boys and girls. These institutions organise and control the entire youth of the village and help to develop them as fully trained members of the community, thoroughly acquainted with the defensive and other reorganisations of the tribe. Arts and crafts, music and folk dances are highly developed. Both patrilineal and matriarchal communities are found.

The tribal people of the Southern Zone, Chenchus, Kadar, Kurumba etc., are the most primitive of the aboriginal population in India. They have abandoned their original dialects and now speak corrupt forms of the neighbouring languages of the region. The basis of their tribal life has been eliminated because food gathering [illegible]

The Central Zone consists of the plateau and mountainous belts between the Indo-Gangetic plains and the Krishna river to the south. The principal tribal communities [illegible] the [illegible] Hills [illegible] Santal [illegible] Bhil [illegible] Gond [illegible]

There is [illegible] of the typical tribal [illegible] shifting cultivation is the prevalent form of production there. Their houses are more solidly built and life is more settled with some arts and crafts in evidence. There is considerable development of poetry and song, and folk dancing and music are popular. Communal life is better organised with village councils under a headman.

The tribal belt in the North-Eastern Zone of India is more important than the other two regions on several counts. Primarily its importance is due to the strategic location of the territory. This region is inhabited by tribes like Aka, Apa Tani, Abor, Chakma, Dafla, Garo, Gurung, Khamti, Khasi, Kuki, Lushai, Limbu, Lepcha, Mogra, Mikir, Miri, Mishmi, Monpa, Naga, Paite, Rabha, Tagin, Tarson, Bodo and others.

Ethnically they belong to two main groups: Tibeto-Burman and Thai-Chinese. But even among them there are communities with the strains of other groups or subgroups.

Among these tribal communities the Nagas have been in the limelight for some time. The Naga practice of head-hunting and the recent [illegible] of a section of the Nagas against the established Government were largely responsible for bringing the Nagas into the headlines of the daily press.

The Nagas do not constitute one single tribe. There are more than fifty principal tribes among them. Their origin is not exactly known. Some of them appear closely akin to similar groups of the tribes of Indonesia, Taiwan and Viet Nam.

Among other tribes of this zone, the Apa Tanis, a small community of only [illegible] [illegible] represent [illegible] of the tribal [illegible]. They are peaceful [illegible]. In a small valley not exceeding a total area of 12 square miles, they have [illegible] which is [illegible] that of the [illegible] tribal communities. [illegible] [illegible] [illegible]

There is [illegible] in the [illegible] of the tribal people [illegible]. In the past [illegible] the primitive tribes had been [illegible] with [illegible], the

results had not been very happy They were subjugated, dispossessed of their land and completely emasculated to the point where their tribal life disintegrated

With the British occupation and rapid opening up of the country the tribal people came closely in contact with ' civilization from which they did not always receive fair treatment. Consequently several uprisings of the tribal people took place in various parts of the country

The underlying causes of these uprisings were the deep dissatisfaction created among the tribal people against exploitation by their more advanced neighbours and resentment against violation of their native customs and rites

Against this background the tribal policy of the Government of India has its origin in an act of 1874 which specified the tribal areas into ' Scheduled Tracts after the pattern of segregation of aborigines into reserves in the United States of America with a view to protecting their lives and ways

Our tribal communities have been guaranteed a fair deal in the new Constitution In recognition of their backwardness and special status, some privileges and constitutional safeguards have been incorporated in the fundamental law of the land Besides the tribal people of Assam State have been given wide regional autonomy to organize themselves according to their aspirations and ideas The ultimate goal is national integration and complete communal mobility but for a short period the need of special protection and some form of isolation has been accepted Complete segregation is however never advocated as a lasting administrative policy because complete isolation has never led to progress and advancement but always to stagnation and death

In the light of the new awakening the present policy of the Government of India strives to ensure complete protection to tribal life and customs without depriving the tribal people of their share of developmental activities

The approach may be summarised as one which treats tribal life and culture with respect and the tribes with an affection which eliminates any possibility of superiority It would bring the best things of modern life to the tribes but in such a way that these will not destroy the traditional way of life but will activate and develop all that is good in it.

According to the policy as formulated by the Government of India the tribes are assured of a better place in national life. More jobs an integrated programme of development and more educational and cultural facilities are envisaged under a special scheme

An advance pilot project ' under this integrated plan is the re distribution of land in certain tribal areas of Central Zone Another important project is the Extension Service for about 10 million tribal people—nearly half of total aboriginal population—who live in compact areas away from civilization

A common feature of the Extension Service is the improvement of agricultural practices, the opening of multi purpose schools where education is related to handicrafts, and the raising of living standards. The schemes under the various planned development programmes are expected to fit in with the genius of the people This original indeed unique conception at once scientific and humane ' writes the noted anthropologist Dr Verrier Elwin is difficult, but it is surely right It is supported both by the findings of anthropological science and the warnings of history It is a charter of religious social economic and cultural rights It is the embodiment of the spirit of reverence It is a gospel of friendliness and equality

(*UNESCO*)

CURIOSITY

As a professional scientist I have spent a great part of my life either in satisfying my own curiosity or in studying the knowledge won by distinguished men who have satisfied their own said Lord Halsbury Chairman of the National Research Development Corporation in a recent BBC talk But he went on to say one of the great heresies of modern life was an insistence that curiosity must be satisfied at all costs A healthy curiosity is characteristic of all human beings and many animals—cats and penguins for instance Its satisfaction is legitimate enough provided it does not violate other instincts—the instincts of privacy for example—so that human race is corrupted and deteriorates as a result."

TONE OF VOICE

Ninety per cent of the friction of daily life is caused by tone of voice

Simple Ways To Improve Your Memory

By ROBERT J. LUMSDEN, B.A.

MOST people can improve their memory if they follow certain principles.

Let us define what we mean by a good memory. It is the power of the mind to recall certain details speedily and accurately whenever need arises. Here are the factors which facilitate this ability to recall.

1. Desire. This is the first great requisite of easy recall. You must want to remember the facts in question.

Most of us forget names because we do not really want to remember them. Subconsciously we feel that we cannot be bothered, that in any case it is an unimportant detail.

By no means is it an insignificant detail to the person concerned, however. He likes to hear his name repeated with respect. His heart warms to us when we show him this little respect, and we shall have taken the first step towards better relationships.

If we bear this in mind we shall want to remember names—and that is a long way towards doing so.

Children and students would make much speedier progress in their studies and do better in their examinations if they wanted to learn and remember—if to pass their examinations was their supreme desire. Instead, they spend much of their time and attention rebelling inwardly against the instruction they are receiving.

This raises the question of interest. We are much more likely to remember facts if our interest is aroused than if it is not. Interest generally follows desire, but not necessarily.

Our emotions also play an important part in the memory process. We have no difficulty in remembering details of incidents which happened years ago if we were moved emotionally at the time. Every wife remembers the details of her wedding-day. Every man remembers details of events which [illegible] fear.

On the other hand, we tend to forget the telephone [illegible] will be [illegible] or an appointment for a meeting with a boring person.

Lastly, it is helpful to will to remember. We [illegible] hope [illegible] we have not [illegible] to remember. [illegible] through lack of [illegible], and [illegible].

Tell yourself definitely that you are going to remember [illegible]—don't merely hope you will remember—determine to do so.

2. Understand the Subject Matter. It is easier to remember something that is understood than something that is incomprehensible.

Make sure that you have followed the reasoning processes and have grasped the implications in the subject matter to be memorised. To test yourself, describe it to another person, either actually or in imagination.

If it is a person's name you wish to remember, take the trouble to find out how it is spelt. See it in your mind's eye.

It is an aid to recalling material if you allow it to enter the mind through as many senses as possible. Don't be content merely with looking at what you wish to remember. Read it aloud or get another to read it to you. Write it out. Draw diagrams, charts, or reproduce it pictorially in any way your ingenuity can suggest. If possible, dramatise it to yourself or others [illegible] or acting.

J. Addington Symonds, in his book *Teach Yourself Personal Efficiency*, speaks of "movement and gesture as vital aids to memorising."

The more the senses by which the material enters the mind, the more easily you will recall it. Above all, aim at a thorough understanding.

3. Begin Trusting Your Memory. Your powers of recall will begin to improve immediately you begin to take an interest in your memory and as you become more conscious [illegible].

As you begin trusting your memory more your confidence in it will grow as you find it improving. You will have set up a [illegible] circle.

You will be [illegible] surprised at the details you can remember. [illegible] from [illegible] your memory is bad.

This [illegible] true [illegible] fact. Your powers of recall [illegible] to improve. [illegible] of [illegible] the [illegible] your [illegible].

4. The Association. This [illegible] of the memory problems. [illegible]

seem that memory works rather like a conveyor belt. It will bring up to the surface of the conscious mind any amount of material stored in the subconscious provided that the individual items on the belt are touching or connected each with the one before it.

Alternatively we may liken the memory process to a bicycle chain each link representing something to be remembered. So long as the chain is unbroken and so long as the individual items are connected or associated with each other the chain will revolve—in other words we shall be able to recall the desired items.

The secret of a good memory lies in the forging of these chains of association. Suppose you decided to do some shopping and wish to purchase some envelopes, a bottle of insecticide, a ball of string, eight three penny stamps, some butter and a bottle of sauce.

You would be able to remember such a strange assortment even after a heavy day at the office or other distracting demands provided you had first spent a few seconds making an imaginative chain composed of the articles.

Imagine a packet of envelopes* coming to you on a conveyor belt. It is not alone however. In close proximity is the bottle of insecticide—in fact the neck of the bottle has been pushed beneath the band securing the envelopes. In imagination see some string wound round the bottle and as you trace it along you come to the parent ball. The space between the ball of string and a packet of butter is bridged by a string of eight three penny stamps and leaning on the butter is a bottle of sauce.

The more vivid startling or unusual you can make your picture the more easily you will recall. For instance, in this last item imagine the stopper has come off the bottle and the butter has been splashed with the sauce. Visualise the brown or red sauce actually running down the side of the packet of butter.

Now test yourself.

'Quickly cover the last paragraph: what was the first object coming to you on the conveyor belt? What was connected with it? Did that article have anything connected with it? See whether you can recall all the six. Test yourself again tomorrow morning when you wake. Ask some one to test you in thirty-six hours time.

Similar techniques are to imagine items hanging on a string, or piled upon each other in a crazy column. In all of these, the secret of success is to have the objects connected with each other in some way.

It is an added help to introduce colour and movement and sometimes distortion of size. The more bizarre your mental picture the better.

5. **Use Mnemonics.** This boils down to another form of association. It consists of memorising a simple code word or sentence, allowing each letter or word to remind us some item of the material required to be recalled.

If to answer an examination question adequately I need to remember seven points I can reduce the seven points to seven key words. After that I can take the initial letters of the key words—let us say AKDSOSM—and formulate some simple or nonsensical sentence, each word of which commences with these letters in turn.

Thus I might devise the sentence "All kangaroos desire sugar on Sunday mornings." A stupid sentence of this kind easily stays in the mind and the initial letters of the words will be sufficient to remind me of the key words.

6. **Get Rid of Handicaps.** Certain states or conditions interfere with a clear impression being made in the first instance or militate against the formation of associations which are sufficiently strong.

High among them we must place worry and fatigue. It is obvious that we cannot show interest or give our full powers of attention if we are worried about other issues, if we are physically or mentally tired.

Dislike—either of the subject or the person connected with it—is also an enemy of recall. The reason is apparent: both lead to boredom and lack of concentration.

There is also the matter of our natural laziness. John Steeksma in his book *Working the Mind* calls it "the imp within". He refers to the perverse whispers which rise up unsought in our minds demanding:

"What is the use of all this to me?" "Must I remember all this detail? I shall be able to live quite happily without it.[illegible]

Betrayed thus the mind receives hazy impressions only and recall in consequence is difficult or impossible.

Reject these handicaps, practise the aids to efficient recall that we listed above, and your memory will grow better every day.

(From *The Psychologist Magazine*)

Incentives To Foreign Investment In India

THE Second Five Year Plan has placed to a more pronounced extent than the first stress on a sizable percentage of industrialisation. The success of such a programme would depend on an efficient mustering of resources, internal as well as external, and here foreign investment has acknowledgedly an important role to play. Already it has had a substantial part in the building up of the present economy of the country. Foreign investments in India have been steadily growing over the past years. In 1948 it stood at Rs 267.7 crores and in 1955 it rose to Rs 457.7 crores. Official figures up to the end of 1957 are not yet available but according to unofficial estimates foreign investment in India has increased by Rs 150 crores.

The Government of India have been fully aware of the contribution that foreign investment can make to our progress and in computing the resources for the Second Five Year Plan, they have taken a sum of Rs 100 crores as fresh foreign investment likely to materialise during this period. Consistent with the Industrial Policy Resolution of 1956 Government have adopted a number of measures designed to reassure private investors abroad particularly about the scope and prospects open to them. Within the framework of general policy explained below each case is gone into on its individual merits and suitable adjustments made. To mention one instance official policy places oil in the public sector and at the same time welcomes foreign enterprise and investment in partnership with Government as in the formation of Oil (India) Limited.

Financing From Abroad

Government have been following the policy of [illegible] of capital participation with Indian collaborators by foreign companies in respect of industrial enterprises that have been approved within the framework of the [illegible] by the Ministry of Commerce and Industry as being consistent with the industrial development plans of the country. In principle, the cost of capital equipment to be imported is allowed at a [illegible] to be financed from abroad. This is [illegible] participation [illegible] either as equity and loan [illegible]. [illegible] about the [illegible] Government are of the view that to the extent possible [illegible] should be in Indian hands [illegible] cases [illegible] considered [illegible] of the [illegible] [illegible] [illegible] company particularly in the matter of development of Indian expertise and "know-how", foreign investment in bulk of the capital structure is allowed.

Assurances have been given that there would be no restrictions on the repatriation of such investment of capital or on the remittance abroad of the profits of such investments after taxes have been paid.

Government of India recently entered into a convertibility arrangement with the U.S.A. under which the U.S. Government will guarantee to the American investor in India the convertibility into dollars of his investments in projects approved by the Government of India and of his income from them.

Technical Collaboration

Indian companies are welcome to obtain the services of foreign experts or consultants who are necessary. Such arrangements exist at Government to Government level as through the Colombo Plan etc. It is recognised that the development of expertise in India is one of the important results of foreign investment and is thus likely to step up further investment. Government approval is given to payments by Indian companies to foreign collaborators towards research fees, technical services etc. In giving such approval the amounts to be paid once mutually settled by the parties themselves are generally not interfered with.

Royalty

So far as royalty is concerned a distinction is made between the element of royalty as such, and the element of services rendered abroad by the foreign collaborators. The latter is exempt from tax. About royalty itself Government are not committed to any particular rate though 5 per cent is, in practice, found to be generally the maximum [illegible] the extent to which generalisation can be made as [illegible] the Indian and foreign collaborators themselves agree on. With reference, however, to specific cases where [illegible] Government have permitted royalties in excess of this percentage. There have been practically no [illegible] between the parties [illegible] because Government declined to approve a particular rate of [illegible].

Taxation

The Government of India have already [illegible] at the [illegible] by way of [illegible] for the [illegible] development of the country. The more important of these tax concessions are [illegible]

(*a*) Exemption from income tax of the profits made by industrial undertakings newly established during the first five years from the commencement of manufacturing operations

(*b*) Exemption from income tax to a shareholder in a newly established industrial company of the dividends he receives from the company out of the profits exempt from tax in the hands of the company

(*c*) Exemption from super tax to a company for an indefinite period on the dividends it receives from an Indian company established after March 31 1952 and engaged wholly or mainly in certain specified important industries

(*d*) For all business enterprises, an outright allowance known as ' development rebate of 25% of the cost of new plant and machinery (40% in the case of ships) in the first year of installation of the asset thereby enabling the enterprises not only to write off the full cost over a period of years by way of depreciation allowances but also to get further tax relief on 25% of the cost

(*e*) Outright deduction or amortization over a period of five years of expenditure incurred by business undertakings on scientific, statistical or social research relating to the class of business carried on

(*f*) Application of a concessional rate of super tax in respect of dividend incomes received by a company from an Indian subsidiary company

(*g*) Exemption from wealth tax for newly established industrial companies on their net worth for a period of five successive assessment years, following their incorporation.

(*h*) Exemption from wealth tax to individual shareholders on their investments in shares of newly established industrial companies during a period of five successive assessment years following the establishment of the companies

(*i*) Exclusion from net worth for purpose of wealth tax in the case of all companies of the value of shares held by them in other companies.

These tax concessions go to reduce substantially the incidence of tax on industrial enterprise in India It is important to note that these concessions are available to foreigners and foreign enterprises in regard to their tax liability in India to the same extent as they are available to Indian nationals and Indian enterprises

In addition there are certain other incentives which are of value particularly to the foreigners

Exemption from income tax is conferred on interest payable—

(i) by an industrial undertaking in India on moneys borrowed by it under a loan agreement with a financial institution of a foreign country, if the institution is approved by the Government of India

(ii) by an industrial undertaking in India on moneys borrowed or debt incurred by it abroad in respect of purchases of plant and machinery from abroad if the transaction is approved by the Government of India

Exemption from income taxation to a technician of foreign nationality employed by an undertaking in India in respect of the remuneration received by him for services rendered as such technician during a period of 365 days from the date of his arrival in India Further if the contract of service is approved by the Government of India before commencement of the technician's service in India the exemption is continued for a further period so that he does not have to pay tax on his Indian remuneration during the financial year of his arrival in India and the two succeeding financial years.

Double Taxation

One problem of practical importance which has also been a source of great misgiving to investors abroad has been the absence of any agreements between India and the foreign countries for avoidance of double taxation and the uncertainty of their getting adequate relief in their own country One serious difficulty faced by the Indian Government in the conclusion of agreements for the purpose was the unwillingness of the industrially and economically advanced countries to depart from the pattern of the agreements they had already concluded with countries of equal industrial and economic status, and the inability of India, with her poor and underdeveloped economy to subscribe to that pattern Recently a delegation of senior officials of the Government of India visited a number of European countries As a result of their efforts, there has been a growing appreciation abroad of India's point of view Agreements at official level have recently been reached with West Germany and Sweden and are [illegible] ratification Agreements with some other countries of Europe are in various stages of finalisation.

THE FIVE REPUBLICS OF FRANCE

(On September 28 the people of France voted a new constitution for their country and [illegible]. [illegible] The following article describes the history of the [illegible] Republic [illegible] the events which brought about the [illegible] of the Fourth Republic.)

FRANCE since the Revolution of 1762, has had four Republics and ten constitutions. The First, Second and Third Republics were destroyed by a revolt of the right wing. The same fate almost overtook the Fourth Republic. And now France has given itself the Fifth Republic and the eleventh constitution. The first two Republics were succeeded by monarchies. Now the Fourth Republic is replaced by the Fifth Republic. It is for the French to decide what kind of political institutions are suited to them. But all friends of France hope whatever political forms she may adopt, she would ever remain loyal to the ideals of fraternity, equality and liberty, born in the fires of the First Revolution. That historic event transcends all that has since happened in France. It will for ever remain a Red Letter Day in the French Calendar. June 14, 1789 when Paris rose against the King and stormed Bastille is already celebrated as a National Holiday by France.

Ancient History

France is one of the most ancient countries in the world. At the dawn of history it was known as Gaul. For centuries it was bound to the Roman Empire. Later it was invaded by the Germans and the English. Even Arabs from distant lands invaded the soil of France. In the twelfth century France not only regained its independence but became the leading country in Europe. Notre Dame was built and the University of Sorbonne was founded. Then came the Hundred Years War with England. The [illegible] of France [illegible] when they faced [illegible] from the [illegible] under the [illegible] of Orleans. [illegible] for the first time in the history of France [illegible] [illegible] the [illegible] [illegible] [illegible]

[illegible] consecrated by the Church she was [illegible] a market place. [illegible] though dead Joan became the [illegible] of all [illegible] of French [illegible] [illegible] [illegible] of [illegible] in the country. The king subdued feudal lords and [illegible] central control.

Revolution

Though [illegible] there remained a wide gap between the [illegible] and the people. In 1774 [illegible] a very [illegible] Louis XVI. His wife, Antoinette [illegible] There were [illegible] in the country, [illegible] the [illegible] court and demanding more money from the people. In 1789 [illegible] General [illegible] representatives of the nobles clergy and [illegible] to discuss the financial [illegible]. The Commons began to [illegible] that [illegible] be [illegible] their consent. Thereupon the king turned them out of the Hall of Versailles. But the deputies met [illegible] in a tennis court and took the oath not to disperse [illegible] that had been framed. The king tried to use force but his soldiers refused to obey him. He therefore gave in [illegible] to get foreign [illegible] the people. This was a [illegible] for the French who [illegible] July 14 [illegible] of the [illegible] prison of Bastille [illegible] This was a [illegible] [illegible] the country. [illegible] National [illegible] formed itself into a Constituent Assembly [illegible] drew up the first French Constitution. [illegible] [illegible] a Declaration of Rights of Man and of the Citizen [illegible] of modern rights and freedoms.

First Republic

The [illegible] [illegible] [illegible] [illegible] [illegible] The [illegible]

would challenge us. We throw them the head of a King." The King was gone, but there was no end to troubles. The Revolution swung to excess. The revolutionaries would find freedom not only for themselves but for all others. Messages were sent to people of other countries to rise against their rulers. Fear began to spread over Europe. Foreign powers combined against France. There were counter loyalists revolutions. At the same time, struggle for power broke out amongst different groups in the National Convention. This destroyed the revolutionary Republic. Napoleon Bonaparte got his opportunity to stage a *coup d etat* and seized power in 1799. Napoleon wielded absolute power which he used to impose French supremacy on Europe. He at first succeeded in conquering many lands but in the end his military adventures left France smaller than it was in 1789. He was defeated by the Allied forces of England, Prussia, Russia, Austria and Sweden and exiled to Elba. In 1815 he escaped and returned to France. He regained power and ruled for one hundred days when on June 18 he was defeated at Waterloo and taken to St. Helena as prisoner, where he died in 1821.

Second Republic

After Napoleon Bonaparte, the House of Bourbon returned to power with Louis XVII who restored the divine right of kings. In 1830 after the revolution of "the three glorious days" in July, the Bourbon was forced to abdicate. The crown was now offered to the liberal minded Louis Phillipe the Duke of Orleans. The workers and Republicans however, began to show signs of discontent. In February 1848, there was another revolution. The King was driven from his throne and a second Republic was proclaimed and the son of Napoleon's brother, Louis Napoleon Bonaparte was made President.

Third Republic

In 1853 by a *coup d etat* Louis proclaimed himself an emperor as Napoleon III. The Franco-Prussian war of 1870 gave rise to the Third Republic. On September 5 1870 at the height of the war a Paris mob abolished the monarchy and proclaimed the Third Republic. During 1894-1905 the Dreyfus case starting as a Court Martial developed into a conflict between the Republicans and reactionaries in the church and the army. The Republic won the contest and continued for seventy years during which France had about seventy governments. It was destroyed in 1940, when France collapsed during the Second World War and Germany occupied three quarters of the country.

Fourth Republic

After the liberation of France in 1944, a provisional government was set up in France under General de Gaulle. It remained in power until the election of October 21, 1945, when a National Assembly was selected to draw up a new constitution and serve as an interim legislative body. A new constitution was approved by a slight margin at a national referendum. General de Gaulle fought against the new constitution— Government by Parliament —in favour of strong Executive with only an advisory assembly. When his views did not prevail he resigned in January 1946 and thereafter regularly warned that the failure of the constitution would lead to the demand for its end. The Fourth Republic formally came into existence in 1947. The ensuing years in France were marked by short lived Governments. There were no less than twenty one Governments during the life of the Fourth Republic. This was largely due to the existence of many political parties in the National Assembly. The lack of homogeneity often made it necessary to set up coalitions reflecting majorities which often had little stability. Though France had been having governmental instability according to a French publication it was coupled with a considerable degree of ministerial stability. When a new cabinet is formed generally half the members of the preceding cabinet keep their positions, a fourth remain in power but change their posts and only a quarter are replaced by new men. Furthermore many changes of cabinet far from implying a real shift in public affairs correspond to a small modification such as would give rise in Great Britain for example to only a partial organisation.

Last Days Of Fourth Republic

However a crisis overtook the Fourth Republic in May 1958. The National Assembly was sent on a holiday. General de Gaulle took over the Government of the country. A new constitution was drawn up by a Committee appointed by the General.

This constitution was submitted to a referendum to the people of France and French Union on September 2[illegible]. The events that led to the crisis may be briefly stated as follows.

April 15 Mr Gaillard's Government (the [illegible] of the Republic) is overthrown by the

[illegible] which regarded his acceptance of the Anglo-American good offices mission and their suggestions for a settlement with Tunisia as a betrayal of French North Africa.

May 13 Civilians aided by the Army establish a Committee of Public Safety by a coup d'etat in Algiers. General Massu, the leader of the revolt, calls for a Government under de Gaulle. The Assembly answers by voting M. Pflimlin into the Premiership.

May 15 General de Gaulle says that he is prepared to take over the Government. The Assembly gives emergency powers to M. Pflimlin who arrests some supporters of the Algiers generals in Paris.

May 19 General de Gaulle at a Press conference says he wishes only to come to power by the call of a united nation.

May 24 The army coup in Corsica. The will of the Assembly to resist begins to disintegrate.

May 26 M. Pflimlin, urged on by M. Mollet, Socialist leader, and others, meet General de Gaulle secretly at dead of night.

May 27 General de Gaulle announces that he has "embarked on the regular procedure" for establishing a government. In a last attempt to save the Assembly, M. Pflimlin puts his proposals for constitutional reform before the Chamber.

May 28 Pflimlin's proposals are passed by 408 votes to 165 on the grounds that if the communist votes were discounted, this was not an absolute majority. M. Pflimlin tenders his resignation to the President, M. Coty.

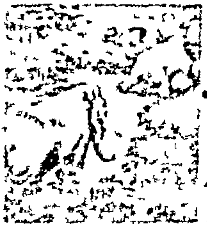
May 29 The President informs the Assembly through a special message that he has summoned de Gaulle to form a government and if the Assembly would not accept the General he would resign the Presidency.

June 1 General de Gaulle presents himself to the French National Assembly and is voted Prime Minister.

June 2 The Assembly goes on vacation leaving the [illegible] Parliamentary Committee as link between the executive and the [illegible].

June 12 The work on draft constitution begins.

September 2 The French Government approves the draft of the new constitution.



September 3 General de Gaulle presents the constitution to the people in the course of a ceremony in Place de la Republique in Paris.

September 28 The people voted with majority the new constitution in a national referendum. The Fourth Republic is ended and the Fifth Republic is inaugurated.

BHUTAN

By RAJINDRA MOHAN WADERHA

PRIME Minister Nehru has recently paid a six day visit to Bhutan. Strangely enough even today many people in India wonder if Bhutan is in India or outside it. There is hardly one good book that tells us all about this 'Land of the Thunder Dragon' and its people. Though this tiny hilly kingdom situated in the north eastern border of India is legally a Protectorate of India and is about the same distance from Calcutta as Shillong as the crow flies, it has religiously tried to shut the doors against all visitors be they Indian or foreign.

Early Visitors

Among the earliest visitors to Bhutan in recent history were the two emissaries sent there by Warren Hastings Mr George Bogle (1774) and Mr Samuel Turner (1783). After about a hundred years Sir Ashley Eden was sent there as the British envoy in 1863. After the attainment of India's Independence, Mr R. K. Nehru visited Bhutan in 1956 and in September 1958 the people of Bhutan had amongst them Mr Nehru as their historic guest.

Land and People

Bhutan (area 18 000 square miles) is flanked on the north by the Tibet Himalayas, on the south by West Bengal, on the east by Khalo and Tinglo tracts of Assam and on the west by Sikkim and Darjeeling. The population is estimated as between 4 and 6 lakhs and is roughly divided into two classes: the Bhutias and the Nepalese, the former dominating the eastern and northern hilly regions and the latter predominating in the fertile south. The Wanghchuks, also a section of Lamaist Buddhists, have been its rulers since 1907, the present King in the line being *Padma Vibhusan* Jigmuk Dorjee Wanghchuk.

Historically Bhutan has been existing as an entity for more than two centuries. But its present system of hereditary monarchy is only a nineteenth century evolution. The crowning event in the evolution of the state took place on Dec. 17 1907 when Uggyen Wanghchuk *penlop* of Tongsa (headquarters of eastern Bhutan) was at a great ceremony at Punakha installed as the first hereditary monarch of the country.

Preceding the installation of the hereditary monarch, Bhutan was ruled by two elected kings known as the Deb Raja and Dharma Raja, who looked after the temporal and spiritual affairs of the state respectively, corresponding to the institutions of Dalai Lama and Panchen Lama in Tibet. In reality Deb Raja was merely a pawn in the hands of one of the two powerful *penlops* of Tangsa and Paro, who were engaged in perpetual feuds to gain supremacy.

In Bhutan the King is all in all. Excepting defence and external affairs which are the concerns of the Government of India the king's rule in all internal matters is absolute. The state is divided into nine provinces and the entire governmental machinery is run by *penlops* (governors) of these provinces. The Maharaja Jigme Dorji Wanghchuk of Bhutan can boast himself as the only monarch in modern times who heads a Government without legislature, without any political party and without a court of law.

Constitution

Bhutan has no written constitution, the kingdom, consisting of nine districts being governed by the unwritten code of Lamaist ethics and traditions. Ethics is however, a relative and flexible connotation and the *Penlops* who are temporal authorities under the Maharaja and in charge of the districts, may interpret them in lines that suit them. These *Penlops* are like feudal barons. They retain soldiers and have their forts (*Dzongs*) like baronial castles. The King who is said to be a man of saintly disposition, is guided in all matters of the state by the Prime Minister, Mr Zigmi Dorjee who is incidentally also the King's brother in law (wife's elder brother). Between them, the Prime Minister on the one hand, the *Penlops* on the other they rule the country without even the least semblance of democracy.

The dark crevasses of the Bhutan Himalayas are as alien to the rays of modern civilization as the darkest depths of Africa. In that kingdom of 18 000 square miles there is hardly one High School, a hospital or a printing press. About roads and means of communication the less said the better. But the present generation is already feeling the impact of advancing civilization. Well-to-do Bhutanese now willingly send their children for schooling at Darjeeling and Kalimpong.

[illegible] schools are being assisted with [illegible] [illegible]

The [illegible] position of Bhutan [illegible] India has been the outcome of the Treaties of 1910 and 1949. According to the terms of the [illegible] treaty concluded between the British Government and Bhutan the Bhutanese Government agreed to be guided by the British Government with regard to its external affairs, while the latter was to pay an annual allowance of Rs. 100,000 a year. By the Treaty of 1949 the control of Bhutan's external relations was transferred from Britain to India, while the Government of India also raised the subsidy to Rs 500,000 a year.

Relations With India

The existing political relations between India and Bhutan are governed by a new treaty, which was signed at Darjeeling on the 8th of August 1949. [illegible] Gangtok the Indian Political Officer attends to Bhutanese affairs while a Bhutanese Agent [illegible] guarded by a team of [illegible] handles correspondence between his Government and the Indian authorities.

India's political relations with Bhutan date back to 1774 when the East India Company signed a treaty [illegible] annual [illegible] to India by the then [illegible] of Bhutan. But [illegible] relationship between the two [illegible] to have been established only since [illegible]. [illegible] by a treaty in 1910, India and Bhutan came closer still. That treaty [illegible] and guidance by India in regard to Bhutan's external [illegible]. The annual subsidy agreed to in that year at Rs 100,000 has [illegible] been [illegible] and is now [illegible]. But it was also in 1910 that the then Government of China formally [illegible] claim to Bhutan as its feudatory [illegible] [illegible] rejected [illegible] by Bhutan and [illegible] Government of this country. China [illegible] [illegible]. [illegible] when India and Bhutan [illegible] [illegible] that Tibet [illegible] [illegible] [illegible].

[illegible] Bhutan can [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] which by [illegible]

as well as religion [illegible] [illegible] "Bhutan" [illegible] of Tibet. [illegible] [illegible] Bhutan [illegible] result of [illegible] of the [illegible] adventurer [illegible] [illegible] territory. [illegible] [illegible] the Bhutanese [illegible] themselves [illegible] [illegible] of [illegible] "The [illegible]" [illegible] the [illegible] problem that [illegible] the Dalai [illegible] nor the Government of India can [illegible] with equanimity. Even the road link between India and Bhutan lies partly across Tibetan territory.

[illegible] in Bhutan [illegible] [illegible] [illegible] Government [illegible] and [illegible] [illegible] Tibet. [illegible] [illegible] [illegible] [illegible] with India.

THE CHANGING PATTERN OF LIFE IN INDIAN VILLAGES

By PROF S C DUBE

Professor of Anthropology, University of Saugor

INDIA is a land of villages A great majority of her people—249 million out of a population of 375 million—are occupied in agriculture and live in villages It is estimated that there are some 5 58 000 villages in the land sheltering nearly 82 7 per cent of the country's population Emerging from its semi isolation of several centuries the timeless and changeless Indian village has to make a critical choice it has to choose between tradition and progress

Little Republics

Until the frontiers of new administration reached down to the village level in the last eight or ten decades the village communities constituted stable and practically self sufficient social systems Describing them as little republics, having nearly everything they want Sir Charles Metcalfe writing in 1832—wondered how they seemed to last where nothing else lasts He added Dynasty after dynasty tumbles down revolution succeeds revolution but the village community remains the same This union of village communities each one forming a separate little state in itself according to him 'contributed more than any other cause to the preservation of the people.' The village communities could preserve their cultural identity and distinctive social patterns largely because of the philosophy of limited state action adopted by the earlier rulers of the country The administration carried out mainly from urban centres did not exercise many positive political functions in the village and the villages were thus left more or less autonomous in regard to their internal affairs Armies on the march or in retreat occasionally disturbed the peace of the village but being used to periodic natural calamities village people learned to suffer them with equanimity The tax collector operating on behalf of the government was a necessary evil His demand often amounted to cruel extortion but he was accepted into the structured village situation as the price for protection from external aggression and internal disorder It is indeed remarkable that village and inter-village organization in some parts of India still bears recognizable resemblance to the village system of Rig-vedic India Even today village authorities perform the functions which were prescribed by Manu for villages in his time

National Tradition

The Indian village derives some of the characteristic features of its organization from the great national tradition of India while the traditions of the region in which it is located also contribute substantially toward shaping its value orientation ethos and general pattern of life Its social pattern is determined by the interplay of several different kinds of solidarities Kinship caste and territorial affinities are the major determinants that shape its social structure. An individual belongs to a family, and the family belongs to a lineage as well as to a wide circle of relatives with whom it is connected either by blood or by marriage These units belong to an endogamous caste Solidarities provided by kin and caste tend to merge but territorial ties belong to a different level An individual and his family belong also to a village which in turn is a part of a network of neighbouring villages the region and the nation.

Caste System

Caste is perhaps the most important single organizing principle in these communities In this system of segmentary division of society, the different segments identified as castes are kept apart by complex observances emerging from an all pervading concept of ritual pollution Hierarchy and social distance manifest and express themselves in regulations that are calculated to avoid pollution and maintain purity Marriage, commensality physical contacts and occupational choice particularly are governed by strict rules Within the village the caste system manifests itself as a vertical structure in which individual castes are hierarchically graded and kept apart and at the same time are linked and kept together by some well defined expectations and obligations which integrate them into the social system of the village The horizontal ties of a caste too are important for a caste group in one village has strong links with its counterparts in other villages and in several spheres of life they tend to act together

Diverse Family Forms

The great diversity of forms in the family and kinship organization of India ... [illegible] ... of presenting a ... [illegible] ... somewhat different

Contrary to common belief the basic unit of social organisation in these communities is not the large joint family but the nuclear family but the nuclear family and the smaller joint family in which only a part of those who should have constituted the ideal larger joint family live together and even the latter generally breaks up when members attain maturity and a degree of economic self-sufficiency. Special ties are recognised between a family and the local group of [illegible] kin i.e. all other families lineally related [illegible] upto the third generation. The solidarity between this cluster of families expresses itself on ceremonial occasions and in times of stress and calamity.

Social Structure

The village as a unit of social structure cuts across the boundaries of kin and caste and serves a number of unrelated families within an integrated multi-caste community. Structurally the village communities can be divided into three main groups: the single settlement village in which the community shares a common and compact settlement; the "nucleated village which has a central settlement as the nucleus around which there are a number of smaller satellite settlements; and the "dispersed" village in which the community consists of a series of scattered homesteads lying well-defined [illegible] one another. All the three have a number of common features. They are stable groups generally with a common past and a number of shared values. They recognise and emphasise their mutual identity and [illegible] to some [illegible] [illegible]. The economy is largely [illegible] agriculture [illegible] and ancillary [illegible] are the most important [illegible] [illegible] [illegible] supplementary or subsidiary to agriculture. Land is greatly [illegible] and valued and the [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] are [illegible] influences. [illegible] largely [illegible] [illegible], the community [illegible] itself [illegible] [illegible] terms of traditional patterns that define the interrelation between the different segments of the community in the fields of economic [illegible] [illegible] and [illegible] are [illegible]. A common [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] and [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] in the village.

Urge For Change

The [illegible] [illegible] [illegible] [illegible] of the social structure of Indian village communities should [illegible] [illegible] as a [illegible] [illegible] model. While the village communities [illegible] [illegible] [illegible] [illegible] same pattern a large number of them will be found to possess the major characteristics and features delineated above. This structure has been exposed to a number of influences and the urge for change has come both from within and from without. The [illegible] impact on India has brought [illegible] a new administrative [illegible] resulting in the [illegible] of a set of [illegible] judicial, and legislative [illegible] and [illegible] along with modern technology, particularly modern systems of transport and communication and industrialisation, have given greater [illegible] mobility to the [illegible]. Western type education too has been a significant influence. [illegible] [illegible] revival manifesting itself partly as a series of movements for internal reform, such as the Arya Samaj and Gandhian campaigns, [illegible] [illegible] [illegible] series of [illegible] changes. [illegible] [illegible] [illegible] of the government in the [illegible] [illegible] days, and [illegible] [illegible] of community development work after attainment of national Independence too have proved to be powerful influences. Social legislation, spread of education, [illegible] [illegible] state development activities and a wide series of urban influences are well [illegible] the communities and bringing about change and modification in their social organisation and outlook.

Main Trends Of Change

[illegible] [illegible] [illegible] of the [illegible] of these forces and factors the pattern of village life in India is changing. What then are the main trends of change? [illegible] [illegible] of the changing [illegible] [illegible] in India, the following would probably appear to be the most important:

One: the emphasis in life is changing from the sacred to the secular.

Two, there has been a noticeable shift from an ascribed status system to an achieved status system.

Three, [illegible].

[illegible] [illegible] [illegible] [illegible] weakened as [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible].

The traditional [illegible] [illegible] of Indian villages [illegible] brought

in their wake sociological consequences of far reaching significance

Rival System

The slight shift from an ascribed status system to an achieved status system is a fundamental change in the traditional social structure of Indian village communities Ascriptive aspects of social organization have not vanished altogether, but now there is more room for recognition of individual achievements. The society being largely caste structured the ascribed or caste status of a person still contributed materially toward determining his status but there are unmistakable signs that a rival system is growing which takes sufficient account of an individual's distinctive qualities and attainments in ranking him

In recent years there has undoubtedly been a change from a kin-oriented outlook to an interest-oriented outlook and a gradual breaking up of large effective kin groups has been in evidence However, even under conditions of semi urbanization, kin groups have continued to perform important functions of socialization and social control In the absence of properly developed secondary groups primary groups continue to operate Growth of individualism within the family and kin group does not as yet symbolize the total loss of regulative and controlling authority of these units

Dual Standard

While there is a general loosening of caste structure at one end, there are signs that it is consolidating at the other and in some rather unexpected directions Rules regarding commensality social contacts and participation occupational choice and general observance of ritual purity have been considerably relaxed A dual standard of behaviour is gradually coming to be recognized according to which expected standards of behaviour in these spheres in the rural areas are quite different from those in an urban setting Adherence to traditional forms is desirable and necessary in the village but persons going from village to city can take moderately to city ways, although they cannot bring back many of these to the village Notwithstanding this general relaxation in the rigid operation of caste rules caste still retains its endogamous character and even powerful movements of social reform have had little success in changing it in this respect. Evidence of casteism in local and state elections has in a way illustrated the new direction in which caste has shown its strength It is necessary to add, however, that practically all over India there is a general weakening and even total breakdown of formal authority structure of individual castes Caste sustains itself and maintains its structural unity through a self regulatory mechanism of social control This at once is a sign of a weakening and of the internal strength of caste structure

Economic Frontiers

These changes in the social fabric are intimately connected with changes on the economic frontiers of the Indian village. Participation in a competitive money economy, coupled with emergence of new reference groups has contributed toward certain major changes in the people's levels of aspiration Modifications in the traditional social structure have made occupational mobility relatively easy, and the emergence of new 'open occupations have provided employment opportunity to many outside the traditional frame of village economy This process has been facilitated by progressive land reform But the rural economic system is still largely tradition bound the range and depth of innovations in it being extremely limited

Impact Of Democracy

On the political frontier the village is making its first acquaintance with a new system, and is still full of awe, wonder and curiosity regarding the apparatus of democracy At the local level democratic elections have been used mainly for changing power alignments in the community initiating in certain areas an intense rivalry and competition between different segments of the village population to gain power through the elections

Widening Horizons

The universe of the average village dwellers in India is also widening resulting in significant modifications in their ethos world view and value attitude system Many modern innovations have been rejected by the village people not because of primitiveness or superstition but because of our failure in offering to them the right thing Promoters of change often fail to adopt the idiom of the people in communicating modern ideas to them. The strategy of change adopted by administration sometimes ignores vital cultural determinants that ultimately govern the people's acceptance or rejection of modern ideas. For implementing the rural development programmes successfully an effort should be made to overcome these drawbacks. Given the right approach the Indian village can speedily march towards

(Courtesy A I.R.)

In these columns we answer the queries from our readers. It may not be possible to answer each and every question but a considered reply shall be given to selected questions. Letters from our readers are welcome. These should be addressed to the **Editor, Question Box.**

WORLD BANK.

Q What are the objectives of the World Bank ? (*J P Agarwal Khatauli*)

Ans The main objectives of the World Bank are

1 To assist in the reconstruction and development of territories of members by facilitating the investment of capital for productive purposes

2 To promote private foreign investments by means of guarantees or participations in loans and other investments made by private investors.

3 When private capital is not available on reasonable terms to make loans for productive purposes out of its own capital or out of Funds borrowed by it

4 To promote the long range balanced growth of international trade and maintenance of equilibrium in balance of payment by encouraging international investment for the development of the productive resources of the members

5 To arrange loans or guarantees so that the more useful and urgent projects, small and large alike will be dealt with first

6 To conduct its operations with regard to the effects of international investment on business conditions and to assist in bringing about a smooth transition from war time to a peace time economy

ABBREVIATIONS

Q What do the following abbreviations stand for ?

(1) U N O G I L (2) D V C
(*M. C Mani, New Delhi*)
(3) B O A C (4) G H Q (5) G O M (6) D P I (7) E R P (8) E C O S A (9) E M F (10) C W P C (11) B Th U (12) D C L
(*[illegible] New Delhi*)

Ans

1. United Nations Observation Group in Lebanon.
2. Damodar Valley Corporation
3. British Overseas Airways Corporation
4. General Head Quarters.
5. Grand Old Man.
6. Director of Public Instruction
7. European Recovery Programme
8. Economic and Social Council
9. Electro-Motive Force
10. Central Water and Power Commission
11. British Thermal Unit.
12. Doctor of Civil Law

DIPLOMA COURSE IN STATISTICS

Q Please name the institutions in [illegible] which offer Diploma Course in Statistics

(*Mahendra Pal Singh, [illegible] M Agra, [illegible]*)

Ans The following institutions [illegible] Diploma Course in Statistics

1 Indian Statistical Institute, Calcutta Statistician's Diploma (Parts I & II)

2 Statistical Branch of Indian Council of Agricultural Research New Delhi [illegible] in Agri Stat.

MOTION OF SUN

Q Does the sun possess any [illegible] motion ?

(*G. N Seth, [illegible]*)

Ans The sun, like every other [illegible] moving through space. Its rate of [illegible] about 12 miles per second and it carries [illegible] its family of planets with it [illegible] from [illegible] We [illegible] on the [illegible] moving [illegible] [illegible] [illegible] [illegible] [illegible] the middle [illegible] [illegible]. This point is called the [illegible] [illegible] and it is near the star [illegible]

ON MONARCHY

Q Please explain the distinction between Absolute Monarchy and limited Monarchy
(*J C Dey, Shillong*)

Ans Absolute monarchy implies that the final authority in making interpreting and executing law belongs to the monarch Limited Monarchy, on the other hand, is one which is controlled by a constitution The greatest example of limited Monarchy is Britain

MARSHALL PLAN

Q Please furnish information about 'Marshall Plan' (*Niranjan Surana, Jodhpur*)

Ans In a speech in June 1947 Mr Marshall U S Secretary of State, suggested to the European countries to draft a plan for their economic reconstruction and he promis d financial aid in the task of economic rehabilitation This was the Marshal Plan sometimes called Marshal Aid Sixteen Western European countries, Anglo-American and French Zones of Germany and Anglo American Zone of Trieste joined this plan This plan was responsible to a large degree for the quick economic recovery of European countries The scheme was to last until 1952 but in 1951 president Truman proposed that this aid should be continued

CURRENCY UNITS

Q Please name the currency units of the following countries

(1) U S S R. (2) China (3) Egypt. (4) Poland (5) Switzerland (6) Union of South Africa (7) Finland (8) Belgium

(*Thakur Dass Kalra N Delhi*)

Ans (1) Rouble (2) Yuan (3) Pound (4) Zloty (5) Franc (6) Pound (7) Markka. (8) Belgian franc.

WORLD OF BOOKS

Q Please name the authors of the following books:

(1) Forsyte Saga (2) Bande Mataram (3) Crime and Punishment (4) Sons and Lovers (5) Thus Spake Zarathustra (6) Rommel

(*C S Vi[illegible]nathan A[illegible]*)

(7) Pygmalion (8) Lycidas (9) Das Capital (10) Ape and Essence

(*R S Dhadwal D[illegible]*)

Ans (1) John Galsworthy (2) Bankim Chandra Chatterjee (3) Dostoevsky (4) D H Lawrence (5) F W Nietzche (6) Desmond Young (7) Bernard Shaw (8) John Milton (9) Karl Marx. (10) Aldous Huxley

PLASTICS

Q Kindly furnish information about Plastics.
(*B P Sinha Ranchi*)

Ans They are materials which can be moulded by heat and pressed into desired shapes and which on cooling retain their new shape and become rigid Of course steel clay, glass etc. are plastic, but the term is reserved for the new raw materials such as synthetic resins One plastic is *celluloid* made from cellulose nitrate and camphor There are several plastics made from casein the protein of skimmed milk

There are two classes of plastics, the *thermoplastic* which become plastic everytime they are heated (e g cellulosic plastics) and *thermosetting* which undergo chemical change when heated so that once set they cannot be rendered plastic again (e g Bakelite)

WHO'S WHO

Q Please name the present occupants of the following posts

1. **Indian Ambassador in U S A**
2. **Indian Ambassador in Indonesia**
3. **Indian Ambassador in China**
4. **Secretary of Planning Commission**
5. **Chairman of the Central Social Welfare Board**
6. **High Commissioner of India in Pakistan**
7. **President of Bharat Sevak Samaj**
8. **Governor of Orissa**
9. **Chief Minister of Andhra Pradesh**
10. **Chief Minister of Bihar**

(*Miss K Snehalatha Ernakulam*)

Ans

1. Chagla
2. Dr Jagannath Khosla
3. G Parthasarathy
4. Vishnu Sahay
5. Mrs Durgabai Deshmukh
6. Rajeshwar Dayal
7. Jawaharlal Nehru
8. Sukhtankar
9. N Sanjiva Reddi
10. Dr S K Sinha

AMENDMENT OF THE CONSTITUTION

Q Please explain the procedure for the amendment of the Constitution of India

(*Suprokash Banerjee Calcutta*)

Ans For amendment of the Constitution a Bill can be presented in either House of Parliament When the Bill is passed in each House by a majority of the total membership of that House [illegible] not less

than two-thirds of the members of that House present and voting, it shall be presented to the President for his assent and upon such assent being given to the Bill the Constitution shall stand amended accordingly.

But ratification by the Legislatures of not less than one-half of the States is required for amendment of the following provisions of the Constitution:

(a) Election of the President, extent of executive power of the Union, extent of executive power of a State, High Courts for union territories, or

(b) the Union Judiciary, State High Courts, Legislative Relations between the Union and the States, or

(c) Union List, State List or Concurrent List, or

(d) the representation of States in Parliament, or

(e) the procedure for amendment of the Constitution as stated above.

Ratification is necessary before the Bill making provision for such amendment is presented to the President for assent.

SUGAR TECHNOLOGY

Q. Please furnish particulars about any institute in India which offers training in Sugar Technology.

(Prit ... Kumar ... [illegible])

Ans. The only Indian institute ... [illegible] which offers training in Sugar Technology is National Sugar Institute, Kanpur, U.P. The courses offered by the institute are Associateship of N.S.I. in Sugar Technology, Fellowship of N.S.I. in Sugar Chemistry, ... [illegible] Sugar Tech. and certificates in Sugar Engg. and Sugar Boiling.

STEEL PLANTS

Q. Please name the places in India where steel plants are now under construction.

([illegible], New Delhi)

Ans. [illegible] steel plants are now ... [illegible] at:
1. [illegible]
2. [illegible]
3. [illegible]

[illegible]

SAKA YEAR

Q. What is Saka Year and what is the ... [illegible]

([illegible])

Ans. The Saka Year which begins on March 22 (March 21 in a leap year), has 365 days normally and 366 in a leap year. The Government of India ... [illegible] on the basis of Saka Year ... [illegible] the new year a day falling on 22nd March ... [illegible] of Chaitra the Year 1878 of Saka Era. The Central Government has decided to adopt this new calendar for ... TODAY'S ELEMENTARY SCHOOL

By HENRY HARAP

(Mr Henry Harap is a Professor of Education at George Pealody College for Teachers Nashville U.S.A The following article in which he describes the new trends and the new models of teaching prevalent in American elementary schools will be read with interest by Indian teachers and educationists)

THE new elementary classroom bears no resemblance to the gloomy room of yesterday with its dark hued walls and heavy fixed desks in straight rows New buildings have more space movable furniture and more equipment for active and creative learning

As a result the classrooms are more flexible and informal Although many existing classrooms still have a rigid and formal atmosphere, the new room is gradually becoming a centre where children live and work together

Today virtually every American elementary school child has access to free textbooks purchased with state or local funds The textbook, more than any other factor still determines what the elementary school child learns in school The textbooks include the whole range of school subjects—reading spelling handwriting English usage geography, history, science health music and others

In addition to the basic collection of text books the pupils have access to several sets of supplementary books and a small classroom collection of books and pamphlets

Twenty years ago it was not uncommon to see a whole primary class begin a reading period with, "Mary turn to page 30 and read aloud" The children would then take turns reading until they came to the end of the story

Today, reading is taught to small groups of the same level of ability or need, and reading aloud is the last of several preparatory steps

Before the child begins to read books such activities as telling a story from pictures sharing an easy picture book and listening to stories that are told or read help him develop readiness to read The amount of emphasis on phonics varies widely

The basic texts and directed reading are continued in the upper grades but the child also reads more independently and more widely Using the classroom or the library collection he reads extensively for information and pleasure The child becomes more familiar with poetry short stories plays biographies, and books of travel

Written expression often begins with the writing of group stories dictated by the children and written on the chalkboard by the teacher

Later pupils write simple letters to invite their mothers to a party or for some other useful purpose As the pupils move to the upper grades they have many occasions for original writing with correction of individual errors Many teachers assign formal writing tasks suggested in language texts and work books Creative writing of poems and stories is encouraged by the imaginative teacher

Good Speaking and Listening

Generally speaking the elementary schools are putting greater emphasis on the development of good speaking and listening habits The long neglected art of conversation is engaging the attention of many teachers As the opportunities to plan to share and to evaluate become more plentiful the children are learning to think quickly, talk fluently, and listen attentively

Grammar is part of the language arts programme The simpler definitions and rules are incorporated in the language text which is usually a part of the pupil's collection This language or English book is one of the important tools used in the child's study of punctuation, sentence structure word study and the elements of good usage

Spelling as a separate subject is generally taught from a text or workbook in which the child encounters the new word in isolation. The words learned in the spelling book are supplemented by new words used in all subjects and by words that have been misspelled in pupils written work.

In this generation the teaching of handwriting has undergone a phenomenal change Today few children learn cursive writing until they reach the end of the second grade or the beginning of the third grade The mechanical exercises in writing rows of ovals to the rhythmic timing of the teacher have disappeared

Beginning writing involves [illegible] the letter forms.

Intelligence Test

[illegible] are given some questions to test [illegible] It [illegible] that you [illegible] all the questions [illegible] the time taken by you to find the correct answers. The [illegible] take more than [illegible] [illegible]

—QUESTIONS—

1 Five school girls, who competed for a scholarship decided that it would be "rather amusing" to send home [illegible] partly mendacious—reports of the result.

Shiela wrote: "I took second place. Mohana was a little in front of Lalita." Lalita: "Shiela was last. Indra was well ahead of Kamal." Mohana: "I only took fourth place. Indra came in second." Kamal: "Mohana was third. Lalita did better than Indra." And Indra: "Lalita took third place. Kamal (to our surprise) won the scholarship."

[illegible] two candidates tied for a place. Each girl made one true statement and one false one.

In what order were the five candidates [illegible]

2 As I was on my way to Amarnath for pilgrimage I met a man with seven wives. Each wife had seven cats. How many were going to pilgrimage?

3 Find the [illegible]:

(a) A pet which is a floor covering
(b) A pet who [illegible] a musical instrument
(c) A pet which is a [illegible]

4 Mr [illegible], Mr Wyvern, Mr [illegible] and Mr [illegible] [illegible] Racing [illegible] and bought [illegible] Each [illegible] was named after one of the [illegible] of the four [illegible] of the [illegible] [illegible]

Mr [illegible] [illegible] the horse [illegible] and Mr [illegible] [illegible]

What [illegible] the horse [illegible]?

5 Here is a simple code

A B D E F H I J L N S V X
O L P I G W U F R T Z Y

To put a letter [illegible] in the code, write the letter which is shown [illegible] below it. Thus for O write A, for A write O, and for TOP write SAD.

Read the following sentences written in code:

(i) P A S L I T S I T
(ii) I O F W O T O W I F F M A T F
(iii) F U R [illegible] I T O I U [illegible]
(iv) W T O R T A T F [illegible] T [illegible] O Z O N I R
(v) D O [illegible] T I U M M P I H O T A Z F L F I F

6 An Oxford graduate brought up [illegible] with the [illegible] candidate for [illegible] in a [illegible] constituency. When [illegible] [illegible] "[illegible]" What do you know about [illegible] [illegible]? The candidate might have answered:

(i) "I was a [illegible] myself [illegible] I was [illegible]"
(ii) "I [illegible] by keeping the [illegible]"
(iii) "[illegible]"
(iv) "I [illegible] for the [illegible] [illegible]"
(v) "[illegible]"

[illegible]

7 [illegible]

[illegible]

8 An ordinary pack of 52 cards is divided into three unequal portions. Call them A, B and C.

If a card is drawn at random from A, the odds are 5 to 3 against its being a red one. If a card is drawn from B, the odds are 3 to 2 against its being black. And if a card is drawn from C the odds are 5 to 3 against its being black.

The number of black cards in B exceeds by five the number of black cards in C.

How many red cards are there in A?

9 Ram's father is four times as old as Ram. In five years his father will be three times as old as Ram. How old is Ram now?

10 Read through the following and then answer the questions at the end.

Tikki, Pushp, and Mohana have the same mother Mrs Sarna. Hikmat, Manohar and Maya have the same father Mr Bahadur.

Mr Bahadur and Mrs Sarna are brother and sister.

Mohan is younger than Hikmat and Manohar, but older than Maya.

(i) What is the name of Tikki's father?
(ii) What relation is Mohana to Pushp?
(iii) What relation is Manohar to Hikmat?
(iv) What relation is Hikmat to Tikki?
(v) What relation is Mohana to Mr Bahadur?
(vi) Is Maya older or younger than Manohar?
(vii) What relation is Mr Bahadur to Mrs Sarna?

ANSWERS

1 Any statement can be made one's starting point. Thus, if one begins with Mohana's statement, either Mohana was fourth and Indra was not second or Indra was second and Mohana was not fourth. Now assume that Mohana was fourth. It follows (from Kamal's statement) that Lalita did better than Indra. Test the relevant possibilities in the light of other statements. It will be found that they all failed and hence Indra was second. And so on.

It will be found that the only positional order consistent with the data is: (1) Kamal (2) Indra (3) Mohana (4) Lalita (5) Sheila

2 One myself

3 (a) Carpet
(b) Trumpet
(c) Puppet

4 Call the horses and trainers S, W, C, Q. The data which we have are

Horse	Trainer	Rider
S	Not C	
W		
C		
Q	Not S	C

It follows (1) that Quaver is trained by Mr Wyvern (2) that Spanglefoot is trained by Mr Quaver (3) that Wyvern is trained by Cherub (4) that Cherub is trained by Mr Spanglefoot (5) that Mr Wyvern rode Spanglefoot and (6) that Mr Quaver rode Cherub.

5 (i) Do trust us
(ii) Dad has a huge nose
(iii) Did he give us a ride?
(iv) He also sends us a camel
(v) Pam's dinner was overdue

6 (i) I was minor (not miner) myself until I was twenty one

7 All these statements are perfectly true, but only one proves that steel is heavier than water which is

(iv) Steel will sink in water

8 Let the number of black cards in C be 3m. Then the number of red cards in C is 5m and the number of black cards in B is 3m plus 5. The latter number must be even and so m is odd. If m is 3 or more the total number of cards in C and B is 9 plus 15 plus 14 plus 21 or more which is impossible. Hence m must be 1 and the three portions contain: C 5 red 3 black, B 12 red, 8 black, A 9 red 15 black.

And so there are 9 red cards in A

9 10 years

10 (i) Mr Sarna (ii) Sister, (iii) Brother, (iv) Cousin, (v) Niece (vi) Younger, (vii) Brother in law.

The best reason for keeping your chin up when in trouble is that it keeps the mouth closed.—Irena Pozett

A habit cannot be tossed out of the window; it must be coaxed down the stairs a step at a time.—Mark Twain

In the presence of trouble some people grow wings, others buy crutches.

GENERAL KNOWLEDGE TEST

Test your knowledge [illegible] the following questions without any [illegible] help. When [illegible] look up for the answers and [illegible]

—QUESTIONS—

1. What is International Finance Corporation? What role does it play in the sector of [illegible]?
2. Enumerate the factors which have [illegible] about an increase in the cost of [illegible] menting the Second Five-Year Plan.
3. Write notes on:
   (a) Central Advisory Board of Archaeology
   (b) [illegible]
   (c) Cultural Agreement with Egypt
4. (a) What are the salient [illegible] of the new French Constitution?
   (b) [illegible] the significance of the Referendum recently held by France.
5. Comment on:
   (a) British Plan for Cyprus
   (b) Recent developments in Algeria
   (c) [illegible]
6. [illegible] the food problem which [illegible] the Government.
7. Does India include the following territories:
   (a) Pondicherry (b) Goa
   (c) [illegible] (d) [illegible]
   (e) Maldives
8. What do you [illegible]?
   (a) [illegible] (b) [illegible]
   (c) [illegible] (d) [illegible]
   (e) [illegible]
9. With what [illegible] are the following [illegible]:
   (a) [illegible] (b) [illegible]
   (c) [illegible] (d) [illegible]
   (e) [illegible]
10. Name the [illegible] of [illegible]
    (a) [illegible]
    (b) President of the World Bank
    (c) Managing Director I.M.F.
    (d) Prime Minister of Lebanon
    (e) Indian Ambassador in Moscow
    (f) Commissioner for India Government in Mauritius

ANSWERS

1. I.F.C. is an international investment [illegible] closely [illegible] with the World Bank [illegible] 33 member governments. IFC's purpose is to further economic development [illegible] these [illegible] member [illegible] government guarantee [illegible] private [illegible] capital and management. IFC does not compete with private capital [illegible] management functions.

Essentially IFC is an investing rather than a lending institution, and [illegible] for private capital.

IFC [illegible] the World Bank [illegible] with private business without government intervention and [illegible] private [illegible]. It does not invest in [illegible] which are government owned [illegible] in the management of which government participates [illegible]. However an enterprise in which [illegible] is not [illegible] from being financed by IFC [illegible]

The [illegible] must be located in a member country or [illegible] member country. IFC [illegible] the [illegible] Africa, [illegible]

IFC [illegible]

IFC will finance not more than half of the total cost of an enterprise

IFC's investments are not conventional fixed interest loans they are rather intermediate between conventional loan capital on the one hand and share capital on the other—loans carrying some interest and some right to participate in the profits and growth of the business

In its investments IFC considers earning power and a balanced capital structure more important than a lien or mortgage on assets Its investment may be subordinated to other obligations

One of IFC's purposes is to encourage initial participation by private financial investors and as the enterprises mature to revolve its portfolio by selling its investments

2 The fulfilment of the plan depended upon certain basic conditions viz substantial increase in agricultural production more domestic savings maintenance of stable price level external assistance and efficient utilisation of resources and assets created under the First Plan These have not been fulfilled to the extent anticipated

Agricultural production rose by 6 1 per cent in 1956-57 as compared with the previous year but in 1957 58 there has been a decline of 7 8 per cent the total production of food grains falling from 68 8 million tons to 62 1 million tons As regards industrial production the rise during the last year was only 1 5 per cent as compared to 8 6 per cent in the previous year

The import of foodgrains has also exceeded expectation, resulting in diversion of valuable foreign exchange During the Second Plan period 6 1 million tons of foodgrains have already been imported during the current year the imports are expected to be 3 5 million tons. The total food import during the 2nd plan was estimated originally at 6 million tons During the current plan already the expenditure incurred has been more than Rs. 500 crores over and above the total expenditure during the entire First Plan period

The additional allotment of Rs 100 crores now for industries and minerals is to provide adequate funds for the three steel plants the expansion of fertilizer projects and the Lignite Projects at Neyveli These projects will go a long way in building up a strong industrial structure and developing the economy so that the earnings on foreign exchange need not unduly depend upon export of agricultural raw materials

As regards social services such as education and health Rs 450 crores are to be spent in the next two years as compared to Rs 360 crores during the first three years of the current plan. Thus the expenditure will increase from an average of Rs 120 crores per annum during the first three years to Rs 225 crores per annum during the remaining period

3 (a) The first meeting of the Board was held in New Delhi in 1945 The Advisory Board was constituted for the purpose of cultivating closer contacts between the Union Department of Archaeology and Indian Universities and Learned Societies as also to arouse public interest in the activities of the Department

As a result several universities and institutions are lending their co operation in furtherance of the archaeological interests Also many young scholars are receiving training in field archaeology

A meeting of the Central Advisory Board of Archaeology was held at Hyderabad on October 9 1958

A special feature of the session will be an archaeological exhibition and a symposium on archaeological problems

(b) The *Berne Convention* which was the first international convention on Copyright was adopted at Berne on September 9 1886 and was completed at Paris in 1896 It was revised subsequently at Berlin in 1908 at Rome in 1928 and again at Brussels in 1948

India has been a member of the Berne Union from its inception Though a signatory to the Brussels text of 1948 India could not accede thereto as the Indian law on copyright did not conform to the Brussels text fully The Copyright Act 1957 came into force on January 21, 1958

India has acceded to the Brussels text of the Convention of the International Union for the Protection of Literatry and Artistic Works known as the Berne Convention. The Instrument of Accession which was signed by the president of India on August 21 1958 was deposited with the Government of the Swiss Confederation on September 17 1958 The accession is expected to take effect on October 21 1958

Although the Brussels Convention generally follows the Rome text, many new features have been introduced in the Brussels text Some of the new features are Cinematographic Works are given the same treatment as literary works. The author is given the same right

—QUESTIONS—

1 What is International Finance Corporation ? What role does it play in the sector of international investment ?

2 Enumerate the factors which have brought about an increase in the cost of implementing the Second Five Year Plan

3 Write notes on
- (a) Central Advisory Board of Archaeology
- (b) Berne Convention
- (c) Cultural Agreement with Egypt

4 (a) what are the salient provisions of the new French Constitution ?
- (b) Bring out clearly the significance of the Referendum recently held by France

5 Comment on
- (a) British Plan for Cyprus
- (b) Recent developments in Algeria
- (c) Racial riots in Nottingham

6 Suggest ways and means to tide over the food problem which confronts the Government

7 Does India include the following territories ?
- (a) Pondicherry (b) Goa.
- (c) Sikkim (d) Bhutan
- (e) Maldives

8 What do you associate with ?
- (a) Freud. (b) Braille
- (c) Fleming (d) Edison.
- (e) Madame Curie

9 With what sports or games are the following persons associated ?
- (a) Vijay Hazare (b) Dhyan Chand
- (c) R Krishnan (d) [illegible]
- (e) T N Seth

10 Name the present occupants of the following posts
- (a) India's Commissioner General for Economic Affairs.
- (b) President of the World Bank
- (c) Managing Director of I M F
- (d) Prime Minister of Lebanon
- (e) Indian Ambassador to Morocco.
- (f) Commissioner for India Government in Mauritius.

ANSWERS

1 IFC is an International investment institution closely affiliated with the World Bank with a capital of $93 million subscribed by 55 member governments IFC's purpose is to further economic development in its less developed member countries by investing—without government guarantee—in productive private enterprises in association with private capital and management I F C does not compete with private capital and it does not exercise management functions

Essentially IFC is an investing rather than a lending institution and it judges projects on the basis of their merits as investments for private capital.

IFC, unlike the World Bank deals directly with private business without government intervention and finances only private enterprises It does not invest in undertakings which are government owned and operated or in the management of which government participates to any significant extent. However an enterprise in which some public funds have been invested is not necessarily precluded from being financed by IFC, if the enterprise is essentially private in character

The project must be located in a member country or in a dependent territory of a member country. IFC invests only in the less developed areas—Africa Asia the Middle East, Australia Latin America, and a few special areas in Europe

IFC invests in enterprises which are predominantly industrial (manufacturing, processing, mining) either for the expansion or improvement of an existing enterprise or in the creation of a new one

IFC will finance not more than half of the total cost of an enterprise

IFC's investments are not conventional fixed interest loans they are rather intermediate between conventional loan capital on the one hand and share capital on the other—loans carrying some interest and some right to participate in the profits and growth of the business

In its investments IFC considers earning power and a balanced capital structure more important than a lien or mortgage on assets Its investment may be subordinated to other obligations

One of IFC's purposes is to encourage initial participation by private financial investors and, as the enterprises mature to revolve its portfolio by selling its investments

2 The fulfilment of the plan depended upon certain basic conditions viz substantial increase in agricultural production more domestic savings maintenance of stable price level, external assistance and efficient utilisation of resources and assets created under the First Plan. These have not been fulfilled to the extent anticipated.

Agricultural production rose by 6 1 per cent in 1956-57 as compared with the previous year but in 1957 58 there has been a decline of 7 8 percent the total production of food grains falling from 68 8 million tons to 62 1 million tons As regards industrial production the rise during the last year was only 1 5 per cent as compared to 8 6 percent in the previous year

The import of foodgrains has also exceeded expectation, resulting in diversion of valuable foreign exchange During the Second Plan period 6 1 million tons of foodgrains have already been imported during the current year the imports are expected to be 3 5 million tons The total food import during the 2nd plan was estimated originally at 6 million tons During the current plan already the expenditure incurred has been more than Rs. 500 crores over and above the total expenditure during the entire First Plan period

The additional allotment of Rs 100 crores now for industries and minerals is to provide adequate funds for the three steel plants the expansion of fertilizer projects and the Lignite Projects at Neyveli These projects will go a long way in building up a strong industrial structure and developing the economy so that the earnings on foreign exchange need not unduly depend upon export of agricultural raw materials

As regards social services such as education and health Rs 450 crores are to be spent in the next two years as compared to Rs 360 crores during the first three years of the current plan Thus the expenditure will increase from an average of Rs 120 crores per annum during the first three years to Rs 225 crores per annum during the remaining period

3 (a) The first meeting of the Board was held in New Delhi in 1945 The Advisory Board was constituted for the purpose of cultivating closer contacts between the Union Department of Archaeology and Indian Universities and Learned Societies as also to arouse public interest in the activities of the Department

As a result, several universities and institutions are lending their co operation in furtherance of the archaeological interests Also many young scholars are receiving training in field archaeology

A meeting of the Central Advisory Board of Archaeology was held at Hyderabad on October 9 1958

A special feature of the session will be an archaeolgical exhibition and a symposium on archaeological problems

(b) The *Berne Convention* which was the first international convention on Copyright was adopted at Berne on September 9 1886 and was completed at Paris in 1896 It was revised subsequently at Berlin in 1908 at Rome in 1928 and again at Brussels in 1948

India has been a member of the Berne Union from its inception Though a signatory to the Brussels text of 1948 India could not accede thereto as the Indian law on copyright did not conform to the Brussels text fully The Copyright Act, 1957 came into force on January 21 1958

India has acceded to the Brussels text of the Convention of the International Union for the Protection of Literatry and Artistic Works known as the Berne Convention. The instrument of Accession which was signed by the president of India on August 21 1958 was deposited with the Government of the Swiss Confederation on September 12 1958 The accession is expected to take effect on October 21 1958

Although the Brussels Convention generally follows the Rome text, many new features have been introduced in the Brussels text Some of the new features are Cinematograph Works are given the same treatment as literary works The author is given the same right

to make a collection of political speeches and speeches delivered in judicial proceedings.

Unsettled disputes between Governments of the Bern Countries are now to be referred to the International Court of Justice for determination.

(c) Ancient ties of friendship and closer cultural relation which have existed between India and Egypt and Syria were further strengthened by the formal signing of a Cultural Agreement between the Republic of India and the United Arab Republic at Cairo on September 25 1958

The Agreement was signed on behalf of India by Shri R.K. Nehru Ambassador Extraordinary and Plenipotentiary of India at Cairo and on behalf of the United Arab Republic by Dr Mahmoud Fawzy, Foreign Minister United Arab Republic.

The Cultural Agreement which consists of twelve articles declares that the two Governments desire to establish and strengthen the bonds of friendship promote cultural relations and develop mutual co-operation in scientific, educational and cultural fields between the two countries

The Agreement will remain in force for a period of ten years and will come into force fifteen days after the exchange of instruments of ratification which will take place in New Delhi.

This is the eighth cultural agreement which India has so far concluded since Independence The earlier agreements were signed with Indonesia Iran, Iraq Japan, Poland, Rumania and Turkey

4 (a) The salient provisions of the New Constitution are —

(1) Universal suffrage is the only source of power It is from universal suffrage, or from the bodies elected by it that the legislative and executive powers are derived.

(2) The legislative and executive powers must be effectively separated in such a manner that the Government and parliament can assume their full authority each on their own account and under their own responsibility

(3) The Government must be responsible to Parliament

(4) The judiciary must remain independent in order to ensure respect for basic liberties as defined in the Constitution of 1946 and in the declaration of the Rights of Man

(5) The Constitution must allow the relationship of the Republic with the associated peoples to be placed on a proper footing.

(b) The Referendum recently held in France and French overseas territories marked the inception of the Fifth Republic as well as the collapse of the Fourth Republic. The people of France have given General de Gaulle a triumphal vote of confidence and the Communist party its first serious defeat since the end of World War II Eighty five p.c. of the electorate voted and only 15 p.c. abstained an all time low record for abstentions The people who voted 'Yes' not only endorsed the General's proposed constitution but also his broad policy of a strong and stable Government in the pursuit of a modern and vigorous France. Herein lies the significance of the Referendum.

5 (a) Britain has formulated a seven year plan to administer Cyprus, the Mediterranean island in partnership with Greece and Turkey Britain has in this connection, extended invitation to the Greek and Turkish Governments to appoint a representative in the island. Turkey accepted this plan of Britain. But Greece has rejected it Eleventh hour efforts made by NATO delegates in Paris to persuade the British Government to postpone its implementation of the Constitutional Plan for Cyprus bore no fruit The new British Plan for Cyprus came into operation on October 1 this year

(b) Algeria situated in the Northern part of Africa covers an area of 847,500 sq miles and is roughly four times the size of France. In 1813 Algeria was annexed by France Since then a constant war was going on between French Imperialists and Algerian nationalists.

The policy pursued by the French was quite unfavourable to the peaceful settlement of the issues. This was mainly responsible for the constant outbreaks of revolution in Algeria The latest development in the Algerian situation is formation of a new Algerian Government in Cairo by the Algerian liberation movement. The newly formed Algerian nationalist government has been promptly accorded recognition by all Arab countries

( ) The racial riots which swept over Nottingham Hill District of London recently has clearly revealed that all is not well with Britain, which boasts itself to be the cradle of democracy The riots began on August 30 when a mob of Whites attacked coloured

persons living in or passing through the Nottingham Hill area The main targets of attack were West Indians and other coloured men. Indians were spared According to official report a plot by anti social elements to stir up racial feelings was responsible for disturbances South African Agents and Fascists constituted the moving spirit behind the activities of the trouble makers

6 Of late the problem of food has assumed alarming dimensions A solution of this threatening problem lies in the formulation of a scientific food policy and the adoption of vigorous and concerted efforts to implement it.

A scientific policy to tide over the food crisis involves two categories of measures

(a) Those to increase food production and
(b) Those to utilize the foodgrains produced in the country in a judicious manner so as to meet the maximum possible demand

The measures to increase the production of foodgrains are

(i) introduction of minor irrigation schemes like the construction and repair of wells, tanks channels small dams tubewells, etc.,
(ii) distribution of chemical fertilizers and manures
(iii) distribution of improved seeds
(iv) fisheries development schemes
(v) land improvement schemes like contour bunding clearance and reclamation of wastelands
(vi) plant protection and antiplant disease schemes
(vii) other grow more food schemes intended to increase the yield per acre and
(viii) a special campaign now being organized to increase the production of rabi grains viz. wheat barley gram and rabi jowar by concerted action in educating the farmers in improved methods of farming arranging timely supply of improved seeds securing the co-operation of village workers and farmers and infusing enthusiasm in them to increase the per acre yield

For the maximum utilization of food grains produced in the country the measures taken are:

(1) segregation of highly surplus areas where the Government can procure foodgrains for distribution in the deficit areas

(2) segregation of highly deficit areas and important consuming centres where the Government can concentrate on distribution of foodgrains from government stocks and

(3) creation of more or less selfsufficient zones by joining deficit areas with surplus areas

Establishment of fairprice shops, and anti hoarding measures such as squeezing of bank credit licensing wheat roller flour mills and food grain dealers etc. will supplement the above measures to a remarkable extent.

7 (a) Yes (b) No
(c) Yes (d) No
(e) Yes.

8 (a) Psycho analysis (b) Printing for the blind. (c) Penicillin
(d) Phonograph Incandescent lamp

RICE PRODUCTION

The total production of rice all the world over (excluding the U S S R.) was about 215 million tons (metric) in 1956 Of this Asia accounted for over 200 million tons

India is the second largest producer of rice (the first being China—82 million tons) with an aggregate yield of about 43 million tons.

Though India and China have the largest area under rice cultivation the highest per hectare* yield (1956) was accounted for by Spain (5 810 kilograms)** followed by Egypt (5 430 kgs.) Australia (5 290 kgs.) Italy (4 [illegible] kgs.) Portugal (4,230 kgs.) and Japan (4 220 kgs.)

In India the area under cultivation extends over 78 million acres Yield per acre is only about 544 kilograms

In 1957 58 the top five producers of rice among the States were West Bengal (41 45 000 tons) Andhra Pradesh (34 65 000 tons) Madras (31 34 000 tons) Uttar Pradesh (22 54 000 tons) and Bihar (21 55 000 tons)

*1 Hectare=2½ acres approximately

STUDENTS' EMPORIUM

ART OF READING

Is reading an art? Before answering another question must be posed and answered What is art? Art' says Bacon is man added to natu e.' That this is an excellent definition of art can easily be p oved by an illustration Nature provides a painter with only rough materials trees, the sea and the mountain and h simplifies arranges organizes and paints a picture to gratify the whims and fancies of the human mind

Skilful exeution and imagination are called for to finish a work of art Even so in the case of reading a knack of reading only those books which one should read and of getting maximum return for the minimum of indus trious study and judicious power to exercise omission are needed. In this sense, reading like painting is an art

Reading can be, in the words of Valery Larbaud an unpunished vice" or it can be to borrow the words of the philosopher Descartes ' a conversation with the most reputable people of pas centuries.'

Reading becomes a vice when it is resorted to as a kind of op um or as a means of flight People married to this kind of reading read constantly They read any part of the en cyclopaedia with equal interest. Left to themselves in a room they plunge headlong into piles of magazines and newspapers and read, we do not know what, and seem to be immensely satisfied with their work, if it can be called wo k For them everything is good. They care neither fo facts nor for ideas but they simp y go on like Tennyson's brook They race ahead page after page like a whip pet chasing a rabbit neither interpreting and understanding nor making room in their mind for assimilation digestion and adoption.

Reading is merely passive with them This kind of reading is not hea thy and does not stand the reader in good stead for men that read much and work little are as bells which do sound to call others, but they themselves never ent r into a church"

There is such a thing as reading for plea sure also A naive reader hopes to find there [illegible] charm in the st ry he reads He reads the [illegible] exaltation and sublimation of his emotions. He reads to enjoy the adventures and escapades which life has chosen to deny him but which the novelist has so enchant ingly described in his story Yet another may read to find among playwrights, poets and moralists perfect expression and synthesis of ideas he has formed and see whether "these unacknowledged legislators of the world" tell him anything new which may be of use to him Such reading for pleasure is a much more active process

Now we come to another type which may *for want of a better phrase,* be called "work reading" which is don by a man with a definite purpose to support the idea or for the expansion of the idea he has entertained It is to be done wi h hand fo underlining, sidelining and starring the important passages, as all are not endowed with a photographic memory

Reading like all work, has its rules The three practical rules offered by Emerson are: Never read any book that is not a year old never read any but famed books and never read any but what you like

One must be careful to choose one's literary nourishment In literature as in love there is a wide variety of tastes and where one sees H len another may see only a plain girl. 'Your' author may not be "his' author

We can safely say that it is advisable to prefer the authors of the past to the present-day ones not tested by the passage of time No doubt you will find your emotions reflected in present day authors and books are being writ ten which may become classics in due co se But the great authors of the past, who have withstood the vicissitudes of time have been adjudged good by humanity An individual may err but humanity can't.

Montaigne pleads eloquently for perfect knowledge of a few masters rather than a superficial and nodding acquaintance [illegible] or a pencil or a pen is with a great many Whether one has to read many or a few of [illegible] authors depends on one's ability to d gest the stuff one reads and on one's power of memory and thinking.

But this much at leas is true that the more one reads the more one gets interested

in reading and the more one is interested in reading, the more does one devour with avidity and the more does one benefit by it. And no one who has not read a lot has ever become a writer. Great writers have always been great readers. One may have an itch to write or one might have even produced something, but if one reads extensively, it will enlarge one's horizon and fortify and augment one's knowledge. Milton read a lot despite his alleged inspiration and so also G B S and Somerest Maugham.

Great politicians and statesmen read a lot. Napoleon read widely and so did Stalin. The favourite authors of Napoleon were Tacitus and Homer. He was interested in English literature as well. On being introduced to a man by the name of Lovelace Nepoleon exclaimed with emotion "That is the name of the man in *Clarissa*".

Rajaji read *Robinson Crusoe* in his forties! Justice Oliver Wendell Holmes read Plato at 93 'to improve his mind'. Cato learnt Greek at 80.

The art of reading consists in acquiring a better and fuller understanding of life from one's acquaintance with it in books. Reading maketh a full man and thinking a perfect man.

HOW TO INCREASE SELF CONFIDENCE

Time and again we meet people who lack self confidence and who find it difficult to get on in life. They are often good workers but they cannot achieve the one thing that is important to them: increase their self confidence. Are you one of them?

If you are take notice of the following tips which are sure to help you.

If your heart starts beating faster because you have been called before the boss just imagine him robbed of all his official dignity—for instance, as he might appear in his bath room before entering the tub. You will be amazed how easy you will find it to talk naturally to him and to regard him just as another fellow being.

Put the greatest stress on your clothing. Good clean clothes give you a better background and make you feel you are some one.

For unpleasant situations in which anyone can occasionally find himself keep a saving ready which is normally only used by very phlegmatic people. Say to yourself "Well that could have happened to anyone!"

Take a daily bath and if possible add vitamin bath salts to it. A daily bath gives you added pep and energy and strengthens your self confidence.

Be more consequent with yourself. Occasionally tackle something you would not have thought you could manage. You will be surprised at the lift it gives you, if you succeed after all!

Sum up your successes once a while. Don't belittle them. They are important to you, because they increase your self confidence.

Finally try to find out the real reason for your lack of self confidence. Perhaps you have been wasting your energies in the wrong job trying to do something that is not really in your line. Once you have found the cause you will find a cure.

And then just look at your fellow beings with open eyes. Watch out for their faults and their funny little habits.

HUMAN PERSONALITY

Human personality is like a magnet with a positive and negative pole. This human magnetism, present in each one of us has the power to attract or repel and we alone can decide the kind of influence we use.

You may imagine that as you are only one among many millions of people in this world your influence will have little or no effect either way—for good or bad. This is an illusion.

History is peppered with examples of the far reaching influence one man or one woman can have on the rest of the world, for good or evil.

We cannot all be famous or infamous even if we desire to be either but whoever you are and wherever you exist your personal influence counts and you should never forget this for a moment.

Consciously or unconsciously your personality affects those around you. In the home in business in social life your influence counts for something. Your character mentality actions speech even your thoughts are a help or a hindrance to others as well as to yourself. You can and do attract or repel everywhere you go.

So many people who creep or bulldoze their way through life are quite oblivious of the effect of their behaviour on others? Their total disregard is amusing or frightening whichever way you look at it.

The bombastic, hard hitting 'go getter' for example is anxious to make a terrific impact upon everybody. He is out to impress people and he knows it. Of course he wants to make a favourable impression but such is his nature that it never occurs to him that his attitude has exactly the opposite effect on most of his audience.

His opposite type, the quiet, modest retiring individual usually makes a similar mistake. He is anxious not to offend people or to be considered an aggressive 'know all'. If he isn't very careful, however others may regard him as an unsociable nonentity.

The influence we exert around us is a very important responsibility. It can attract or repel other people and it can make or break us. (From Psychology)

GROWTH OF UNIVERSITY PLANNING FORUMS

University Planning Forums all over India, which number about three hundred today, celebrated the National Plan Day on September 13. It was on September 13, 1956 that Parliament approved the Second Five Year Plan.

The community of students and teachers played a notable part in the historic struggle for achieving independence. The objective of the Planning Forum movement is to ensure that the one million teachers and college students in India play as vital a role today in national reconstruction as they had played in the nation's emancipation.

An attempt to associate teachers and students of Universities in the formulation of the First Five Year Plan was made when the Planning Commission requested the Vice Chancellors of Universities to arrange the draft Plan to be widely discussed at University centres. The draft outline of the First Plan was published in July 1951 and Universities discussed the development programmes in groups and seminars and made many valuable suggestions.

The experience in the case of the First Plan pointed to the necessity of making a more intimate liaison with teachers and students. An organised machinery for keeping in continuous touch with them was urgently necessary. It was for establishing this machinery that Shri S.N. Mishra, Union Deputy Minister for Planning, addressed the Vice Chancellors of Universities in August 1955 [illegible] the formation of Planning Forums as societies of teachers and students in Universities and colleges.

The first National Conference of Planning Forums, held in New Delhi in April 1956 was timed so as to enable students and teachers to pool their ideas in a general debate before the draft of the Second Five Year Plan was finalised and presented to Parliament. Altogether one hundred and thirty representatives of seventy two Forums drawn from twenty five Universities took part. The Conference was inaugurated by the Prime Minister who called for 'a crusading spirit and incentive' in the work of national reconstruction and looked forward to the increasing participation of students in the implementation of the programmes. Dr Rajendra Prasad, President of the Republic also addressed the delegates and he also stressed the role every one had to play if the National Plan was to be realised. "What we call our rights" he said, "ought necessarily to flow from the performance of duty. Every one must perform his duty to society, his country and to humanity at large and thus prepare himself to fulfil the task assigned to him."

The Planning Forum movement has been expanding rapidly. By the end of 1956 over 160 Planning Forums had been constituted and today there are more than 300 forums all over India. The Forums meet periodically in regional conferences. The Southern Regional Conference was held in Trivandrum in September 1956, the Northern Regional Conference at Srinagar in September 1957 and the Eastern Regional Conference in Darjeeling in May 1958. There is a Central Executive Committee for the whole movement. As suggested by the Central Committee, State Executive Committees are being formed to coordinate the activities of the Forums at the State level.

A new phase in the evolution of the Planning Forums is opening up today. While deliberations and discussions are of great value it is felt that the Forums ought not to stop at that level but should transform themselves as active instruments in the implementation of the Plan itself. Shri C.N. Mishra, Union Deputy Planning Minister and Chairman of the Planning Forums, has made a strong plea for the participation of students in development activities and has suggested that voluntary work should be done by organised student groups in the Community Development Blocks. Another sphere of work that has been suggested is that of research, surveys and [illegible] [illegible]. Small villages in the neighbourhood of educational institutions could be adopted as [illegible] [illegible]. The Planning Commission has also recommended [illegible]

Small Savings drives as another concrete programme which the Forums could under take.

GUIDE TO CAREERS THE PANCHAYAT SECRETARY

A Panchayat is a form of self government through which selected village leaders meet in council to deal with the collective welf re of the village community Usually a population of 1,000 to 2,000 is served by a panchayat

The Constitutions of panchayats vary from State to State The number of members is generally fixed according to the population of the area within the maximum and minimum limits specified under the Panchayat Acts These limits vary from 3 to 7 members in the Punjab to 30 to 51 in Uttar Pradesh The functions of panchayats can be classified as municipal economic and developmental and judicial Their municipal powers relate to village lanes ponds wells protection against epidemics maintenance of school buildings and roads arrangements of lighting improvement of agriculture and handicrafts watch and ward etc In economic and developmental matters a Panchayat sometimes acts as the channel through which Government assistance is receiv ed and helps the administration to extend programmes of agriculture cultivation de- velopment land management welfare com munity works etc Their judicial powers may relate to the trial of civil suits involving small amounts and petty criminal cases

Panchayats have their own funds to which are credited contributions from Government and local bodies Among the taxes which the panchayats are variously entitl d to levy are the general property tax the service taxes, and taxes on land revenue trades professions animals vehicles fairs festivals etc The sources of income however vary from State to State.

Generally speaking the State Governments have created a separate Department of Pancha yats which is attached to the Department of Local S lf Government etc. The main func tions of the Organisation at the State level are to administer the State Panchayat Raj Act arrange for the formation of panchayats con trol their expenditure supervise and control the work of field staff and arrange for the training of panchayat staff In some States the Department has also the responsibility for distribution of grants to panchayats and for administering self help activities In Kerala the Director of Panchayats also supervises public works taken up for execution from the panchayat fund and government grants.

Each State has field staff generally at the district level but sometimes also at the divisional sub-divisional tehsil or police station levels Panchayats in most States, except in Mysore and Kerala, are generally served by full time or part time Panchayat Secretaries In the district, the Collector or District Magistrate generally supervises the work of the panchayat staff

The Work Of A Panchayat Secretary is to perform all the administrative and develop- mental duties entrusted to him by the pancha- yat to carry out executive orders of the pan- chayat and to supervise control and direct the work of panchayat employees. The village community is at times assembled to prepare their minds for extension and community pro- jects work Social welfare programmes and educational activities are organised co-operative activities at the village level are promoted public works of general utility are executed, and guidance is given to the field staff engaged on the improvement of rural communications, water supply, hygiene cultivation and cottage industries Small savings and co-operative movements, development schemes etc are also promoted, and assistance is render d in the process of making smaller people credit worthy A plan of production for each family in the village is sometimes formulated and assistance may be rendered in its implementation. Arrangements for the prompt recovery of taxes are made and records of taxes collected and expenditure incurred are maintained for the inspection of outside auditors and in pectors Subject to the provisions of the Panchayat Act, all licences and permits which may be granted by the panchayat are also usually issued over his s gnature.

Personal Qualities necessary for the job are a sympathetic temperament and willingness and capacity for rural wo k. Ability to organise and mobilise resources and labour is also necessary for which a keen understanding of the needs and problems of the village com- munity is essential Th work involves living and working in a village and constant contacts with the village people The job is suitable only for persons who are fond of village life

Entry into the profession is by selection In Andhra Madhya Pradesh and Madras pan chay t secretaries are appointed by the Government in the first instance and subse- quent postings and transfers are made by the d partments In Assam and Orissa they are appointed by the Deputy Commissioner,

Collector or District Magistrate. In Mysore, the Commissioner for Local Self Government makes these appointments. Panchayats themselves are authorised to make these appointments with the approval of District magistrates, panchayat officers or the Director of Panchayats/Chief Panchayat Officer in the States of Punjab and Rajasthan. In Bombay panchayats are authorised to make these appointments themselves. Some States like Uttar Pradesh have constituted selection committees for the purpose.

To Qualify conditions vary from State to State. Andhra, Assam, Bihar, Bombay, Madras and Punjab usually employ matriculates as first-grade secretaries and middle-pass candidates as second grade secretaries. Some of the States relax the minimum educational qualifications in the case of social workers and persons otherwise suitable. Madhya Pradesh, Orissa and Uttar Pradesh have prescribed middle school, or its equivalent standard for these posts while in Rajasthan literate persons, having aptitude for such work are recruited.

Training is not uniform and in many States a training programme has yet to be started.

Assam and Himachal Pradesh have set up a regular training school for the training of panchayat secretaries. In Bombay secretaries are trained in the District Board offices. In the Punjab they are trained by the educational staff of the Panchayat Department and in Uttar Pradesh they are attached to other panchayat secretaries for training. Madhya Pradesh and Orissa are making arrangements for the training.

The Cost of Training is usually borne by the panchayats or by the Government. The duration of the course usually varies from a fortnight to three months.

The Syllabus of Studies includes the Panchayat Raj Act, village administration, village economics [illegible] management of land, social education, welfare etc. Day to day field work is an important part of training and secretaries have to acquaint themselves with all aspects of village life, their problems and the Panchayat Act.

Employment Outlook. [illegible] of village panchayats (Gram Panchayats) [illegible] [illegible] [illegible] been accepted by all States [illegible] [illegible] All States [illegible] West Bengal have [illegible] panchayat [illegible] and [illegible] village [illegible]

During the First Five-Year Plan the number of village panchayats increased from 83,087 to 117,600 covering 300,000 villages out of a total of about 5,20,000 major villages in the country. At present every village in Uttar Pradesh, Punjab, Madhya Pradesh, Mysore and Kerala is served by a panchayat, and it is anticipated that by 1961 the number of panchayats will be doubled so that every village community in India will have a panchayat to serve their common needs. It has been considered essential to provide a trained Panchayat Secretary for each panchayat, or for a group of panchayats within a radius of two or three miles. In brief the panchayats are to be established as an effective and dynamic organisation for rural welfare and development in the country.

Panchayats offer an active life of social service to young persons for achieving the long cherished ideal of village swaraj and prosperity.

PRIMARY EDUCATION IN INDIA

It is expected that by the end of the Third Five Year Plan it would be possible to provide facilities of free and compulsory primary education for all children of the age group 6-11 years in the whole country.

When the Second Plan was drawn up it was expected that the number of additional pupils for whom school facilities would become available in the age-group 6-11 (by the end of Plan period) would be about 77,00,000. By the end of the third year of the Second Plan the additional enrolment in this group would approximate 60,00,000.

Whereas in 1950-51 the number of pupils [illegible] (age group 6-11) [illegible] was 1,87,50,000 in 195[illegible] [illegible] 2,47,12,000 [illegible] [illegible] up to 2,21,[illegible]

[illegible] primary teachers [illegible] three years of the Second Plan [illegible] 2,70,000

THE PROBLEM OF FORMOSA

(Below are three editorials in a series which appeared in Canada's national newspaper The 'Globe and Mail' of Toronto Strangely these editorials appeared in the New York Times also—as advertisements —Ed C & C)

FRICTION points created by Western policy—or lack of it—in the Near East have already produced two major crises in that part of the world. More are to come It is the same in the Far East where Western policy notably United States policy has created what is probably the worst friction point of all

This is the so-called Nationalist Government of China which squats on the island of Formosa, confronting and challenging the firmly established Communist Government on the nearby mainland

The Nationalist "Government is wholly synthetic. It consists of defeated army which was driven from the mainland nine years ago. Portected by the United States Navy and financed by lavish hand-outs (a billion dollars during those nine years) from the United States Government the leader of this army Generalissimo Chiang Kai shek not only proclaims his regime to be the true and only China, but threatens to reconquer the mainland

Such a situation invites and incites violence of the kind which took place when mainland Communist forces bombarded the islands of Quemoy and Little Quemoy held by the Nationalists The Communist Government of China can argue that Chiang's forces constitute a threat to its security It can attack Quemoy or Matsu or even Formosa itself on the pretext of preventing Chiang and his men from launching an invasion against the mainland

The Western Powers make matters worse —very much worse—by supporting Chiang's ridiculous and dangerous pretensions The U S Canada and others accept his rump regime as the true and only Government of China. Britain and others while recognizing the Communist Government of Peking still admit—in United Nations matters for example —the right of the Formosa Government to speak for the Chinese people They thus maintain and exacerbate the tension between the two regimes That tension could lead to a war directly involving China the United States and Russia Things cannot be left any longer in this perilous state

There is no sympathy for Chiang with a China. Why should there be? His 22 years of power were marked by wholesale corruption uncontrolled inflation incessant civil wars, foreign invasion and occupation by an almost unbroken course of national disaster and humiliation The Chinese do not want to see him—still less help him—return

Irrational Policies

So he and his make believe Government are withering in Formosa His troops are growing old and there are no replacements for them—except to the extent that Formosan youths of dubious loyalty can be drafted in to his army Chiang himself is past 70 When he dies who will take over from him? And to what purpose?

Western policies in this case are utterly irrational To refuse to recognize the real, effective Chinese Government is bad enough But to pretend, in all solemnity that a rump regime decaying on a small island is the true Government of China and has the sole right to speak for that mighty nation is sheer folly It is as if in pique against the Soviet Union we hailed some exiled aging Grand Duke as Czar of Russia

In policies as in everything else nothing but disaster can come from evading reality

When the United Nations was set up in 1945 it assumed that the chief burden of keeping world peace would rest with five Great Powers the United States Britain France Russia and China These accordingly were given permanent seats on the Security Council with power to veto any of its actions save in purely procedural matters China's seat went as was reasonable enough at the time to the Chiang Kai-shek Government which then—more or less—ruled the country

Real China

But four years later this regime had been defeated discredited driven off the mainland to Formosa—with scant prospect that it would ever return Today there is absolutely no prospect of its returning Yet all the way through—from 1949 when the Communists won power in China till now when they have complete unchallenged control over it—the Formosa regime has occupied China's seat the seat allotted to the Chinese nation and people on the U N Security Council The real China the real Chinese Government, is not even a rank-and-file U N.

It is argued that if China's seat on the Security Council were taken from synthetic sovereignty of Chiang Kai-shek and given to the real China of Mao Tse-tung the Communists would then have two members on the Security Council where now they have only one. As long as the veto exists what does it matter? A single vote as we saw when the Security Council tried to tackle the Near East crisis last month can do all the damage that possibly can be done. And it is always possible since Communist Russia and Communist China are by no means identical twins that one might use its veto on the other.

Certainly, it is great folly to leave the Great-power seat, the Great Power veto in the hands of the Chiang regime. For that *regime has a vested interest in trouble between East and West.* It can survive on Formosa only if it has U.S. military protection and economic aid and the worse relations are between the United States and Communist China the more of both it is likely to get. Moreover its one hope of re-establishing itself in China is through a general war. In any major crisis it can be expected to use all its influence in the Security Council, including the veto, to increase the tension and defeat any conciliatory moves.

What is China? What is a Great Power? When the Communist Chinese Government bombards offshore islands held by Chiang's rump regime it is, in effect, demanding answers to these questions. It is suggesting rather brutally (has it any other way?) to the Western nations that when they pretend Formosa is China, when they pretend Formosa is a Great Power and when they pretend the *real* China, which really is a Great Power, does not even exist—why then, they are asking for trouble! and they are going to get it.

Who owns Formosa? Chinese Nationalists who fled there when they were defeated and driven off the mainland nine years ago? Or the Communist Government which now has firm control of China?

Both claim Formosa but neither in fact has any right to it or to its 10 million inhabitants. Indeed Indonesia might as well make such a claim, for the island's original inhabitants were primitive Indonesian tribesmen, whose descendants still survive in the mountains. After them (around 1600 A.D.) Chinese [illegible] but it was not until the end of the Seventeenth Century that [illegible] was actually made part of the Chinese Empire. Even then, the link was loose, and the Formosans developed a distinct character of their own, including a dialect not understood on the mainland.

Ceded to Japan

In 1895 following a defeat in war China ceded Formosa to Japan, which held it for the next 50 years. Japanese rule accompanied by intensive development further widened the gulf between the Formosans and the Chinese. Yet the wartime Allies at their Cairo Conference of 1943 sweepingly decided to "return" Formosa to China and this was done immediately after the war, no effort being made to ascertain how the Formosans themselves felt about it.

In fact they disliked the decision, rebelling two years later against the horde of greedy and corrupt carpetbaggers which the Chinese Nationalist Government (then in power on the mainland) sent over to rule them. That revolt took 5,000 lives. Then in 1949 following the Communist triumph in China, Generalissimo Chiang Kai-shek himself with his officials and the remnants of his armies fled to the island and proclaimed it the new headquarters of the Nationalist regime.

The Formosans liked this no better. They get no satisfaction from providing a shelter, training ground and possible jumping-off point for a defeated foreign army, an army whose presence is a standing invitation and incitement to attack from the Chinese mainland. Nor, it seems probable, would they get any satisfaction from being handed over to Peking. Communism has made few converts among them.

Formosa's Future

The West must abandon the ridiculous idea that the Chiang regime represents China, that it rules China, that it has authority of any kind whatsoever. But abandoning that regime does not mean abandoning Formosa. On the contrary it means liberating Formosa from foreign rule and—what is quite as important—foreign rule—the ever present risk of becoming a bloody battle ground between East and West.

With the Chiang regime off their backs Formosans would have a chance to determine their own future—by let us say an internationally supervised plebiscite. An independent Formosan republic, [illegible] part of China [illegible] country could be one of most [illegible] Civil War can never be [illegible] of strife and disappear [illegible]

LETTERS to EDITOR

Letters from the readers giving their own opinion or point of view on all interesting subjects are published in these columns Letters should be brief to the point neatly typed double space They may be written under a pseudonym but must be accompanied by writer s name and address The views expressed here do not necessarily reflect editorial opinion or policy

INDISCIPLINE AMONG STUDENTS

Sir

I crave the hospitality of your columns to present my views as a student regarding the so-called growing indiscipline among the students

The complaint that is very often lodged against this important part of our society and nation is that they do not behave well with the teachers—they do not respect them they do not abide by the rules they are hostile to the administrative authorities and the government they take active part in politics These and many others are the complaints but no body I am sure has tried to find out the correct cause and remedy of this social disease

That the students don t have any regard for their teachers is right But then as a student I can say that the teachers also don t feel any responsibility regarding the career of their disciples The reason is not far to seek Modern teachers are not like our old Gurus they can be defined to be the mighty puppets or lecturing machines and living human beings Either the milk of human kindness does not flow in them or they don t get the time and opportunity of distributing it among the students Then the students are not M/s Ram Shyam and William but they are Messrs 1 2 and 3 What I mean to emphasise here is that due to the crowds in the classes the relation of the teacher and the taught has vanished away The personality of the teacher and the moral force is not communicated to the students

The statement that the students do not abide by the rules is open to contradiction Rules laws are necessary things but there are rules and rules and their correct implications should be understood properly Rules are the tracks or the roads of society and government to lead the people to the correct way and to check the antisocial behaviour So long as the rules are utilized as rules I am sure, no part of humanity educated or uneducated can violate But when they become the whips in the hands of authorities to scourge the people like the shepherds scourging the sheep well then sheep only can abide by the rules and not the human beings who know how to get rid of it very easily

I agree fully with the view that the students are hostile towards the authorities But as the Indian proverb goes there can be no clapping unless both the palms strike Physician heal thyself first, and wash and sweeten thy bloody hand if all the perfumes of Arabia can do so Your moral exertions without being yourself moral your diagnosis of the social disease without being yourself healthy your long lectures on loyalty to the nation without being yourself loyal non violence without being yourself so your preaching of the sermons of discipline without being yourself disciplined is something like the barking of the dog at an elephant something like the old lion preaching AHIMSA is something beyond understanding Think and think with the unprejudiced mind that you are successors of that Arch spirit—the father of the nation whose sole belief was in doing first and preaching next.

There are many more reasons that forced the students to behave in undesirable ways one of them being the apathetic attitude of the authorities towards the reasonable and correct needs and demands of the students

Then there are many people in administration or the government body who think that the students should not take active part in politics I share my views with them but with one more necessary modification i e that the students should not indulge in dirty-party politics Since the youth is

excitable and more susceptible imitative (as the modern Psychology says) students cannot help being active in politics of the nation. And I am sure this can cause no harm to the nation if the energy is directed to the right channel. This is possible only when the group formation between the teaching staff and administrative body of big institutions is put to an end. If it is necessary for these groups to exist if the definition of educational institutes or universities remains incomplete in absence of the said power blocs well and good. They should exist. But may God give them the good sense of not utilizing or misusing the youth power as a means to their own personal ends.

Finally then let me make an appeal to the great leaders of different political parties—great as they are—that they should not try to overthrow one ruling party by foul means. They should try to strike at the black spot instead of clouding the white horizon. Loyalty to the nation in a healthy democratic country deserves preference to the interest of party. Any attempt of uprooting the present government by foul means deserves condemnation.

So long as these social political, academic and administrative fears and apprehensions remain no firm basis of peace and discipline can be found.

Varnasi — Yours etc.
Sept 8, 53 — Ram Pujan Tripathi

PRECIS WRITING

Sir,

In some examinations especially those held by Public Service Commissions a question is often asked to write a summary or precis of the matter given.

The ability to write a good precis is largely a matter of practice; in fact constant practice is essential in order to attain proficiency and the earnest student will, in addition to working the exercises given in any book, take every opportunity of making precis of literary passages and of economic and financial articles. The latter can always be found in good newspapers and monthly magazines.

A good precis has certain characteristics which can, for convenience, be reduced to rules as given below.

1. The precis must be written in good English, with a smooth flowing style. It is this characteristic which distinguishes a precis from a telegram or a summary. Any attempt to condense by omitting "a", "an" and "the" or using telegraphic language will not be liked by the examiner.

2. Direct speech must be changed into indirect or reported speech.

3. The past tense must be used unless the sense of the passage requires otherwise.

4. The sense of the original must be adhered to.

The writer of a precis has one object only i.e. to condense an original passage. He may dispute statements or opinions or even know that statements of fact are erroneous but he must on no account alter them. Even such an absurd statement as that the moon is made of green vegetables must be rigidly adhered to.

There are two ways by which condensation may be achieved.

(i) By substituting words for phrases and phrases for sentences.

(ii) By omitting all that is irrelevant and unimportant.

In both the cases it depends largely on practice plus the possession of a good vocabulary.

Usually in examination work the required length of the precis is stated, otherwise your precis should not exceed one third of the length of the original.

If a really good precis is to be produced it is necessary to proceed systematically, and the following rules are set as being the most helpful in this connection.

1. Read through the whole passage in order to get the idea of what it is about.

2. Read through the passage again and underline each important point that must be incorporated in the precis.

3. Make a rough draft of the passage arranging the points underlined in appropriate orders and omitting the unnecessary matter.

4. Compare your draft with the original and add anything of importance which has been omitted.

5. Check the approximate number of words in the draft to ensure that the number of words allowed is not exceeded. If the number of words is not specified, the precis should be one third or a quarter of the length of the original.

6. Read through the draft carefully to ensure that the matter flows smoothly and that there are no grammatical errors.

7. Make a copy of the draft and supply it with a suitable title. The number of words should be given at the foot of the precis.

Yours etc.
Kanpur — K[illegible], M.A., B.T.

COLD WAR AND HUMANITY

Sir,

Since the Korean War the world is passing from one crisis to another in quick succession and the cold war is going on unabated threatening the outbreak of a third World War at any moment. Needless to say that in the event of a full scale war, the mass killing weapons like A and H Bombs, I. C. B. M. etc. will be freely used by either belligerent power as a result of which both combatants and non-combatants or militants and non militants will face the disastrous consequences. Time and again the scientists have warned the world that the explosion of A and H Bombs will not only spell disaster to the present generation but its after effects will also render potential danger to the coming generation in the form of deformity and disease. Dr Linus Pauling an American Nobel Prize winning scientist predicted that the atomic fall-out would cause 2000000 children in each of the 20 generations to be mentally or physically defective. Dr Herman Muller, a nobel prize winning biologist disclosed that leukomania induced by Atom Bomb test might take 100000 lives within 30 years. Hence a war at this atomic age is frought with grave danger of total extinction of humanity from the world. This being the outcome of war it is strange to see that politicians are still adamant in their cold war campaign. Against this background one question naturally arises as to what more fundmental interest the mankind has than of its survival. This is a pointer to the politicians who are architects of war and peace. Th only way to avert war is to guide the politics of the countries along scrupulous line. But the practical difficulty is that the present day world politics is guided by those who have the superior strength. Disarmament talks and negotiations are manoeuvred by them only to suit their own purposes and are never aimed sincerely at peace. Then how to save humanity from its imminent annihilation? The question should be considered from the angle of humanity. Since a global war is a challenge to the very existence of humanity it is the concern of all irrespective of nationality, socio-political ideology and geographical limits to prevent such a war at any rate.

Hence the ultimate concern for solution of war lies in the hands of the common men who should control the politicians by exercising an effective check on the latter.

There should develop an atmosphere of international accord amongst the non militant sections of the world so that in the event of any war threat from inside and outside a concerted move can be initiated simultaneously throughout the world to arrest the war tensions prevailing at the moment. This is the only practical measure to ensure peace in the world.

In a world full of tensions today, co-existence is the only alternative to war. All conflicts should be solved through peaceful means. As our Prime Minister Nehru says solution of problems by war has become totally outmoded in this age of Atom and Hydrogen Bombs. Approach to the conflicts should always be positive. To put in the words of the Prime Minister when a negotiation fails attempts should be made again to come to an agreement till the desired result is fully achieved. Mutual suspicion should be sunk as far as practicable as it stands in the way of settlement of conflicts. The gulf of difference should be sought to be bridged by narrowing the points of difference. Each side must concede to others view point in resolving disputes. Exchange of ideas between the countries tends to foster mutual understanding and thereby proves the way for international amity and harmony amidst ideological differences.

The permanent solution of world conflicts lies in the successful implementation of Panchshila as enunciated by India for lasting peace in the world.

SURINAM

Sir

In your October 1958 issue of the "Careers and Courses" at page 782 under the heading "Facts about Metric System" you have mentioned "SURINAM" as one of the Asian countries which introduced metric system in 1917. Actually however SURINAM is one of the territories of Netherlands. This country is in South America surrounded by Brazil, British and French Guianas. Will you kindly clarify? I am of course subject to correction.

New Delhi
4-10-58

Yours faithfully
(J Varadarajan)

(Surinam or Netherland Guiana is a Dutch colony in South America. We published the name of countries as given in the Government Communique—Ed C C C)

FILM WORLD

STRICTER CENSORSHIP ON FILMS

The Information Consultative Committee of M.P.s attached to the Ministry of Information and Broadcasting at its meeting in New Delhi discussed at length the question of stricter censorship on horror and crime films.

Though purporting to be based on mythological or religious works many of these films have a deleterious effect on morals and social conduct and injure the religious susceptibilities of people. There are films which over-emphasize sex and preach class hatred and subversion.

It was considered desirable to discuss the matter further after the members had seen some of these films. In case more stringent restrictions are to be imposed, it might necessitate amendment of the Constitution.

The film censorship policy of the Government has come up before the committee twice during the current session. According to Ministry of Information and Broadcasting elaborate directives have been given to the censors to refuse certificates for unsuitable films unless cuts suggested by them are made.

No film can be certified if it lowers the moral standards or ridicules prevailing laws or injures the sentiments of any community, religion or foreign Power. Themes which attack the sanctity of the institution of marriage or depict vice are prohibited.

During the first months of this year six Indian films and 23 foreign films were refused certificates.

There is a general discontent among the producers in India that the Censors have been very harsh to Indian films these days. Films when shown to them are mercilessly mutilated leaving the producers to complete darkness.

Recently a delegation of the Indian Motion Picture Producers Association met the Prime Minister in Delhi before his departure for Moscow. According to them the censor trouble with which the Indian screen was faced, may now be taken up by the Prime Minister himself, who has asked for a list of uncertified films.

Some of the censor blunders which may be noted are regarding the recent Eros of Filmistan's "Paying Guest". The film was passed by the Censors and it was screened in many important centres with a certificate of "Adults Only". After its run for more than eight weeks the film was banned throughout India. Another of Filmistan's films for international market "Bombay Flight 417" which was completed long ago has not been given a certificate. A foreign film "Outlaw", released in Bombay and other places some years ago was banned after it had run for some weeks.

CORK FILM FESTIVAL

Two fifteen minute documentary films, "Jhelum" and "Pattras" are entered by India which is amongst the 24 nations which will participate in the third Cork (Ireland) Film Festival. The festival will concentrate on the art of film-making, and one of its main objects is to promote interest in short films and to stress its importance in the field of education, general knowledge and entertainment.

Representatives of makers of short films will be invited to address the audience on the problems of the industry. Outstanding feature films will also be screened. Internationally famous lecturers as well as film personalities and stars will attend the festival.

LOCARNO FESTIVAL AWARDS

Triumphing over sixteen competitors from eleven nations, Twentieth Century Fox's CinemaScope production of John O'Hara's "Ten North Frederick" was awarded the Vela D'Oro (Golden Sail) as the best feature production shown at the eleventh annual International Film Festival at Locarno, Switzerland.

In a second Twentieth Century Fox triumph, the Technicolor subject "The Barrier of our Daily..." received first prize in the category of documentaries and shorts.

THE "GODDESS" WINS

Columbia's "The Goddess" starring Kim Stanley and Lloyd Bridges won the "critics'" award at the Brussels Film Festival. "The Goddess" was also shown at the Edinburgh Film Festival on August 31.

NEED FOR FILM FESTIVAL IN INDIA

A call for holding an international film festival in India on the lines of those being held in foreign countries such as Czechoslovakia Berlin and Venice was made by the Sheriff of Bombay, Mr J C. Jain last week

The Sheriff who returned after attending the film festivals at Karlovy Vary Berlin and Venice during his continental tour, was of the opinion that the response and appeal for such an international film festival in India would be more than what he evinced at these festivals

He said that India was friendly with every country So every film producing country would send their entries for a film festival in India. He disclosed that the Berlin film Festival failed to get entries from Communist countries and Karlovy Vary Film Festival in Czechoslovakia did not attract entries from non-Communist countries This was because of political ideologies In the case of India Sheriff pointed out she could count upon entries from all film producing countries and the support of every one.

Speaking of Indian films he said, they were very popular in some foreign countries and had received acclaim There was enough scope for the exhibition of good Indian films abroad.

Emphasising the need for the holding of a film festival in India the Sheriff said the time was now opportune There was concrete recognition of the merits of Indian pictures in the shape of several international awards received by them

As India was keeping good diplomatic relations with all the film producing countries the film festival would be a grand success he asserted He maintained that if the Union Government could not make arrangements for such a festival the film industry in Bombay with the assistance of the State Government would do well to take the initiative.

Explaining the benefits accruing from such a festival the Sheriff said that it could give impetus to the film industry and help the country to find an international market for Indian films It would also bring foreign exchange

BRITISH FILM INDUSTRY FACES CRISIS

The British cinema crisis continues.

Many more theatres are facing inevitable closure and this year a attendance estimate is down to half the patronage enjoyed ten years ago

This was the gloomy picture given by Lord Rank the Rank Organisation chief in a comment on his company s report and accounts published recently

Film production and distribution resulted in a loss of £1,264,000 compared with Rank s profit of £719 000 last year Lord Rank regarded the loss as exceptional and had every reason to think the current year would show considerable improvement for the group But he anticipated the closure of many more British cinemas through lack of profitability

He spoke of a serious decline in the availability of films which attract the public. "The films needed are not available and are not likely to be available in the foreseeable future The drastic cuts in Hollywood output is most disturbing he said

He attributed the marked attendance fall over the past ten years not only to television competition but to the changing pattern of public spending There is more concentration of money on washing machines refrigerators and motor cars to the detriment of cinema going he said

Attendances dropped from 1,514 000 000 in 1948 to 915 000 000 in 1957 and 1958 attendances a e estimated between 700 000 000 and 750 000 000

In addition to more empty seats, cinemas bore £12 000 000 annual entertainments tax.

FILMING LIFE OF MICRO ORGANISMS

Progress in the field of optics has made it possible to achieve in microcinematography the same effect as is produced only by the electronic microscope This was demonstrated in Moscow at a meeting of the Standing Research Film Committee of the International Scientific Film Association The meeting was devoted to technical progress in cinema

The use of anoptral interferential optics and stereoscopy have enabled researchers to get a vivid picture of the life of micro-organisms. Dr Roger Robineaux of France demonstrated a film confirming the remarkable discovery that the protoplasm has a greater density than the nucleus in monocellular organisms The film, Analysis of the Effect of Antibiotics on Living Cells by the British scientists Monroan, Ambrose and Easty records the extremely interesting property of cells of the liver and kidneys of not reacting to th[illegible]

Great Interest was aroused by a report and film by the Soviet [illegible] Professor Mikh

all Peshkov He has perfected the anoptical optical systems suggested by the German scientist Wilsie freeing the image completely of the light aura which complicates observations It becomes lit up from inside as it were sharp and three-dimensional, making it possible to use great magnification without sacrificing the quality of filming

A report was also made by Dr Lind of the German Democratic Republic on the first experiments with the application of stereoscopic techniques in biology

• • •

ALL-TIME BEST FILMS

The 33 year-old Russian revolutionary film, "Battleship Potemkin", directed by the late Sergei Eisenstein, heads the list of twelve best films of all times based on votes by 117 movie historians selected by the International Bureau of Historical Film Research and representing 26 different countries according to an announcement by the Belgian Film Library

Charles Chaplin's "The Gold Rush" also made in the same year (1925), comes second in the list followed by the Italian film Vittorio de Sica's "Bicycle Thief" (1948) Potemkin received 100 votes while the other two received 85 each

The following are the other nine best films of all time in that order The Passion of Joan of Arc" (France—1928), directed by Carl Dreyer "Grand Illusion (France—1937), directed by Jean Renoir "Greed (United States of America—1923), directed by Erich von Stroheim Intolerance (U.S.A.—1916), directed by D.W. Griffith; "Mother" (Russia—1926) directed by Vsevolod Pudovkin, "Citizen Kane" (U.S.A.—1941) directed by Orson Welles "Earth" (Russia—1930) directed by Alexander Dovzhenko; The Last Laugh (Germany—1924) directed by F. W. Murnau and The Cabinet of Dr Caligari (Germany 1919) directed by R Wiene

By comparison, the number of votes obtained by each director for all his films mentioned in the list, Charles Chaplin secured the highest number of votes [illegible], followed by S. M. Eisenstein (166), Rene Clair (133), Vittorio de Sica (123) D. W. Griffith (123) John Ford (107), Jean Renoir (103), Carl Dreyer (98), Erich von Stroheim (91) Vsevolod Pudovkin (71), F. W. Murnau (90) and Robert Flaherty (12)

It took ten months to determine the list of 12 "best films of all times" which were screened at the International Film Festival of Brussels 1958 from October 12 to 18 The presentation is organized by the Belgian Film Library

A second jury of seven filmmakers of international reputation will have the task of classifying the films according to their [illegible] today

During the seven-day projection programme there were also showings of unreleased films of the directors of the 12 films screenings of little known masterpieces and round table discussions bringing together directors, film historians and critics

• • •

BEST FILM EVER

The unanimous vote in favour of "Potemkin" as the best film ever made proves that in appreciation of the arts political prejudice is dormant Not the 18th century Potemkin Marshal, but a battleship is the hero of the film made by the late Serge Eisenstein It is of course a silent film but it is noteworthy that Chaplin's "Gold Rush", acclaimed as one of the best films made is also independent of sound

The Soviet film was made in 1925 and had a gratifying reception on its exhibition in New York The film got prizes at Paris also, in spite of its ideological content Eisenstein in his later years was out of official favour, but as a theoretician of the cinema he was outstanding In his way with masses of men he has been compared to the late D W Griffith

The link-up of modern movements with the past was demonstrated effectively by Eisenstein, whose last film "Ivan the Terrible" was also a Soviet screen triumph The Eisenstein always appealed to the intelligence proves that in making movies for the masses it is not always hidden that scores And what is called Soviet realism has penetrated to the films of other countries notably Italy

SCHOLARSHIPS FOR CHILDREN OF POLITICAL SUFFERERS

Dr K L. Shrimali, Union Minister of Education in a statement in the Rajya Sabha on September 23 gave details of a scheme to grant Scholarships to the children of political sufferers who took part in the struggle for freedom. He also added that it was proposed to implement the scheme shortly

According to the Minister's statement the scheme will provide inter alia the following benefits.

(a) special consideration in the matter of admissions and awards of freeships and half freeships in all recognized institutions

(b) free seats in hostels attached to recognized institutions, and

(c) a limited number of stipends and book grants to scholars from the primary to the post graduate levels

The concession will be admissible to

(i) children of political sufferers and grand children of pre deceased sons of political sufferers,

(ii) political sufferers whose income does not exceed Rs 300/ p m.

For the purpose of this scheme the term Political Sufferer has been defined as follows

> Political sufferer means a person who suffered imprisonment or detention of not less then 6 months, or who died or was killed in action or in detention, or was awarded capital punishment or became permanently incapacitated due to firing or lathi-charge etc or lost his job or means of livelihood or a part or the whole of his property on account of participation in the national movement for the emancipation of India'

The scheme will be administered by the State Governments/Union territories The Government of India will give subsidies to the State Governments on a 50 50 basis but will meet the entire expenditure incurred by the Union territories.

• • • •

SCHOOL BUILDINGS AND TEACHERS IN DELHI

Dr K L Shrimali, Union Minister of Education told the Lok Sabha on September 19 that present there were 140 Government schools in Delhi and New Delhi and out of these 53 were being run in Government buildings 24 partly in Government buildings and partly in tents 19 in rented buildings 16 partly in rented buildings and partly in tents and 28 purely in tents.

Twenty school buildings which, he said were under construction at present would be ready by December 1958 In addition, construction of another 26 buildings was proposed to be taken up during the year

The Minister added that there was a great dearth of trained teachers in the following categories —

Domestic Science Teachers Lady Physical Training Instructors Lady Science and Mathe-

[illegible] Teachers and Hygiene and Physiology Teachers

Efforts were being made to recruit qualified teachers through the Employment Exchange as well as by giving wide publicity he added.

• • •

UNIVERSITIES TO WORK FOR 180 DAYS

Dr K.L. Shrimali Union Minister of Education in a statement laid on the table of the Lok Sabha on September 16 referred to the reforms particularly regarding working days which had been accepted or adopted by the various Universities of India and the medium of education in the Universities

The following is the text of the Minister's statement :—

"The University Grants Commission have recently advised all the Universities to provide for at least 180 clear working days not including days used for examination Sundays and holidays.

"The replies so far received by the Commission from the Universities indicate that they are generally in favour of the above recommendation of the Commission. As regards other reforms a comprehensive report as required under Section 18 of the U.G.C. Act will be laid before the House in due course.

"The Committee appointed to examine the problems connected with the medium of instruction has since submitted a report which the Commission have accepted.

"Copies of the report have been supplied to all the Universities who have been requested to intimate the action taken or proposed to be taken on the recommendations contained in the report.

"The replies of the Universities are still awaited. I may be added that the Commission has not so far taken any definite stand in regard to the question of medium of instruction and has generally held that this is a matter for the Universities themselves to decide."

• • •

INSTITUTE TO TRAIN LIBRARIANS

Dr K.L. Shrimali, Union Minister of Education in a statement laid on the table of Lok Sabha on September 16 gave the main outlines of [illegible] management and other [illegible] and [illegible] of the Institute for the Training of Librarians to be set up at Delhi University

The main [illegible] of the scheme [illegible] to the [illegible] will be as follows:—

Composition: The Institute will consist of a Director, five lecturers and the necessary staff. The office of the Director of the Institute and that of the Head of the Department of Library Science will be combined and the work of the teaching staff appointed under the scheme of the Institute will be co-ordinated with that of the existing teaching staff of the Department of Library Science. At the same time the entity of the Institute will be kept distinct from that of the Department.

Management and Administration: The Institute will be a part of the University of Delhi and will be under the academic and administrative control of the authorities of the University. It will, however, have an advisory committee through which the Ministry of Education will keep in touch with the working and development of the Institute.

The Institute will provide in due course the following main training courses :—

(i) A basic course of one academic year leading to the Diploma in Library Science.

(ii) Refresher courses of about three to five months duration.

(iii) Special courses of varying duration from a few weeks to a full-fledged course of one academic year, dealing with special aspects of librarianship.

The minimum qualification prescribed for the course leading to the Diploma will be a Bachelor's Degree of a recognised university. The refresher courses will be open to candidates already possessing a Diploma in Library Science. Qualifications for the special courses will vary and will be determined according to the nature of the particular courses.

GANDHI BHAVANS IN UNIVERSITIES

Replying to a question regarding the proposal to set up Gandhi Bhavans in selected universities in India Dr K L Shrimali Union Minister of Education stated as follows in the Rajya Sabha on September 10

Although the Government of India have no proposal under consideration the University Grants Commission has approved a scheme for the establishment of Gandhi Bhavans in the Indian Universities as drawn up by the Gandhi Samarak Nidhi

"The Commission has also decided to start Gandhi Bhavans in the Universities of Allahabad Delhi Kerala Nagpur, Panjab Patna and Rajasthan in the first instance

It has also decided to assist each of the Universities starting such Bhavans to the extent of Rs 50 000/, while the Samarak Nidhi will contribute a similar amount for the purpose

• •

EVENING COLLEGES IN DELHI

Dr K L Shrimali Union Minister of Education said in the Rajya Sabha that the following four colleges in Delhi started evening classes with effect from the date shown against each

1	Deshbandhu College Kalkaji New Delhi	18 7 1958
2	P G D A V College Chitra Gupta Road, New Delhi	18 7 1958
3	Delhi College Ajmeri Gate, Delhi	21 7 1958
4	Dayal Singh Trust College (in the premises of the Camp College New Delhi	1 8 1958

TEA IN INDIA

The tea industry occupies an important place in the national economy of India Apart from providing direct employment to about a million workers it substantially supports the Indian plywood and fertiliser industries.

Of the Indian plywood's total annual output of 78 million sq ft. the tea industry alone consumed 64 million sq ft. or 82 per cent during 1954

During the same year the tea industry purchased 82 thousand tons of fertilisers of which 73 thousand tons valued at Rs 2.54 crores came from within the country

The country's transport services earned by way of freights Rs 3.86 crores from this industry during 1954

During 1950-51 exports of tea were valued at Rs 8 042 lakhs forming 13 51 per cent of total value of exports from India (Rs 59 679 lakhs) During the [illegible] year 1957 tea exports were [illegible] Rs 1[illegible] 346 lakhs forming 19 75 per cent of the total value of exports (Rs 6[illegible] lakhs)

Against the total quantity of tea produced in India 201 million lbs of tea were available for internal consumption [illegible] 1951 52 and 176.6 and 181 [illegible] million lbs of tea during 1953-54 and 1954 55 respectively

Economic REVIEW

I MORARJI'S MISSION FOR MONEY

Mr Morarji Desai the Finance Minister of India has succeeded to a remarkable degree in apprising the foreign countries about the nature and magnitude of India's monetary requirements. The developments which followed closely in the wake of his foreign tour bear eloquent testimony to this. Five friendly foreign countries and the World Bank have now agreed to place at the disposal of India fresh funds to the tune of $350 m.

This arrangement was evolved at the Washington conference of the representatives of the Governments of the U.S.A., the U.K., West Germany, Canada and Japan and the authorities of the World Bank. The lending parties have agreed to accept repayment on a long term basis.

The U.K. Government has agreed to provide funds of the value of $102 million, West Germany $40 million, Canada $17 million and Japan $10 million. All these credits can be drawn upon between now and the end of March next year for financing this country's import commitments falling within that period.

The bulk of the payment will have to be made to the U.K. and West Germany and to a lesser extent Japan.

The World Bank has undertaken to make loans to the extent of $100 million in the period up to the end of March 1959. The bulk of these funds may be released for payment for purchases made for the development programmes of the Railways.

Also the Bank has expressed its willingness to negotiate new credits totalling $[illegible] million for the following two years.

The U.S. Government has agreed to provide $[illegible] million from its Development Loan Fund. Out of this sum $75 million will be available for use during the period up to the end of March next while the balance will be forthcoming between then and the end of the following June.

In addition the U.S. Government is contemplating [illegible] in the form of wheat [illegible] Under the existing [illegible] agreement wheat [illegible] will be shipped to this country before March 31. A new P.L. 480 agreement was signed on Sept. 26 which provides for a wheat loan of three million tons. Deliveries under the programme will take place at the rate of 25,000 tons a month.

These new developments in the sector of foreign aid are sure to enable India to tide through its foreign exchange crisis.

II MONTREAL CONFERENCE

The Commonwealth Trade and Economic Conference held recently at Montreal (Canada) has examined the myriad, intricate, varied and variegated economic problems confronting the world today. The 11-nation communique issued at the close of the conference is a significant document which incorporates the major decisions taken at the Conference to tackle the vital economic problems.

The 11 nation communique declares "it remains our objective that sterling should be made fully convertible as soon as necessary conditions have been achieved and that trade discrimination should continue to be progressively removed in view of advantages to be gained by so doing."

But the communique adds that "a final decision on timing of convertibility must rest with the U.K. which would however take into account the interests of the Commonwealth as a whole."

The communique said that on problems of price stability of bulk commodities "we agreed to participate in an examination of the problems on a commodity by commodity basis in order to [illegible] have worked for producers [illegible]."

The [illegible] the Commonwealth [illegible] [illegible]

That [illegible] conference [illegible] [illegible]

It [illegible]

and that the central theme that had run through the discussions in Montreal had been "an expanding Commonwealth in an expanding world."

The communique said that the projected European free trade area should be 'outward looking and should not carry out restrictive practices. Views were exchanged at the conference on 'various aspects of the new situation created by more active participation of a number of Sino-Soviet group countries in world markets.'

It disclosed that the conference had agreed to set up an advisory group to consider methods of mobilizing resources for Commonwealth development. It also recorded decisions to create 1 000 Commonwealth scholarships and to girdle the world with an £88 million Commonwealth telephone cable which will take 10 years to complete.

The decisions taken at the Montreal Conference are bound to have a profound bearing on the international economy. But in the ultimate analysis, it all depends on the effective implementation of these decisions. If the member countries stick to these decisions with firmness and honesty of purpose many of the economic ills of the present-day world can be easily solved.

III WORK FOR EDUCATED UNEMPLOYED

The Government of India has finalised a scheme to set up transport co operative societies with the object of providing gainful work for educated unemployed. To begin with pilot schemes would be undertaken in West Bengal Bombay Kerala Madras and Delhi.

Each State or territory will have a co-operative society for the purpose owning ten vehicles operating city as well as State routes.

Membership of the societies will be restricted to educated unemployeds with experience of work as drivers mechanics booking clerks depot managers. The minimum educational qualification will be Matriculation.

Each society will have 50 members each member contributing Rs 1 000 towards the capital of the society.

There will be a board of directors headed by the Transport Commissioner of the State concerned with the Registrar of co-operative Societies and the officer in charge of the Employment Directorate as members. Two more members of the board may be selected from among the members.

The selection of the members of the society will be made by the board. Each member will be given the same wages and their training would be so arranged that any member will be able to perform the duties of any other member.

On a total fleet strength of 50 vehicles, the total capital investment will be about Rs 15 lakhs. No allocation of funds has been made to the State Governments as the details of the scheme have yet to be worked out.

This is a project worth experimenting. In addition to providing gainful employment it will also go a long way in giving a strong stimulus to co-operative enterprise.

IV PROSPECTS FOR PETROLEUM

The striking of oil in Cambay and Lunej (in Bombay State) recently marked a new development potent with significance. India is deficient in natural gas and petroleum in no small measure and has therefore to resort to a policy of import to meet its essential requirements. The striking of petroleum in large quantities in India will reduce the volume of its import substantially and this will lead to a considerable saving in foreign exchange.

The Government of India is also devising ways and means to set up new oil refineries in India.

Initial refinery project studies for Gauhati and Barauni which were entrusted to an American firm of consultants last November are almost complete and are under examination by the Government.

As envisaged at present the Gauhati refinery which is to be erected with Rumanian assistance will have a crude oil capacity of 750 000 tons per annum. It is expected to come into production early in 1961 and is being designed to produce particularly kerosine and high speed diesel oil.

The Barauni refinery which it is hoped to complete early in 1962 will have a capacity of two million tons of crude oil per annum. It is expected to produce aviation spirit lubricants and bitumen and is estimated to cost about Rs 39 crores.

Discussions are in progress with such of the foreign countries that have expressed an interest in the Barauni project including the Soviet Union Italy and the United Kingdom. A final decision on the choice for foreign collaborations is expected to be taken by the end of this year. The choice will to a large extent be determined by the terms of credit offered.

All these augur bright prospects for petroleum industry in India.

V. WORLD BANK'S NEW RECORDS

The thirteenth annual report of World Bank presents a [illegible] of the [illegible] loans [illegible] in the past one year. The report revealed that the World Bank has set new records in both its lending and borrowing operations for the year ended June 30, 1958. Another interesting revelation in the report was that India topped the list of World Bank borrowers during the year ending June 30, 1958.

The 34 loans made during the year amounted to the equivalent of $ 711 million and the funds raised by the Bank through the sale of its bonds and notes to other [illegible] amounted to $5[illegible]0 million. At the same time disbursements on the Bank's own loans [illegible] $499 million also exceeded previous levels.

The growing number of economic development projects that are ready and eligible for financing by the Bank indicates that the rise in lending during the year may have signalled the start of a new and higher level of operations.

The Bank continued to cover out of its own resources all its operating expenses and continued to show a surplus of earning over expenditure. Net income during the year amounted to $ 42 million, the highest figure yet recorded. The Bank's reserves reached a figure of $3[illegible] million.

Loans were made for projects in 18 countries, two of which—the Philippines and [illegible]—had not previously benefited from Bank loans.

Nearly half the year's lending was to strengthen transport and services.

The year's loans will spur agricultural production in several member countries.

More than $ 1[illegible] million was lent during the year for industry.

As regards loans to India, India received seven loans aggregating $ 1[illegible]5.5 million (about Rs. [illegible] crores) during the year ending June 30 1958. These seven loans were given for the development of her railways (4 loans Rs. 45 crores) ports (2 loans Rs. 21 crores) and steel industry (1 loan Rs. 13 crores).

The total amount of loans granted to India by the World Bank so far is of the order of [illegible] million dollars (Rs. [illegible] crores). The first loan was granted to railways in [illegible] 1949 and the latest for the port development in June 1958.

VI. NEW DIMENSIONS IN INDUSTRIAL FINANCE

The [illegible] of [illegible] Chairman of the Industrial Finance Corporation [illegible] annual meeting [illegible] [illegible] which the [illegible] [illegible] [illegible] industrial finance [illegible] in 1948 [illegible] [illegible] had to [illegible] alarming paucity in industrial finance especially in the sphere of medium term and long term finance. The I. F. C. was therefore established to [illegible] and [illegible] remedy the situation and the review of the work carried on by it [illegible] that it has succeeded to a large degree in realising its objective. This is no [illegible] observation for the information furnished by the Chairman is proof positive for I.F.C's achievements.

The Corporation had made a net profit of over Rs 28 lakhs during 1957-58 and had been able to return to the Government for the first time since its inception 10 years ago Rs 5.45 lakhs towards repayment of subvention.

The Corporation had also augmented this year its general reserve fund from Rs [illegible] lakhs to Rs 17 lakhs. It was for the first time during the last five years that the Corporation had transferred any money to its fund [illegible].

During the year under review the Corporation had raised Rs 4.56 crores from the open market by the issue of bonds.

Of the total [illegible] of Rs 7.79 crores [illegible] by the Corporation during the year the maximum had gone to the sugar industry followed by power and cement undertakings. A majority of the [illegible] of loans in the sugar sector were [illegible] factories. According to the annual report the Corporation approved three schemes for import of machinery and equipment under the deferred payment guarantee scheme during the year ended June 30. The total amount agreed to be guaranteed in these cases came to Rs. 3.96 crores. The report states that the Corporation which completed the first decade of its existence on June 30, 1958 has sanctioned 231 loans totalling Rs. 62.9 crores to various industrial concerns [illegible]. These [illegible] loans [illegible] Rs. 4[illegible] crores [illegible] (171 applications) [illegible] from new undertakings. Loans amounting to Rs 31.86 crores had been disbursed up to the end of June [illegible].

[illegible] I. F. C. [illegible] [illegible] years [illegible] [illegible] will be [illegible] [illegible] working.

SCIENCE & INVENTION

INTENSE COSMIC RADIATION

The instruments in the Third Soviet Sputnik have recorded intense cosmic radiation at great heights in the area of the equator, Sergei Vernov Corresponding Member of the USSR Academy of Sciences told a *Tass* correspondent. The number of cosmic particles there is so great that one might well wonder whether they shall not prove harmful to the future astronauts However the space ships of the future will be able to bypass the areas They only need to start from close to the poles and avoid approaching the earth's equatorial plane

Asked about the reason for this great number of cosmic particles at great heights Sergei Vernov advanced a hypothesis that goes a long way towards explaining this riddle The earth is bombarded by cosmic rays and the fragments of atoms smashed by them fly in all directions and partially back into cosmic space Some one or two thousand kilometres out a part of the neutrons issplit into electrons and protons These electrically charged particles are retained and deflected in definite directions by the magnetic field of the earth

We have called this radiation ' terrestrial inasmuch as it is observed around the earth Vernov said But conditions necessary for the appearance of such radiation can also exist on other celestial bodies which also have a magnetic field and are bombarded by cosmic particles. The phenomenon is being studied extensively at present, both theoretically and experimentally

• • •

MANNED SPUTNIKS—A REAL PROSPECT

The standard of rocketry today is so high that automatic flying laboratories manned earth satellites and cosmic rocket ships should be regarded as distinctly realistic prospects Academician Leonid Sedov declared in Moscow at a meeting devoted to the anniversary of the first artificial earth satellite

He said there are two main difficulties in the realization of these projects The first is protection of living organisms against certain radiations during long flights in cosmic space and the second is the problem of safe return We hope that these difficulties will no put off for long the conquest of cosmic space, Sedov declared

To orbit a Sputnik, Sedov said, it was necessary to control the speed of the rocket in cutting off the engine to an accuracy of a hundredth of one per cent with the margin of accuracy in following the set course of about one degree Moreover a whole number of complex problems of design had to be solved in developing multistage rockets, including specifically the problem of reliable and timely separation of the component stages and the starting and killing of the engines powering the different stages

• • •

RETRIEVABLE SPUTNIKS

Soviet scientists and engineers are capable of making a sputnik which would not burn up when entering the atmosphere or from the shock of landing on a planet, writes Prof Vladimir Dobronravov in *Moskovskaya Pravda* Prof Dobronravov notes that such a retrievable sputnik must have engines with a fuel reserve to help it approach the earth at the appointed time The engines must also brake its speed when it enters the dense layers of the atmosphere and protect it from burning up This also requires that the sputnik should be stabilised and should not have any transversal rotation of its own

On August 27 the Soviet scientist recalls the Soviet Union launched a single stage rocket with an animal on board to a height of 450 kilometres That rocket had a system of stabilisation which prevented its body from rotating

• • •

RADIOACTIVE TRACERS STUDY DRUG ACTION

Radioisotopes may be used as tracers to study the action of drugs within the body including side effects and potential new uses or hazards according to officials of the Pfizer Therapeutic Institute in the United States.

The tremendous biological activity of such compounds as the antibiotics vitamins tranquilisers etc makes sensitive independent methods for their detection of paramount importance if their interactions with body chemistry are to be studied at [illegible] physiological [illegible]

[illegible] are [illegible] for such [illegible]

• • •

MESSAGE-CARRYING SATELLITES

Earth satellites that can carry messages or mail in a fraction of the time now required will probably be developed within a few years according to Dr Wernher von Braun, the famous United States rocket expert. Plans for such a project are already well advanced, he says.

It is estimated that half a dozen such satellites would be enough to handle as much information as is now sent from place to place in all the [illegible] of the world—both civilian and governmental, von Braun says.

He added that the development of such "communication satellites" is now possible because of new developments in electronics. The entire contents of a book could be recorded in a few seconds with an electronic tape recording system. Then the message could be carried to its destination in a satellite which would relay it by radio as it passed overhead.

Dr von Braun explained the working of a [illegible] satellite as follows: As the satellite passed over New York, for example, its tape recorder would be triggered by a radio station that would receive what was then on the tape and would record on the newly erased tape at high speed messages for, say, Capetown. As the satellite passed over Capetown the process would be reversed—taking off the messages from New York and recording new messages for some other part of the world.

• • •

ANOTHER NEW TRANSLATION DEVICE

Development of an electronic "brain" that can convert English words directly into electronic instructions for computers has been reported by the U.S. Air Force. The machine, called AIMACO or Air Materiel Command [illegible] Compiler, was developed by technicians of Air Materiel Command (AMC) at Dayton, Ohio, and [illegible] of the Sperry Rand Corporation. [illegible]

ORGANS SUCCESSFULLY TRANSPLANTED

The head of a puppy was successfully transplanted to a full grown dog in an operation performed by a well known Soviet physiologist, Prof Vladimir Demikhov, in the presence of two Norwegian surgeons. Dr Demikhov demonstrated to the foreign guests his original method of transplantation [illegible] He [illegible] the head of the puppy together with its paws and [illegible] blood vessels. These vessels were [illegible] the carotid artery and the jugular vein of the grown dog. A vessel [illegible] apparatus which foreign doctors call "the Soviet [illegible] in surgery" was used in the operation.

The experiment was a success. The [illegible] with the new head [illegible] well. [illegible]

Dr Vladimir Demikhov is widely known in the Soviet Union for his experiments in transplanting organs. He has made [illegible] operations of transplanting lungs and the heart from one dog to another.

Dr Vladimir Demikhov showed the foreign guests a dog which had the heart and lungs transplanted a week before. The dog called "Bujan" now lives with two hearts and an additional lung.

"The ultimate purpose of our experiments," said Dr Demikhov to a Tass correspondent, "is to transplant vital organs to man to [illegible] those that are [illegible] affected. Many difficulties lie ahead. But [illegible] that they will be overcome and medicine will obtain a new powerful weapon [illegible] [illegible]"

• • •

DISCOVERY OF A NEW PLANET

[illegible] were reported at the Tenth International Astronautical Congress held at Moscow.

[illegible]

[illegible]

[illegible]

to confirm the theory that the central core of the earth is liquid

The core becomes molten they calculate, about half way to the centre of the Earth at a depth of rather more than 1 800 miles

As their figures correspond closely with the results of earthquake recordings, the molten core theory may now be regarded as proved

GLASS AUTOMOBILE ENGINE PARTS

The major working parts of automobile engines and even automobile brake shoes can be made of newly developed glass materials according to scientists of the Corning Glass Works Atomic Energy Department

The Glass that could be used for this purpose is Pyroceram, a glass ceramic material developed by the Corning Works It is lighter stronger and more heat resistant than most metals Corning scientists have suggested it for use as piston heads and high temperature bearings in engines as brake shoes and as structural parts of hypersonic aircraft—the aircraft of the future that will fly at speeds of more than 3 000 miles an hour

* * *

HEREDITARY CHANGES AT WILL

French Scientists believe successful experiments have opened the door to making real hereditary changes at will by artificial means in humans as well as animals it was reported in Paris on October 2, 1958

This follows an announcement that a new strain of ducks whose development by chemical injections was announced last July has continued to show the same characteristics over two or three generations

A team of biologists led by Professor Jacque Benoit, Professor of Histophysiology at the College de France, announced last year that they had given Peking ducks some of the characteristics of the Khaki Campbell variety by injecting them with desoxy ribonucleic acid (known as A D N) taken from the sex cells of the Khaki Campbells

Seventy per cent of the first 26 ducklings hatched from eggs laid by these ducks, inherited artificial characteristics from their parents Most of the treated Peking ducks lost the yellow-orange colour from their beaks and developed several other characteristics of the Khakis These changes have continued in the second and third generations

The scientists stress that much more work must be done before these experiments can be regarded as definite but they have concluded that beneficial racial charges can be obtained after birth in vertebrates and that these changes can be handed down through several generations

French scientists working in the field of heritable mutation consider that this discovery has opened the way to infinite possibilities of making changes in human and animal heredity, although much more research has to be done

Commentators have said that the discovery may make it possible to ultimately, develop a race of 'superman Others have said that certain results will not be possible without experiments on a pure race of ducks—which is not available

500 000 YEARS OLD TEETH

The discovery of fossilised milk teeth from a child who lived in East Africa between 400 000 and 500 000 years ago is announced by Dr L S B Leakey Curator of the Corydon Museum in Nairobi

The teeth were discovered 200 feet below the earth s surface at a place called Olduvai George in Tanganyika The discovery was kept secret for the past two years

The incredible size of the milk teeth does not necessarily mean that the owner was of giant size said Dr Leakey The child might simply have had disproportionately large jaws.

The 'animals of this area hunted were, however gigantic and their only weapons were boulders or primitive stone hand axes. This Dr Leakey said suggested the possibility that this was ' pretty large and pretty strong '

Excavations at Olduvai have also revealed that as long ago as 400 000 years man was interested in colours as lumps of other were found on a living site 50 miles from the nearest place where it occurred naturally

Scientists had previously no idea that man used ivory in really remote periods But at Olduvai an ivory tool—shaped from a hippo-tusk and possibly used for skinning animals—was unearthed

Dr Leakey said that the living sites were the first of early Chellean culture to be found in the world They revealed that the early man had begun to use hand axes in the main he was still using primitive pebble tools

Man had still no knowledge of fire He was fond of marrow for most of the animal bones on the living sites had been split open.

DOG'S EYES FOR HUMAN BEINGS

French army surgeons claim to have successfully grafted the cornea from the eyes of dogs to human eyes.

An army veterinary surgeon, M. Francis Henaff, told a study group at the Paris College of Medicine on September 23 that the technique would revolutionise eye surgery.

He said that until now, unless the graft was carried out within 24 hours of the healthy cornea being removed from the donor, the fragile membraneous lens would degenerate and become useless.

But specially treated corneas from dogs could be preserved for months by refrigeration. The new technique had been carried out successfully three times in France, he added.

• • • •

HYPNOTISM INSTEAD OF ANAESTHETIC

Hypnotism has become part of Britain's National Health Service.

A doctor in maternity case called in another doctor to use hypnotism instead of an anaesthetic.

The second doctor's claim for a fee was disputed by the London Executive of the Health Service.

The British Medical Association and the Health Ministry then had talks with the Executive.

The B.M.A.'s view was that hypnotism was an effective method of relieving pain in childbirth. Since Sept. 1 the London Executive have approved the 33 shillings payment to the doctor—and made British medical history.

STRONG PAPER BOXES FROM BAGASSE

Bagasse, the fibre-like residue that is left after sugar has been extracted from sugarcane, has been successfully made into corrugated paper shipping boxes through a process developed by the U.S. Department of Agriculture.

The Department reports that in laboratory tests 75 per cent of the bagasse boxes used for box making were equal or superior to comparable commercial paper boards. As part of a research and testing programme 1,200 boxes to hold cans and bottles were manufactured and given both laboratory tests and shipping durability tests. The bagasse boxes were described as sturdy and not as safe as regular boxes.

Major obstacles to economical and efficient pulping of bagasse have been removed by improvements in the screening and refining of fibre and pith, the Department reported.

PEOPLE IN THE NEWS

MR M. C CHAGLA

The appointment of Mr M C Chagla as India s Ambassador to the United States was announced in New Delhi on September 13 Mr Chagla who succeeds Mr G L Mehta, took charge of the diplomatic post in October

Mr Mohammed Ali Currim Chagla one of the outstanding authorities in Indian jurisprudence has been Chief Justice of the Bombay High Court since August 15 1947 when India became independent Mr Chagla is a man of many parts Deeply interested in literature and the classics of all clime he is a great lover of the fine arts In Bombay he has been associated with scores of cultural organisations

Mr Chagla was born in Bombay on September 30 1900 He was educated at St Xavier s High School and College, Bombay and Lincoln College Oxford He was president of the Oxford Asiatic Society in 1921 and president of the Oxford Indian Majlis in 1922

He was part time professor of constitutional law at the Government Law College Bombay from 1927 to 1930 secretary of the Bar Council of the High Court at Bombay from 1933 to 1941 and puisne judge of the Bombay High Court from 1941 to 1947

He had been serving as Chief Justice of Bombay High Court since August 1947 He was a member of the Indian delegation to the U N in 1946, served as Vice Chancellor of Bombay University from April 1947 to November 1947 and as chairman of the Legal Education Committee in 1948 and has been president of the Bombay branch of the Royal Asiatic Society since 1947

He is also a memb r of the Law Commission He served on behalf of India as an ad hoc judge of the International Court of Justice at The Hague in 1957 He was chairman of the Commission which enquired into the investment of L I C funds in the Mundhra concerns

Mr Chagla and Smt Mehrunnisa Chagla have a daughter and two sons

About his faith in work, Mr Chagla once said

The only abiding satisfaction that one can get is from one s work It is in the quality of the work done that a man realises himself I am no a ce ic and I have always taken a pleasure in the good things of life

DR BHAGWAN DAS

Dr Bhagwan Das whose death occurred in Banaras on Thursday September 18 1958, was born in 1869 His father Madhava Das, was a Zamindar of Banaras He was educated at Queen s School and Banaras College At the early age of 19 he took the M A degree in Philosophy from Calcutta University He entered Government service in 1890 and served as Deputy Collector but his mind lay elsewhere S rvice of the Motherland attracted him more than the prospect of becoming an official of British bureaucracy He resigned his job to interest himself in the spread of education and theosophy

In 1916 he became the founder of the Banaras Hindu University Foundation Committee Later h served on the Senate Syndicate and other academic committees of the University In 1921 he was honoured with the office of the Kulipati of Kashi Vidyapith

Since 1884 Dr Bhagwan Das was a member of the Theosophical Society He served as its general secretary in 1910 and edited the journal *Theosophy in India* for a number of years He made his debut in politics in 1917 when he presided over the protest meeting held in Banaras against the internment of Dr Annie Besant Despite heavy literary and academic preoccupations he presided over the U P Social Conference and the U P Political Conference in 1921 Duly recognised as an eminent scholar and theologian he was invited to preside over many provincial and inter-provincial religious conferences Participating in the non-co-operation movement he courted imprisonment in 1921 and was released in January 192

In 1923 Dr Bhagwan Das was elected chairman of the Banaras Municipal Board He held the office for two years In 1934 he was elected unopposed to the Indian Legislative Assembly He sponsored a Bill for the legalisation of inter-caste marriages The universities of Allahabad (1937) and Banaras

DOGS' EYES FOR HUMAN BEINGS

French army surgeons [illegible] have successfully grafted the corneas from the eyes of dogs to human eyes.

Since 1894 Dr Bhagwan Das was a member of the Theosophical Society He served as its general secretary in 1919 and edited the journal *Theosophy in India* for a number of years He made his debut in politics in 1917 when he presided over the protest meeting held in Banaras against the internment of Dr Annie Besant Despite heavy literary and academic preoccupations he presided over the U P Social Conference and the U P Political Conference in 1921 Widely recognised as an eminent scholar and theologian he was invited to preside over many provincial and inter-provincial religious conferences Participating in the non-co-operation movement he courted imprisonment in 1921 and was released in January 1922

In 1923 Dr Bhagwan Das was elected chairman of the Banaras Municipal Board He held the office for two years In 1934 he was elected unopposed to the Central Legislative Assembly He sponsored a Bill for the legalisation of inter-caste marriages. The [illegible] of Allaha[illegible] and

(1929) conferred Dr Litt. Honoris Causa on Dr Bhagwan Das in appreciation of his vast learning, ripe scholarship and deep researches into ancient Hindu culture and civilization as well as the religions of the world.

Dr Bhagwan Das was the author of a dozen or more standard works, which include the *Science of Emotions*, *Mystic Experiences*, the *Science of Peace*, *Krishna—a Study in the Theory of Avatars*, *Social Reconstruction*, *The Purpose and Use of Philosophy*, *Unity of Asiatic Thought*, *the essential Unity of All Religions*, *Ancient versus Modern Scientific Socialism and Communalism and its cure*.

His monumental Sanskrit publication, *Manavadharmasar* contains 35,000 slokas; the book has been acclaimed as a great repository of Hindu scriptures. His other Hindi and Sanskrit publications include *Samanvaya Prayojana* and *Purushartha*.

He could speak with ease and fluency on a wide range of subjects. To spread and popularize the use of Sanskrit, he wrote letters in Sanskrit to such of his relations as knew Sanskrit. No wonder that he could speak Sanskrit as freely as he could write it.

His outstanding career was capped by the award of the Bharat Ratna in 1955, the same year in which Prime Minister Nehru was the recipient of the award. He did yeoman service to the country as an educationist and a pillar of the Congress.

MR. EUGENE R BLACK

Mr Eugene R. Black became President of the International Bank for Reconstruction and Development and Chairman of the Executive Directors on July 1, 1949.

Mr Black first became connected with the International Bank on March 14, 1947 when he was appointed Executive Director for the United States. At that time, he was a Vice President of the Chase National Bank of the City of New York, from which he resigned upon his appointment. On March 15, 1949, Mr Black was elected a Senior Vice President of the Chase National Bank, and he returned to the Chase as of that date but continued to serve on a temporary basis as Executive Director for the United States of the International Bank at the request of the United States Secretary of the Treasury. On May 18, 1949 when Mr Black was elected President of the International Bank by the Executive Directors he resigned as Senior Vice President of the Chase Bank. In September 1953 the Executive Directors of the Bank selected Mr Black as President for a new term running until June 30, 1959.

Mr Black was born on May 1, 1898 in Atlanta, Georgia. His father was Governor of the Federal Reserve Bank of Atlanta and also served in Washington as the Governor of the Federal Reserve Board. Mr Black's maternal grandfather was Henry Grady, Editor of the Atlanta Constitution.

He was educated at the University of Georgia from which he graduated at the age of 18. In his junior year he was elected to Phi Beta Kappa, an honorary fraternity. At ... during the first world war he was commissioned as an ensign in the U.S. Navy.

After the war, Mr Black became associated in Atlanta with Harris, Forbes & Company, New York investment bankers. In 1931 he became manager of the Atlanta office of the Chase Harris Forbes Corporation, successor firm. He was appointed Assistant Vice President of that Corporation in January 1933 and was placed in charge of the Atlanta, New Orleans, Houston and Dallas offices. Later in the year the firm was dissolved and Mr. Black was appointed a Second Vice President of the Chase National Bank of the City of New York and in 1937 he became a Vice President.

MR. PER JACOBSSON

Mr Per Jacobsson, (pronounced Pair Yakobsson) a Swedish national was elected Managing Director of the International Monetary Fund and Chairman of the Board of Executive Directors in 1956.

Mr Jacobsson was previously a member of the Bank for International Settlements where he had served since 1931 as Economic Adviser and Head of the Monetary and Economic Department.

As part of his work at Basle, Mr Jacobsson was responsible for the annual reports of the Bank, which were continued even during the Second World War. From 1934 to 1938 he also served as a member of the Irish Banking Commission which led to the establishment of the Central Bank of Ireland. After the Second World War he took part in the work of post-war reconstruction, being connected with ... a financial study for reform in Italy (1947-48) and being asked, together with ... as an independent expert for the OEEC ... balance of payments ... (1950-51) ... Austria (1951) ...

Mr Jacobsson was born in Sweden in 1894

and studied law and economics at the University of Upsala He was a lecturer in economics at Stockholm from 1918 to 1920

In April 1920, Mr Jacobsson joined the Secretariat of the League of Nations and up to the end of 1928 he remained a member of the Economic and Financial Section of the Secretariat of the League, in charge mainly of Public Finance In that capacity he participated in the League reconstruction work in particular in Austria, Hungary, Bulgaria and Danzig this reconstruction work often had been considered the most successful part of the League s work

After two and a half years in public and private business in Sweden, during which—among other things—Mr Jacobsson was Chairman of the League of Nations Union he joined the Bank for International Settlements

Most of his publications have been of an official character but he has also contributed numerous articles to journals and periodicals His published books include *Post War Economic Problems* (1918) *World's Armament Expenditure* (1929) and *Monetary Improvements in Europe and Problems of a Return to Convertibility*

Mr Jacobsson has received honorary degrees from Trinity College Dublin Gettysburg College and Basle and Upsala Universities and has also been elected a member of the American Philosophical Society

IMPLEMENTATION OF EMPLOYEES' STATE INSURANCE SCHEME

The provisions of the Employees State Insurance Act 1948 apply to all perennial factories using power and employing 20 or more persons and cover labourers and clerical staff with monthly earnings below Rs 400

The health insurance scheme which provides *inter alia* medical benefits to industrial workers under this Act was first introduced in Delhi and Kanpur in February 1952, covering only 1 20 000 insured persons. Since then the Scheme has been extended to cover over 13 00 000 workers in different parts of the country

During the Second Plan period it is proposed to implement the Scheme in every industrial centre which has a concentration of 1 500 factory workers thus carrying the benefits of this Scheme to about 22 00 000 employees.

It is also intended to extend during this period medical care to the families of employees covered by the Scheme. A beginning has already been made in this direction and the honour of being the first State to take this enlightened step goes to Mysore Other States are expected to follow this example in the near future

Side by side with the extension of the Scheme to cover a larger number of workers and their families improvements are also being made in the quality of medical services offered under the Scheme

For instance today additional cash benefits are being offered to insured persons suffering from T B There is also an arrangement to provide artificial limbs to insured persons who lose them in factory accidents or otherwise On the medical side the standard of medical assistance has been raised from mere outdoor treatment and home visits to a more comprehensive medical care including hospitalisation and specialist services

Hospitals exclusively for the use of insured persons are now available in Madras and Bangalore In Bombay Calcutta Kanpur Bangalore and Madras plans for construction of new hospitals are in various stages of development A sum of Rs 5 75 crores is being spent on the construction of new hospitals In addition a sum of Rs 5 25 crores is likely to be spent on construction of a number of dispensaries at various industrial centres falling under the Scheme

PARLIAMENTARY AFFAIRS

B. H. U. BILL VOTED BY RAJYA SABHA

The Rajya Sabha on September 11 passed the Banaras Hindu University Bill as passed by the Lok Sabha. The Bill seeks to replace an Ordinance issued recently to improve the day-to-day working and administration of the University. Earlier referring to the debate the Minister for Education Dr Shrimali appealed to the members of the various groups in the country and in the House to rise above party politics and affiliations to help the students to become fit to serve the society. He said all parties must unite together to eradicate the poisonous atmosphere in the Universities.

Dr. Shrimali also assured the House that Government will bring forward a comprehensive measure for the Banaras Hindu University as quickly as possible. This required consultation with the University Grants Commission the State Government concerned and other interests and would entail some time.

Oil Struck at Cambay

The Minister for Mines and Oil, Shri K. D. Malaviya told the Lok Sabha on September 12 that oil had been struck by the Oil and Natural Gas Commission at Cambay in Bombay on September 3 at a depth of 5,326 feet and that penetration has been made in what appeared to be an oil bearing area. He added: "We propose to increase the number of drills in this area and also in some other promising areas so as to speed up the work."

Indo-Pakistan Talks

In response to a calling attention notice in the Lok Sabha on September 12 the Prime Minister Shri Nehru said his talks with the [illegible] and the agreements arrived at were on the whole satisfactory and placed a copy of the joint statement issued by the two Prime Ministers on the Table of the Lok Sabha. The statement, Shri Nehru added, said that a number of border problems relating to the eastern border had been gone into and agreements had been arrived at in respect of them. Some other matters [illegible] of other [illegible] [illegible] and [illegible] had been laid down.

Replying to a question whether the transfer of Indian territory [illegible] and the [illegible] Pakistan under the Nehru-Noon agreement would not require the sanction of Parliament, Shri Nehru said so far as the readjustment of the border was concerned there were [illegible] in express terms of the Radcliffe Award and of the Bagge Award and he did not think the sanction of Parliament would be required. He would however have the matter looked into by the Law Minister.

Progress At Three Steel Plants

The Minister for Steel, Mines and Fuel, Sardar Swaran Singh, announced in the Lok Sabha on September 8 that the first coke oven battery in Rourkela would be heated up on that day. This was the very first movement in setting up the operation of a steel plant. This heating will have to be continued for six weeks before production begins.

Describing the progress made by the three steel plants the Minister said the first blast furnace in Rourkela would be ready by the end of this year and the second and third during the course of next year. The first coke oven battery in Bhilai was expected to be commissioned by the end of this year with the blast furnace closely following it. The second and third blast furnaces would be ready in the second and third quarter of next year. In Durgapur the blast furnace would be commissioned in October next year and the third furnace and the rolling mills by the end of April 1961.

Press Registrar's Report

There was an increase in the circulation of [illegible] newspapers and periodicals published in India last year. This is revealed in Annual Report for 1957 of the Press Registrar which was presented to the Lok Sabha on [illegible] on behalf of the Minister for Information and Broadcasting by his Parliamentary Secretary Shri [illegible]

The report [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]. There were [illegible] [illegible] [illegible]

lation of monthlies There was an increase of 0 9 per cent in the circulation of English papers Hindi papers showed a decline of 8 8 per cent Among newspapers of other languages an increase in circulation was recorded in respect of Assamese—16 3 per cent, Bengali—4 4 per cent Kannada—63 2 per cent, Oriya—7 per cent, Sanskrit—150 per cent Telugu—28 9 per cent Urdu—0 6 per cent. On the other hand, there was a decline in the circulation of papers published in Gujrati—12 9 per cent Malayalam—17 7 per cent Marathi—17 per cent, Punjabi—16 1 per cent and Tamil—10 3 per cent.

Rehabilitation Of East Bengal Refugees

The Rehabilitation Minister Shri Mehr Chand Khanna said in the Lok Sabha on September 10 that West Bengal had reached the saturation point and hardly any cultivable or culturable land was available in the State Only waste-lands of sub-marginal qualities were available in Midnapore He was speaking in the course of a discussion on the decisions reached at the recent high level conference in Calcutta about rehabilitation of displaced persons from East Pakistan. Shri Khanna said it was proposed to close down all displaced persons camps in West Bengal by the end of July next year The Minister said everybody agreed that these camps in West Bengal had a demoralising affect on displaced persons About 45 000 families were in camps West Bengal is expected to absorb about 10 000 of these. Shri Khanna said there appeared to be some misunderstanding that when the Central Government undertook to take 35 000 families *outside* West Bengal it was committed to rehabilitate them all by July 31 1959 the date by which the camps were to be closed. The position was that Government undertook to rehabilitate every family that went out of the State and pending that provide them with shelter and employment without break The Minister said he would call upon the Opposition members to submit to him in black and white workable schemes for the rehabilitation of displaced persons within West Bengal He did not see any point in their suggestion to call a meeting for considering this question

Rajya Sabha Debates Food Situation

Opening a debate on the food situation in the Rajya Sabha on September 15 1958 the Food Minister Shri A P Jain said that the gloom which had enveloped the food situation appeared to have scattered now Prices in some States — The Punjab Bihar and Uttar Pradesh—were showing a downward trend. He hoped that the *Rabi* Campaign in ten States would be repeated in every season and extended to more crops He assured the House that the stocks in hand and the arrangements made by Government would enable them to hold the supply line until the new crop came in December Shri Jain said Government would try to procure the maximum possible quantity within the country This year about 6¼ lakh tons had been procured and this was not a bad achievement.

The Minister said that Government would not go in for total control and rationing but it was their policy to extend State trading in food grains more and more to check speculation and hoarding This would be supplemented by some regulation of consumption and direction of production He made it clear that the zonal system which was one way of trade control would continue Shri Jain appealed to Opposition groups to treat food as a national problem He said he hoped that the States would also set up food committees similar to the one set up by the Prime Minister

Replying to the debate on September 16 Shri Jain said that the fall in food prices was the result of Government's action and not of agitation launched by Opposition parties The biggest decline was in the Punjab where politics was not mixed up with food where the Centre had categorically refused to lift ban on the movement of wheat to other regions and where hoarded stocks had been seized. Shri Jain said it was to the credit of Bihar Government that it was able to meet the situation with comparatively small quantity of food grains in a fairly efficient manner He gave figures to show that the Centre had been just and fair in distributing available stocks among the States He said the Centre had agreed to supply to West Bengal more than one lakh tons of foodgrains this month and 90 000 tons of rice and wheat in October while the State would make up 20 000 tons from its own stocks

Appraisal And Prospects Of The Plan

The Minister for Planning, Shri Gulzarilal Nanda gave the Lok Sabha on September 17 the changes proposed in the Plan targets as a result of reappraisal of the Second Five-Year Plan by the Planning Commission. He was opening a debate on the Planning Commission's Memorandum on Appraisal and Prospects of the Plan presented to Parliament May last Shri Nanda said certain

Appraisal And Prospects Of The Plan

The Minister for Planning Shri Gulzarilal Nanda, gave the Lok Sabha on September 17 the changes proposed in the Plan targets as a result of r appraisal of the Second Five Year Plan by the Planning Commission He was opening a debate on the Planning C[illegible]sion s Memorandum an Appraisal [illegible]pects of the Plan presented to Parl[illegible] May last Shri Nanda said [illegible]

[illegible]

randum on Appraisal and Prospects of the Second Five Year Plan said there was no room for despondency in regard to the Second Plan. On the other hand there had been considerable recovery in the last few months The market, which was tight sometime ago was in a flourishing condition now Shri Pant said he did not think that 4,800 crores or 4 500 crores was the limit of the Plan If right circumstances came to help the country they might even go further But if for the future progress of the country it became necessary to restrict the scope of activity to-day they would do that The only limitation under which they functioned was to see that the Plan succeeded through the right means

Shri Pant said he could not understand why some members had made unkindly if not unfair remarks about the Planning Commission He pointed out that they were not yet even half way through the Second Plan Projects had begun to take shape, for instance the Rourkela Steel Plant had almost begun to yield some results The other two steel plants were also likely to give a considerable quantity of iron by the end of the year or during the next year He did not see why the Planning Commission was supposed to have failed in its task. He thought that if planning had become a part of national thinking and acting it was because of the success achieved by the Planning Commission The Plan was a flexible one in the shaping of which all parties in the House had assisted Therefore they all had to share the credit and discredit of the Plan which was a national plan

Rajya Sabha Discusses The Plan

The Minister for Planning Shri Gulzarilal Nanda told the Rajya Sabha on September 24 that the achievements of the Second Plan should not be belittled at the same time the difficulty in facing the Plan should not be minimised He said that as a result of rephasing of the Second Plan it was proposed to allot additional sums of 31 crores of rupees to agriculture and 26 crores to minor irrigation He was opening a debate in the Rajya Sabha on the Appraisal and Prospects of the Second Five-Year Plan He expressed regret that irrigation potential of India was not being fully utilised. Irrigation rates were being changed and lower rates would be charged from the farmer in the first year to make the irrigation facilities attractive for him

Shri Nanda said the achievements of the Second Plan in the last two or three years were indeed solid and considerable In terms of financial outlay, for instance, the total for the last three years of the Second Plan was 500 crores more than the entire First Plan Agricultural potential created in the last three years was 7 million tons against 6 million tons in the earlier five years Outlay of industry in the public sector was five fold

Winding up the debate on September 25, Shri Nanda said that industrial production was rising on the whole Some difficulties about raw material were there but these were temporary and might last only for a year or two Speaking about the role of the Planning Commission the Minister said this was limited to giving advice or caution, although the Commission was answerable for the quality of its advice Government was responsible for the decision taken on the advice of the Planning Commission. Parliament too had a measure of responsibility After detailed discussion Parliament by approving the Plan had determined its direction its structure and its targets.

Oil Strike At Cambay

The Minister for Mines and Oil Shri K.D Malaviya said in the Lok Sabha on September 23 that while the discovery of oil field in Cambay was epoch making, it would be premature to say that oil existed there in commercial quantities or to compare this oilfield with Abadan or Kuwait. While there was every sign of oil being found in large quantities it was not a fact that oil was spouting out in Cambay in commercial quantities They would have to wait for sometime more to know about this Shri Malaviya was speaking during the debate on supplementary grants for demands for the current financial year The Minister said there was certainly justification for excitement and jubilation but no single oil well has ever established commercial quantity of gas or oil For that purpose they must drill a fairly large number of holes.

Export Of Coal

The Minister for Steel Mines and Fuel Sardar Swaran Singh announced in the Lok Sabha on September 23 that the Government of India had decided to allow the export of two lakh tons of metallurgical coal during the remaining period of the current year He said that from the next year the Government's intention was to export [illegible] lakh tons of metallurgical coal Sardar Swaran Singh was speaking on a half an hour discussion on coal exports He gave figures to show that during the last seven years except for the boom year

FOOD AGITATION IN UTTAR PRADESH

During July August acute *famine conditions prevailed* in the eastern districts of Uttar Pradesh. *Prices of food grains in the open market registered* an *unprecedented rise* and several cases of looting of food grains in Aligarh, Hathras and rural areas of eastern U P were *reported* The *opposition Parties in* the Legislature alleged that several *deaths* by starvation had occured in East U P districts On August 27 in Fatehgarh an angry mob of about 1 000 people including nearly 100 women *failing to* meet *their food* grain *needs* from the fair price shops marched to the local grain market raided the shops and looted about 100 maunds of grains On August 28 an immediate allotment of 25 000 tons of food grains was made by the Centre to Uttar Pradesh to enable it to tide over the crisis The Government of India also banned the export of rice and paddy from U P on August 29 The U P Food Minister, Mr Ali Zaheer attributed the shooting up of food grain prices in the State to the witholding of foodgrain stocks by the traders for profiteering He said that the Government was trying all shops to find out the hoarded stocks At its meeting in Lucknow on August 30 P S P executive decided to launch a civil disobedience movement in the *first week* of September The movement was to seize the Government food stocks and distribute them at reasonable rates

The communist party at a meeting in Lucknow on September 2 adopted a resolution stating that if the State Government did not fulfil opposition demands and took no major step to solve the food problem the Communist Party in consultation with other opposition parties would organise a State-wide one-day token strike Members of the Allahabad Unit of the Communist Party decided to go on a 24 hour hunger strike on September 5 in sympathy with three of their comrades who were already on hunger strike in Lucknow as a protest against what was described as the Government's failure to tackle the deteriorating food situation in the state

Initiating a two day debate on his no-confidence motion against the Council of Ministers on September 3 Mr. Triloki Singh Leader of the opposition in the U P Vidhan Sabha accused the State Government of not foreseeing the steady rise in food prices during the past six months in spite of repeated warnings given to it by the opposition He said that in order to boost up its prestige the Government always circulated false figures of food production with the result that complacency overtook the food producing agencies Mr Govind Sahai (Congress M L A) said the Government calculations on the food front were continuously upset by natural calamaties! Mr Charan Singh Revenue and Finance Minister offer d to place files of the department before the leader of the Opposition to disprove his allegation that the figures supplied by the Government were manipulated Winding up the debate on Sep 4 Dr Sampurananda the Chief Minister said that no famine situation existed in the State. The Vidhan Sabha rejected the P.S.P sponsored no confidence motion by 269 votes to 95

The Praja Socialist Party launched satyagraha in Azamgarh Ballia Deoria and Ghazipur on September 5 against the food policy of the State Government. Seventy four members of the P.S.P were arrested Nine Communist food marchers were summarily tried and sentenced to one month's imprisonment in Ghazipur on September 6 On the same day 79 people including 2 M P s were arrested in various parts of U P in connection with the food agitation At a press conference on September 7 Prime Minister Nehru said that an all party consultative Committee could be constituted in Uttar Pradesh once the present agitation which was for political reasons, ended He said that efforts to tackle the food situation on a national basis would be helpful

On September 7 Mr Triloki Singh leader of the opposition in the U P Vidhan Sabha Dr A J Faridi opposition leader in the Upper House and 12 others were arrested in Lucknow

On September 5, steel helmeted Provincial Armed Constabulary men entered the U P Vidhan Sabha hall to remove the Socialist leader Mr Raj Narain Singh and 17 other members of the party

Trouble arose when Mr Raj Narain Singh refused to leave the House after his announcement that the Chief Minister Mr Sampurna-

1951 ... [illegible] from India had been [illegible] more or less in the same [illegible]

Ganga Barrage Project

The Minister for Irrigation and Power, Hafiz Mohd. Ibrahim, informed the Rajya Sabha on September 23 that Government would do their best to take up the Ganga Barrage Project [illegible] possible time. He said a team had been [illegible] to set up a Ganga River Board. He was speaking in a [illegible] discussion on Government's [illegible] of the project presented to the House earlier [illegible]

Film Institute And Film Production Bureau

The Minister for Information and Broadcasting, Dr. Keskar, announced in the Lok Sabha on September 24 that the scheme for setting up of a Film Institute and Film Production Bureau had been sanctioned. Steps were being taken to set up these organisations.

Railway Development Programme

Replying to a question in the Rajya Sabha on September 23, Deputy Minister for Railways, [illegible] the amount [illegible] of the Second Five Year Plan to the end of July 1958 Rs. [illegible] crores had been spent on the Railway Development Programme. He further said that [illegible] of the above expenditure had been met from the internal [illegible] and [illegible] from the foreign exchange resources.

Important Legislation

On September 8 steel helmeted Provincial Armed Constabulary men entered the U P Vidhan Sabha hall to remove the Socialist leader, Mr Raj Narain Singh and 17 other members of the party

Trouble arose when Mr Raj Narain Singh refused to leave the House after his amendment that the Chief Minister, Mr Sampurna

mands be expelled from the House for a period of one month for "misleading the people by wrongfully attempting [illegible] and for not taking any effective action against hoarders"

The Speaker had earlier disallowed three adjournment motions. On September 9 the five opposition parties in the U P Vidhan Sabha staged a walk-out after question hour declaring that they would not return to the House during the current session.

The Praja Socialist Party and Socialist Party Opposition in the U P Vidhan Parishad also announced their decision to boycott the current session of the House as a protest against the ruling of the chairman not to allow discussion on the proceedings of the Lower House.

Dr Sampurnanand and Acharya Kripalani met in Lucknow on September 8 and 9 to explore possibilities of ending the crisis in the State but their talks reached a deadlock when the Chief Minister refused to release the opposition leaders lodged in jail in order to create a more congenial atmosphere for negotiations.

On September 17 Mr Raj Narain Singh leader of the Socialist Group in the U P Vidhan Sabha and several others belonging to the Opposition parties in U P were arrested in Lucknow. A partial hartal was observed in principal cities of the State as a protest against the State Government's policy of repression. Mr Ajoy Ghosh General Secretary of the Communist Party [illegible] in New Delhi on September 1[illegible] that the food agitation in Uttar Pradesh would be [illegible] ted. Dr Sampurnanand in an interview in New Delhi on September 1[illegible] gave the impression that the State Government would [illegible] to [illegible] and that a withdrawal of the agitation should precede any talks with the opposition.

On September 17 Mr V V Giri Governor of Uttar Pradesh appealed to the Government and the opposition [illegible] the "general food crisis" in the State [illegible] with one another. The Chief Minister [illegible] of the Cabinet on September 1[illegible] to [illegible] by the Governor [illegible] of the [illegible] by the Governor.

After the Cabinet meeting Dr Sampurnanand [illegible] the [illegible] of the food [illegible] [illegible] have [illegible] of [illegible]

party to [illegible]. I do not want [illegible] [illegible] or [illegible]

Dr Sampurnanand also [illegible] with the leaders of the opposition parties under detention.

The Speaker of U P Vidhan Sabha [illegible] A G Kher met Mr [illegible] leader of the opposition [illegible] Balrampur [illegible] from jail. Their talks [illegible] a way out [illegible] the [illegible] created by the food [illegible] On September 21 [illegible] had been [illegible] to [illegible] and Chief [illegible] Union Home Minister Mr Pant and the Union Minister for Transport Mr [illegible] Shastri at Banaras.

The Government [illegible] created by the State Government's appeal to the opposition and the Government to [illegible] a [illegible] of settlement [illegible] on September 23 by the [illegible] attitude of the State Government.

At a [illegible] meeting of the State Legislature Congress Party Dr Sampurnanand [illegible] the Chief Minister [illegible] of the [illegible] forming an all-party committee to [illegible] food [illegible] at the [illegible] Dr Sampurnanand [illegible] September 22 that the Government was not [illegible] to negotiate [illegible] Opposition.

On the other hand the Opposition parties have [illegible] total number of [illegible]

Mr Tribhuvan [illegible] leader of the Opposition in the U P Vidhan Sabha and [illegible] [illegible] of the [illegible] P who had been [illegible] with the food agitation, were released on September 25.

The [illegible] Committee of the U P [illegible] [illegible]

[illegible]

On September [illegible] [illegible]

The State Executive of the Bharatiya Jana Sangh at the conclusion of a two day meeting in Lucknow on October 5 unanimously decided to call off its 24 day food agitation against the food policy of the State Government The only tangible result of the series of talks Dr Sampurnanand Chief Minister of U P had with Mr Triloki Singh Praja Socialist leader and representatives of other opposition parties regarding the recent food agitation was the agreement on the formation of an all party committee on food Announcing his decision at a press conference in Lucknow on October 11 Dr Sampurnanand indicated that the constitution and objectives of the U P Food Committee would closely follow its forerunner set up Mr Nehru at the Centre The Committee was to meet in the third week of October

OIL STRUCK AT LUNEJ

Brownish oil sprouted out with great force on September 19 from the Lunej well eight miles north of Cambay where Indian engineers struck oil in the first week of September The flow out of oil was so powerful that it rose nearly 30 feet above the ground and splashed all around the derrick floor making the surface slippery

Engineers and workers had reached a depth of 1 694 metres (over 5 500 ft.) making a progress of about 500 ft below the depth reached on September 8 when the discovery of oil was first made

Only three days earlier Mr K.D Malaviya Minister for Mines and Oil who toured the area announced the Government's decision to intensify oil investigations in the region

Experts present at Cambay at the time of the oil flow out decided after a conference to suspend further drilling and sealed the well They immediately got in touch with the Government of India and awaited instructions from Delhi on the next stage of the operations as the flow of oil without its being immediately collected and transported to a refinery would have been a *complete waste* of the precious liquid

Experts at Cambay were heartened by the fact that oil had not only been struck at 5 600 ft below a near record for Indian conditions but it has also shown promise of a substantial reservoir even at the shallow 6 000 ft level An official of the Oil and Natural Gas Commission told newsmen in Ahmedabad on September 22 that Lunej promised to become the Abadan of India

When drilling operations were resumed on September 22 oil gushed out in a fountain 40 ft. high This convinced all experts at the site that oil is present in sufficient quantities

A strong police guard was posted at the site and only holders of special identity cards were allowed to enter the area

The Minister of Mines and Oil Mr K D Malaviya in a speech in Lok Sabha on September 23 counselled against counting the chicken before they are hatched in regard to the oil discovery in Cambay While the country was entitled to feel proud and excited about the discovery Mr Malaviya said it was premature to draw conclusions about the possibility of finding oil in commercial quantities They would have to await the results of further drilling and the testing of several other wells in the neighbourhood before being in a position to assess the reserves of oil or gas in the area It was true he said that the finding of oil in large quantities would change the entire economic picture of the country

While oil was completely in the State sector under the Industrial Policy Resolution the Government of India had no doctrinaire approach in the matter

As for protecting consumer interests, the Minister referred to the proposed constitution of a Petroleum Consumers Advisory Council which would meet soon. That Council would advise on oil exploration production and distribution and all other matters connected with oil

Drilling operations at Lunej point about 90 miles from Ahmedabad were resumed on September 28 after a break of seven days Drilling operations became possible as the pressure of the gas had gone down considerably The oil experts were convinced that there was no harm in resuming the operations The plan is to drill down to 10 000 feet

The Russian expert who recently arrived from Moscow to study the Lunej oil field and the Indian Chief Engineer Mr Ghosh were present when the Russian engineer in charge resumed the drilling

Crude oil mixed with mud continues to come up and is continuously analysed in the laboratory As a precautionary measure fire brigade squads from Ahmedabad and Cambay have been summoned Another drilling [illegible] is said to have been selected at [illegible] near Lunej

Foreign Events

TROUBLE IN FORMOSA STRAITS

After a long period of quiescence the situation in the Formosa Straits again became acute towards the end of August as a result of the intensive shelling of Nationalist-held islands of Quemoy and Little Quemoy by Communist batteries on the Chinese mainland.

From Aug. 23 onwards Quemoy and Little Quemoy were subjected to heavy daily bombardments.

Over 50,000 shells were fired within two hours on Aug. 23, while on subsequent days Quemoy was hit by up to 60,000 shells in 24 hours.

Until the end of August the Nationalists at first said they had suffered over 1,000 casualties in the Quemoy bombardments, including many civilians.

The Fukien Command of the Chinese Communist Army broadcast a message on Aug. 27 to the Nationalist commander of the Quemoys (General Hu Lien) calling upon him to surrender.

During the first fortnight of September a number of attempts were made to supply the Quemoy garrison and civilian population from Formosa. Owing to the intensity of the bombardment from the mainland and interception by Communist gunboats, very few vessels were able to reach the island [illegible]

It was also said in Formosa that the situation in Quemoy was becoming grave [illegible]

As from [illegible] of the U.S. Seventh Fleet [illegible] Quemoy [illegible]

[illegible] were delivered to Quemoy by Nationalist [illegible] from Formosa [illegible] started on Sept. 14.

The intensive bombardment of Quemoy aroused grave concern in the United States, where fears were expressed that it might be a prelude to a Communist invasion of the offshore islands. On Sept. 4 the Secretary of State conferred with President Eisenhower at Newport, Rhode Island, after which the following statement on the U.S. position was issued by Mr. Dulles with the authorization of the President:

"(1) Neither Taiwan nor the islands of Quemoy and Matsu have ever been under the authority of the Chinese Communists. Since the end of the Second World War [illegible] they have been continuously under the authority of Free China, the Republic of China.

(2) The United States is bound by treaty to help to defend Taiwan from armed attack and the President is authorized by joint resolution of Congress to employ the armed forces of the United States for the securing and protecting of related positions such as Quemoy and Matsu."

On Sept. 11 President Eisenhower made a nation-wide broadcast [illegible]

The U.S. Seventh Fleet [illegible]

[illegible]

[illegible]

world. In addition the Pentagon confirmed on Sept. 15 that a battalion of *Nike Hercules* anti-aircraft missiles capable of firing atomic or conventional warheads had been assigned "for service in the Pacific area". A squadron of Matador guided missiles (pilotless aircraft) had been stationed in Formosa for some time previously.

In a statement broadcast by Peking Radio on Sept. 6 Chou En-lai reiterated the Chinese Communist Government's claim to "liberate" Formosa and the Pescadores and denounced what he described as the U.S.A.'s "aggression" in those areas and its support for the "Chiang Kai-shek clique". At the same time he called for a resumption of the Sino-American ambassadorial talks "to make another effort for the defence of peace".

Mr. Chou's expressed willingness to resume the Sino-American ambassadorial talks was considered by President Eisenhower at a meeting of the National Security Council held on Sept. 7 at the White House. An official U.S. statement said in part:

"We hope that the reported statement of Chou En-lai is responsive to the urging contained in our Sept. 4 policy statement that armed force should not be used to achieve territorial ambitions, although such renunciations of force need not involve renouncing claims or the pursuit of policy by peaceful means. If the Chinese Communists are now prepared to respond, the United States welcomes that decision. The U.S. Ambassador at Warsaw stands ready promptly to meet with the Chinese Communist Ambassador there who has previously acted in this matter."

Mr. Mao Tse-tung (chairman of the People's Republic) made a speech on Sept. 8 to the Supreme State Conference in Peking in which, although criticizing what he described as "U.S. imperialism," he said that he was hopeful about the ambassadorial talks to be resumed between China and the United States.

The Chinese Communist Government issued a declaration on Sept. 4 extending the limit of China's territorial waters from three to 12 nautical miles.

The U.S. warships [illegible] Chinese Nationalist convoys to Quemoy [illegible] the new 12-mile limit claimed by Communist China but observed the three-mile limit observed by the United States and the great majority of other maritime countries. In the week Sept. 4-11 Peking issued [illegible] statements accusing the United States of infringing China's "sovereignty" by permitting American vessels to enter the 12-mile limit, and describing such actions as "war provocations".

The Soviet Prime Minister sent a letter to President Eisenhower on Sept. 8 expressing the Soviet Union's concern at the situation in the Formosa Straits, and declaring *inter alia* that "an attack on the Chinese People's Republic would be an attack on the Soviet Union". M. Khrushchev expressed full support for the Chinese Communist Government in the Formosa dispute, denounced the attitude of the United States and of "Chiang Kai-shek", but urged that all parties should try to "find a common language with the aim of removing the tension which has arisen in the Far East".

President Eisenhower replied to M. Khrushchev as follows on Sept. 13:

"I regret to say I do not see in your letter any effort to find that common language which could indeed facilitate the removal of the danger existing in the current situation in the Taiwan area. On the contrary, the description of this situation contained in your letter seems designed to serve the ambitions of international Communism rather than to present the facts."

The following statement on the British attitude to the Far East crisis was issued on Sept. 12 by the Foreign Office in London:

"We have no obligation or commitment of any kind to take military action for the defence of Quemoy, Matsu or Formosa. Our only obligations are those in accordance with the U.N. Charter. The U.S. Government have neither sought nor received promises of British support in the event of war over the Chinese offshore islands.

"With regard to the present situation, we regret the current indications that the Chinese Government wishes to settle the problem of the offshore islands by force. We hope that further attempts will be made to solve the status of the offshore islands by peaceful methods."

Addressing the Foreign Press Association in London on Sept. 1[illegible] Mr. [illegible] [illegible] the Labour Party's [illegible] as follows:

(1) The [illegible] Government should be recognized as the Government of China and take its place in the United Nations. (2) [illegible] and the Pescadores should be placed under U.N. administration for a period. (3) [illegible]

BLOODLESS MILITARY COUP IN PAKISTAN

nor fair 'The same group of people who have brought Pakistan on the verge of ruination will rig the elections for their own ends

'The disgraceful scene enacted recently in the East Pakistan Assembly is known to all You do not raise the prestige of your country by beating the Speaker killing the Deputy Speaker and desecrating the National Flag'

An appraisal of the internal situation 'has led me to believe that a vast majority of the people no longer have confidence in the present system of government and are getting more and more disillusioned and are becoming dangerously resentful of the manner in which they are being exploited

'Therefore President Mirza concluded 'as Head of the State my foremost duty before God and the people is the integrity of Pakistan It is seriously threatened by the ruthlessness of traitors and political adventurers

To save Pakistan from complete disruption he decreed the Constitution of March 23 1956 will be abrogated the Central and Provincial Governments will be dismissed with immediate effect, all political parties will be abolished and until alternative arrangements are made Pakistan will come under Martial law

General Mohammad Ayub Khan Chief Martial Law Administrator on October 9 promulgated 29 martial law regulations providing for constitution of summary military courts and special military courts and death punishment for crimes of smuggling child lifting abduction of women hoarding of food grains and dacoity as defined in the Pakistan Penal Code

The regulations also provided that if any person joins or attempts to join recalcitrants he shall suffer death and no less punishment

The maximum punishment of death has also been prescribed for such offences as looting failure to give correct name and address and production of permit or pass to any military or civil officer or any soldier when required to do so and tendering of false or refusal to give evidence in trials held under these regulations

Wilful adulteration of all kinds of goods or dilution or mixing or unauthorised manufacture of medicines of all types will entail the maximum punishment of 14 years imprisonment

The Chief Martial Law Administrator also divided Pakistan into three zones

The Chief Martial Law Administrator General Mohammed Ayub Khan gave a firm indication in Karachi on October 10 that Pakistan s foreign policy would continue to be essentially the same as it was before the peaceful revolution three days ago

The present foreign policy has not hurt us No friend of Pakistan will say so' he told a crowded press conference in the Committee Room of the National Assembly

The Pakistani General who is in command of the country s armed forces said that Pakistan would try to work for friendly relations with all Arab nations

On the Kashmir issue he said Kashmir is a thing that no Pakistani can forget. We have got to have a satisfactory solution for this problem We shall be very happy if it is solved peacefully

He thought that relations between India and Pakistan would be very friendly if Kashmir and the canal waters disputes were peacefully solved

Except for these two problems 'we have no grouse against India he declared

Maj Gen Iskander Mirza took personal responsibility for the overthrow of Pakistan s parliamentary government and the abrogation of her Constitution in a press conference in Karachi on October 10

My authority is revolution the President said in an interview this evening I have no sanction of law or of the Constitution I have the sanction only of my conscience

Pakistan s peaceful revolution had its origin Gen Mirza said in his own reluctant conviction over the decision to move against the constituted government of premier Noon and had been a matter of common responsibility between them

The timing was determined by the President who said This was a joint decision in which I took the initiative If anyone made revolution it was me

In a series of private conversations over the past year Gen Ayub Khan who also joined the press conference said he repeatedly urged the president to take decisive action if Pakistan were to be saved from ruin through the misrule of corrupt politicians

We both came to the conclusion that the country was going to the dogs Gen Ayub Khan said I said to the President Are you going to act or are you not? It is your responsibility to bring about a change If you do not, which Heaven forbid we (the armed forces) shall force a change"

[illegible]

FIFTH REPUBLIC VOTED IN FRENCH UNION

[illegible]

The [illegible] of the Fifth French Republic [illegible]

[illegible]

est president in history by the beginning of next year

According to this blueprint France will have a succession of political Sundays from the middle of November to the last part of December Following the legislative elections municipal councils will set aside a Sunday to designate delegates who are to participate in later presidential elections The presidential balloting is now envisaged for December The new chief executive will be chosen by an electoral college made up of these municipal councillors the National Assembly the Senate members of departmental councils and representatives of the overseas territories

ARMY SEIZES POWER IN BURMA

The Burmese Army seized power on September 26 in a bloodless coup apparently designed to prevent the country's shaky Government from drifting into the hands of the Communists

The well organised operation put troops in control of all the major cities and towns in this South East Asia Republic which shares a 1,500 mile border with China

The Army said it was acting to preserve democracy and law and order as well as to put an end to political strife which has produced most of the growing pains in Burma since the British granted independence 10 years ago

Army leaders said one of the nation's Political groups had been building up secret arms stocks to wipe out all opposition and take over the country Army intelligence leaders said the Communists were preparing to help the plotters who were not identified

Obviously unhappy with the political intrigue which has split the ruling Anti Fascist People's Freedom League into pro Western and neutralist camps army leaders were reported to have issued an ultimatum to both factions They were said to have warned the A F P F L that they would not stand by and let any political group grab power by force But they also promised the politicians that they would hand over power back to any Government which could keep Burma on an even keel and guarantee the nation's security

These were the political events behind the coup

Early in the year a split developed in the A.F P F L between the supporters of the Prime Minister U Nu and those of the former Deputy Premiers U Ba Swe and U Kyaw Nyein Both are Socialists like U Nu but bitter anti-Communists

In June, U Nu released two Communist members of Parliament from jail so that he could have their votes to win a confidence motion against his Government He squeezed through by eight votes with the Communists providing the margin of victory over the dissidents in the A F P F L The anti Communist dissidents of the A F P F L then held a rump meeting of the League's Executive Council and voted to expel U Nu The expulsion did not stick

In July the Communists announced they were ending their 10 year old jungle war against the Government The 30-men Central Committee of the People's Comrades Party (P C P) was flown to Rangoon and told by the army that it was free to enjoy democratic rights under the constitution The party was legalised on August 15 Two days later the P C P proclaimed its goal as revolution leading to the creation of a Communist World

The split in U Nu's party deepened and the Premier cancelled the August 28 session of Parliament with a view to calling elections in the autumn or winter With the A F P F L heading into the election badly split the Communists began counting on gains at the polls But no party appeared strong enough to gain a firm enough majority for a stable Government

Despite the Communist pledge to lay down their arms the rebellion continued to hold the nation in a state of near civil war Recently rebels were reported to be slipping into Rangoon from the provinces and the army wanted to step up its campaign against them

The army took over key points in the city on September 25

The Burmese Prime Minister U Nu in a broadcast on September 26 appealed to people to lend their support to General Ne Win the Commander in Chief of the Burmese Armed Forces who had accepted his invitation to head a new Government The broadcast made it clear that the political changes were sought by U Nu and the proposed new Cabinet had his fullest approval

U Nu said "We intended to hold general elections in November this year But we came to realise more and more day by day that the general elections to be held in November could not be free and fair

I invited Gen Win to [illegible] [illegible] [illegible] free elections [illegible] six months I am glad to [illegible] accepted my invitation."

Gen. Win [illegible] hold general elections before the end of next April.

In a letter to Gen. Win, U Nu [illegible] that he would ask the President to summon Parliament on October 28, when he would resign. [illegible] Gen. Win as Prem.

In reply Gen. Win said that he would not include any members of political parties in the Government [illegible] He also pledged to preserve Burma's neutral policy in foreign affairs.

The decision to hand over power to Gen. Ne Win was [illegible] on September 27 to U Nu [illegible]

[illegible] A.F.P.F.L. [illegible] during the [illegible] Anti-Fascist People's Freedom League (A.F.P.F.L.) the [illegible] which has ruled Burma since the attainment of independence in 1948 [illegible] agreement, two of [illegible] Deputy Premiers (U Ba Swe and U Kyaw Nyein) and [illegible] Ministers resigned on June 4 [illegible] the Prime Minister U Nu formed a new Cabinet [illegible] were represented. The new [illegible] a vote of confidence in the Chamber of Deputies on June 9 [illegible] the Government [illegible] by the [illegible] National United Front (N.U.F.) [illegible] quently entered the Cabinet.

The Speaker of the Chamber of Deputies [illegible] resigned on July 16 and was [illegible] Deputy Premier and Defence Minister [illegible] Dr. E Maung, president of the Justice Party and one of the [illegible] of the N.U.F. [illegible] Minister of [illegible] U [illegible] who had been transferred to the Ministry of Education.

On [illegible] the President U [illegible] [illegible] Chamber of Deputies [illegible] August [illegible] the [illegible] Government [illegible] the [illegible] Parliament [illegible]

[illegible] ment [illegible] for the [illegible] after the split in the A.F.P.F.L. [illegible] and other rebels [illegible] organization [illegible] That [illegible] during July and August [illegible] and the Mon United Front [illegible] with the Government [illegible] producing any [illegible]

The [illegible] the [illegible] U Nu declared on March 31 that [illegible] the Government [illegible] the Communist Party and other rebels [illegible] U Nu [illegible] however that he was not prepared to [illegible] rebels unless they [illegible] rebels [illegible]

Two rebel groups, the People's Volunteer Organization [illegible] Government [illegible] On July 28 the P.V.O. [illegible] Army [illegible] in [illegible] the [illegible] of [illegible] P.V.O. [illegible] on August [illegible] Burma Workers and Peasants' Party (the general [illegible] P.V.O.) was [illegible] years.

[illegible] AND [illegible] OF [illegible]

The [illegible] [illegible] Minister [illegible] [illegible] [illegible]

ers who had barricaded themselves behind palace walls in Kalat

Simultaneous with his arrest in Kalat under the Security of Pakistan Act, a Presidential order issued in Karachi stripped the Khan of all distinctions, privileges and annuities conferred on him and named his 18 year old son Daud Jan eldest of his 12 children, as his successor

As units of the army surrounded the Khan s palace at crack of dawn they were met with small arm fire which was promptly silenced. The Khan rejected the initial demand to surrender but later agreed to receive the Deputy Commissioner of Kalat Division As the Deputy Commissioner with his escort, was crossing the gates, fire was opened and three soldiers were injured The soldiers then moved in and occupied strategic positions around the palace A burst of gunfire from a tank "had the desired effect and the Khan gave in ' Meanwhile a violent crowd of about 300 had gathered outside the palace gates and obstructed his removal The District Magistrate had to order firing and three fell dead and two were injured before the crowd dispersed.

Six hours after his arrest a Pakistani Air Force plane awaiting all th while at Quetta flew him to an unspecified destination in West Pakistan.

A *communique* issued by the Ministry of States and Frontier Regions said that the Khan would be provided a maintenance allowance during the period of detention Under the standstill agreement he was paid an annuity of Rs 6 lakhs.

The sprawling desert kingdom of Kalat nearly 53 000 square miles in area but with a population of only three lakhs acceded to Pakistan on March 27 1948 but with evident reluctance and after threats of armed action by the authorities in Karachi

The State was merged in West Pakistan on October 14 1955 when one-unit was born and ever since the Khan had been campaigning for the revival of his State

In recent months he stepped up his campaign which culminated on October 3 in a quixotic ceremony at Miri fortress when he hauled down the Pakistani flag and hoisted the Kalat State flag He had earlier refused to come to Karachi for talks with President Iskander Mirza

During his sojourn abroad he is said to have consulted legal experts and returned to Pakistan with the intention of serving an 11 point notice on the Government of Pakistan. He did not serve the notice but had been carrying on a ceaseless campaign for the dismemberment of integrated West Pakistan and the restoration of his princely state

Explaining the circumstances that led to the arrest of the Khan heir to the 500-year-old hegemony of the kingdom of Kalat the Government handout said He as chairman of the council of rulers of Baluchistan States Union had cherished dreams of an empire with himself as the head When this could not come off he started, as a first act to convene meetings of some sirdars and 'jirga leaders and to administer a steady dose of secessionist propaganda against the legally established authority

' It will be recalled that to gain his anti-*Pakistani* ends the ruler organised a party called Ustamangol under the leadership of his brother Shahzada Abdul Karim The Shahzada tried to persuade Baluchis to unite under his banner Efforts however failed and the tribes including Kharanis Bhugtis Marris and Makranis refused to have anything to do with this movement."

The report added At the same time the ruler sent his uncle Sultan Ibrahim Khan with documents to Afghanistan with treaties given to him and his predecessors by the British Government Sultan Ibrahim Khan however received rebuff in Afghanistan

The ruler is also understood to have financed publication of two booklets Tarikh-e Baluchistan and Baloch Qaum [illegible] Tarikh The first booklet sought to create an impression that Jinnah took recourse to unfair tactics and exerted illegal pressure on him for merger of Kalat with Pakistan The last chapter of the book contains fatwa branding Qaid-e Azam and Qa'id e Millat Liaquat Ali Khan as 'Kafirs

Sir Ahmed Yar Khan is the second son of the late Sir Muhammed Azam Jan and was elected to the Khanate in 19 3 by a tribal jirga in preference to three brothers He has always had an independent nature and in 1946 requested Britain to return Quetta [illegible] Nahki and Nasirab d saying that the British never conquered Kalat. Kalat is an independent State and has been so for the las [illegible] years.

[illegible] is the pursuit to [illegible]

SUCCESS TELLS ITS OWN STORY

The *Careers Institute* and *Careers & Courses* are serving a great purpose in building careers of youths of India thus serving a great purpose in the building of Nation as well.—...There are many pamphlets published by your Institute that are of a great deal to every youth who is supposed to be the builder of the nation. One pamphlet *Personality Test* is a marvellous one ...

Gurgaon. Kundan Singh

• • •

I take this opportunity to thank you for all your kindness in giving me the necessary instructions and guidance in respect of my appearing for the recent I.A.S. Examination. I am sure you will be interested to know that I have done well in the examination and I am sure of my successful result.

Tuticorin C. S. Rajendran

• • •

It gives me much pleasure to announce that your '*A Guide to Intelligence Test* and *S.S. Board Interviews*' have helped me a lot to prepare a service candidate a Jawan of my own Unit to appear before a Service Selection Board which ultimately gave him a [illegible] and as such now he is a full fledged Army Officer.

Siliguri (W.B.) R.A. Narayan A.S.C.

• • •

I am pleased to inform you that your tuition for *British Constitutional History* had been a boon to me when I was groping in the darkness of ignorance to locate my path. I thank you very much for suggesting to me the books [illegible] the subject when I [illegible] for some.

Patna S.M. Parende

• • •

In the I.A.S. Examination I [illegible] compulsory papers most tricky and [illegible]. The *General Knowledge* papers were the [illegible] of many a brilliant candidate [illegible] I am glad to inform you that your *Guess Papers* in the General Knowledge [illegible] my father [illegible] more marks than I otherwise would have [illegible].

Madras S. Subramaniam

• • •

Before I joined your Institute, I was not feeling on sure grounds. But now the things are different. The wavering mind which has been troubling me so much is no more troubling. I am confident of success in the Examination. Your *Model Guess Papers* recently received are a boon to the student community. The papers are so important and exquisitely solved that not a single examinee can miss them.

Moradabad T. John

• • •

I studied your *Lectures on History and Political Science* and was much satisfied. I got so much material from these which I could not get from many books after a labour of about six months.

Gohana (Dt. Rohtak) Shiv Lal

• • •

I had almost despaired of success in the I.A.S. Examination before I joined the *Careers Institute*. They made things so easy and to the point that I was quite at home with question papers. To my surprise many of the questions they had discussed had appeared. Within a month I was so well-equipped that I got very high qualifying marks in the Examination. I regret I did not join it earlier.

Dehra Dun S. Khanna M.A.

• • •

In a Competitive Examination if candidates could just get a couple of marks more than they would otherwise do without going through your practice they should think their money invested amply rewarded.

"Last year I bought your *Guess Papers* in the *Compulsory Subjects* and *Knowledge* and did my papers very satisfactorily.

Patna. S. Sinha

• • •

CAREERS make possible, what seems impossible. A huge portion that was [illegible] me was put by them in a [illegible] I will remember all the [illegible]. They give only what is necessary for the Examinations. They have a [illegible] Careers as a sure way to success.

EDITORIAL

THE U. N. AND ITS SIGNIFICANCE

The League of Nations, which was created after the First World War to bring a new era of peace in the world failed miserably in its basic task to prevent anoth r world war During the Second World War the need was again felt to create an organisation which would really rid mankind from a further destructive and terrible war At their historic meeting at Dumbarton Oaks in 1944 the three wartime allies United States United Kingdom and the Soviet Union first conceived the idea of an organisation under which the task of ' maintaining international peace and security and cooperation in establishing political, economic and social conditions could be achieved and proposals were drawn up which later formed the basis of the U N Charter Thus it was that the United Nations Organisation the most representative international organisation ever created on earth originated on 24th October 1945 when 51 nations signed the U N Charter in San Francisco A new chapter in human relations was begun that day when the war weary nations pledged themselves in the U N Charter to save succeeding generations from the scourge of war" and to promote social progress and better standards of life in general freedom"

The chief task of the U N O as recorded in the Charter is "to maintain international peace and security, and to that end to take effective collective measures for the prevention and removal of threats to the peace and for the suppression of acts of aggression or other breaches of the peace and to bring about by peaceful means and in conformity with the principles of justice and international law adjustment or settlement of international disputes or situations which might lead to a breach of the peace'

The U N record for the last thirteen years has justified its existence as the most practical instrument for peace ever devised through voluntary cooperation among different nations The past thirteen years have been difficult years in the history of international relations Serious diplomatic [illegible] between U N members and even military conflicts frequently evoked real alarm for the fate of the organisation During this period many attempts have been made to undermine the foundations of the U N set it on the wrong path, lessen its significance and convert it from an instrument of peace and cooperation into an obedient weapon in the hands of certain powers but the U N has stood all the [illegible] like a

rock. It has survived inspite of the efforts of its very founders to convert it into an arena of cold war. Even attempts have been made by certain Big Powers to bypass this World Organisation and throw their weight on weaker nations. But everytime the U.N. has emerged triumphant over the evil designs of the imperialist powers who try to plunge the world into the darkness and devastation of another world war.

The U.N. has become firmly established in the minds of people throughout the world as a symbol of the hope that war can in future be avoided and as an important forum for international discussions and negotiations. The U.N. is an instrument for reconciliation and for world-wide cooperation. This is the secret of its strength. To-day the U.N. stands as the bulwark of peace, and it impinges on all aspects of our life—political, social, economic, scientific and others.

Force Of Peace

The United Nations has been a positive force of peace in many ways. It has provided a reasonable basis for collective action. We are familiar with the role played by U.N. in repelling the Communist aggression in Korea. For the first time in history collective action through an international organisation did work successfully on the battle field and this was done without resorting to global war. The role of U.N. in the deplorable episode of the Suez Canal in 1956 has been extremely laudable. The combined naked aggression by Britain, France and Israel on Egypt would have succeeded to [illegible] extent had there been no world organisation [illegible]. In the Middle East the U.N. has shown by its [illegible] in a series of crises its [illegible] as an instrument for lessening tension and for reconciliation. It has worked as a framework for fruitful contacts among the Governments concerned, and in the U.N. Observation Group in Lebanon it has been able to [illegible] as an [illegible] which [illegible] the U.N. [illegible] Organisation [illegible] the U.N. [illegible] Force before it [illegible] [illegible] [illegible]. The U.N. [illegible] [illegible] for the [illegible] [illegible] [illegible] U.N. has been able to [illegible] the [illegible] [illegible] [illegible] [illegible].

There is another [illegible] in which the United Nations is serving the interests of peace. It is by the [illegible] [illegible]

During its first decade the U.N. made vital contributions to the maintenance of peace. For example it helped to bring about the Soviet withdrawal from Iran. Its [illegible] were an important factor in achieving an independent Indonesia. It contributed to the alleviation of a dangerous Communist threat in Greece. It negotiated a cease-fire between Israel and the Arab States. It arranged a cease-fire in Kashmir. It settled the fate of the former Italian colonies: Libya is independent, Somaliland is expected to achieve that goal in 1960 and Eritrea has entered into a federal relationship with Ethiopia. Finally it provided the diplomatic channel in which the Berlin blockade crisis could be discussed and resolved. In November 1956 in Hungary the U.N. did not succeed in securing a withdrawal of Soviet forces. However it did establish conclusively in the eyes of world opinion the brutal suppression of the Hungarian people and condemned the Soviet Union for its action. In the serious crisis in the Middle East in the fall of 1956 the force of world opinion in the United Nations played a substantial part in bringing about the withdrawal of foreign forces from Egypt. At the same time the U.N. established an Emergency Force which is maintaining peaceful conditions along the armistice demarcation line between Israel and Egypt and in the Gaza and Sharm el Sheikh area. Moreover, a fleet of over 40 ships under the supervision of the United Nations cleared the Suez Canal which is carrying its normal traffic today. The latest example of the peaceful influence of the United Nations is the [illegible] adopted by the special U.N. General Assembly in August 1958 of an Arab-sponsored resolution to stabilise the situation in Lebanon and Jordan. This again averted a threatened major conflagration in the Middle East.

The United Nations serves the interests of world peace in still another way and that is through its value as a forum of world opinion. It is well recognised that the [illegible] of [illegible] [illegible] whether national or [illegible], is the public opinion behind it. The power of the [illegible] the power of the press, the power of the [illegible] are [illegible] [illegible] power. But in the last [illegible] they are [illegible] [illegible] [illegible] the power of the [illegible] [illegible] [illegible] [illegible] [illegible] the U.N. [illegible] [illegible] [illegible] [illegible] [illegible]. The [illegible] [illegible] [illegible] the interests of [illegible] and [illegible] [illegible] Algeria and Cyprus,

the question of China's admission to U N and many other problems have been brought before the world assembly and discussed a number of times Though these problems are still unsolved the world opinion is getting stronger and more in favour to solve them every time they are discussed The U N provides a diplomatic meeting place where delegates can learn to quarrel without fighting

The United Nations is also trying to establish a more secure peace by eradicating poverty and raising the standards of life for all people The fundamental causes of war are poverty disease and poor living conditions All of these normally cause instability The U N is assisting the under developed areas of the world progress quickly with the help of the industrially advanced nations Even in the second half of the twentieth century most human beings are hungry most of the time, half the world's people have yet to be taught how to read and write. The *per capita* income of two-thirds of the world population is less than a hundred dollars a year and they cannot afford decent housing clothing and recreation. Moreover millions of people still live in bondage The United Nations has been seized of these problems and every effort is being made to eradicate poverty, disease and misery wherever they are prevalent

Other Achievements

Lately the two major developments in the economic activity of the U N have been the establishment of the Special Fund for Economic Development and the establishment of an Economic Commission for Africa. The resources of the Special Fund accepted by the General Assembly's Economic Committee only a few months ago are likely to be limited and hence the Economic and Social's Council's draft resolution has recommended that the Fund "shall be concentrated as far as practicable on relatively large projects' and that ' projects undertaken shall be those which will lead to early results and have the widest possible impact in advancing economic, social or technical development.

The establishment of the Economic Commission for Africa recognises the immense importance of that continent Like its sister bodies (Economic Commission for Asia and Far East, Economic Commission for Europe and Economic Commission for Latin America) the Economic Commission for Africa will study the problems of economic development particulary those relating to trade questions and economic integration

In the field of social questions the work of the U N through its various bodies, extends to human rights, the status of women children refugees and narcotics control The operations of the U N Children's Fund U N I C E F, continue to increase Compared with 1951, when the resources amounted to 11 4 million dollars in 1957 they rose to 20 5 million dollars with 104 countries receiving aid through 324 programmes which encompass among other schemes malaria eradication, control of yaws syphilis trachoma and leprosy, B C G inoculation and penicillin production. The World Health Organization is also doing a tremendous service to humanity by controlling malaria and other diseases in Asia and Far East

The other offshoots of the U N, such as Trusteeship Council the UNESCO the FAO, the International Court and others, are also doing their best in their respective fields to make the world a better place to live in to alleviate the miseries of mankind to raise the status of common human being and to peace and brotherhood in the tension ridden world

In the scientific field the U N called two international conferences of atomic scientists in 1955 and 1958 to discuss the peaceful uses of atomic energy An Indian Dr Homi J Bhaba, had the distinction of presiding over the first of them Noteworthy also is the report of the U N Scientific Committee on the effects of Atomic Radiation presenting the results of its three years of study of the problems The scientists from all regions of the world have worked constructively together despite political differences to produce the most comprehensive and authoritative single contribution to knowledge in this field

India's Role

India has been an active supporter of the United Nations from its very inception From the time Sir A. Ramaswami Mudaliar then Supply Member of the Governor General's Executive Council and leader of the delegation of India signed the United Nations Charter at San Francisco on June 26 1945 India has played a considerable role in the affairs of the U N When India became free in 1947 and became an independent member of the U N, its presence in the world affairs was greatly enhanced Mrs Vijaya Lakshmi Pandit [illegible] the [illegible] of becoming [illegible] of [illegible] World

Organisation. At the time of the San Francisco Conference in 1945 India was not politically independent, but as a non-official ambassador of the suppressed masses of Asia and Africa Shrimati Pandit campaigned vigorously to make their voice heard in the deliberations of the conference. From 1947, when India became free, Mrs. Pandit has headed the Indian delegation to the U.N. a number of times.

Late Sir B.N. Rau was the Permanent Representative of the Government of India and leader of the Indian delegation to the General Assembly from 1949 until his election in 1952 to the Judgeship of the World Court at the Hague. During the three years he led the Indian Delegation he considerably promoted the international prestige of India, built up the Arab-Asian Group for constructive purposes, facilitated the political emancipation of the Italian colonies and generally brought hope and cheer to the lives of the non-self governing and Trust Territories by his courageous championship of their cause at the United Nations.

Mr. V.K. Krishna Menon, the Chief delegate to the U.N. has many a time bridged a gulf between the Communist and the Western Camps. He has advocated the cause of the People's Republic of China to get her admitted to the United Nations. His able exposition of the Kashmir problem has changed the trend of Western Nations who have been hostile to India on this issue. Our permanent representatives like Rajeshwar Dayal and Arthur Lal have also rendered fine work at the U.N. India has always been siding with the oppressed nations in seeking their cause of independence. India is the leader of the non-aligned camp in the U.N. and plays a substantial role in shaping the thinking of the 29 nation Afro-Asian Group. The cease-fire and later the armistice in Korea came largely as a result of the [illegible] taken by the group led by India.

[illegible] U.N. [illegible] The U.N. [illegible] often [illegible] war propaganda. [illegible] the U.N. has been used to [illegible] the U.N. [illegible] United States. The Trust Territories [illegible] Africa are exploited by Britain and France but the U.N. looks on helplessly. However, it is not by the failures but by the successes that the U.N. should be judged. The only guarantee of peace and happiness of mankind in this nuclear age is the existence of the U.N. Few will question the immense significance of the United Nations for the prevention of war and the peaceful settlement of international disputes. The future of the whole of civilisation depends in no small measure upon the success of the United Nations. The U.N. has shown itself capable more than once and in more ways than one of narrowing the premises of war and conflict as well as broadening the base of humanitarian action.

—:o:—

HAZARDS OF ATOMIC WARFARE

By SHRI R S GUPTA

Deputy Commandant National Fire Service College, Nagpur

THE enormous energy released from the explosion of an atomic bomb causes damage to materials and men through heat, radio activity and blast Hazards of heat and blast, have already been experienced in wars But radio activity is an effect peculiar to the atomic weapon

When an atomic bomb is detonated a wave of intense heat called 'heat flash' radiates in all directions in straight lines at the velocity of light (186 000 miles per second) The temperature of objects just underneath the ball of fire goes up by many thousands of degrees Even at a distance of five miles the flash is sufficiently intense to produce a feeling of bodily warmth

People directly exposed to the head flash of the 'nominal' bomb (20 000 tons T N T) within 2½ miles of the target area (ground zero) would receive burns on any exposed skin The nearer to the target area the greater is the danger to life and those directly exposed within ½ mile of ground would undoubtedly be killed because of serious burns if not from other causes Severe third degree burns (charring) would result up to about a mile second degree burns (blistering) upto about 1½ to 2 miles and first degree burns (reddening) upto about 2½ miles

Primary Fires

In Japan the thermal radiation from the atomic explosions was so intense that the surfaces of many materials which do not normally show visible signs of heat were affected e g roof tiles polished granite and concrete was reddened at a distance varying from ½ 1 mile from ground zero In the open objects ignited in this way rarely continue to burn since so much heat is lost to the surrounding air Isolated fires started in Hiroshima and Nagasaki occurred at distances of nearly 2 miles from the centre of damage although the main fire zone was restricted to a radius of about 1¼ miles Many concrete buildings near the centre which survived the blast were gutted by fires started either by the heat flash which had [illegible] and ignited combustible contents

Th[e] grea[test] fire dan[ger] from [illegible] bomb is caused when visibility is maximum [illegible] in summer afternoons and in ever[illegible] and since at such a time of the year the humidity of materials is low, the chances of starting a fire which will go on are the most There is also the risk of secondary fires resulting from damage caused by the blast e g the collapse of buildings on domestic fires the breaking of gas pipes and short circuiting of electrical wirings The risk can be reduced by such simple precautions as shutting up stores covering open fires with sand or earth and by turning off gas and electricity at the main Research however, has shown that secondary fire risk is likely to be small compared with the primary risk of direct ignition by thermal radiation

Fire Storm

The chief feature of a fire storm is the generation of high winds which are drawn into the centre of the fire area to feed the rising column of hot air and flames These inrushing winds prevent the spread of fire outwards but ensure almost complete destruction by fire of everything within the fire area This inevitably increases the number of casualties Whether a fire storm develops depends mostly on the nature of the target Where there are tall buildings packed together with plenty of combustible material the risk is much greater

Blast Wave

The radius for complete destruction may be taken as ½ mile Within this distance it is estimated that even modern steel framed buildings will collapse Within the radius of ½ to ¾ mile the damage will be such that demolition will be necessary but even so it will of course be essential to ensure that fire cannot spread From ¾ to 1¾ miles buildings will be made habitable by first aid repairs Beyond 2 miles it is unlikely that any fires will be caused by radiation so that the fire problem will range over the distance ½ to 2 miles from the bomb The destructive distance will increase as the cube root of the power of the bomb so that an eight times nominal atomic bomb will cause damage over twice the ranges given

Th[e] ability of a bu[ilding] to withstand the [illegible] of the b[illegible] [illegible] [illegible] [illegible] the bu[ilding] [illegible] [illegible] The strongest [illegible] at least [illegible] forced con[crete] buildings [illegible] are probably certain steel type industrial struc-

tures having light frames and long end spans

Effect Of Heat Radiation

For the radiation to have any effect it must be absorbed by a material. Highly polished surfaces reflect 93 to 95% of the radiation, which falls on them and as not only about 5 to 10% is absorbed the radiation will have little effect. Unfortunately most combustible materials absorb heat radiation well and this depends on the shade of the material. The radiation falling on any material will heat up the surface and finally when the temperature rises to about 0°C it will burst into flames.

Fire Prevention

It will not be possible to prevent all fires following an atomic explosion but the aim is to reduce the fire danger to a minimum. Within a radius of ½ mile from ground buildings will more or less completely collapse and combustibles will be well dusted with rubble. As such there will be little danger of a large fire starting in this circle. Beyond this combustible material will be ignited at a range of 2 miles from the explosion.

Two types of precautionary measures are possible. They are first, the removal of the readily flammable materials such as textiles, paper etc. out of the probable path of radiation or erection of an incombustible barrier to prevent the radiation falling on them; second, the materials may be treated in such a manner that they are rendered less flammable.

It is not likely that fires will be started on the external surfaces of buildings. Doors and window frames may catch fire momentarily but it is unlikely that they will cause continuing fires. The main danger will come from materials usually found indoors. Walls of buildings are opaque to heat and light radiation. Fires may, therefore, be started by radiation crossing through windows.

Fire Precautions

The first fire precaution is to keep all readily flammable materials out of the danger zone. [illegible] [illegible] The board may be [illegible] when the [illegible] were

arriving but by then it would have done most of its useful work.

A device for admission of some extra light into the room can be arranged by fixing a suitable board to the window at an angle of 45°. The inside of the board should be white washed or some kind of reflecting surface might be fixed to avoid the radiation. The only rays that would be reflected into the room would be those from the sky more or less overhead. Radiation could also be kept out by fixing a metal sheeted screen on hinges to the window but a permanent form of protection is desirable.

Glass may stop two thirds of the heat radiation falling on it. The absorption power of glass for both heat and light radiation can be improved by coating it with white paint or whitewash.

Curtains may be treated with a solution of boric acid and borax. This will prevent the ignition of these curtains fabrics during the flash period until the intensity has been raised by about 40% over that normally required for ignition but more important still, it will remove the chances of a curtain fire. Upholstery or papers, which have to remain, should be covered by sheets treated with borax boric acid or tin sodium tungstate or P. V. C. sheeting or by any material, which is not readily ignited.

Consequent to the blast and fire hazards there is the debris problem in a big city or town, where a large proportion of the material of almost every building is damaged on the Ferrous 13-Megaton bomb burst on or over the ground, the type of debris that might be encountered at different ranges from ground zero are as follows:—

Between 0 and 1½ miles—complete debris and [illegible]
Between 1½ and 3 miles—light to heavy debris
Between 3 and 3½ miles—heavy debris
Between 3½ [illegible] [illegible] [illegible] of very heavy debris

Causes Of Casualty

[illegible] [illegible] materials. [illegible]

most damaging to human beings resulting in death and destruction of body cells

So far no known form of clothing will give protection against gamma rays but a large measure of immunity can be obtained by structural precautions of a conventional character Unprotected persons within half a mile of ground zero would receive a fatal dose of radiation and, at about three quarters of a mile, half the number might die Beyond this range the intensity of the rays falls off and there should be relatively few deaths The lesser effects of radiation such as loss of h ir might be expected up to one and a half miles This is in addition to the radio active fallout which deposits contaminated dust on foodstuffs or growing crop

Room For Protection

Large buildings with a number of storeys, specially if they are of heavy construction provide much better protection than small single sto ey structures In choosing a 'refuge' room in a house a room on the ground floor or in a basement would be the ideal. Windows would have to be blocked e g with sandbags Where possible boxes of earth can be placed on outside walls to provide additional protection Heavy furniture (pianos book cases etc) packed along the inside of the wall would also help

From what has been stated above we can form an idea regarding the extent of death and destruction that might be caused from an atomic warfare either through fire or the blast or radio-activity Even those who by chance might survive within the danger zone will not escape its fury They would gradually lose their strength and vitality and would die of diseases like cancer Even the next generation might have to suffer its consequences

---

Newsprint Consumption In India

The estimated annual consumption of newsprint in India before World War II was about 37 000 tons The present demand is estimated at 80 000 tons which is expected to rise to 1 00 000 tons by 1960 61

During 1957 55 649 tons of newsprint were imported into India

Until the setting up of the Nepa Mills which went into production in January 1955 India depended for its newsprint requirements solely on imports

The first Newsprint Control Order was promulgated on May 31 1941 under which purchase and sale of newsprint was controlled import quotas allocated to various newspapers and the use of newsprint for purposes other than the publication of newspapers was prohibited

Another control order entitled Newspapers Control Order was issued on May 29 1942 with the object of regulating the consumption of newsprint by fixing the number of pages in newspapers sold at particular prices From April 1943 the distribution of newsprint was also brought under control The page restrictions which were revised from time to time were most stringent during the period April 1943 to July 1946 With improvement in the supply position control on newsprint was lifted from June 1949 From August 25 1949 newsprint was placed on Open General Licence

At a meeting of the Economy Board of the Ministry of Finance held in October 1957 it was decided that the newsprint requirements of newspapers should be calculated on a scientific basis taking into account their size average number of pages published circulation and regularity of publication

Accordingly a composite newsprint unit manned by staff drawn from the Ministries of Information and Broadcasting and Commerce and Industry was set up to work out the entitlement of newspapers for the import of newsprint

At the only unit in operation at present manufacturing newsprint in the country—popularly known as Nepa Mill—production during 1955 was 2,563 tons It increased to 14 489 tons during 1957

To augment internal production the Second Plan envisages the establishment of a second newsprint production unit with an annual capacity of 30 000 tons

In the absence of conifers (like firs and spruce) which are the conventional raw materials for the manufacture of newsprint attention is being paid to the utilisation of other fibrous raw materials such as bagasse [illegible] available in the country

Second unit is proposed to be [illegible] at [illegible] in Andhra Pradesh in order to utilise the [illegible] available in the [illegible] Sugar Factory

INTERNATIONAL MONETARY FUND

THE International Monetary Fund is an association of nations that have undertaken by accepting the Fund Articles of Agreement to promote international monetary cooperation and the expansion of world trade.

Among the ways in which members of the Fund work together to accomplish these goals are:

(a) By promoting exchange stability and by providing a procedure for orderly adjustment of foreign exchange rates;

(b) By ensuring that any major changes in exchange practices will be submitted to international consultation before being put into effect; and

(c) By working toward the removal of restrictions on current exchange transactions.

To help achieve its objectives the Fund's Articles of Agreement also authorize it to engage in foreign exchange and gold transactions with members for purposes in accord with the Articles of Agreement.

Membership And Capital Funds

On May 31, 1948 there were 47 members of the Fund. Under the Articles of Agreement of the International Bank for Reconstruction and Development Fund membership is a prerequisite to membership in the Bank.

Each member of the Fund is assigned a quota which determines the member's voting power and the amount of foreign exchange which eligible members may purchase from the Fund. The quotas of members who were represented at Bretton Woods are set forth in the Articles of Agreement [illegible] a few of these have [illegible] been changed by the Fund at the request of the members concerned. The quotas of other members are determined by the Fund as part of the terms of membership. The subscription of each member is equal to its quota [illegible] paid [illegible] in gold and partly in the member's own currency. Quotas range up to $ 1,300 [illegible] the United States [illegible]

At May 31 1948 [illegible] Fund's [illegible] and $ [illegible] [illegible]

be [illegible] [illegible] mately $ 9 [illegible]

How It Works

The three principal methods by which the Fund works to achieve its objectives are by affording a continuous forum for conference in the meetings of its Board of Directors where full consultation on monetary and exchange matters may be conducted (2) by furnishing upon request expert technicians to advise and assist members in working out their financial and monetary problems and (3) by making its foreign exchange resources available under proper safeguards to its members to meet their temporary [illegible] [illegible]. In all these activities the Fund seeks to help its members find practical solutions to their foreign exchange problems that will be in accord with the constructive principles of the Articles of Agreement.

Consultation

Through consultation with its members, the Fund has become an international code of conduct in the exchange field. It is becoming recognized that [illegible] [illegible] [illegible] [illegible] [illegible] the Governments.

The Fund [illegible] members on their international [illegible] [illegible] [illegible] Articles of Agreement [illegible] [illegible] [illegible]

[illegible]

Regardless of their size or degree of technical advancement they have access to competent advice based upon the accumulated experience and knowledge which the Fund brings to bear upon its problems

Technical Advice

The Fund has maintained an extensive programme of technical assistance through staff missions to many parts of the world and provides studies reports and publications on international financial subjects

It has advised countries on changes in par values or exchange rates modifications in multiple currency practices and exchange restriction and on questions of monetary, credit and fiscal policy that have important bearing on international payments Its technicians have assisted members in establishing or adapting to their needs of institutional machinery such as central banking and exchange systems With many countries the Fund has conferred on techniques of improving their collection and presentation of financial statistics It has discussed with members the monetary impact of development programs levels of monetary reserves use of Fund resources gold transactions and other questions important to economic development and harmonious international monetary relations

Transactions

The Fund sells foreign exchange to members, under certain conditions out of the currencies it holds Among these condition sales are limited as a general rule to 25% of a member's quota in any 12 months In some circumstances a waiver may be granted to permit larger purchases A member purchasing foreign exchange from the Fund pays with its own currency The Fund's Articles of Agreement prescribe conditions under which members must repurchase their own currency from the Fund with gold or with convertible currencies These provisions are to ensure that the Fund will maintain a desirable level of currencies of all members so these resources will be constantly available to the members for their foreign exchange needs

Since a Fund policy statement of February 1952 Fund purchases of a member's currency are expected to be repurchased within a period not exceeding 3 to 5 years or reduced by the purchase of the member's currency by another member It has been agreed also that members may obtain standby arrangements assuring them of drawings of Fund resources up to specified limits and within a period not exceeding one year

Sales of currency through May 31 1958, included Belgian Francs British pounds, Canadian dollars Dutch guilders, West German deutsches marks and United States dollars with a total value equivalent to approximately $ 3 016 000 000 Repurchases up to that date amounted to $ 1 220 000 000 in gold and U S dollars

Sales of exchange are subject to a service charge of one half per cent payable in gold or partly in gold and partly in the member's own currency In addition there is a rising periodic charge payable by members on amounts of their currency held by the Fund in excess of their quota

THINGS THEY SAY

Much of the good work of the world has been that of dull people who have done their best

—George Hoar

If pleasures are greatest in anticipating just remember that this is also true of trouble

—Elbert Hubbard

The tragedy of life is not so much what men suffer but rather what they miss

—Thomas Carlyle

If you have great talents industry will improve them if but moderate abilities industry will supply their deficiencies

—Samuel Smiles

If Karl Marx were alive today his problem would be to find parking spaces for the capitalist proletariat rather than break their chains of economic slavery

—C K Reddy

One of the marks of a gentleman is never to show that he is tired

—E V Lucas

It wasn't too long ago that you could finance a pretty good war for what six months of peace costs today

—Bill Vaughan

A religion that is small enough for our understanding would not be large enough for our needs

—Arthur Balfour

U.N's WORK IN ECONOMIC AND SOCIAL FIELD

OF the organs of the United Nations none probably has responsibility extending over as wide a field as the Economic and Social Council. And none probably has a greater interest vested in peace. The work of the Council can advance and be of benefit only under peaceful conditions and one of its principal impediments, even more powerful perhaps than shortage of funds has been the continuance of international tensions.

In 1957-58 the period under review the routine work of the Council expanded and deepened itself in certain directions. The important tangible achievements were in the field of economics: (a) the steps taken to execute the decision of the General Assembly on December 14, 1957 to establish the long proposed Special United Nations Fund for Economic Development and (b) the establishment of an Economic Commission for Africa to join the Commissions for Latin America, Asia and the Far East and Europe.

The resources of the Special Fund are [illegible] $100 [illegible] a year [illegible] recommended to the General Assembly [illegible] the Fund [illegible] large projects [illegible] [illegible]

The [illegible] [illegible]

[illegible]

[illegible] and International [illegible] was [illegible] the Commission [illegible] the Lower Mekong Basin [illegible] Thailand and the Republic of Viet-Nam [illegible] E.C.A.F.E.'s [illegible]

The work of the regional Commissions apart, the Economic Council's [illegible] World Economic Survey, the European Economic Survey, the [illegible] Food Resources [illegible] projects [illegible]

Social Aspect

In [illegible] the other aspect of the Council's [illegible] progress [illegible] the task [illegible] of study and [illegible] [illegible] of the Council [illegible] [illegible] Human Rights, the Status of Women, Children, Refugees and Narcotic Control.

A specific achievement in the year under review has been the approval of [illegible] proposed [illegible] Convention on [illegible] [illegible]

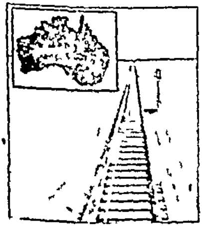
December 10, 1958 will be the tenth anniversary of the adoption of the Universal Declaration of Human Rights. [illegible] Human Rights [illegible]

The [illegible] Human [illegible]

[illegible]

to seek further information About the minimum age of marriage, consent and compulsory registration a draft Convention has been called for

The operations of the United Nations Children s Fund continued to increase Compared to 1951 when the resources amounted to $11 4 million, in 1957 they rose to $20 5 million with 104 countries receiving aid through 324 programmes which encompass among other schemes malaria eradication control of yaws syphilis, trachoma and leprosy B C G inoculation and penicillin production



Vital work, though hampered by the shortage of funds, continued in the office of the United Nations High Commissioner for Refugees By January 1958 the problem of Hungarian refugees in Yugoslavia was considered solved and efforts to reach a similar result for those in Austria proceeded Meanwhile the office of the High Commissioner has had to concern itself with persons who left the middle East during the Suez and other disturbances and one of its principal tasks—seeking international protection and the right to work social security travel and naturalization for refugees—continued to occupy the U N H C R.

Technical Assistance bestraddles both economic and social questions and few aspects of the work of the Economic and Social Council have been as readily appreciated by the receiving countries as the provision of technical assistance In 1957 the Technical Assistance Committee disbursed the largest amount since 1950 and the work was marked by a higher rate of implementation Some modest shifts were made in the programme to meet the special needs of countries in Africa and the Far East. The administrators of the programme have been particularly gratified because the level of experts recruited is accounted particularly high Evaluation has shown that the requisites of effective co ordination by the receiving Governments, of the existence of national plans of development and of competent resident representatives are being to a considerable extent, fulfilled though many of the 38 countries covered have no orderly plan of development yet

Two examples from the year might indicate the importance of miscellaneous work done by the Economic and Social Council the decision to start the International Administrative Service (proposed by the Secretary General) on an experimental basis and international co-operation in cartography

---

DID YOU KNOW ?

The longest stretch of straight railroad track in the world runs across the Australian Nullarbor Desert. The track goes in a straight line for 328 miles without crossing a river or passing a single tree

The Communist Minister of Education for East Germany recently told a gathering of workers that the alleged right of parents does not exist and is not compatible with the character of our state"

The world's greatest tides are recorded in the Bay of Fundy on the east coast of Canada The [illegible] rise and fall of water is 20 feet every six hours [illegible] it can rise as much as 53 feet from the low water

HOW TO STUDY CURRENT AFFAIRS

CURRENT Affairs form an important [illegible] in the entrance examinations to almost all government services and even large business organisations expect the [illegible] to be well aware of what is happening around them. Apart from this, in the [illegible] world one who is ignorant of world events is likely to be left behind in the race for [illegible].

A [illegible] of the people at large, and especially of the candidates for public or private services, [illegible] affairs simply [illegible] with the importance of this subject. But even those who sincerely try to grasp current affairs are [illegible] when faced with a question concerning them. This is so because their approach to the study of current affairs is wrong.

The Correct Approach

Current Affairs [illegible] to be [illegible] from the [illegible]. The daily newspapers are one of the important sources of knowledge. Most people only scan them [illegible] they do not study them. [illegible] daily [illegible] Let us analyse the contents of a [illegible] daily newspaper and see what it offers.

Anatomy Of A Newspaper

On the front page you will find the most important news of the world and our own country, with the [illegible] of headlines [illegible] The next page [illegible] give you the [illegible] [illegible]

[illegible]

[illegible] and [illegible] important events [illegible]

[illegible] you will find [illegible] Correspondents [illegible] and the Letters to the Editor columns [illegible] offer a good [illegible] [illegible] animals. The [illegible] page [illegible] [illegible] [illegible] and [illegible] [illegible] current world [illegible].

[illegible] three quarters of [illegible] [illegible] [illegible] daily [illegible].

Special Programmes

[illegible]

[illegible]

[illegible]

examination they should start maintaining a 'Clipping File' just an ordinary large blank paper register in which newspaper cuttings of special interest will be pasted

The file should be divided into continental partitions as follows

Africa North Africa Central Africa, East Africa, West Africa and South Africa

America North America and Canada South America.

Asia West Asia South Asia Central Asia East Asia and South East Asia

Australia Australia with New Zealand and Tasmania

Europe North West and South West Europe North East and South East Europe, East and West Europe

To take the countries which are usually in the new , North Africa will include Spanish and French Morocco with Algeria West Africa will include Egypt and the Sudan Cyprus the Arab States and Israel will come under West Asia whilst South Asia will include Afghanistan Iran Pakistan India Ceylon and Burma Central Asia will cover Asiatic Russia and Tibet East Asia will include China Formosa Korea Japan Thailand and both Vietnams South East Asia would cover Malaya and Singapore, Indonesia the Phillipines New Guinea and the Poleynesian Islands In the North and South West Europe will go Britain France and the Latin countries whilst North East Europe will cover the Baltic States East and West Germany for clarity's sake should go into East and West Europe respectively, whilst Russia and Turkey, the Balkan countries and the Levant States will come under East and South East Europe

Would it not be simpler to index each country alphabetically you may ask ? Yes as a secondary measure But this broad continental division will train the student's mind to work logically so that he will mentally locate each unit correctly in its geographical context and thereby instantly grasp its geopolitical significance The Secondary purely alphabetical index will include Events and Personalities as well as countries with reference to its page and relative position, as shown below —

		Page
A		
Algeria	North Africa	12
B		
Bhakra Dam	India (South Asia)	30
Bao Dai	S. Vietnam (East Asia)	43
C		
Cyprus	West Asia	22
Chou en Lai	China (East Asia)	53
	(and so on)	

In this way the student will slowly build up his knowledge of Current Affairs intelligently and systematically and at the same time compile his own personal Book of Current Affairs with whose pages he is wholly familiar and from which revision is easy

In Addition of course, if he wishes to delve deeper into the subject he can subscribe to one of the many well-compiled and frequently published Current Affairs books and read up the economical ramifications in other publications

Conclusion

In conclusion I can only hammer home the fact that Curent Affairs are very much a part of our professional knowledge today and an important cultural subject that their knowledge cannot be acquired overnight by wading through a pile of books and a five hundred page summary That this subject must be studied methodically and diligently and absorbed in small regular doses over a period of time and that the study of our daily newspaper is the key to the study of this subject.

'Let us not be afflicted with an unseemly Examination psychosis towards Current Affairs each time we are due to appear for one of these tests because they are a simple and interesting subject and in which we are now bound to be proficient

(From an article by Major C L Proudfoot)

Gramdan And Community Development In India

By SHRI SHRIMAN NARAYAN
Member, Planning Commission

INDIA is the only country in the world which has launched the experiment in planning on a comprehensive scale under a democratic set up. So far there has been overall planning in the Soviet Union and in some of the Eastern European countries. China has also now started comprehensive economic planning on the Soviet model. So far as the democratic countries of the West are concerned, they have had some kind of a piecemeal planning, but they have not attempted, so far, overall planning touching all sectors of national life. In the United States, President Roosevelt had taken certain radical steps in the form of the National Recovery Act to tide over the economic crisis after the Great Depression. In the United Kingdom Lord Beveridge had prepared a plan for Social Security. But India is the first democratic country to undertake the experiment of comprehensive planning under the Parliamentary system of Government. The targets of India's First Five Year Plan were achieved substantially. In some cases, we could even exceed the targets. We are now in the middle of the Second Five Year Plan and the country is making every effort to see it through. There are, of course, several difficulties in the way. [illegible] more or less [illegible] to the very nature of economic planning. [illegible] to be boldly faced and overcome.

Acharya Vinoba Bhave, who is the greatest living disciple of Mahatma Gandhi, is the [illegible] of the Bhoodan movement about seven years ago. He has been walking from village to village during this period and has been able to get about 4.5 million acres of land through the [illegible] of persuasion and [illegible]. The Bhoodan movement has now entered a new phase, the phase of Gramdan [illegible] the village [illegible] [illegible]

[illegible] of the [illegible] [illegible] taken for [illegible] [illegible] The [illegible] [illegible] Vinoba Bhave has [illegible] Community Development [illegible] Second Five Year Plan [illegible] between Gramdan and Community Development programme. [illegible]

[illegible]

(Continued on Page [illegible])

Cultural Relations Between East And West

By ROGER CAILLOIS

THE problem of cultural relations and mutual understanding between East and West cannot be posed in abstract or absolute terms it is neither simple nor abstract

In the first place, East and West do not live in ignorance of one another Their mutual awareness is age old We need only think back to the silk route to Marco Polo s travels. However, this awareness takes two forms that are not only distinct but complementary Western intellectuals have a scholarly knowledge of the East but their learning has to do chiefly with the ancient Orient an Orient which has vanished or is vanishing Western knowledge of this East is largely confined to the past hence to traditional and spiritual values rather than to present day realities Most Easterners on the other hand have acquired concrete first hand knowledge of the modern West they are familiar with Western industrialism and Western colonialism In a word they know a missionary West (in the non religious sense of the term) which has spread its techniques and cultural values around the globe On the other hand Easterners are often partly or wholly ignorant of European history and Western traditions They are more familiar with Cubism than with Gothic art more conversant with the latest in twelve-tone music than with the Gregorian chant or even Mozart Thus Western knowledge of the East confined as it is to cultural values and tradition is precisely the sort of knowledge about the West that Easterners frequently lack A second contrast in the West only specialists are familiar with the East while in the East everyone has experienced the effects of Western society though he may not have personal knowledge of the West

My second observation concerns the vagueness of the term Orient' But the word Orient is a kind of generic term covering a great many civilizations which though they certainly have things in common—such as not being Western—are often quite different, if not incompatible on other scores Let us take the arts as an example Islamic tradition forbade the portrayal of the human face and developed an abstract, geometrical art form, the arabesque Yet in the very heart of Islam the Persian miniature restored the face of man to the [illegible] arts And what of the arts of India China and [illegible]

tude of styles are spread out over countless periods ?

There are a great many ways of life to be found in the East what with Islam Persia, India China and Japan many more probably than can be found in all the history of the West where successive ways of life have finally merged into a kind of unity

Might the West prove to be the source of unity for the East ? Naturally enough the first things a traveller notices in Asia are the sign boards and people s dress and everywhere he finds symbols and costume differ, except where a common European origin has brought about a recent and decisive homogeneity The innumerable Chinese characters depict objects beings and concepts rather than transcribe sounds and precisely because they constitute a dictionary rather than an alphabet they are understood by eight hundred million human beings Yet the fact remains that Arabic and Devanagari writing and their derivatives and Chinese writing and the writings of so many other Asian countries are not compatible systems which facilitate reciprocal translation so that in the end the only system which insures communication between Cairo, Karachi Teheran Peking Calcutta Bombay, Tokyo and Djakarta is the twenty four letter Latin alphabet of the West The same holds true for languages When the peoples of Asia and Africa met at Bandung to assert their independence and reject Western domination they found that to communicate among themselves, they had to use a Western language the very language of that British empire whose yoke they were throwing off

Finally it is clear that the notion of a sharp contrast between East and West in the field of literature would be contrary to the very nature of literary effort and inspiration The similarities and differences that count are between individual men, between one poet and another one thinker and another They also exist between literary forms social environments and historical periods The deepest affinities are not to be found within either Eastern or Western world but rather in the [illegible] of more or less [illegible] bonds linking the two hemispheres They do not link Homer with [illegible] or the [illegible] with Li Tai Po but rather Li Tai Po with Mallarmé or the [illegible] with the Song of Songs [illegible] Lao-Tse [illegible] And the latter s [illegible]

are close to the [illegible], as well as writers [illegible] from the other side of the world and of which [illegible] was never aware.

Recently I undertook to compile an anthology of world poetry. In order to give this mass of verse a semblance of organization, I had to give up any idea of geographical or [illegible] and found myself obliged to arrange these poems culled from every age and every land, according to their inspiration, form and [illegible]. Now there are a great many [illegible], and the table of contents of an anthology such as this one [illegible] many headings. Yet without forcing matters I was able to put both Eastern and Western poems and even poems from different Oriental cultures side by side in almost every category.

The Orient is today experiencing a quite new type of [illegible]. This new unifying factor does not stem from a common difference separating Eastern cultures from the West but rather from elements these cultures have [illegible] borrowed from the West: an alphabet and languages for [illegible] communication (as I have already mentioned), the daily newspapers, radio and cinema, [illegible], machines of all sorts, [illegible] and social ideas and institutions, scholarship, sciences, bookkeeping and so forth [illegible] Western vice far easier to export than Western virtues.

As a rule, the[illegible] of Eastern countries who wish to learn about their neighbours' history and culture (and even their own) are obliged to come to the [illegible] and universities of London, Paris and Berlin. This was apparent at the International Pen Club Congress which met in Tokyo for the first time in an Asian country in September 19[illegible]. Every Eastern [illegible] present [illegible] Western [illegible] [illegible] Western Europe. [illegible] [illegible]

[illegible] [illegible] [illegible]

A [illegible] has been [illegible]

which all cultural influences merge. An idea which springs forth at any point on the globe will [illegible] [illegible] thanks to radio, books, magazines, newspapers and the speed and regularity of transport facilities. Yet, this mass of cultural exchanges remains profoundly unbalanced. The translation of literary works is almost exclusively a one-way affair [illegible] of the [illegible] influences. In an overwhelming proportion, it is the West that gives and the East that receives. We may safely say that Easterners are far more familiar with modern Western literature than Westerners are with contemporary Eastern literature.

For the [illegible] and [illegible] of classical and ancient periods, Western [illegible] and [illegible] knowledge have tipped the scale in their favour. All the world history is [illegible] classified and [illegible] in Western museums. The great creations of Asian art everywhere by the [illegible] have been reclaimed for mankind by European scholarship. The monuments of Angkor have been rescued. Empires of vanished centuries covered over by the [illegible] growth of the soil, lost in the tangled coils of history, have risen again from what seemed eternal night. Thanks to the [illegible] [illegible] [illegible] [illegible] [illegible] and [illegible] they now fill museums and libraries the world over. These splendours bear [illegible] [illegible] [illegible] [illegible] [illegible] and [illegible] the [illegible] [illegible] [illegible] [illegible] [illegible] of the universal heritage.

I doubt that there exists a more [illegible] [illegible] of [illegible] [illegible] than that [illegible] which styles and [illegible] [illegible] both East and West [illegible] [illegible] for [illegible] the ages and the nations to share their own [illegible]. (UNESCO)

WAYS TO DEVELOP POWERS OF CONCENTRATION

By ROBERT J LUMSDEN, B.A

INABILITY to concentrate is a common failing It is responsible for keeping many people in the rank and file folk who have the ability to reach management level and other positions of distinction

It is in our own interests, then to try to develop our powers of concentration

Let us first catalogue the enemies of concentration. These may be named as lack of interest, weakness of will self pity distractions laziness and dispersed effort

1 Lack of Interest When we read a thrilling novel we are not troubled with the problem of concentration Unwittingly and without effort we concentrate so well that we are oblivious of another person coming into the room or addressing us Similarly when we daydream we concentrate so intensely upon pleasant events and circumstances that we are quite unconscious of external stimuli

It is obvious that concentration follows interest Where interest is aroused and maintained, the problem of concentration does not arise. While interest is white-hot, concentration is intense

The vital question is how do we maintain interest at this level ?

Behind all activity there is desire followed by decision For example young Maurice wanted above all else to be fully qualified in his profession He wanted the prestige the security and the satisfaction that such a condition would bring him This was his ambition his supreme desire

One memorable day after giving the matter careful thought, Maurice made a great decision He resolved to begin studying for the series of examinations which would give him his heart's desire.

During the years of intensive study which followed there were times when Maurice faltered a little in his resolve and frequently there were evenings when his mind would wander from some of the textbooks

It was then that Maurice discovered that the secret of concentration lay in quickening his original desire in re kindling his interest. This is how he did it

When he found his attention wandering seriously he would lay down his books and deliberately allow himself ten minutes of reverie During this time he would visualise himself as having gained his much-desired qualifications

He would remind himself of the increased income it would bring and the many exciting and worthwhile things he could do with that bigger salary He would be able to have better clothes and better holidays May be he would go in for a little sports car or may be he would put money away towards a house to shelter himself and the girl of his choice

He imagined also the prestige his qualification would give him for the rest of his life the satisfaction it would give him and the more interesting and responsible work it would make possible

After this little excursion into the very possible future Maurice found that he returned to his studies with renewed zeal and enthusiasm His resolve to succeed thus strengthened, he had no difficulty in concentrating all his thoughts upon the matter in hand

In other words, his work again became his primary interest. Nothing else interested him so much as negotiating this present difficulty and irrelevant thoughts ceased to obtrude.

2. Weakness of Will

Interest not only keeps our thoughts from wandering it also strengthens the will. Through quickening his interest by a strictly rationed interval of directed day dreaming Maurice found that his will to succeed was strengthened as well

He gritted his teeth and resolved to press on no matter what difficulties confronted him. He determined to plod on doggedly and to achieve his ambition Interest reinforced his will

Nevertheless a measure of will power is necessary in the first instance You cannot quicken the embers of a fire with a breeze if there are no embers there Maurice showed his will power by returning to his studies after an allotted time The person of weak will would have spent all the evening in daydreaming without doing anything to make his dreams come true

Perhaps you say That's what I lack—will power I just can't bring myself to act !" Your best plan is to win a series of small battles This will prepare you for bigger ones

At least once every day drive yourself to do something that you do would not like to do but

done. It may be a trivial thing like [illegible] a letter or washing the crockery or taking the dog for a walk. Let it be something that normally you would avoid. This is the first practical path to a strong will.

Just as no one ever learned to swim without first venturing out in the shallows, so no one [illegible] strength of will [illegible] a series of small [illegible] strength. Will power, like confidence, [illegible] on little points of progress.

Coué's autosuggestion can help you too. Visualise yourself as being a person of strong will. Say to yourself [illegible] the well-known Coué formula [illegible] and say it aloud repeatedly:

Hour by hour, day by day
My will gets stronger and stronger.

3. Self Pity. This is a [illegible] of concentration and it may be [illegible] little by little. [illegible] when he was told he [illegible]

Fortunately, by persevering [illegible] time to remember [illegible] and [illegible] he was able to overcome the [illegible] self pity.

When you are tempted not to [illegible] through self pity, remember how you would regret not studying in future years. Think also how fortunate you are in having such opportunities, and remember that there are millions who would give anything to have your privileges and chances.

Say to yourself some such thing as this:

"Why am I [illegible] It [illegible] On the contrary [illegible] going to keep [illegible]"

4. Distractions. [illegible]

[illegible]

Have your room well [illegible]

[illegible]

If you are [illegible]

5. Fatigue. [illegible]

[illegible]

SIKKIM: Land And Its People

By AMIYA K. BANERJEE

IT is very much a mistake — and it seems wide spread—for Indians to think of Sikkim as a foreign country. For all practical purposes it is as much a part of India as, say, Scotland is of the United Kingdom. The strictly legal position however is that this little Himalayan region is a protectorate of the mother country. But so virtually were the many princely States in British India which had their own customs barriers and frontier restrictions that did not debar them from forming a part of India. Indian citizens do not require a passport to enter Sikkim.

And yet this little emerald land nestling in the eastern Himalayas has been systematically neglected so far by the average tourist to our hills. The Kanchenjunga range, the pride of Sikkim's scenic possessions, offers some of the finest mountain scenery in the world and by far the best in the Indian Himalayas. Blessed with a copious rainfall Sikkim can also boast of an incredible variety of plants, flowers, orchids and ferns. The evergreen valleys are drained by crystal clear brooks foaming over a thousand boulders and on the uplands the air is clear and fresh blown from the snows. To the jaded traveller from the sweltering plains of India, no finer holiday can be recommended than an excursion into the heart of these majestic mountains.

Sikkim measures about seventy miles only from south to north and some fifty five miles from east to west and geographically, resembles a vast amphitheatre whose north slope is formed by the main axis of the Himalayas and the other sides by the Singalela and Chola ranges running southward from the main ridge and leaving only one gap in their complicated network through which the Teesta flows out at Sevok on to the Bengal plains. The emerald hills are mostly terraced and support considerable cultivation of rice. No wonder, therefore, that the Tibetan name for Sikkim is Denjong —which means 'Rice Country'.

Sir J. D. Hooker who with Dr A. Campbell discovered Sikkim and courted imprisonment leading to a war between India and Sikkim a century ago has left valuable accounts of the country's flora and fauna. In the tropical zone up to 5 000 feet from sea level, the crops are grown and the hillsides are covered with forests of oak, chestnut, cherry and laurel and a prodigious variety of ferns and orchids. The Himalayan black bear an occasional tiger or a leopard and the sambhar inhabit this region. Sikkim has an exceptionally large number of birds and butterflies living mostly in the tropical zone. The temperate zone extending up to 13 000 feet produces most of the flowers for which Sikkim is famous and pride of place goes to the rhododendrons and the vaccinia which at places occupy entire hill slopes and fill up the valleys so as to make them impenetrable. The musk and the barking deer are the principal fauna of this region. The Alpine zone, reaching above the perpetual snow line at 16 000 feet houses some varieties of rhododendrons and here are found the brown Himalayan bears that seldom descend to lower heights.

Next only to its enchanting flora and fauna the colourful people of this secluded country would interest the visitor most. The Lepchas, the original settlers of the soil are a shy and retiring type of people mostly inhabiting the outlying forest areas. They are born naturalists and expert hunters. The agriculture and commerce of the land are in the hands of the more venturesome Nepali immigrants who, paradoxically form the bulk of the population. The Bhutias from the neighbouring State of Bhutan in the east and the Tibetans from the north make up a considerable floating population and this variegated cross-section of humanity is seen at its best on the weekly market day at the Gangtok bazar. There the aprons, the scarves and the jewellery of the women strike up a symphony of colour which is picked up and returned by the fur caps of the Bhutias, the flowing tunics of the Lepchas and the turquoise ear rings or the ornamental sword girdles of the Tibetans. Laden with merchandise mule caravans from Lhasa, from Yangtse or Lhasa reach the bazar off and on and deposit their bundles with the local dealers. On a sunny day the Gangtok bazar scene is one of extreme animation.

The upper classes in Sikkim are landed gentry known as the Kazis. They are mainly of Tibetan origin and the royal family also hails from that country. Intermarriage between the Sikkimese and Tibetans is the rule rather than the exception. It is, therefore, no wonder that on the religious and the cultural planes Sikkim is but a district of Tibet. Lamaism is the common religion [illegible] in the countries and the [illegible] Lama [illegible] Gangtok are [illegible] country [illegible]

[illegible] are also modelled on Tibetan [illegible]. Sikkim may therefore be [illegible] called—as it is called—the Little Tibet in India.

According to existing arrangements, foreign tourists in India are required to obtain a permit to enter Sikkim. Indian [illegible] are under no such [illegible], but they must also make their [illegible] reservations in advance through the Deputy Commissioner, Darjeeling. It is always [illegible] to notify the Political Officer at Gangtok of one's proposed visit. Through bus services now ply between Siliguri and Gangtok (and plenty of taxis and [illegible] are also available at Siliguri), making it possible for the busy tourist to leave Dum Dum by the morning plane for Bagdogra (aerodrome for Siliguri) and to reach Gangtok early in the afternoon.

Gangtok, the capital of Sikkim and a [illegible] town of several thousand inhabitants at an altitude of 6,000 feet, has little to offer to the tourist except the [illegible] and the magnificent palace and its attached monastery. Gangtok [illegible] to all [illegible] tourists in Sikkim [illegible] as the base from where [illegible] excursions would be planned into the heart of the [illegible] villages—[illegible] the Lachen Valley to the [illegible] in the direction of the [illegible] Kanchenjunga group of mountains.

[illegible] the best time to [illegible] in April and May and for the [illegible] in October and November when the [illegible] clear and the roads in the upper [illegible] are not [illegible]. Trekking at higher altitudes [illegible] from December to February [illegible] when heavy snowfalls may [illegible] and when [illegible] also likely to [illegible] on account of the [illegible] caused by [illegible] a [illegible].

Another [illegible] would be hard [illegible] for a tourist [illegible] of the [illegible] [illegible]. There [illegible] at the moment [illegible] at Gangtok and for that matter anywhere else in Sikkim. The [illegible] [illegible] [illegible] Darjeeling [illegible] [illegible]. The [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible].

The authorities, when [illegible] with these questions, are likely to [illegible] the [illegible] and [illegible] that Sikkim gets now [illegible] cannot be [illegible]. [illegible] the right approach to this question [illegible] has to be [illegible] in the [illegible] of one of the [illegible] of [illegible]—travel. (Courtesy: The [illegible])

(Continued from page 91?)

[illegible] to cooperate with one another at different levels in order to ensure the [illegible] of the [illegible], [illegible] structure of the nation. [illegible] small [illegible] would be [illegible] encouraged to plan for themselves for their [illegible] needs without depending too much on the Administration. In the beginning the Community Development programme in India started as a Government programme with people's participation. But now the nature of the Community Development programme is "People's programme with Government participation." The [illegible] and [illegible] rule the people. [illegible] must be of the people, for the people and by the people.

[illegible] has been able to secure about 3,000 [illegible] in different States of India. [illegible] has been [illegible] by the All India Sarva Seva Sangh. It is [illegible] in the [illegible]. [illegible] the [illegible] of [illegible] with the [illegible]. All the [illegible] [illegible] [illegible]. It is [illegible] that the [illegible] [illegible] [illegible] of the world.

[illegible] OF [illegible]

[illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible].

[illegible]

OUR POPULATION PROBLEM

By Dr S CHANDRASEKHAR

THE population problem has come to be recognised as one of the most basic of all human problems, because it affects almost every aspect of man's social life. It affects the health and happiness of individual families, it affects the material prosperity and social progress of nations and it affects international security and peace, for population problems have led in the past, and may lead in the future to war.

Fertility

Our population problem has numerous aspects and these touch almost every sphere of human endeavour ranging all the way from biology and cultural values to marital patterns and preventive medicine. But the most fundamental aspect of the problem is the ratio between the total available natural resources and the minimum needs of man. In other words the problem is how to bring about a better and a more stable balance between the fertility of the soil and the fertility of man, between human production and human reproduction.

I shall attempt to examine the problem under three headings—the facts, the problem and a policy or solution.

Some Facts

I cannot unfortunately go into all the relevant facts or the cumulative significance of their inter-relationships. But what are some of the important demographic facts? Our population has been growing at fairly rapid rate of 1.2 per cent per annum during the last several years. Actually this rate is not very high because there are certain countries in the West which exceed this rate. But because we have a massive population to begin with even a nominal rate of increase gives us a net annual addition of some five millions. This means that we add every decade about fifty millions, or as much as the population of Great Britain or Western Germany. It is obvious that this rate of growth and the net addition progressively increase under the conditions prevalent in our country.

Today our population is probably around 398 millions and I am afraid that the 1961 Census—only three years away—will reveal that we have passed the 400 million mark. The projection of our growth of course depends on the nature of assumptions one makes about the trends of our birth and death rates.

Birth Rates

What about our birth and death rates? The crude birth rates do not reveal as much as fertility rates or even better what are called specific fertility rate. The fertility rate represents the number of female children born each year per 1000 women between 15 and 45 years of age. Since there are variations in the age groups in the proportion of total women of child bearing age specific fertility rates give a more accurate picture of our population growth. But unfortunately we do not have reliable statistics to do any detailed refinements. Such evidence as we have after adjusting the rates shows that the birth rate is around 40 per thousand. The important point here is that our birth rate is not only high but that it has shown no definite declining trend during the last decade. A decline in the birth rate will of course depend on the number of girls born, the number and the age at which the girls marry, the number of children they bear and whether they complete their reproductive period etc. Anyway we have not witnessed so far any definitive decline in our birth rate.

Declining Death Rate

What about our death rate? Any scientific answer to this question must examine the various components such as the infant mortality rate, the maternal mortality rate, their sex differentials and the overall mortality rate for both sexes in all age groups. Further the infant mortality rate (which is the number of infants who die per 1000 live births in a year) must be examined in the light of pre-natal loss of life, still birth, peri-natal (one week) mortality, neo-natal (one month) and post neo-natal mortality. Here again we do not have accurate figures but such figures as we have and as we can accept after refinement reveal that our death rate is one of the highest in the world—around 30 per 1000. But fortunately it is declining. For instance the infant mortality rate which is a sensitive index of our socio-economic conditions shows a decline. Our infant mortality rate, if official figures are accepted, is around 115 per 1000 live births whereas in most advanced countries the rate is between 20 and 30. But even here the rate is declining. This is a very welcome feature for the nation's children are too precious to be wasted by premature death or preventable disease.

Unfortunate Effect

What about the future? Thanks to the

life are also modelled on Tibetan practices Sikkim may therefore be justly called—as it is called—the Little Tibet in India

According to existing arrangements, foreign tourists in India are required to obtain a permit to enter Sikkim. Indian citizens are under no such obligation but they must also make their dak bungalow reservations in advance through the Deputy Commissioner Darjeeling. It is always convenient to notify the Political Officer at Gangtok of one's proposed visit. Through bus services now ply between Siliguri and Gangtok (and plenty of taxis and station wagons are also available at Siliguri) making it possible for the busy tourist to leave Dum Dum by the morning plane for Bagdogra (aerodrome for Siliguri) and to reach Gangtok early in the afternoon.

Gangtok the capital of Sikkim and a peaceful town of several thousand inhabitants at an altitude of 6 000 feet has little to offer to the tourist except the animated bazar and the magnificent palace and its attached monastery. Gangtok to all serious tourists in Sikkim could act at best as the base from where numerous exhilarating excursions could be planned into the heart of the many picturesque valleys—especially the Lachen Valley to the north—or in the direction of the magnificent Kanchenjunga group of mountains.

For flower lovers the best time to visit Sikkim is in April and May and for the hiking enthusiast October and November when the air is cool and clear and the roads in the upper reaches are not snow bound. Trekking at higher altitudes becomes difficult from December to February when heavy snow falls may occur and when visibility is also likely to suffer on account of the smoke emitted by numerous forest fires

Another land with such magnificent scenic and human appeal would be hard to find which caters so little for a tourist trade that has all the potentialities of becoming very prosperous indeed. There are at the moment no hotels worth the name at Gangtok, and for that matter nowhere else in Sikkim. The enthusiastic [illegible] with the meagre information [illegible] by official circles in Darjeeling has to hunt up scraps of know[illegible] from the [illegible] in this [illegible] country. The present restrictions on foreigners are also considered [illegible] and constitute perhaps the main reason why so few foreigners [illegible] visit this picturesque land [illegible] many of them go to Darjeeling some fifty miles away

The authorities, when faced with these questions, are likely to pose it the other way round and say that with the trickle of tourist traffic that Sikkim gets now, costly establishments cannot be thought of. Whichever may be the right approach to this question the vicious circle has to be broken somehow in the interest of one of the finest of human pastimes—travel (Courtesy The Statesman

—

(Continued from page 914)

supposed to co-operate with one another at different levels in order to ensure the fullest utilisation of the material, human and financial resources of the Nation. But, in essence smaller Community Units must be fully encouraged to plan for themselves for their immediate needs without depending too much on the Administration. In the beginning the Community Development movement in India started as a Government programme with people's participation. But, now the motto of the Community Development movement is People's programmes with Government participation. The State is there only to help, assist and generally guide the people. But the plan must be of the people, for the people and by the people

So far Acharya Vinobaji has been able to secure about 5 000 Gramdan in different States of India. Intensive constructive work has been started in several places by the All India Sarva Seva Sangh. It is now intended to start some more centres for carrying on intensive work in the Gramdan Villages. As mentioned above, the Ministry of Community Development is also trying to co-operate in the fullest measure with the Gramdan Scheme. All the political parties in India have also pledged their support to this revolutionary movement. It is expected that the Gramdan and Community Development movements will be able to achieve substantial results which will not only benefit our country but will also show a new way to the rest of the world

—

CODE OF LIFE

My code of life and conduct is simply this: Work hard, play to the allowable limit; disregard equally the good and the bad opinion of others; never do a friend a dirty trick; never grow indignant over anything; live the moment to the utmost of its possibilities and be satisfied with life always but never with oneself.

—G. J. Nathan

OUR POPULATION PROBLEM

By Dr S CHANDRASEKHAR

THE population problem has come to be recognised as one of the most basic of all human problems because it affects almost every aspect of man's social life It affects the health and happiness of individual families it affects the material prosperity and social progress of nations and it affects international security and peace, for population problems have led in the past, and may lead in the future to war

Fertility

Our population problem has numerous aspects and these touch almost every sphere of human endeavour ranging all the way from biology and cultural values to marital patterns and preventive medicine But the most fundamental aspect of the problem is the ratio between the total available natural resources and the minimum needs of man In otherwords the problem is how to bring about a beitter and a more stable balance between the fertility of the soil and the fertility of man betwe n human production and human reproduction

I shall attempt to examine the problem under three headings—the facts the problem, and a policy or solution

Some Facts

I cannot, unfortunately go into all the relevant facts or the cumulative significance of their inter relationships But what are some of the important demographic facts ? Our population has been growing at fairly rapid rate of 1 2 per cent per annum during the last several years Actually this rate is not very high because there are certain countries in the West which exceed this rate But because we have a massive population to begin with even a nominal rate of increase gives us a net annual addition of some five millions. This means that we add every decade about fifty millions, or as much as the population of Great Britain or Western Germany It is obvious that this rate of growth and the net addition progressively increase under the conditions prevalent in our country

Today our population is probably around 398 millions and I am afraid that the 1961 Census—only three years away—will reveal that we have passed the 400 million mark The projection of our growth of course depends on the nature of assumptions one makes about the trends of our birth and death rates.

Birth Rates

What about our birth and death rates ? The crude birth rates do not reveal as much as fertility rates or even better what are called specific fertility rate The fertility rate represents the number of female children born each year per 1000 women between 15 and 45 years of age Since there are variations in the age groups in the proportion of total women of child bearing age specific fertility rates give a more accurate picture of our population growth. But unfortunately we do not have reliable statistics to do any detailed refinements Such evidence as we have after adjusting the rates shows that the birth rate is around 40 per thousand The important point here is that our birth rate is not only high but that it has shown no definite declining trend during the last decade A decline in the birth rate will of course depend on the number of girls born, the number and the age at which the girls marry the number of children they bear and whether they complete their reproductive period etc. Anyway we have not witnessed so far any definitive decline in our birth rate.

Declining Death Rate

What about our death rate ? Any scientific answer to this question must examine the various components such as the infant mortality rate the maternal mortality rate, their sex differentials and the overall mortality rate for both sexes in all age groups Further the infant mortality rate (which is the number of infants who die per 1000 live births in a year) must be examined in the light of pre-natal loss of life still birth peri natal (one week) mortality neo-natal (one month) and post neo-natal mortality Here again we do not have accurate figures but such figures as we have and as we can accept after refinement reveal that our death rate is one of the highest in the world—around 30 per 1000 But fortunately it is declining For instance the infant mortality rate which is a sensitive index of our socio economic conditions shows a decline Our infant mortality rate if official figures are accepted is around 115 per 1000 live births whereas in most advanced countries the rate is between 20 and 30 But even here the rate is declining This is a very welcome feature for the nation's children are too precious to be wasted by premature death or preventable disease

Unfortunate Effect

What about the future ? Thanks to the

efforts of our Second Five Year Plan, we have declared war on disease with better preventive diagnostic and curative services better sanitary and hygienic facilities more medical personnel and hospitals and new wonder drugs. But a welcome decline in our death rate has an unfortunate effect on our population problem for it increases the net addition to our population if nothing happens to our birth rate. For instance if we can reduce our infant mortality by say, fifty percent, our net annual addition to our population can increase from its present five millions to almost ten millions—an alarming prospect! And yet all of us are dedicated to the ideal of alleviating human suffering postponing death and prolonging human life And we also want to raise the expectation of life at birth for our people

Living Standard

What about our standard or rather level, of living No matter how one defines the concept of a level of living we all know that our level of living is relatively low This does no need any statistical evidences! Even those who do not believe in abundant living and want simple and austere living must grant that our per capita consumption of food clothing housing education medical help cultural amenities etc. is far from satisfactory according to any Asian (not European or American) optimum standard of living All of us are agreed that we do not want any citizen of our country to go chronically hungry much less die from hunger; to go about semi naked to live on our pavements in squalor to suffer or die from curable disease or to be illiterate or ignorant

Too Many People

We want everyone in our country to attain the highest possibilities and develop to the most their inborn and acquired abilities. This can be possible only in an economy of abundance and not one of scarcity Our low living standard is simply an index of too many people trying to share very limited resources.

There are numerous other demographic, socio-economic facts bearing on this question I can only recommend the interested to read the 1951 Census Report Usually government reports particularly census reports, make dull reading but Mr R. A Gopalaswamy's census report makes fascinating reading and it is well worth any interested layman's perusal.

The Problem

The population problem in its simplest formulation is this How can we raise our standard of living (which means more of everything for everybody) and cut down our death rate (which means keeping alive more people who would otherwise die) when we are unable to support the existing population even at the present miserable standard of living, and at the same time our population continues to increase by five or more millions every year? It is simply impossible We should forget all about raising our standard of living and perhaps even lower our already low standard. Or else we must raise our death rate. But no one can seriously sponsor such a proposal. What then is the way out ?

Two Fold Solution

What is the solution to our population problem ? There are obviously two approaches to the question One is to increase tremendously our agricultural and industrial production so that the per capita income in our country is raised Or rigidly control our population growth But if we increase production and also add to our population, then we can only maintain the status quo. That is we shall have to run very hard to stand still

Therefore the better way is to raise the production of our food and manufactures as fast as possible on the one hand and control population growth on the other so that standard of living can go up

Increased Production

What about increasing our production? The Government's efforts as seen in our two plans are dedicated to this ideal We are doing our best to bring more land under cultivation We are trying to raise the crops In fact, we are trying to raise our total food supply so that we can be self sufficient and save the much needed foreign exchange. Secondly we are trying to industrialise our economy Industrialisation needs raw materials, skilled labour capital, machinery and technological know-how We are trying to import Western machines and hire foreign experts. Despite some difficulties we are trying to shift under-employed people from overcrowded agriculture to productive urban factories. I am one of those who believe that large scale and rapid industrialisation will go a great way to solve our population problem. Apart from raising the level of living of our people through more goods, and services, [illegible]

trialization may also result in a lower birth rate.

Family Planning

The second major solution is that of family planning The mere mention of this term raises heat and controversy in many parts of the world I have travelled in many parts of the world and have discovered that the mere mention of this term raises heat and controversy There is so much cultural political and religious prejudice on this question that our country stands high for having taken a courageous and progressive stand on family planning Prime Minister Nehru who has taken this position that we should control our numbers, deserves all the praise, for this policy is an effective step in promoting international peace in the long run.

The Government and voluntary agencies must carry this reform to the nooks and corners of our country Our fashions must change and must be considered unpatriotic for any young newly married couples to have more than two or three children I realise that there are numerous very real difficulties in the path of implementing family planning in rural India, but we must pioneer and perhaps explore methods of permanent conception control Here again we are fortunate that the Ministry of Health and Shri D P Karmarkar are not only aware of the magnitude of the problem but are making serious efforts in the right direction Once our family planning movement gets under way and gains momentum then we shall be able to stabilize our population at some desirable number till economic standards are perceptibly raised.

Women's Education

The third and last approch is women's education. In technical demographic discussions, women's education is never mentioned but I think the solution of our population problem will be nearer and easier if all our young women can have some liberalising education. By education I do not mean what is conventionally imparted in our colleges and universities. We need new educational values for our women so that they may cultivate a sense of dedication to the cause of our country and a new awareness of their role in enriching our life and heritage When our women realise their rights and have children by choice and not by chance by design and not by accident, then half of our battle has been won

The Objectives

The objectives of our population policy must be to build a better, healthier and richer India, an India that will give to its citizens first of all a higher standard of living so that in the midst of possible sufficiency, no child will cry for food and go without it: an India where the inventions of modern science and the conveniences of modern civilization will be at the disposal of every family not merely for the few that can afford them today: an India where people will have no sense of frustrating insecurity and which will make it possible for all groups regardless of caste creed, or language to live in friendship and prosperity, an India that will carry forward her mission of peace to other countries of Asia and the West without the last though of exploitation of anyone, anywhere either in the realm of mind or material possessions.

Agricultural Production in Our Five Year Plans

By SHRI V. T. KRISHNAMACHARI,
Deputy Chairman, Planning Commission

THE object of this article is to explain the position assigned to increased agricultural production in the First and Second Five Year Plans and to indicate the steps by which in the remaining period of the Second Five Year Plan the targets placed before the country can be achieved.

Agricultural programmes have the highest priority in our Plans. The reason for this is obvious. It is only through rapidly increasing agricultural production that we can bring about as large an improvement as possible in the living standards of the 70 per cent of the people that live in the countryside, reduce the gap between rural and urban incomes and promote social stability. As the G. M. F. Enquiry Committee has pointed out, agricultural improvement is an integral part of the much wider programme of raising the standards of rural life. As the Committee has said, "It is only by placing this ideal—of bringing about an appreciable improvement in the standards of rural life and making it fuller and richer—before the country and ensuring that the energies of the entire administrative machinery of the States and the best non-official leadership are directed to plans for its realisation that we can awaken mass enthusiasm and enlist the active interest and support of the millions of families living in the countryside in the immense task of bettering their own condition."

Acting on this broader objective the First Five-Year Plan initiated the Community Development movement. Its aim is to provide the facilities—administrative, technical and financial—needed to assist every village community to raise its standards [illegible] population. The programme for this should be comprehensive enough to make a real impact on the life of all sections of the village community including landless labourers and those who suffer from old time disabilities. The objective is to change the outlook—to create a feeling [illegible] in the community and ensure that the whole [illegible] should feel that they have [illegible] to improve the conditions of the other members.

The programme of work placed before every village by the movement is:

(i) Every family should have a plan of improvement of its own—improved agriculture, cottage and small-scale industries etc., the necessary assistance should be given for the implementation of this Plan.

(ii) The co-operative movement should be spread so that every family is represented on at least one co-operative society in its own right.

(iii) Every family should make its own contribution in labour and (or) money for works of permanent benefit to the community, and in this way the vast unutilised energy in the countryside should be harnessed for the benefit of the community.

(iv) A well organised women's and youth movement should be developed in all villages.

At the end of the First Five-Year Plan the Community Development movement had spread over 85,000 villages.

For the First Five Year Plan the target of additional production potential of foodgrains was fixed at 7.6 million tons as follows:

	(Million tons)
Major irrigation	2.9
Minor irrigation	2.0
Land Reclamation and Development	1.5
Fertilisers and manures	1.3
Improved seeds	0.3
	7.6

The increase in production of foodgrains in 1955-56 over the 1949-50 level was estimated at 10.9 million tons. Of this the increase in production potential on account of works programmes was estimated at [illegible] million tons against the [illegible] target of 7.6 million tons. The total provision in the First Five Year Plan on programmes of rural improvement was Rs. 750 crores. This [illegible] [illegible] [illegible] and [illegible] [illegible] rural water supply schemes, and [illegible] [illegible] The [illegible] [illegible] five year period [illegible] [illegible] [illegible] [illegible] [illegible] several decades before independence.

Irrigation, power and agricultural improvements

In summing up the achievement under the First Five Year Plan, the Planning Commission remarked as follows —

"While the general trend of food production would appear to be upward, it must be admitted that favourable seasons have played a notable part and there are substantial elements of instability despite the evidence of growth of agricultural production during the First Five-Year Plan. The experience of the First Five Year Plan suggests the need for each State to undertake a critical assessment of the various factors which have operated in relation to its agricultural production trends during the past few years From the overall production trends of the country as a whole only cautious conclusions may be drawn

In February 1955 on the eve of the Second Five-Year Plan, the Planning Commission placed before the States the goal of doubling agricultural production within the next ten years In the letter to the States the Planning Commission said

'A programme under which every family in a village is offered the assistance needed in a well organised manner with the objective of doubling agricultural production in the country within a period of ten years and in which every village will be enabled to provide itself with such amenities—wholesome drinking water supply a road connecting it with a main road or railway station etc. within a short time cannot fail to appeal to the country side and evoke enthusiasm It is the duty of the official and non official organisations to explain this objective and see that the implications of this are fully understood so that every family in the countryside is animated by a common aim and outlook and public co-operation is secured in the widest possible measure

The target suggested is by no means impossible of achievement As the World Bank Mission observed in 1956 proper application of known techniques in conjunction with the possible expansion of irrigation and the cultivated area could increase India's agricultural output four or five fold In every village there are progressive farmers whose yields are two or three times those of the rest of the village If by suitable measures all agriculturists can be assisted to bring up their level of production to those of the progressive farmers India's food problem can be finally solved

The targets worked out by the States in the first instance were, however, not found adequate Revised discussions were therefore held between the Ministries of Agriculture and Community Development and Planning Commission on the one side and the States on the other in September October 1956 The targets fixed as a result of these discussions are shown below —

Commodity	Unit	Estimated production 1955-56 (base year)	Targets of production
Foodgrains	million tons	65 0	80 4
Oilseeds	,,	5 5	7 6
Sugarcane (Gur)	,,	5 8	7 8
Cotton	million bales	4 2	6 5
Jute		4 0	5 5
Other crops			
All Commodities			

If these targets are realised agricultural production as a whole will increase by about 28% the increase in the production of food grains being 25% and of commercial crops about 34%

The provision for programmes of rural development in the Second Five Year Plan is Rs 1026 crores as against Rs 760 crores in the First Plan Besides this there are much larger allocations than in the First Plan for short and medium credit fertiliser loans rural electrification village and small scale industries in rural areas and allied heads

The Plan for each State provides for programmes for utilisation of irrigation facilities production multiplication and distribution of improved seeds especially of paddy wheat and jowar use of fertilisers compost and green manures spread of Japanese method of cultivation soil conservation etc During the initial years of the Second Plan in every State efforts are to be organised to cover every acre with improved seed and along with fertilisers and organic manures and green manures Programmes for improved seed fertiliser and organic manures are indeed not separate programmes. Each of them has to be employed on every acre of land in the right proportion and the cultivation techniques have to be adopted The Plan provides for the opening of 4 185 seed farms during the plan period.

The targets fixed for the States were as follows —

Foodgrains

	(million tons)
Major irrigation	3.02
Minor irrigation	1.89
Fertilisers	3.77
Improved seeds	3.40
Land development	0.94
Improved agricultural practices	2.47
	15.49

The Planning Commission has always stressed that in every village the panchayat and village co-operative should have a programme for the village—which would be made up of all family programmes for which the entire village would be prepared to work. These should be fitted into block and district programmes and through these into State programmes. The Community Development movement spread over 85,000 villages in the First Five Year Plan period. By the end of the current year it is anticipated to cover about 3 lakh villages. By 1960-61 practically all the villages will be covered. This organisation is the agency at the disposal of the States for reaching all families in the countryside. In my Mount Abu speech I suggested an outline of a village programme for adoption. It is set out here:

(i) Multi purpose, large and medium projects: Construction of the field channels needed to utilise the irrigation available and their maintenance in an efficient condition from day to day.

(ii) Minor irrigation works including tubewells. The responsibility for maintaining these wells and for excavating and maintaining field channels is the responsibility of the village.

(iii) Contour-bunding, soil conservation and other programmes for dry farming in the dry areas and [illegible]

(iv) Scientific agriculture:

(a) Producing as a permanent arrangement in the village all the seeds and organic and green manure needed, arranging for the supply of these [illegible] [illegible]

(b) Arranging for the [illegible] [illegible] [illegible] [illegible]

(c) Promoting the use of Japanese method of cultivation in all areas suitable for it and other advanced techniques for wheat and other crops which are suggested by the technical departments and in other ways work for a diversified agricultural economy.

(d) Development of animal husbandry programmes: dairy, poultry, fisheries, etc.

(v) Programmes for supplementary occupation: Cottage and small-scale industries, etc.

(vi) Consolidation of holdings: A programme of consolidation of holdings is essential especially in areas which are irrigated or have assured rainfall for the effective implementation of the groups of programmes which I have indicated above.

(vii) Works for the benefit of the community. Every family should devote a portion of its time to building up permanent assets of value to the community.

(viii) Women and the youth in the village should play their full part in these activities. The centre for these should be the village school.

With the spread of the community development movement, this programme should be implemented from year to year in every village on carefully prepared lines. Gradually also these village institutions should be linked with institutions at higher levels.

The progress made in the States in the matter of [illegible] of programmes has been recently reviewed in the "Appraisal and Prospects of the Second Five Year Plan". Though much remains to be done, there is no doubt that everywhere there is heightened awareness of the need for [illegible] [illegible] [illegible] [illegible] [illegible] There is every reason for hoping that [illegible] [illegible] [illegible] will be achieved.

Intelligence Test

(Below are given some questions to test quickness of your mind and intelligence It does not matter that you attempt all the questions What matters is the time taken by you to find the correct answers The whole paper should not take more than 30 minutes to a fairly intelligent person Try now and find out)

—QUESTIONS—

Q 1 A train leaves Dehli every hour, 24 hours a day and a train leaves Kanpur every hour 24 hours a day It takes six hours for the trip from Delhi to Kanpur It takes six hours for the trip from Kanpur to Delhi You are on a train which leaves Delhi for Kanpur at eleven in the morning As your train pulls out of the Delhi station a train from Kanpur is just gasping out its last chug as it slowly comes to a halt.

Including this incoming train how many trains will you see enroute from Delhi to Kanpur through out your trip?

Q 2 Which two words of the five in brackets in each line are connected with each other in the same way as the first two words in that line?

e g, boy, girl (man, young woman, baby, old)= man and woman

1. King queen (prince duke princess earl marquis.)
2. Oar boat (beak, wing bird egg bacon)
3. Pig pork (bread, cheese sheep, lamb mutton)
4. One two (thirty, forty fifty sixty, seventy)
5. Arm hand (leg knee foot, wrist elbow)
6. Ship sea (camel lion, tiger desert abandon)
7. Football goal (run, walk, cricketer bat handle)
8. Flock, sheep (lead swarm school herd bees)
9. Ink, pen (mirror photograph picture paint brush)
10. Book, chap er (volume play date act novel)

Q 3 At a christmas party the following guests were present: Mrs. Jones, aged 75 years Mr Smith aged 45 years, Mrs Smith aged 40 years Miss Robinson aged 23 years Tom Smith aged 17 years Harry Brown, aged 13 years, Mary Brown aged 12 years Elsie Smith aged 5 years John Smith aged 2 years and Janet Smith aged 2 months. Each received one of the presents mentioned below To which of the guests were the presents given?

1. A baby s rattle
2. Trousseau linen
3. A schoolgirl s diary
4. A box of tin soldiers
5. A bottle of scent.
6. A ' schoolboy s diary ,
7. A doll
8. A thick woollen shawl.
9. A box of cigars
10. A tennis racquet (weight 13¼oz)

Q 4 In order to get on in life you should

(a) Never speak unless spoken to,
(b) Work hard
(c) Eat more fruit.
(d) Read the newspaper

Q 5 A friend writes I have walked over from Byforewood today where I had the misfortune to break a limb yesterday

Can you guess from this which limb probably he broke—his right arm left arm, right leg or left leg?

Q 6 Arrange the words in each question to make it as sensible a statement as possible Do this in your head" and state whether the statements are always true usually true or occasionally true

1. If ponds freeze very cold it will is
2. In the [illegible] midnight does not England;
3. milk milkmen deliver the to forgets

4 young girls I like play with to dolls;
5 they to stations no petrol buy motor list when petrol,
6 the cry at the cinema pictures people shown make
7 an egg cannot make an omelette without breaking one,
8 she has least when a married lady gets at one bridesmaid
9 their are thick people London way so that fore in the late
10 rides on a police man who is to be liable stopped through the nigh by a light at the town without his bicycle

Q 7 Something is wrong' In each of the following sentences. Find out the absurdity

(i) He asked for a match to light an electric fire

(ii) The Crown Prince told his men that he would abdicate the throne

(iii) The goose could be seen with its duckling on the pond

Q 8 A chain has twenty links The upper ten links will each support a weight of 80 to 100 pounds the lower five links will each support a weight of 50 pounds, and the others will each only support a weigh of 60 pounds What load will the whole chain bear?

Q 9 Find the mathematical fallacy in the following —

(a) Smith purchased a shoe from M/s Easywear for Rs 30/ After Smith was gone, it was discovered that he should have paid only Rs. 25/ John was sent to refund 5/ to Smith but John returned only Rs 3, and kept Rs 2 for himself Smith had paid Rs. 30 but we can now account for Rs. 29 only Rs 27, cost of goods paid by Smith and Rs. 2/ kept by John what about the balance of Rs 1/

(b) 16-36=25-45

Now adding 81/4 both sides we have

$$16-36+\frac{81}{4}=25-45+\frac{81}{4}$$

$$\text{or } \left(4-\frac{9}{2}\right)^2=\left(5-\frac{9}{2}\right)^2$$

$$\text{or } 4-\frac{9}{2}=5-\frac{9}{2}$$

or 4=5

Q 10 Thread rated

(i) Write the last letter of the word in this extraordinary sentence that has more than twelve letters

(ii) Write down the number of letters in the first third word in this sentence unless a cat is bigger than a rat, in which case write the word "Rat".

ANSWERS

Ans. 1 Since it takes ten hours to cover the trip from Kanpur to Delhi, the train which pulls into Delhi had left Kanpur at 5 a.m. You will arrive Kanpur ten hours later at 5 p.m. You will therefore pass trains that leave Kanpur at the following hours: 5 a.m., 6 a.m., 7 a.m., 8 a.m., 9 a.m., 10 a.m., 11 a.m., 12 p.m., 1 p.m., 2 p.m., 3 p.m., 4 p.m. Of course at the exact moment you pull into the Kanpur Station, a train will be leaving for Delhi If you are alert, you you will see also this one The answer then is thirteen trains.

Ans. 2 (1) prince princess (2) wing bird (3) sheep mutton, (4) thirty six (5) leg foot, (6) camel, desert (7) cricket run, (8) swarm bees (9) Palm beach, (10) play act

Ans 3 (1) Jane Smith (2) Mrs Robertson (3) Mary Brown (4) John Smith, (5) Mrs. Smith (6) Harry Brown, (7) Dine Smith (8) Mrs. Jones (9) Mr Smith (10) Tom Smith.

Ans. 4 (b)

Ans 5 Left arm

Ans 6 (1) always true (2) always true (3) occasionally true (4) usually true
(5) usually true (6) occasionally true
(7) always true (8) usually true
(9) occasionally true (10) always true

Ans 7 (i) Fact is, fire not lighted by a match
(ii) Crown Prince does not occupy the throne
(iii) A goose does not have ducklings

Ans. 8 60 pounds.

Ans. 9 (a) In order to account for Rs 30 we have to count Rs 27, the cost of shoes and Rs 3, which Smith has received back Rs. 25 have been kept for John and of Rs. 2 — of which Rs 25 have gone to M/s Easywear

If $a^2 = b^2$ then $a = \pm b$.

Here the mistake was made in ...

Ans 10 (i) y (ii) Rat

...

GENERAL KNOWLEDGE TEST

Test your knowledge. Solve the following questions without any extraneous help. When finished, look up for the answers and compare.

—QUESTIONS—

1. What are the circumstances under which the President may issue an ordinance? What is the life of such an ordinance?

2. Write a brief but comprehensive note on the International Labour Organisation.

3. Write short notes on
   (a) National Cadet Corps
   (b) Central Institute of Education
   (c) Human Rights

4. (a) What is the basis of the controversy regarding our national language.
   (b) How did the Indian National Congress view the problem in its 63rd session at Pragyotishpur?

5. Give a brief description of the Federation of the West Indies.

6. What is the significance of the following
   (a) Apsara
   (b) Youth Hostels
   (c) India's International debts

7. Who was first to isolate an inert gas. Name some inert gases.

8. What do you associate with the following?
   (a) Dr. Karve
   (b) Arya Bhatta
   (c) John Tyndall.
   (d) N. M. Joshi
   (e) Panini

9. What do the following abreviations stand for?
   (a) A M S C F
   (b) W C O T P
   (c) U S A A F
   (d) V I
   (e) G C M G

10. Where are the following located?
    (a) Kremlin
    (b) Woolworth Building
    (c) Fuji yama
    (d) Capitol.
    (e) Sphinx

ANSWERS

1. In the event of Parliament being not in session the President has been empowered under the Constitution to legislate by the Ordinances if he is satisfied that circumstances exist which render it necessary for him to take immediate action. But the Ordinance thus promulgated unless withdrawn earlier by the President must be laid before Parliament and shall cease to operate at the expiration of six weeks from the reassembly of Parliament. The Ordinance shall however cease to have effect immediately if it is disapproved by both Houses of Parliament.

Thus the President may enact by Ordinance what Parliament might have enacted. If an Ordinance which embodies wholly or partly or with modifications the Provisions of a Bill pending before the House is promulgated a statement explaining the circumstances which necessitated immediate legislation by Ordinance is required to be laid on the Table at the commencement of the session following the promulgation of the Ordinance. Such a statement is also required whenever a Bill seeking to replace an Ordinance with or without modification is introduced in the House.

2. The International Labour Organisation is an inter-governmental organisation which was established in 1919 as part of the Treaty of Versailles. In 1946 the I.L.O. became the first Specialised Agency of the United Nations. At present seventy eight countries are its members. [illegible] countries both big and small so that by and large the organisation is truly global in every respect. Another feature distinguishing the I.L.O. from other Specialised Agencies is its tripartite [illegible]. The I.L.O. has no power of sanctions or enforcement and has to depend for all its actions on mutual agreement not only between ex

ries but also among the main parties concerned In all deliberations at the Conference the Governing Body or Industrial Committees all the three parties—governments employers and workers are represented with full freedom to discuss and vote independently

3 (a) A committee under the chairmanship of Pandit H N Kunzru known as the N C C. Committee was constituted in July 1946 to make recommendations for the establishment on a national basis, of a cadet corps organisation in schools colleges and universities. After carefully analysing the needs of the youth of the country the Committee submitted its report to the Government of India in March 1947 Early in 1948 Government decided to implement the recommendations of the Committee the National Cadet Corps Act being passed by Parliament a little later the same year

The aims to be achieved by the N.C.C. are firstly to develop character comradeship, the ideal of service and capacity for leadership in young men and women, secondly to provide service training to young men and women so as to stimulate interest among them in the defence of the country and thirdly to build up a reserve of potential officers to enable the Armed Forces to expand rapidly in a national emergency The N. C. C consists of three divisions the Junior Division formed from amongst students of schools the Senior Division enrolled from regular students of colleges and universities and the Girls Division enrolled from among girl students of schools and colleges

(b) Set up as an all India institution by the Government of India in 1947 the Central Institute of Education is administered by the Central Ministry of Education and is a constituent college of the University of Delhi. It has two main functions (i) to conduct researches in education, the findings of which should be useful to the country as a whole and (ii) to offer courses particularly of an advanced nature to teachers and other educational personnel

The activities of the Institute as it is today may be classified under two broad heads (i) teaching and (ii) research On the teaching side it runs courses leading to the B Ed M Ed and Ph D Degrees of the University of Delhi On the research side work is [illegible] fields [illegible] It also has a [illegible] [illegible] qualified [illegible] Also attached to the [illegible] [illegible] [illegible] nursery [illegible] and an experimental basic school

(c) With the signing of the United Nations Charter in 1945 for the first time in human history Human Rights became a matter of immediate practical concern to various governments as well as international organisations. In Article 55 of the Charter of the United Nations the new World Organisation was called upon to promote "universal respect for and observance of human rights and fundamental freedom The Charter did not define rights to be protected.

It was left to a United Nations Commission headed by Mrs Franklin D Roosevelt to elaborate this resolve into a Universal Declaration of Human Rights which was adopted on December 10 1948 by the United Nations General Assembly meeting at the Palais Chaillot in Paris The Declaration was a statement of principles and was not legally binding on member states It was to be followed by the formulation of an International Bill or Covenant of Human Rights

4 (a) After it was provided in the Indian constitution that Hindi is our national language and it will replace English as an official language within 15 years after the commencement of the constitution (26th Jan 1950) at the discretion of the President doubts began to arise in the minds of our leaders whether Hindi would be able to replace English within the stipulated period of fifteen years As time went by the doubts changed into apprehensions and some voices were heard to say that English should be retained as an official language for indefinite time The cause of English has been reinforced by the slow development of Hindi and the apathy of some of the non Hindi areas towards the learning of Hindi However the Indian National Congress and the Government are conscious of the difficulties involved in the change over to Hindi The question was discussed at the 63 Session and a resolution was adopted defining its policy regarding the adoption of Hindi

(b) The resolution said that the official language for all-India purposes would have to be Hindi, but the transition to Hindi would very naturally have to be gradual [illegible] the progressive use of both international [illegible] and provincial language [illegible] as regards as long as the [illegible] has to be [illegible] and [illegible] and it would be [illegible] [illegible] use of [illegible]

Ans. 5 On March, 21 1956 the [illegible] [illegible] to the House of [illegible] [illegible] of the new [illegible] [illegible] of [illegible] [illegible] future took place

It unites the 10 colonies of Barbados Jamaica, Trinidad and Tobago the Leeward Islands of Antigua Montserrat, andSt Christopher N-veis Anguilla and the windward Islands of Dominica Grenada St Lucia and St. Vincent.

It will have a total population of approximately 3 000,000 a majority of whom are of African descent but with a substantial Indian minority principally in Trinidad where the capital of the Federation will be situated

The mainland colonies of British Guiana and British Honduras and the small Virgin Islands colony have chosen to remain outside the federation for the present but the constitution makes provision for their accession later if they should so decide

The islands forming the federation some of which have been British possessions since the early 17th century vary consid rably in size population and degree of economic development from Jamaica with an area of 4 411 square miles and more than 1 500 000 people and a large number of well established modern industries to Montserrat 32 square miles in extent with a population of 14 000 living almost entirely by agriculture

Ans 6 (a) *Apsara*, India s first atomic reactor or the swimming pool type, reached criticality for the first time on August 4 1956 It is the first reactor to go into operation in Asia outsid the U S.S R It was designed engineered and built entirely by our own people and by Indian industry, except for the fuel elements The fuel elements which contain enriched uranium have been provided by the Un ted Kingdom Atomic Energy Authority

(b) *Youth Hostels* In order to provide cheap food and accommodation to the students while on tour it is intended to set up a network of Youth Hostels in the country This work is carried out through —

1 Youth Hostels Association of India
2 State Governments and
3 Joint Projects by the Ministry of Education and the Ministry of Transport

(c) The substantial increases in the import requirements of the Plan and therefore, of the external assistance needed to meet the balance of payments gap has resulted in sizeable commitments by way of interest charges and the repayment of capital in the coming years

There together with the further additions that may be made in the remaining period of the Plan will throw a heavy burden on the country s balance of payments in the period of the Third Plan This will no doubt present formidable difficulties and unless planning is made right from now about the ways and means of meeting these obligations the country might be taken unawares

7 The late Sir William Ramsay discovered argon in 1894 and later he isolated four other rare gases of a similar inert character The inert gases discovered by him are helium neon krypton and xanon

8 (a) Eminent Indian Educational social reformer Recently decorated with the year's only Bharat Ratana by the President

(b) *Arya Bhatt* A Great Mathematician Author of *Sura Sinddhanta* and Varahamihira lived in the Gupta period

(c) Heat a Mode of Motion
(d) Funder of A I T U C
(e) Famous Sanskrit Grammarian

9 (a) Young Men s Society for Christian Endeavour

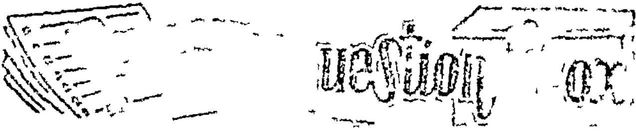
(b) World Comfederation of Organisation of the Teaching Association

(c) United States of American s Air-Force.

(d) The German Flying Bomb

(e) Grand Cross of St Michael and St. George

10 (a) Moscow
(b) New York, U.S A.
(c) Japan
(d) Washington
(e) Egypt.



AN EVERLASTING ANCHORAGE

At the end only two things really matter to a man, regardless of who h is and they are the affection and understanding of his family Anything and everything else he creates is insubstantial it is a ship given over to the mercy of the winds and tides of prejudice But the family is an everlasting anchorage, a quiet harbour where a man s ship can be left to swing to the moorings of pride and loyalty —Richard Syrd

It is with words as with sunbeams—the more they are condensed the deeper they burn.

—Southey

In this column we answer the queries from our readers. It may not be possible to answer each and every one, but as many as possible will be given in order of receipt. Letters from our readers are welcome. These should be addressed to the Editor, Question Box.

SPECIALIZED AGENCIES

Q. Please give the names of the specialized Agencies of the United Nations which deal with (1) Labour Problems (2) Nutrition and consumption (3) Exchange Rates (4) Aviation.

(P. K. [illegible])

Ans.
1. International Labour Organisation (I.L.O.)
2. World Health Organisation (W.H.O.)
3. International Monetary Fund (I.M.F.)
4. International Civil Aviation Organisation (I.C.A.O.)

HORMONES

Q. What are hormones? Please cite some instances.

(R. [illegible] ([illegible]))

Ans. Hormones are distinct chemical substances produced by an endocrine or ductless gland which create a physiological reaction in any other organ (or organs) to which they are carried by the blood stream. Instances are insulin (secreted by the pancreas), [illegible] (by the [illegible] gland), [illegible] (adrenal glands) and sex hormones.

BEGINNING OF 20th CENTURY

Q. Why is the year 1919 and not 1900 regarded as the beginning of 20th century or of the new era in the history of international relations and organisations?

([illegible])

Ans. In [illegible] [illegible] [illegible] [illegible] 1932 [illegible] [illegible]

SUPREME COURT [illegible]

Q. [illegible] proved by the head of the country in India, U.K. and U.S.A.? Who has the Supreme authority in our country—the Supreme Court or the Parliament?

([illegible])

Ans. The President of India is the head of the Executive. [illegible] passed by the Parliament and [illegible] by the President they become [illegible]. If an Act of the Parliament is challenged and the Supreme Court rules that it contravenes certain articles of the Constitution, it [illegible]. Hence the Parliament can make amendments to the Act so that it does not go against the Constitution. In U.K. an Act of the Parliament cannot be [illegible] by any authority. In U.S. the position is similar to that in India.

INDIRECT AGGRESSION

Q. What is meant by the phrase "indirect aggression" as in common's [illegible] U.A.R.?

([illegible])

Ans. Internal propaganda by a foreign country to incite people against the government of the country concerned by [illegible] [illegible] [illegible] [illegible]

INTERNATIONAL [illegible] ... TAL CONVENTION

[illegible]

BRAKES OF THE RAILWAY TRAIN

Q How are the brakes of the railway train applied? Give details?

(A S Nat Dharnwal)

Ans Brakes of the railway trains consist of a piston working in a cylinder and connected by a long train pipe to the engine pulling the train A current of steam from the engine produces a vacuum in the train pipe and in the space below the piston When air is permitted to enter the train pipe it also presses upon the underside of the piston consequently the piston is forced upwards and the attached brakes are put on After the brakes have been applied the engine again produces a vacuum by pumping air from the train pipe in order to take the brakes off again

STATUS & CAPITALS

Q Please explain the political status and respective capitals of the following countries —

(a) Saudi Arabia (b) Kuwait
(c) Bahrien and (d) Oman and Muscat

(Iboton Shah Manipur)

Ans (a) Saudi Arabia is the most important part of Arabia It has reconciled itself with U A R It was strictly neutral throughout the Middle East crisis created by Western Armed intervention America has its Air base at Dahran on a five year lease Capital of Saudi Arabia is NEJD

(b c d.) They are tinny sultanates of Arabia and their names are from their capitals except for Oman whose capital is Muscat

THEODOLITE

Q What is a theodolite? (*Raj Pal, Jodhpur*)

Ans. It is an instrument used by surveyors for measuring angles in the horizontal and vertical planes

ADHESION AND CO HESION

Q Please define and explain the terms of Physics ' adhesion and cohesion in details

(Vishaw Dayal, Chandigarh.)

Ans The term adhesion refers to the attachment of particles of one kind of matter to an object composed of another kind Such as in dipping one s finger in water some water adheres to it on withdrawing the finger But cohesion is the attachment of particles forming for instance a piece of wood by force of attraction. The particles of a liquid do not cohere so well as do those of a solid and in gas cohesion is not apparent at all If you place your finger in mercury instead of water particles do not adhere to your finger because in mercury cohesion is stronger than adhesion In water the reverse is true If a glass rod is placed in water the surface of the water against the rod is curved upwards instead of remaining horizontal because the force of adhesion is greater than that of cohesion.

CHEMICAL ENGINEERING COURSES

Q Name some of the institutes of chemical engineering in India

(Jayanta Kataki Gauhati Assam.)

Ans The following institutions offer Chemical Engineering Courses in India

1. West Bengal Ceramic Institute Calcutta
2. *Deptt of Industries* Industrial Chemistry Class Patna Bihar
3. D E Society s Technical Institute Poona
4. Kalabhavan Technical Institute, Baroda
5. Naoroji Pestonji Baria Science Institute Navasarai, Baroda
6. Saugor University Saugor
7. Delhi Polytechnic Delhi Applied science Deptt.
8. East Punjab University, Deptt of Chemical Technology
9. Gandhi National Memorial Technical Institute Nabha
10. Shri Krishnarajendra Silver Jubilee Technological Institute Bangalore (Annamalai University)
11. Banaras Hindu University, Banaras

Post Graduate Courses are provided by the following institutions —

1. Deptt. of Chemical Technology University of Bombay
2. Lakshminarayan Institute of Technology Nagpur University, Nagpur
3. Indian Institute of Science Malleswaram, P O Bangalore
4. J V D College of Science & Technology Waltair
5. Alagappa Chettiar College of Technology Guindy Madras
6. Harcourt Butler Technological Institute Kanpur
7. Banaras Hindu University Banaras
8. Indian Institute of Sugar Technology Kanpur

THE SUN AND THE SKY

Q *Please explain the following —*

(a) **Elliptical Orbit**
(b) **Solar Radiation**
(c) **Ionosphere** *(D C Jain Bhopal)*

Ans (a) The path of a planet through which it revolves round the sun is shaped like an egg and is known as Elliptical orbit. All the planetary orbits lie nearly in the same plane and the planets themselves all revolve in the same direction around the sun. The orbits are ellipses or oval figures though most of them are nearly circles.

(b) *Planets revolving round the sun* are seen by reflected sunlight. This is possible because the sun radiates light. This process of radiation is called solar radiation.

(c) Sphere of ions consisting of electrically charged atoms or molecules is known as *Ionosphere*.

CINEMATOGRAPHY AND SOUND ENGINEERING

Q Where is the Institute where Cinematography and Sound Engineering are taught?

(Navin Nand Joshi B [illegible])

Ans 1. Cine Technicians Association of South India, Madras provides facilities for the training of cine technicians.

2. Central Polytechnic, Perhampur Broadway, Madras provides 4 year courses in Cinematography and Sound Engineering.

3. Abdulla Fazalbhoy Institute, St Xavier's College, Bombay offers the courses in (a) Cinema Projection (b) Cinematography & (c) Sound recording.

NOVEL AND FICTION

Q What is the difference between Novel and Fiction? *(Zafar Ali Beg Aligarh)*

Ans Fiction is either not true or at least is as probably false as true. It has many forms of which novel is one.

ABBREVIATIONS

Q What do the following abbreviations stand for?

(a) N N R C (b) N E F A (c) A F P F L
(D [illegible] Hazaribagh)

Ans (a) National Nature Preservation Commission [illegible]

(b) North East Frontier Agency

(c) [illegible] Fascist [illegible] Freedom League (Burma)

PERSONALITY

Q Define attitude, aptitude and personality. What is the difference between them?

(B Nanda [illegible] [illegible])

Ans Any condition of things or set of persons viewed as expressing some thought, feeling etc. is defined as attitude. Aptitude is the fitness or teachableness of a person and is purely an intellectual concern. Personality is usually a derogatory remark i.e. reflection directly applied to a person. In ordinary sense it can be explained that a good personality is the outcome of good attitude and aptitude with several other elements.

POWER OF GLASSES FOR I P S

Q What should be the maximum power of correcting glasses for I P S & I A S?

(Tej Bahadur, Patna)

Ans The maximum power of correcting glasses for I.P.S. & I.A.S. should be as below:

I.P.S. Better 6/6 and worse 6/9 the same as mentioned for I.A.S. examination.

Note (i) Myopia in the above standards should not exceed—4D
(ii) Manifest Hypermetropia should not exceed+1.5D
(iii) In cases with error of refraction above 2D ophthalmoscopic examination should be conducted to detect any progress of morbid changes of the choroid or retina.

COWARDICE ISN'T TACT

Some people mistake weakness for tact. If they are silent when they ought to speak and so [illegible] an agreement they do not feel, they call it being tactful. Cowardice would be a much better name. Tact is an active quality that is not exercised by merely closing a dark for count. Be sure, when you think you are being extremely tactful, that you are not in reality running away from something you ought to face.

—Sir Frank Medlicott M P

TO LIVE IS TO STRIVE

Each new level of success that we [illegible] [illegible] that is [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] on the [illegible] [illegible] [illegible] [illegible] of the stage. To live [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] —J P Cardell

LETTERS to the EDITOR

Letters from the readers giving their own opinion or point of view on all interesting subjects are published in these columns. Letters should be brief to the point, neatly typed in double space. They may be written under a pseudonym but must be accompanied by writer's name and address. The views expressed here do not necessarily reflect editorial opinion or policy.

FAMILY AUTOCRACY IN INDIA

Sir,

The Constitution of India envisages for the establishment of Parliamentary democracy in India. But the success of democratic machinery depends upon conscientious and responsible citizens.

Democracy is a Government by discussion. So, it is also a Government by reasoning. Thus, we find that in democracy a citizen must be vigilant over the acts of commission and ommission on the part of the party in power and must be always ready to put checks on irresponsible and undemocratic functioning of governmental machinery. But in India, besides economic and other causes, the working of family administration is proving greatest hinderance towards the growth and evolution of responsible and conscientious citizens. The family plays a considerable role in the evolution of human personality. An ideal citizen is not possible in any State without an ideal family. The family imparts the primary training of citizenship to an individual. The sense of domination and control still permeate in the administration of our family. Our family administration is autocratic and despotic in nature. The head of the family is the monarch of his family empire and ruthlessly exploits the democratic machinery of family administration. Democracy in India rests with our family pattern based on democratic foundation. It is a tragedy to find that the pattern of family is not conducive to the requirements of modern state machinery.

The will of the family monarch is supreme over the will of other members of the family. It has almost become traditional with the head of the family not to listen to what his subordinates and juniors say. The obvious consequence is that members of the family do not get an adequate opportunity to develop their intellectual and moral personalities. I do not mean to say that the family head should grant unlimited and unrestricted freedom to the members of his family. But he must remember, 'Too much interference brings stagnation and too little brings chaos.'

Thus a man finds an undemocratic environment in his family and consequently his mental and intellectual developments are greatly retarded.

Consequently such men coming out of the family never become ideal and conscious citizens. Thus I mean to draw the attention of social reformers through the columns of your esteemed Magazine to root out these unhealthy and undemocratic trends in the working of our family organisations.

Patna — Yours faithfully,

INDIA AND INTERNATIONAL AFFAIRS

Sir,

Lately it has almost been a fashion with our top leaders to express their reactions to every new development in the international situation in total disregard of the adverse repercussions they might produce. It is not easily understandable how positive neutrality can simply mean airing our views on every conceivable subject on this earth, no matter whether it really concerns us or not. Whether it is the Suez or it is *Hungary, Poland, Lebanon* or *Formosa*, we must have to say something on the justice or otherwise of the stand taken by the contending parties thereto. But such views are apt to become stale in no time because of the frequency with which they are expressed and, before long, there will be little inclination to attach any seriousness to them. I feel it is better to reserve our opinion to ourselves to be given only when it is sought for.

It seems we stand to benefit if we bear this

[illegible] when we depend on the assistance of almost all the advanced nations of the world for the successful implementation of the Plans we [illegible] [illegible] of our [illegible]. We [illegible] reserve the right to criticize others when we are unable to [illegible] our own legs. Too much of meddling with international affairs can [illegible] especially when we have created more problems at home than solved them.

HINDI IN BIHAR

Sir

Kindly allow me a little space in yours journal to draw the attention of *Bihar Government* in regard to its recent decision of abolishing Hindi (Compulsory) from the curriculum of Bihar Public Service Commission Examinations Mysore Orissa Andhra Pradesh and Bombay, though they are non Hindi speaking States have done best to place Hindi in State Service Commissions as a compulsory subject but Bihar where 90% of its population speak Hindi is doing the reverse Here Hindi is the medium of instruction upto M A stage In place of Hindi English should be made optional because every graduate is supposed to know English at least Hindi should have enhanced his prestige The Public Service Commission applies the principle of democracy but the Government is doing otherwise It is the Government for by and of the administrators and not of the people Though minority should be safe-guarded yet majority should not be murdered on the altar of minority On the one hand the Goverment is of the opinion to introduce for all intents and purposes Hindi from 1st July 1959 while on the other hand it is trying to suppress it

Patna Yours faithfully

TEA DRINKING

Sir

Now-a days tea drinking has become very common in India From early in the morning till late at night tea is taken at an interval of three to four hours Not to talk of aged people, even children cannot do without it.

Tea owing to its slightly intoxicating effect may be good for older people but it is definitely harmful to children Its excessive use is injurious to health It is difficult to get rid of tea habit With the approaching tea time headache and fatigue overtake the system After tea the body starts functioning normally

Near the examination candidates take strong tea to avoid sleep at night. Excessive use of strong tea produces sleeplessness and they have to resort to soporifics to induce sleep

It is indisputable that excessive tea has made the average Indian lazy He cannot get up from bed unless the so-called bed tea is given to him In order to regain our lost health and vitality we should observe 'missing tea weeks and take milk instead

STUDENTS' EMPORIUM

INDIA'S NATIONAL FIRE SERVICE COLLEGE

In July 1958 India's National Fire Service College completed two years of its existence. For the first year it was temporarily housed in the barracks of the old S[illegible] forces at Rampur from where it was shifted in June 1957 to its new and permanent home in Nagpur.

These two years have been a period of intensive activity and rapid growth for this unique institution which is the first of its kind in India and perhaps the only organisation for systematic training of fire-fighters in the whole of South East Asia. In this short period it has not only succeeded in building up a full-fledged training apparatus virtually from scrap but has also broken new grounds in the techniques of training in the arduous and highly specialised art of fire-fighting.

When the national Government came into being only a few big industrial and port towns were found to have any organised fire-fighting service worthy of mention. Fire-services in the few other places where they existed were found to be defective both in the matter of trained personnel and equipment. Majority of our towns and almost all villages were doing without any fire-fighting service at all.

Moreover, as the pace of industrialisation gathered momentum and new townships and [illegible] centres began to arise the risk from fire accidents also grew, and a serious and urgent need arose to review the state of the fire-fighting services in the country.

In May 1950 a Committee of Fire Experts consisting of [illegible] Chief Fire Officers [illegible] in the country was appointed by the Government. The Committee gave top priority to the establishment of a central institute for the training of fire-fighters since there was hardly any place in the country where modern techniques of fire-fighting [illegible] [illegible] the [illegible] to the existing [illegible] but also to the [illegible] number of [illegible] who would be needed to man the [illegible] fire services.

It is [illegible] that the National Fire Service College has [illegible] [illegible] [illegible] the [illegible] [illegible]. In the experienced hands of its Commandant and a small batch of trained instructors, the College functions as a first rate training centre [illegible] on lines not very different from those of the [illegible] institutions for the training of army and police personnel, the emphasis being on discipline, team work and a high standard of performance.

The College has a hostel with forty fully furnished rooms attached to it. It possesses a substantial library of books on the subject of fire fighting, a film [illegible] and some of the latest types of fire-fighting machines, ladders, pumps and other equipment. The College has extensive grounds for drill and fire-fighting practice complete with a [illegible] high steel tower for training in climbing and rescue operations.

The College possesses arrangements for running five different courses of the duration of approximately six months each. There are two Elementary Courses for beginners, one Junior Officers Course in advanced fire prevention, one Advanced Course in fire engineering and a Seminar for Senior Officers. All these courses have been carefully designed not only to bring out improvements in the existing fire services but also for building up, in as short a period of time as possible, a large body of trained personnel who are needed to provide the man power for the creation of new fire services and for the expansion of the existing ones in the country.

* * *

FAVOURITE READING PLACES

[illegible] a short [illegible] [illegible] reading places [illegible] [illegible] [illegible] the [illegible] [illegible]. The [illegible] [illegible] for general [illegible] and reading [illegible] [illegible] [illegible] a remarkable taste [illegible] [illegible] [illegible] [illegible] preference for place as well as time and [illegible].

For most people the [illegible] [illegible] [illegible] the [illegible]. But the great [illegible] have always been [illegible] [illegible] [illegible] [illegible] where [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] my [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] myself [illegible] [illegible] [illegible] [illegible]

At the other end of the scale in adventurousness was Richard Hooker who was once discovered reading Horace while he tended his own small flock of sheep in a common field as his servant had gone home to dinner!

Reading in the open air is a delight to many but few pursue it with the tenacity of G K Chesterton, who was once seen on Ilkley Moor, in Yorkshire, on a cold spring day, leaning against a tree so completely absorbed in the pages of his book as to be unaware of the heavy rain falling

The same nonchalant reader himself once recounted how as he sat reading in a hansom cab in the streets of London he suddenly noticed something of a commotion among the passers by Only then did he discover that instead of sitting normally on his seat he was in fact sitting on the road with the cab on top of him still reading his book!

Books as travelling companions have been recognised by the enlightened long before the arrival of railways and the railway station bookstalls J A Froude asks what did passengers do on long voyages when there were no novels? If they could read, it seems they merely took other volumes Petrarch made sure his little copy of St. Augustine's *Confessions* accompanied him on every journey he made long or short

Dr Johnson raised a good point about reading on a journey If you are to have but one book with you upon a same time journey he told Boswell let it be a book of science, for when you have read through a book of entertainment you know it and it can do no more for you but a book of science is inexhaustible

On his famous tour to the Hebrides he took his own advice reading on the journey such a seemingly unlikely tome as Cocker's *Arithmetick*

Pliny the Elder loved to read whilst on the move even in his chariot or sedan-chair Napoleon had a special shelf for books fitted inside his coach while Sir Julius Caesar, Master of the Rolls during the reign of King James I of England had constructd the most elaborate travelling library of all a gigantic morocco covered box shaped like a huge volume and containing the forty four classics which he took with him on every voyage

John Addington Symonds seemed to take a long journey just for the pleasure of getting through a lot of reading on it he is recorded as ploughing through Guicciardini's *History of Italy* on a trip from London to Florence quite regardless of the increasing attractiveness of the scenery through which he passed This made Maurice Hewlett comment that a man who could do that ' could read Milton on top of a motor bus which of course is something that has since been done countless times

For in the bustle of modern life a journey, however short affords an unrivalled opportunity for reading books and at the same time for reducing that limitless tedium that so many of our journeyings represent

Of almost equal popularity is the practic of reading at meals—a habit surely restricted only by the niceties of manners and family sociability? It has been said against this much complained of practice—and indeed it still is said to the young—that eating requires all the attention that blood drawn by a book to the brain should be allowed to support the process of mastication and digestion or internal upsets will result

However many great men have read at the table notably Stevenson Johnson, Shelley and Bernard Shaw, who often found the quiet of a prolonged meal time the only chance of reading during a busy day

Some of the books with meals addicts have gone so far as to define appropriate volumes for certain repasts Charles Lamb always found Milton a good supper book but Leigh Hunt preferred to digest his tea or dinner with the latest book sellers catalogues ticking certain books in the pure imagination of buying them Thomas Campbell said that to read Homer at breakfast each day had become by long habit, necessary to his existence while R.L.S. recommends for breakfast reading Alkman's *Annals* they made him almost forget to drink his tea and eat his egg!

If the book is a good one and grips its reader it matters little where it is read Much worthwhile reading has been done and in some cases still is done in prison According to Sir Edward Cook only there does one find "the acid test of what is readable

Paul Verlain actually taught himself English whilst incarcerated at Mons and it is said that Napoleon's greatest joy at St Helena was always on those days when the ship arrived bringing him fresh books to add to his greedily devoured library of some 8 000 volumes

Lying on a hearth swinging idly in a hammock, soaking in the bath waiting for the dentist, on an elephant's back surreptitiously during a church service standing before the bookseller's stall—the born reader reads anywhere, anytime But few delights equal the

back in bed, which is for most people reading de luxe (By David Gunston)

• • •

CURE FOR UNHAPPINESS COMPLEX

"Nobody loves me" is the hue and cry of the day wherever you go and whomever you meet. And then, of course, the popular complaint "I am so unhappy". This unhappiness complex has become a regular fashion with people today.

There is a psychological backdrop to all this talk of unhappiness, especially popular with the youth of today. Precarious interest in things beyond a youthful mind—adult thoughts, postures or unstable and mature companions—are responsible for these hot house products, blasé, cynical, unhappy.

Unhappiness is the result of one's actions or behaviour. There are, of course, two types of behaviour—impulsive and deliberate. Impulsive behaviour tends to overlook immediate happiness in the quickness and speed of reflex action. The deliberate is in most cases, too practical, too mechanical, too thought out and planned and thus misses the thrill of suspense or the unexpected.

Man's actions are directed consciously or unconsciously to the pursuit of happiness. The stimulus for any action is first planted in his mind with the avowed or unavowed impulse for pleasure. No one decides or does anything unless it will bring him pleasure, whether it may be pleasure in the popular sense of the term or in its deeper connotation intellectual or affection. There is a motive of some sort of self gratification behind every impulse. This self gratification is made synonymous with happiness. There is so much impatience in everybody to reach the pitch of self-satisfaction, that they forget there is no short-cut to happiness.

I know people have everything and yet they are so unhappy. There's something wrong in people's lives. People are unhappy because everyone is only towards comfort, and more and more comfort—a pampering of the [illegible] and physical self [illegible] this [illegible] they [illegible] down as a "search for happiness". The [illegible] are "unhappy" [illegible] about themselves [illegible] in a state of envy and greed. Unhappiness comes from [illegible] and modern [illegible] which he [illegible] happiness.

[illegible]

found a need for [illegible] psychology or psychiatry. This branch of science and the men who follow it in reality are only serving the purpose of the old time confidante. "No one who has friends with willing ears is never lonely." And loneliness is the basis of insecurity and insecurity is the definition of unhappiness. A friendship provides sympathetic understanding and a proper appreciation of troubles and private fears which are more [illegible] when aired in the [illegible] of one's own mind.

Speaking of one's daily day-to-day annoyances to a sympathetic friend knocks the hurt out of it, enables you to see life in its correct perspective. Your friend may not be giving you any active advice or any solution but in the process of this telling and the hearing [illegible] [illegible]. This [illegible] with [illegible] and you do not trust a [illegible] because he is honest. If honesty is what you are looking for in a friend, your enemy would probably be your best friend. You say your heart out to the psychiatrist because he is the only one you can pay to hear those things you would be ashamed of declaring [illegible] especially if they are very close to you.

The only [illegible] of happiness is permanently contentment and the degree of happiness one can reach is in proportion to the sorrow one has experienced. The deeper you dig a well the more water it can contain.

Real lasting happiness is not relevant to the physical self. Happiness has only one relationship, is of the soul. It belongs to the soul. It is the conquest [illegible] of the physical and mental to the spiritual.

(By [illegible])

• • •

HOW TO DEVELOP A USEFUL MEMORY

The eighteenth century [illegible] Samuel Johnson was [illegible] in the [illegible] [illegible] memory [illegible] "Memory is the primary and fundamental power without which there could be no other intellectual operation."

Without memory there can be no sense of self [illegible] [illegible] as [illegible] Through memory we learn to find words, to talk and to [illegible] [illegible] [illegible]

[illegible]

To a large extent this theory is proved by

the fact that under hypnosis memories can be revived which the individual believes he had entirely forgotten They go back to early childhood and could go further still if the experiences of early existence were capable of being expressed in words

Such memories can often be detected in the symbolism of dreams

But time softens memories so that when we look back we are unable to reproduce the pangs of toothache or the miseries of unrequited love

Once when I was a younger man I had the opportunity of talking to a veteran of the Crimean War in which British troops suffered what were perhaps the greatest privations in history He showed none of the indignation and resentment I expected, but instead chuckled with glee as he recounted successful thefts from neighbouring tents

Years later I listened to a survivor of the 1914-18 war giving his experiences on the Somme His talk was not of bloody massacres and hair breadth escapes, but of the difficulties of cooking chickens stolen from French farms

Similarly it requires a conscious effort on my part to think of the slaughter on the beaches of Gallipoli But I can smile any time at the dismay of my orderly when a piece of shell ripped off his tunic pocket and scattered its contents.

We should learn by past experiences but we should not be reacting to them as if they were still present The lesson of war is the futility of war and the lesson of life is that human nature is infinitely adaptable and that the greatest tragedies and misfortunes can be surmounted

Memory enables us to assimilate to digest, and to profit by those happenings which have touched ourselves Being naturally selective it enables us to do this with the minimum of pain

When the opposite appears to be the case and the individual says I can t forget I wish I could it is because he is using memory as a form of self flagellation

I can t forget means "I cannot forgive myself

Cannot Forget It is noteworthy that such reproaches are commonly concerned with lapses from childish standards rather than adult sins. They may centre around a son s failure to reach the bed of a dying mother or a daughter s lapse in failing to nurse her father

The sort of memories which wake us up at night years afterwards and which make us 'want to kick myself are incidents which affect our own self esteem

If they can act as reminders to be more patient more careful more far seeing such recollections can be wholesome But not if they are simply accompanied by wishes that events had happened differently

Those whose minds refuse to leave some tragedy of the past should accept it squarely and see in the finality of death a reason for forgetting and self forgiveness rather than dwelling on the impossibility of explanations and exonerations.

The child who has done wrong needs to confess and be punished so that it may start again with a clean slate. The individual who is punishing himself through dwelling on the past is doing so because he is seeking forgiveness

Religion which refers forgiveness to a Heavenly Father can be of assistance here while logic tells us that we can only be actually responsible for what we do in the present fleeting moment, and should therefore concentrate on that

One cannot discuss memory without discussing the ability to memorise, which is a different angle altogether It is in order to improve the power of memory that many people turn to psychology for guidance

Memory depends upon concentration repetition and association If we can link the facts we wish to learn with something pleasant we will retain them more surely than otherwise

We may have to do this artificially because the facts themselves are dull Perhaps we can find a way to link them with some story or joke so that the one recalls the other

But one must have some purpose in trying to learn. Knowledge of the facts may be a necessary step forward in life or perhaps will add to one s status and self esteem. These are pleasant ideas which give a stimulus to memory

Sometimes facts can be woven into a jingle which makes them easy to memorise One example is the well known "Thirty days hath September April June and November....

Such an arrangement is called a mnemonic and it is a good practice to make one up for oneself

To improve the memory for names and faces, use all the three requisites—concentration,

repetition, and association. Take a good look at the individual you are meeting, noting his general appearance and any conspicuous feature while you repeat the name. "Very pleased to meet you, Mr B—"

Bring the man's name into your conversation with him as often as you reasonably can. Remind yourself: "When I meet him again I shall recall all the circumstances and remember his name, Mr B."

It is a good thing to carry a note book in which to jot down names, addresses and telephone numbers which you wish to remember. But if you wish to improve your memory, you will think hard as you do so and form a clear picture of yourself writing these facts on a certain page of the book.

By doing this you will use the notebook to confirm your memory and not merely to jog it. What has never really been in the mind cannot be recalled.

As already said, memory is selective. The selection is the work of the unconscious part of the mind which is the part which retains childish characteristics. Memory dwells, therefore, on pleasant things and jibs at being asked to look at what is unpleasant.

The name of the town where you experienced a business defeat will escape you, though it be "on the tip of the tongue."

But you think with pleasure of another town in which you had success. Its name may even keep on obtruding itself when you try to think of the other.

One very soon learns that any trace of anxiety can block the memory. The more you "rack your brains" the more hopeless is the effort of memory.

This is very noticeable when you have mislaid something you badly need. If you get all worked up about it, and conduct a frantic search, you are quite likely to meet with frustration.

Pursue your search with the calm certainty that what you want is [illegible] to be found. Make a clear picture of the last time you saw the [illegible] and then let your [illegible] [illegible] [illegible] [illegible] [illegible]

[illegible]

who have been going to the [illegible] work and [illegible]

While there is no limit to the work a man can do if he [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] unless he has period[s] of [illegible] and [illegible] in what [illegible] good to him.

This is [illegible] the case when he is driven by anxiety to qualify within a [illegible] time or to [illegible] and enjoy the [illegible] of his [illegible]

It [illegible] happens sometimes that a man is working for some object which [illegible] him and may even [illegible] [illegible] will to fail. Memory then ceases to be his servant and he [illegible]

Do not get panicked if your memory is no longer yours to command. Search for the causes, and you will [illegible] that you can keep your powers of memorising up to a [illegible] [illegible] level of efficiency.

(From *The* [illegible]
By D. R. [illegible] Ltd.)

GUIDE TO CAREERS—THE TURNER

A lathe is a machine that supports and rotates metal pieces while they are cut to shape by stationary cutting tools. The [illegible] consists of a long horizontal bed, upon which is [illegible] a head stock for carrying the spindle of the rotating spindle and other parts, [illegible] (including carriages) and a tail stock [illegible]

A Turner's Work is to [illegible] [illegible] according to specification, [illegible] [illegible] and threading [illegible] on a lathe. The [illegible] is set up on a lathe and appropriate cutting tools are selected, sharpened and [illegible] for different operations such as [illegible] and turning. The working accuracy is measured [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]

[illegible]

dingly Work is done to the finest limits with precision tools and in the process the larges and the smallest of lathes may be operated by him All types of ferrous and non ferrous metals such as iron steel brass copper aluminium etc are also fashioned

The work is performed inside a workshop which is normally noisy because of the operation of a number of machines and is normally performed by continuous standing at one place A worker s hands and clothing are apt to become dirty from contact with oils lubricants greasy tools and materials Working hours are generally during the day time but in bigger workshops these may be fixed in shifts The working schedule is usually 48 hours a week, and conditions of work and employment are steadily being improved under the legislative measures of various States

Personal Qualities necessary for the job are willingness and capacity to take up manual work a steady hand for the skilful handling of the machines and mental alertness and mechanical ability for accurate performance Like any other machine job the work requires an average standard of health

To Qualify as a turner practical training should preferably be combined with a course in the trade Young men desirous of entering this profession can qualify for it in one of the following ways —

(a) **Apprenticeship** which means learning the trade by working on the job under the guidance and supervision of an experienced worker with or without some allowance or wage There are no educational or age limitations for starting as an apprentice though some of the bigger concerns have prescribed definite qualifications and a method of selection for recruitment of apprentices In small workshops apprentices are generally accepted on a personal approach through a foreman or an employee

Some private as well as Government employers such as the Indian Railways the Defence Services Ordnance factories State owned or managed industrial concerns take up paid apprentices who are treated as regular employees On successful completion of training the apprentices are usually absorbed a technicians

The duration of the training varies from six months to five years and persons of varying qualifications from literates to matriculates are eligible

(b) **Trade Schools**, run by individuals private managing bodies and charitable societies are scattered all over the country These schools charge tuition fees varying from Rs 2/ to Rs 10/ per month, and offer theoretical and practical training in the trade The basic educational qualifications required for the training varies in different schools but is usually the vernacular middle standard However for promotion and higher earnings a matriculation standard is desired

Industrial Training Centres run by the Central and State Govornments also give basic training to technicians seeking industrial employment There is no uniformity in the requirements for admission but usually persons who have attained middle to matriculation standard are admitted. The duration of the training varies from six months to two years Normally no tuition fee is charged some deserving trainees are given a stipend to meet their living expenses

Training in a trade school or training institute covers instruction in the following subjects —

Arithmetic drawing properties of metals and alloys and their heat treatment measuring instruments theory of the trade estimation of cost and material

Turners are highly skilled workers and greater emphasis is usually laid on their practical performance than on the theoretical knowledge of the trade.

Further Training and practice are necessary for the performance of precision work. Only long years of continuous work on the job can give a worker the necessary experience and confidence Turners can also specialise in a particular field of industry or may learn the operation of other machines to be eligible for posts of machinist, capstan and turret lathe operators etc

Openings exist in all branches of heavy and light engineering industries, Government (Railways Defence Services, Civil Aviation workshops) and private engineering concerns shipyards ordnance factories automobile plants oil refineries foundries machine tool factories repair and job workshops metal fabricators etc. Repair and maintenance work also absorbs a large number of turners Energetic turners with financial resources can set up their own repair and job shops

Entry Into The Trade will depend upon an individual s qualifications. Trainees usually prepared at trade schools normally have to

undergo further practical training in some workshop to gain experience and confidence. Apprentices are usually selected by the managements on requirements of the concerns and workshops. Employment can be sought in local engineering concerns and repair shops for which personal contacts are generally useful.

Prospects For Advancement to better paid jobs are very bright. Experienced turners, capable of first rate performance can earn higher wages and secure early advancement to such posts as journeymen, machine shop erectors, machine supervisors, job inspectors, chargemen, assistant foremen and foremen.

Salaries paid to turners depend upon the performance of individuals and the type of employing establishment. A fresh turner can start on Rs. 2/8 to Rs. 4/- per day rising to Rs. 4/- to Rs. 7/- within a year or two. Precision work turners earn Rs. 7/- to Rs. 10/- per day or Rs. 150/- to Rs. 300/- per month.

Employment Outlook: Fabrication and repair of all types of machinery, machine tools and machine parts require the services of skilled turners. For the increased production of steel, three new iron and steel mills are proposed to be set up in the country during the Second Plan Period. Increased production of steel will in turn result in the establishment of a number of engineering workshops for the fabrication of plants and machinery for all types of industries.

Employment statistics reveal that there is already a general shortage of properly trained and skilled turners all over the country. Future expansion in the industrial and engineering fields will result in a still greater demand for these tradesmen.

For Further Information you may contact:—

(i) The Director of Industries/Technical Education, for training facilities in your State.

(ii) The Manager of the Training Schools/Institutes for further information on training facilities.

(iii) The nearest Employment Exchange for information on jobs, stipend and in-plant training facilities in your area.

(Ministry of Labour, Government of India)

ELIN WAGNER FOUNDATION FELLOWSHIP

The Elin Wagner Foundation (Sweden) has made an offer of a postgraduate Research Fellowship of 10,000 Swedish Crowns. The sum may be divided between two Fellowships which is open to students of all countries.

The object of the Fellowship is to foster scientific research regarding the role played by women from the time of the earliest matriarchal cultures and to investigate the later developments of the influence and position of women in our time. The sphere of research embraces both ancient and modern fields of human endeavour such as archaeology, ethnology, history, sociology, economics, law, psychology, etc.

The special application form and further information may be obtained from the Chairman, Mrs. [illegible], [illegible], 9, Stockholm O, Sweden. Applications should also be sent to the same address not before December 31, 1958.

• • •

SCIENCE RESEARCH SCHOLARSHIPS

The Royal Commission for the Exhibition of 1851 has repeated its offer of the Science Research Scholarships and the Rutherford Scholarship of the Royal Society for 1959.

The Science Research Scholarship is for research in some branch of pure or applied science for a period of two years and is of the basic value of £ 550 per annum.

The Rutherford Scholarship will be awarded for experimental research in any branch of natural sciences, but preference will be given to candidates who propose to work in Experimental Physics. It will be tenable for three years and its value will be between £ 450 and 550 per annum.

Candidates should possess a first class Master's degree in science and at least two years' research experience. Their record of work must indicate a high promise of research for advancing knowledge of its application to the industries. They should be ordinarily under 26 years of age on May 1, 1959.

The last date for the receipt of applications is December 31, 1958. Further information may be had from the Ministry of Scientific Research & Cultural Affairs (Scholarships Section), Government of India, New Delhi. Application forms duly filled in should be forwarded to the Ministry of Scientific Research and Cultural Affairs through the Head of the Institution where the candidate is working or studied for the degree.

FILM WORLD

AMERICAN FILMS MAKING A COME-BACK

The United States film industry is making a come back in its fight against television.

The latest returns show that cinema attenddance in the first half of the year was three per cent higher than in the corresponding months of 1957 The rise is encouraging although it by no means wipes out losses sustained in earlier periods

Many Americans say they are tired of quiz shows—and this reaction comes at a time when several of these programmes are being investigated following allegations that they are weighted in favour of contestants who have friends in the right places.

It will take the cinemas a long time to regain the hold they once had

Attendances during the immediate post-war years, before television became accepted as a necessity in every home averaged 87 500 000 a week By 1957, this total was down to 46 500 000 weekly

Over the same period television advertising revenue showed exactly the opposite trend Practically non-existent in 1947 it amounted to $433 000 000 in 1953 with a further rise to $897 000 000 in 1956

By last year there were so many sets in the United States that 78 per cent of the population could look in

Now that the cinemas are showing gains advertisers are becoming more cautious about their television accounts

Usually all advertising time for the autumn is sold out on the major networks by June This year there were still some periods unsold in the middle of July

Although routine films no longer attract the audiences who would have attended out of habit in the old days a few outstanding productions are drawing big crowds

Only about 200 cinemas are equipped with the special screens necessary for Around the World in 80 Days, yet it has taken well over $30 000 000

• • • •

CINEMA ATTENDANCE IN BRITAIN

The decline in cinema attendances in the United Kingdom continued into the second quarter of the year But the drop was less serious than in other recent periods Attendances were four per cent. lower than in the opening three months and 15 per cent. down on April June last year During the previous four quarters the decrease averaged 20 per cent

These figures issued by the Board of Trade are compiled from returns made by 4 027 cinemas Gross takings in the second quarter amounted to just under £21 000 000

• • •

LURING PATRONS TO CINEMA

A determined move to break the public's television habits by interspersing the film pattern with presentations of top-line artistes live on cinema stages is being made by the Rank Organisation

Although these presentations are limited to one, perhaps two nights a week in about two dozen centres in the country it is believed that these star appearances will encourage more people to get away from their homes for entertainment and are also likely to prove beneficial to the cinema in the long run In coming months American and British pop musical stars as well as ballet opera and at Christmas Pantomime will ring the changes at a number of C. M A houses

• • • •

LOSS ON BRITISH GOVERNMENT FILMS

The British Lion studios which are owned by the State lost £154 000 last year

No dividend was paid against 15 per cent in the previous year

The company is one of the three largest of its kind in this country

Heavy outlays for modernising the studios at Shepperton Middlesex are blamed for the result

• • • •

U K. ADOLESCENTS MORE FILM MINDED

People in Britain go to the cinema on an average once every three weeks and younger adults constitute the screen's biggest support. Average weekly cinema admissions total 15 600 000

These [illegible] are among findings of a survey [illegible] carried out on behalf of the Screen Advertising Association.

The average man goes to the cinema more often than the average woman—18.6 times a year compared with 15.5 times.

Cinema-going is most popular with the 16-24 age group among whom the average number of visits per person rose to 35.4 per year.

Between 25—34 the average attendance dropped to 20 a year and to 14.8 for the 35—44 group and only 12 for those between 45 and 64.

MOVIE CLUB FOR OVER 60

The Golden Age Movie Club, an organisation to benefit citizens over 60 years of age has been formed in New York. The Club will obtain special discounts on admission prices for persons over 60 in more than 200 theatres in the Metropolitan area. The theatres will issue membership cards to those who apply in person and present proof of age. There is no other obligation or cost beyond the reduced admission prices.

INDIAN FILM'S SUCCESS IN NEW YORK

"Pather Panchali" has set up the highest record at the box office of the New York theatre where its American screening is now being held. It grossed for its first week's run there 6,343 dollars, the previous highest record having been 4,445 dollars.

Those in charge of the film's handling in America hope that the film, which has been highly acclaimed by the American Press and the public, would last for about six months run, if not a longer time, and this will pave the way for the American screening of Satyajit Ray's second film "Aparajito" which won the Venice Grand Prix.

NEW AWARD FOR A JAPANESE FILM

The Japanese film "Tokyo Story" is the first recipient of a new international award, Sutherland Trophy, presented to the British Film Institute by its patron, the Duke of Sutherland.

The trophy [illegible]

Awarded at the close of the London Film Festival which ended on October 31, the trophy, a [illegible] was presented by the [illegible] to a Japanese representative of the producers.

Directed by Yasujiro Ozu, it is a study of the relationship between two generations of a Tokyo family and a study of the effect of time upon people.

MINIMUM PAY FOR WRITERS

The Film Writers Association, at its general body meeting held in Bombay on October 4, fixed the minimum rates of payment to members of the Association for various categories.

The rates unanimously decided upon are:

One story Rs. 2,000; Screenplay for a single film—Rs. 2,500; Dialogue for a single film—Rs. 3,000; and Lyrics—Rs. 250 each.

While these rates indicate the minimum amount payable to the writers in different categories, the Association will have no objection to any higher payment agreed to between the producers and the writers concerned.

A standard form of agreement to be entered into by the members-writers with their prospective producers is also being evolved by the Association in consultation with legal experts so as to safeguard the interests of both the parties.

PENCIL LAMP FOR CINEMA

A three inch tube lamp, the size of a clinical thermometer, has provided the cinema with a revolutionary light source.

Using the principle of mercury discharge lamps but with an added gas [illegible] much power.

[illegible]

a small size theatre twice as long A spare lamp drops automatically into position in the event of a failure while running without interruption of the show

The light quality faithfully renders colour film Other advantages include easiest maintenance no adjustments and the lamp s special adaptability to automatic control systems.

It was demonstrated in conjunction with a remote control situated in the auditorium and operated from a small console which can be sited at any convenient place giving the chief projectionist an audience view of the screen

* * *

WORLD'S OLDEST MOVIE ARCHIVES

The Swedish Film Society possesses the oldest film archives in the world Its unique collection consists of 370,000 different film stills and 600 000 extra copies many rare film copies and other historical material of interest.

The oldest film in the collection is one taken at the Stockholm exhibition in 1897 and the majority of the great film classics are included

An item of curiousity is the dress worn by Greta Garbo in her first great film The Saga of Gosta Berling , dating from 1923

Besides pictures and films the collection housed at the Technical Museum in Stockholm also includes a comprehensive library

Classics from the collection are shown every Saturday afternoon to the public and during certain film weeks they are accompanied by lectures by experts Members of the Society are mainly film people authors critics and technicians but it is open to anybody interested.

The Film Society besides applying itself to history and research has also given modern Swedish film its support worked for better working conditions in the film branch and been a forum for topical debate Films are rented to studio groups at home and abroad.

The initiative taken in the founding of the Society and the collection was that of Dr Bengt Idestam Almqvist noted Swedish film critic Generous contributions by film companies and private donors have helped the growth of the collection and formed the backbone of the society s activities

FILMS MADE IN ROCKET FLIGHTS

Soviet science films made in rockets sent up to a height of 68 and 132 miles were shown in Moscow on September 9 1958 at a meeting of the Standing Committee for Scientific Research Films of the International Scientific Cinema Association.

The rockets were equipped with automatic cameras adapted to stand unusual temperatures, sharp accelerations and conditions of weightlessness during cosmic flight By means of a system of mirrors a record was taken of everything going on within the rocket

During the first flight in 1957 to a height of 68 miles the camera recorded the behaviour and condition of the dogs Malyshka and Linda all through the flight from the moment the rocket left the earth till the animals return on parachutes The dogs were placed in special air tight suits with a transparent front part Throughout the flight they felt very well Only during the first seconds the sharp acceleration caused more frequent breathing When the condition of weightlessness set in the dogs became perfectly quiet and closely watched the rays of the sun which from time to time penetrated the rocket through a window

On the second flight to a height of 132 miles on August 27 1958 the dogs ' Whitey and Brindle were placed not in air tight suits but in an air tight cabin The film shows that the animals stood this travel into space perfectly well.

DOCUMENTARY FILM FESTIVAL

A Polish film The Last Day of Summer directed by Tadeusz Konwicki and Jan Laskowski was awarded the Grand Prize at the ninth International Documentary Film Festival here

' Provided One Can Still Be Drunk " directed by Jean Daniel Pollet (France) the adventures of two adolescents sampling Paris night life won the first prize for narrative films

The Japanese film "Mikuro Non Sekai" ("World of Microbes) was singled out as the best scientific film. The picture is the work of Totsuro Onuma and Mamasi Sugiyala

A Pakistani film. One Acre of Land" was awarded a special diploma.

It was made by technicians of the Aid to Pakistan Organisation.

Economic REVIEW

INDIA'S FOREST RESOURCES

India's forests cover 2.81 lakh sq miles which is about 22 percent of the total area of the country. Of the four forest regions, Madhya Pradesh in the Central Areas and Tripura in the Eastern and Kerala and [illegible] in the Southern Region are having the richest forest areas in the country. In Tripura nearly 60 percent of the total area is under forests while in Assam more than 44 per cent is forest area.

The per capita forest area of 0.2 hectare is however very low as compared to countries like the USSR and the U.S.A. with per capita forest area of 3.5 hectares and 1.8 hectares respectively. India's per capita consumption of round wood is 1.4 cubic feet as compared to 43 cubic feet in the United States and consumption of pulp products 1.6 lb. as against 73 lb. in the United Kingdom. The forest area is also unevenly distributed in the country. The productivity is substantially below the average yield of forests in western countries. In view of these facts the National Forest Policy Resolution of 1952 proposed that the area under forests be gradually raised to 33 per cent of the total area, the proportion to be aimed at being 60 per cent in hilly regions and 20 per cent in plains.

Major Forest Products: With growing urbanisation and industrialisation the demand for timber and other forest products is rapidly increasing. In 1956-57 more than 200 million cubic feet of timber, round wood, pulp and matchwood, firewood and charcoal wood valued at Rs. 21.67 crores was produced.

There are over 1600 known species of [illegible] plants besides a number of animal products. The minor forest products like medicinal plants, essential oils, resins, [illegible] [illegible] gums, [illegible] [illegible], bamboos, canes, fibres, [illegible] [illegible] [illegible], and [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]. These products [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] of [illegible] [illegible] [illegible] and [illegible]. In 1956-57 minor forest produce worth Rs. 7.73 crores were obtained.

Development Plans: In the Second Plan Rs. 27 crores have been provided for forest schemes which aim at the rehabilitation of about 3.3 lakh acres of degraded forests and the plantation of 50,000 acres with important commercial species like teak, 11,000 acres with wattle and [illegible] and 2000 acres with medicinal plants. Another 50,000 acres are to be brought under [illegible] [illegible] [illegible]. The programme also provides for the [illegible] of better [illegible] of timber, [illegible] establishment of timber [illegible] [illegible] [illegible] plants and [illegible] [illegible] of forest resources.

Extraction of Andaman timber: [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] home demand and export. During the first nine months of 1957 21,221 tons of timber and 1,000 tons of [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] by the [illegible] [illegible] department.

During 1957-58 Rs. 1.45 crores were given to the State Governments by way of loans and subsidies for the implementation of development schemes under the Second Plan.

U.N SUGAR CONFERENCE

United Nations Sugar Conference under the chairmanship of Mr Eric Roll of the British Board of Trade concluded its work in Geneva on October 25 with the unanimous adoption of a 48 article international agreement which will remain in force for the next five years Representatives of some 50 countries participated

India Brazil and Peru not members of the old agreement which is expiring in December all announced their accession to the new agreement.

Among other things it has been decided that when the prevailing price exceeds 3 75 [illegible] lb [illegible] Council will meet to

consider the market situation and to take appropriate action.

In the absence of an agreement by the council on the action to be taken, the quotas in effect shall be increased by 2-1/2 percent.

If after action decided by the Council has been taken or if the quotas are increased by 2 1/2 percent, the prevailing price still remains above 3.75 cents the quotas shall be restored to the level at which they were before the aforementioned increase.

If the prevailing price is below 3.25 cents, the quotas shall be reduced by 2 1/2 percent and the Council will meet within seven days to decide whether any further reduction shall be made. If they cannot agree the percentage of the reduction shall be raised to five percent, provided that reductions do not take the quotas below 90 percent of the basic export tonnages unless the prevailing price is below 3.15 cents in which case further reduction may be made.

In order that the market regulated by this agreement should be better equipped to face shortages in time, the [illegible] stocks to be held by the producing countries have been raised from 10 to 12 1/2 percent of the annual production. The maximum allowed is 20 percent.

A new [illegible] has been added to the agreement which is general [illegible] multilateral arrangements. The new agreement sets out the following basic export tonnages for the first three quota years:

Belgian Congo [illegible] Belgium [illegible] 35,000; Brazil 350,000; [illegible] 5,000; Cuba 2,415,000; [illegible]; Denmark 71,000; Dominican Republic [illegible]; France 20,000; East Germany [illegible]; [illegible] 45,000; Hungary 40,000; [illegible] 100,000; Indonesia 250,000; [illegible] 25,000; Mexico 75,000; Netherlands 40,000; Peru [illegible]; Philippines 25,000; Poland 220,000; Portugal (including overseas territories) 20,000; Taiwan 600,000; and Soviet Union 200,000.

The [illegible] for [illegible] of the old agreement are unchanged.

The agreement will be open [illegible] in London during the period [illegible] to 21.

* * *

GATT SESSION IN GENEVA

The 13th Session of the Contracting Parties to General Agreement on Tariffs and Trade [illegible] in which [illegible] of [illegible] amount [illegible] in which 37 countries, accounting for over 80 percent of world trade are represented, opened at Geneva on October 16, 1958.

The tone of the meeting was set by a special report Trends in International Trade prepared by four economists of eminent international standing and presented by the Australian delegation at last year's session.

The report focused attention on two major problems. The first is the widening rather than narrowing gap in economic progress between the more developed and the industrial countries and the growing trade and payments difficulties of the under-developed countries.

The second problem is closely related to the first. Many countries outside Europe are worried that the creation of the European Economic Community (the Common Market) by six Continental countries and perhaps also the proposed European Free Trade Area may reduce the trading opportunities in Europe for primary producing countries not associated with these schemes, particularly in view of the preferential treatment given to the overseas territories of the members of the common market.

Furthermore the experts argue that the use of "deficiency payments" as a method of subsidy is less harmful than "price support". The system of deficiency payments, which is applied in Britain, allows the price charged to consumers in the domestic market to be at the world level, but [illegible] the [illegible] producers through some form of subsidy. On the other hand under the price-support system which is generally applied in [illegible] of Western Europe and [illegible] prices paid to home producers and charged to consumers are [illegible] above the level of world [illegible] system which [illegible] also [illegible] of [illegible] the [illegible] of [illegible].

University Forum

IMPORTANT ASPECTS

Inaugurating a two-day conference of Directors of Educational Seminars which opened in Delhi on September 29, Shri P N Kirpal Secretary, Union Ministry of Education, underlined the three important aspects of these seminars viz study of specific problems publicity and propaganda of the work done and the follow up action E.A Pires Principal, Central Institute of Education, presided

If these three important aspects of the educational seminars Shri Kirpal added were kept in view a good deal of useful work could be done in the direction of improving the educational standards

Referring to the role of these seminars in improving the educational standards Shri Kirpal said that these intended to contribute to the widening of the outlook of both the teachers and the students. These seminars also helped ultimately in formulating a national plan of education

Through these seminars the Government was also trying constantly to forge national unity since the participants to seminars were invited from all parts of the country

The conference was organised by the All India Council for Secondary Education which has so far organised 30 seminars of Headmasters and Subject Teachers

• • •

DISADVANTAGES OF DOUBLE SHIFTS IN SCHOOLS

A two week Seminar of Principals of High and Higher Secondary Schools of Delhi which opened in new Delhi on October 9 has criticised the double shift school system as one of the major factors contributing to the lowering of educational standards. The fortnightly seminar was organised under the joint auspices of the All India Council for Secondary Education and the Delhi Directorate of Education Dr E. A Pires, Principal Central Institute of Education, Delhi was the Director of the Seminar

The double shift system in schools has been criticised on physical psychological and educational grounds. The participants in the Seminar felt that although it was originally introduced as a temporary solution of a problem—the problem of providing schooling facilities for thousands of displaced students from West Pakistan—it has become a problem in itself

Listing the defects and difficulties under two main heads educational and administrative the Principals tried to prove that the system is a negation of education as well as a false economy

According to the findings of the Seminar, the main educational difficulties are (i) the unnatural hours of work for the second shift when the students and the teachers are not in a proper mood to work, (ii) the short duration of the working day with the same amount of work to be covered as a full time single shift school (iii) the inculcation of wrong attitudes towards work as a consequence of poor working conditions (iv) the temptation for the teachers to take up outside work during the long free time at their disposal resulting in inefficiency in their work at school and (v) the stifling of co-curricular activities.

The main administrative difficulties are (i) the shorter hours of work which create difficulties in the way of proper organization of the school programme (ii) the too short interval between the two shifts which greatly affects the cleanliness of the school (iii) the difficulty in the way of a proper up keep and care of property and furniture (iv) the difference in the number of pupils in the sections in the two shifts using the same classrooms which causes a waste of time in the adjustment of seating arrangements (v) the problem of getting work from class IV servants (vi) the problem of setting apart rooms for special subjects like science for both the schools and (vii) the difficulty of organising cultural and educational programmes after school hours.

While recommending the discontinuation of the system under a phased programme spread over a period of five years or so, the seminar suggested certain immediate organisational measures to minimise the evil effects of the system

Some of the suggestions are (i) longer hours of attendance for teachers than for students which may be utilised for correcting assignments, etc., (ii) planning of a double period time-table to get a sufficient unit of

time to cut [illegible] work, (iii) co-operative planning of curricular work by the heads of the two schools through regular meetings, (iv) co-operative planning of extra-curricular activities and cultural and educational programmes outside the regular time-table as well as the introduction of the [illegible] system, (v) the detachment of primary classes from double shift schools (vi) provision of adequate lighting arrangements in each school (vii) the placing of all class IV servants under one and the same head or better still under both of them (viii) residential facilities for all class IV staff or at least for the sweepers and chowkidars on the premises of the school or at least near it and (ix) single responsibility by mutual agreement for each head for a particular length of time for the cleanliness of the school.

* * *

PARENT-TEACHER ASSOCIATION

The Seminar of Principals of High and Higher Secondary Schools of Delhi which was held in New Delhi in October has recommended to the schools to set up Parent-Teacher Associations to ensure better teacher-parent co-operation.

The principals agreed that there was a general apathy and lack of co-operation on the part of parents but they also felt that at present time very little was being done in most of the schools to get the active co-operation of the parents.

According to the principals the proposed Parent-Teacher Associations should have the following aims in view:

To know the child's home environment, to know his interests and the company he keeps, to know the disturbances in his studies, his physical handicaps and emotional troubles, to create an interest in parents in school social problems and to guide the parent in planning his child's career.

The Seminar also discussed the difficulties in the way of [illegible] of these associations. The [illegible] they felt were: (a) lack of [illegible] [illegible] background amongst the parents, (b) [illegible] of some parents towards the [illegible] of their children, (c) Teachers [illegible] [illegible] parents, (d) want of [illegible] among the parents and (e) lack of [illegible] on the part of the parents of the [illegible] [illegible] [illegible].

[illegible] CENTRE IN DELHI

An agreement for the setting up of a [illegible] type [illegible] centre [illegible] small-scale industry at the Okhla Industrial Estate near Delhi was [illegible] on October 21 between [illegible] of the Government of India and the West German Government.

The centre to be set up by the National Small Industries Corporation in collaboration with the West German Government, will be officially opened on January 1 19[illegible].

Giving details of the project to which West Germany is contributing about [illegible] rupees, German Commissioner Mr. [illegible] told a press conference that the centre would impart both practical and theoretical training to promising trainees of [illegible] industrial units. [illegible] of 2,0[illegible] [illegible] would be given a [illegible] month course by the centre's [illegible] staff which would include 23 German [illegible] [illegible] aided by a German director. An Indian director and [illegible] Indian [illegible] would also be attached to the [illegible] and they would in turn learn training techniques from the Germans. "There will be a [illegible] [illegible] of [illegible] [illegible] [illegible] the Germans who will be here for [illegible] only", Mr [illegible] said. He hoped that it would be possible to [illegible] the centre during this period.

Another important feature of the project, Mr. [illegible] said would be production of prototypes of machines, tools and [illegible] to be [illegible] to small-scale [illegible] for commercial production. It would also undertake the manufacture of certain specialised [illegible] [illegible] needed by the [illegible].

Mr [illegible] said that the West German Government would supply equipment worth about 2.5 million [illegible] to bear the expenses of the technical staff for an initial period of three years. West Germany would also meet the expenses for [illegible] the [illegible] staff of the centre in Germany. The Government of India would provide [illegible] [illegible] [illegible] the [illegible] [illegible] [illegible] the [illegible] and [illegible] [illegible] [illegible] [illegible] [illegible].

The [illegible] [illegible] [illegible] would be [illegible] [illegible] [illegible] [illegible] [illegible] the [illegible] would be [illegible] [illegible] [illegible] [illegible]. The [illegible] [illegible] [illegible] January 1 19[illegible].

[illegible] [illegible] Mr. [illegible] said the [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] of the [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] the [illegible] [illegible] [illegible] [illegible] [illegible]

stries Corporation The trainees would be selected by the Regional Institutes of the Corporation from all parts of the country

He said that the centre would have 12 sections, including a tool room foundry and design sections A number of German manufacturers had evinced interest in the project and might co-operate in the production of prototypes of their machines at the centre They would also be prepared to provide training facilities for Indian technicians in Germany and make available to the centre the services of technical experts

EMPLOYMENT FOR EDUCATED YOUTH

The work Cum orientation camp scheme, introduced to tackle the problem of unemployment among the educated youth, is expected to be modified shortly

The training period of six months is likely to be extended to equip the candidates with the basic skill required for self employment

The proposal was considered on October 30 at a joint meeting of the representatives of the Labour Ministry including the Directorate of Employment and Training Delhi the members of its advisory committee and the chairman and officials of the Industrial Advisory Board

The training centre in Delhi has sent out two groups of students. A third is expected to be out shortly The activities broadly comprise vocational counselling guidance and instruction in selected crafts and trades training in citizenship principles of co-operation, welfare schemes and manual work.

In May last it was felt that the six months training should either be followed by apprenticeship in industry or the course should be made self sufficient to enable the trainees to settle down in life The issue was fully discussed by experts who were unanimous that the scheme should be modified

ENGINEERING COLLEGE FOR BOMBAY

A new engineering college, estimated to cost Rs 4 052 000 is proposed to be opened in Bombay to meet the increasing demand for engineers to man schemes under the Five-Year Plan

The college will be the second engineering institution in Greater Bombay and the fourth in Bombay State

• • •

JAMIA MILLIA'S B ED COURSE

The B Ed course of the Teachers Training College, Jamia Millia, Delhi, which was closed indefinitely on October 28, reopened on Tuesday Nov 4 following an assurance from the Vice Chancellor, Prof M. Mujeeb that he would do his best to secure recognition of the B Ed degree by the Government.

According to the Vice Chancelor the course was closed because the behaviour of the students was derogatory to the College and to the tradition of student discipline maintained by it.

The Union Minister Dr K.L. Shrimali, advised a deputation of students on Nov 3 to end the strike and go back to their class pending decision on their demand by the Government

The trouble started on October 16 as the students feared that they might not be entitled to receive the B Ed. degree on completing the course The situation continued to deteriorate till October 28 when the students absented themselves from the classes and the authorities found that discipline among the students had deteriorated to such a degree that it was not possible to continue the course

Dr Zakir Hussain the founder of the Jamia Millia, now Governor of Bihar is reported to have explained the problems of the institution to Mr Nehru when he was in Delhi to attend the Governors conference

The course was started in 1948-49 to prepare instructors for Basic training institutions and supervisors of Basic schools In 1952 53 the course was regularised by the Jamia Millia to train teachers for senior Basic schools and was called the B.Ed

The Government recognised the course as equivalent to the B T degree of other universities originally till 1956 Later recognition was extended till September 17 1958 In September, the Government decided to extend the recognition to this degree for another year

VOCABULARY TEST

Here are 19 words [illegible] First [illegible] your own [illegible] [illegible] Then [illegible] the word or phrase [illegible] Answers [illegible] (Pronunciation of words is given in brackets after the word.)

1 *forge* ([illegible])—A: to [illegible] B: move ahead C: split apart D: climb

2 *fare* ([illegible])—A: to turn out or happen B: be just and honest C: pay one's way D: [illegible]

3 *fume* ([illegible])—A: to fume B: give off [illegible] C: show anger D: hurry

4 *flick* ([illegible])—A: to hit hard B: scratch C: hit lightly D: snap at

5 *fuse* ([illegible])—A: to dread B: [illegible] C: melt together D: embarrass

6 *foist* ([illegible])—A: to force B: lift C: [illegible] D: palm off

7 *flaunt* ([illegible])—A: to make vulgar display of B: treat with contempt C: [illegible] completely D: hit

8 *flounce* ([illegible])—A: to flirt B: [illegible] C: dance D: fling oneself about impatiently

9 *flaunt* ([illegible])—A: to scoff at or jeer B: twist C: [illegible] D: display boastfully

10 *flare* ([illegible])—A: to simmer B: fly into a passion C: be enthusiastic D: be wary

11 *flay* ([illegible])—A: to whip B: spread out C: strip off the skin D: splice together

12 *fray* ([illegible])—A: to quarrel B: become frayed C: pay the costs D: become frightened

13 *flock* ([illegible])—A: to [illegible] B: [illegible] C: [illegible] D: [illegible]

14 *fob* ([illegible])—A: to [illegible] on a [illegible] B: deceive C: [illegible] D: [illegible]

15 *flail* ([illegible])—A: to [illegible] B: [illegible] C: be [illegible] D: [illegible] or beat

16 *foster* ([illegible])—A: to [illegible] B: [illegible] C: [illegible] D: [illegible]

17 *fret* ([illegible])—A: to [illegible] B: grow angry C: [illegible] D: quarrel [illegible]

18 *flinch* ([illegible])—A: to flinch B: [illegible] C: [illegible] D: [illegible]

19 *fell* ([illegible])—A: [illegible] B: [illegible] C: [illegible] D: [illegible] down

ANSWERS

1 *forge*—B: to move ahead, as "In the [illegible] the horse [illegible] began to forge ahead." [illegible]

2 *fare*—A: To turn out or happen, as "[illegible] well [illegible]" [illegible]

3 *fume*—C: To [illegible] anger [illegible]

4 *flick*—C: To hit lightly, as "to flick a horse with a whip" or "to flick a dust from a coat."

5 *fuse*—C: To melt together, [illegible] by heat. Hence to unite, as "The [illegible] worked [illegible]" Latin *fusus*, from *fundere*, "to pour."

6 *foist*—D: To thrust slyly, [illegible] as "The salesman tried to foist an inferior product on the customer."

7 *flout*—B: To treat with contempt, to scoff at, as "Who would dare flout the order?" Middle English [illegible] "to whistle."

8 *flounce*—D: To fling oneself about impatiently, petulantly, as "We were startled to see her flounce out of the room." Probably from the Swedish *flunsa*, "to plunge."

9 *flaunt*—D: To display boastfully, to parade, as "He liked to flaunt his wealth in public."

10 *flare*—B: To [illegible] Hence, to fly into a passion or rage, as "[illegible] would flare up at the most unexpected [illegible]"

11 *flay*—C: To strip off the skin [illegible] to [illegible], as "[illegible]" Old English *flean*.

12 *fray*—B: To become frayed [illegible] as "[illegible] edges." Latin *fricare*, "to rub."

13 *flock*—D: To [illegible] as "The [illegible] began to flock [illegible]"

14 *fob*—D: To [illegible] as "He was [illegible] trying to fob [illegible]"

15 *flail*—D: To strike or beat as with the flail used [illegible] as "[illegible]" Latin *flagellum*, "a whip."

16 *foster*—C: To [illegible] as "[illegible]" Old French [illegible] Latin [illegible]

17 *fret*—B: "[illegible]"

18 *flinch*—D: To [illegible] as "[illegible]"

19 *fell*—D: To cut down, as [illegible] as "He felled [illegible] with a single blow." Old English [illegible]

SCIENCE & INVENTION

SPACESHIP INTO SOLAR ORBIT

An American expert told the International Astronautical Congress in Amsterdam of plans to send an unmanned spaceship into orbit around the sun 92 million miles away

The expert, Mr R P Haviland of the American General Electric Company said he had been developing ideas for sending a cone shaped spaceship round the sun by a five stage rocket.

"A solar prob. offers an opportunity for investigating the solar atmosphere directly and for conducting a number of other investiga tions of the sun and the various environmental factors associated with it he said

"Assuming that a five stage rocket would be the limit of practical design it is found that a 250 000 lb take off weight is required to place a 50-lb pay load at the distance of mer cury A reasonable approach to this five stage design would use liquid propellant units for the first two stages and solid propellants for the last th ee

'All manoeuvring would be accomplished in the earlier stages.' Mr Haviland said. 'A possible shape of the probe is a cone with the base towards the sun

Mr Haviland said a distance of 28 million kilometres (about 124 million miles) would have to be bridged by the probes signalling equipment.

NEW ANTIBIOTIC TO CHECK CANCER

A new antibiotic, which possesses strong cancer checking powers is claimed to have been discovered by two Japanese scientists

Dr Sueo Tateoka and Dr Tsuyoshi Kajiwara told the Antibiotic Science Council in Tokyo on October 21, that the new antibiotic when injected in mice destroyed cancer cells in a short time The antibiotic was derived from soil germs found near Osaka It has been named Chromomycin.

The doctors said that the new drug s cancer-checking characteristics were tested in ex haustive experiments lasting over a period of three years. In animal experiments the anti biotic was said to have been injected daily into a number of mice planted with cancerous sarcomas for a period of eight to 16 days. The doctors said that such injections of the drug led to destroying the sarcomas of 30 to 60 per cent of the afflicted mice

The fact that the antibiotic possessed stay ing powers against cancer was additionally borne out in the result that the doses given to seriously stricken mice extended their survival to 12 days against eight days for those which did not receive the drug, the discoverers said

Chromomycin however, has not yet been tested on human beings

* * *

3-D COLOUR TELEVISION

Television has a new dress—depth ! The first television system with a 3-D camera recently was devised by General Electric Company and installed at the National Reactor Testing Station in western United States The depth of perception provided by this new 3 D system is expected to be utilized by industries for distant viewing of various types of opera tions, such as switching operations in railroad yards dispatching of trucks or buses in termi nal yards process control devices in automic factories colour inspection and maintenance work

The camera used in 3-D television has a dual-optical system which photographs a scene as it would be viewed by the two eyes of an observer Two images are transmitted by the camera on a time sharing basis The images appear alternately on a single TV screen at the rate of 90 pictures a second—45 pictures cor responding to the view as seen by the right eye, then 45 pictures as seen by the left eye In the viewing console alternate pictures are polarized vertically and horizontally The person viewing the screen through polarized spectacles actually sees the alternating images but because they move with great rapidity the viewer appears to see only one image—an image with greater depth than is achieved with other types of cameras

Girl in picture, wearing polarized specta cles views on a TV screen the movements of model trucks as she pulls them toward the camera that photographs them in three dimen sional colour

NERVEGAS FORMULA WITH RUSSIANS

Dr. Josef Brehm, wartime head of the

VOCABULARY TEST

Here are 19 verbs all beginning with f. First write down your own definitions of the words you think you know. Then mark the word or phrase you believe is nearest in meaning to the key word. Answers are given below. (Pronunciation of words is given in brackets next to the word.)

1 *forge* (forj)—A to [illegible] B move ahead. C split apart. D climb

2 *fare* (fare)—A to turn out or happen. B be just and honest C pay one's way D suffer

3 *fume* (fume)—A to foam. B give off sparks C show anger D hurry

4 *flick* (flick)—A to hit hard B scratch. C flip lightly D snap at

5 *fuse* (fuze)—A to cloud. B singe C melt together D embarrass.

6 *foist* (foyst)—A to force B lift C: strengthen D palm off.

7 *flout* (flout)—A to make vulgar display of B treat with contempt. C strut conspicuously D hit

8 *flounce* (flounce)—A: to flirt B swagger C dance D fling oneself about impatiently

9 *flaunt* (flawnt)—A to scoff at or jeer B twist C: disdain D display boastfully

10 *flare* (flare)—A to simmer B: fly in to a passion C be enthusiastic. D be noisy

11 *flay* (flay)—A to whip B spread out. C strip off the skin D splice together

12 *fray* (fray)—A to quarrel B become raged. C pay the costs. D become frightened

13 *fleck* (flek)—A to sear or scratch B: snap. C dent D spot or streak

14 *filch* (filch)—A to welsh on a bet B deceive C spy D steal slyly

15 *flail* (flale)—A to wince B: skin. C be undecided. D Strike or beat.

16 *feign* (fane)—A to disdain B be favourably disposed C pretend D flatter

17 *foil* (foil)—A: to hinder or prevent. B: grow angry C deceive D quarrel bitterly

18 *flex* (fleks)—A to flinch. B stretch. C work. D: bend.

19 *fell* (fel)—A to level off. B: faint C: kill. D knock down

ANSWERS

1 *forge*—B to move ahead as "In the second half the home team began to forge ahead"

2 *fare*—A To turn out or happen to do or go; as, "May your book fare well in sales" Old English [illegible] "to go"

3 *fume*—C: To show anger [illegible] in annoyance; as "[illegible] would always fume [illegible] unnecessary delay" Latin fumare "to [illegible]"

4 *flick*—C To flip lightly as "to flick a horse with a whip", or "to flick dust from a coat"

5 *fuse*—C: To melt together liquefy by heat. Hence to unite as, "The instructor worked hard to fuse his men into a well drilled unit." Latin fusus from fundere "to pour"

6 *foist*—D To thrust slyly palm off, as, "The salesman tried to foist an inferior product on the customer"

7 *flout*—B To treat with contempt, mock or scoff at as "Who would dare flout the order?" Middle English flouten, "to whistle"

8 *flounce*—D To fling oneself about impatiently petulantly as "We were startled to see her flounce out of the room" Probably from the Swedish flunsa, "to plunge"

9 *flaunt*—D To display boastfully to parade; as, "He liked to flaunt his wealth in public."

10 *flare*—B To blaze up suddenly. Hence, to fly into a passion or rage as, "She would flare up at the most unexpected times".

11 *flay*—C To strip off the skin Hence to censure harshly criticise brutally; as "He set out to flay his critics with his pen." Old English flean.

12 *fray*—B To become ragged; ravel out with wear; as "This cloth will soon fray at the edges" Latin fricare "to rub"

13 *fleck*—D To spot or streak, as, "The rising sun began to fleck the forest floor with gold."

14 *filch*—D: To steal small amounts slyly as "He was caught trying to filch from the cash register"

15 *flail*—D To strike or beat, as with the flail used to separate grain; as, "The hail flails the harvest and rends the trees asunder" Latin flagellare "to flail."

16. *feign*—C To pretend, simulate as "No matter how he may feign modesty, he is a man of conceit." Old French feindre from Latin fingere, "to form, invent."

17 *foil*—A: To hinder or prevent from [illegible] or baffle as "to foil the enemy's plans" Old French fuller "to trample"

18 *flex*—D: To bend; as, "to flex the arm" Latin flexus from flectere "to bend"

19 *fell*—D: To cut down, as a tree; hence to knock down as "He tried to fell his opponent with a single blow" Old English fellan "to fell."

3-D COLOUR TELEVISION

Television has a new dress—depth ! The first television system with a 3-D *camera* recently was devised by General Electric Company and installed at the National Reactor Testing Station in western United States The depth of perception provided by this new 3 D system is expected to be utilized by industries for distant viewing of various types of operations, such as switching operations in railroad yards dispatching of trucks or buses in terminal yards process control devices in automic factories colour inspection and maintenance work

The camera used in 3-D television has a dual-optical system which photographs a scene as it would be viewed by the two eyes of an observer Two images are transmitted by the camera on a time sharing basis The images appear alternately on a single TV screen at the rate of 90 pictures a second—45 pictures corresponding to the view as seen by the right eye, then 45 pictures as seen by the left eye In the viewing console alternate pictures are polarized vertically and horizontally The person viewing the screen through polarized spectacles actually sees the alternating images but because they move with great rapidity the viewer appears to see only one image—an image with greater depth than is achieved with other types of cameras

Girl in picture wearing polarized spectacles views on a TV screen the movements of model trucks as she pulls them toward the camera that photographs them in three dimensional colour

• • •

"NERVEGAS FORMULA WITH RUSSIANS"

Dr. Josef Brahm, [illegible] of

German chemical warfare experimental station said in Hamburg that the Russians could attack the U S A with an invisible, tasteless, odourless nerve-gas which killed instantly

German chemists developed the gas during the war and he believed the Russians had the formula, he said. It could be carried by rocket and as liquid atomised on delivery

• • •

PLANTS THRIVE ON SEA WATER IN DESERT

Israeli Government scientists claim to have grown cotton and sugar beet on sand dunes and similar unpromising places by irrigating them with sea water

Other crops raised by the same method include citrus fruits dates and cabbages.

Led by Dr Hugo Boyko the investigators began their experiments in 1947 Dr Boyko had carried out his own tests before the war Most of the present series were carried out in the Negev Desert

Dr Boyko is a member of UNESCO International Council for Arid Zone Research

The sea water is poured on the plants from above In this way it is claimed, most of the salt ends up low down in the sand where it cannot harm the plants

Dr Boyko believes that the same principles could be applied to growing 200 species of plants

• • •

TENSION MAIN FACTOR IN HEART DISEASE

Tension is the main factor in heart disease, a medical research group said in San Francisco on October 27

Newspaper editors and business executives are the most prone to heart trouble the researchers told the American Heart Association.

They reported that they questioned 83 newspaper editors, television officials advertising executives, representatives of engineering firms and senior officers of business corporations

This group showed six times as much clinical heart disease as a relatively "easy going" group including city employees, embalmers, book keepers and others engaged mostly in routine jobs.

Twenty three in the "tension" group had heart disease but only four of the 83 in the "non-tension" group the researchers Dr Meyer Friedman and Dr Ray Rosenman of San [illegible] a Mt. Zion Hospital reported.

The study indicated that consumption of alcohol cigarette smoking, overweight exercise and diet had little or nothing to do with cardiac disease the doctors said

• • •

HYPNOSIS MENDS BROKEN MARRIAGES

Doctors from a large number of countries who attended a medical congress in Barcelona discussed the latest theory advanced to mend breaking or broken marriages—hypnosis.

Under hypnosis, according to Dr Howard Miller of Howard University Washington, wives and husbands will talk about their things that they would not normally mention.

Dr Miller claims "dramatic results"—75 marriages mended out of every 100

The basic principle of the treatment is that if the wife is the more discouraging partner the husband listens in, while under hypnosis, she reveals her innermost resentments.

Dr Miller explains A wife's disillusionment is often the gross lack of consideration on the part of the husband. Post hypnotic suggestions are that she shall be loving responsive and co operative to her husband—if his attitude is kind and loving Before the session is concluded, the wife is given a much happier picture of how things will be after she emerges from her trance Then, under hypnosis, the husband promises to fulfil her desires to the best of his ability

• • •

NEGRO—A NEWER MODEL OF MAN

Dr Mervyn Jeffreys, a noted expert on social anthropology said in Johannesburg on September 11 after life-long comparative studies of the Negro and the European: "Anthropologically there is much evidence that the Negro is a newer and, in many ways a better model of man than the European."

Dr Jeffreys who was an Oxford Rhodes scholar in 1910 and a senior district official in the British colonial service in Nigeria is the author of hundreds of articles in scientific journals He is now engaged in writing a book in which the following points will come out

Whites and blacks and modern apes, all descend from a common ancestor but the Negro is a more distant relation of the ape than the white A European's skull is much thinner than a gorilla's The skull of a Negro is thinner still although built of stronger bone Physically the Negro has advanced further up the ladder from primeval man Europeans are less hairy than apes but the Negro is less hairy even than the European.

• • •

AMPUTATION OF ARMS UNDER HYPNOSIS

Twenty two-year old Charles Shuttleworth had his left arm amputated under hypnosis in what is believed to be the first operation of its kind in the world The operation was performed in Johansburg on September 10

An anaesthetist stood by as the hypnotist, Mr Eddit Milne, put Shuttleworth in a trance within three seconds A surgeon then amputated the arm between the shoulder and elbow

Mr Milne said the patient felt no pain at all throughout the 40 minute operation and the sign of strain was the cold sweat on his forehead. The anaesthist was not needed

After the operation Shuttleworth awoke quickly smiled and shook hands with the 63 year-old hypnotist Mr Milne quoted a doctor as saying the amputation had been a complete success and the method was terrific

Shuttleworth remained in hospital for two days

• • •

TUBERCULOSIS FROM CATS DOGS AND PARROTS

The possibility of human beings catching tuberculosis from dogs, cats parrots goats pigs and monkeys was discussed at a recent meeting in Stockholm of the Joint WHO/FAO Committee on animal diseases transmissible to man

The experts noted that tuberculosis infection from cattle had become much less frequent in many countries due to systematic application of the tuberculin tes and slaughter of all animals reacting to this test Public health authorities are paying more attention to other animal sources of tuberculosis and discussions revealed that, while cats are resistant to the human type dogs parrots and monkeys can con ract the disease and pass it on

• • •

PLASTIC BLOOD VESSELS

The victim of an accident is rushed to a hospital The operation performed on him shows that the part of an artery has been torn away at the injured spot. It is impossible to join its ends because the gap is too great. To leave it alone means necrosis (mortification) for a part of the patient s body What is to be done? The doctors do not hesitate They simply insert a small length of artificial art ry

Until quite recently such a thing would have been regarded as fantasy and such operations were impossible Aneurisms of the aorta or diseases of other big blood vessels were considered to be incurable. Now opera ions for replacing blood vessels by their artificial counter parts are being performed in a number of medical institutions For instance P A Kuprianov, Member of the Medical Academy of Moscow, has used a polyvinyl tube to replace the aorta An interesting experiment was recently carried out by surgeon V M Medvensky who replaced part of the gullet by a plastic tube.

Large arteries have been successfully replaced by plastics in many cases. A tube of this kind introduced into the human organ ism is gradually assimilated, its walls are covered with connective tissue and the patient so to say, grows a new artery

The use of plastics, synthetic fibre and other polymers in medical practice is being steadily extended. For instance thread made of polyvinyl alcohol makes it possible to shorten the post operation period. Plastic bands are successfully used to join the ends of several nerves Plastic film facilitates the treatment of burns.

• • •

WRIST WATCH SIZE BATTERY

A tiny new dry cell type electric battery the size of a wrist watch has been developed in the United States. It can be recharged, is almost indestruc ible and will last at least 10 years in active use

It is expected that the battery will be of greatest value in portable radios hearing aids, airplane navigation systems inter communica tion systems and other electrical and electronic devices

Dry cell batteries at present used most widely in flashlights and portable radios when used up are thrown away The new battery however can be recharged over and over again to obtain a long period of service

The battery was developed by two scientists at the Naval Ordnance Laboratory while they were experimenting with different mater ials Using lead lead-oxide and silver powder for plates in an experimental battery they found that they could make a mighty midget" battery of a new type

This was a single cell rated at 1 5 ampere hours, which produces nine tenths of a volt of electricity The ordinary flashlight battery cell which is many times larger gives only one and a half volts

The new midget battery weighs only about 1½ ounces (40 grams) and can easily be used with the transistorized circuits that have come into wide use in recent years in hearing aids, walkie talkies, and other devices.

When produced on a large scale, the cost of the new battery will be about 50 per cent more than the mercury batteries now being used. But scientists have pointed out that its advantages of long life, constant voltage and durability far outweigh cost considerations.

Experiments conducted with the new battery over a period of three years indicated that it is highly resistant to shock, vibration, heat and cold. "Gassing"—a common failing of present day batteries in which the electric current decomposes some of the chemicals used in their construction, forming them into gases that ruin the cell, is also eliminated in the new battery which contains no gas-forming chemicals.

• • •

ORIGIN OF LIFE ON EARTH

There are reasons to believe that our planet was lifeless for at least two-thirds of its existence, Academician Alexander Oparin said in a report at the USSR Conference on the Philosophic Problems of Natural Sciences held in Moscow.

Hydrocarbons and their simplest derivatives began to appear in the earliest period of the history of the earth, he continued, but they were merely initial compounds, the first link in a long chain of organochemical transformations on the surface of a still lifeless earth.

Academician Oparin, who is regarded as the world's greatest authority on the origin of life, stressed in his report that mechanical materialism had proved powerless to give a substantiated reply to the question of how life had begun. Only dialectical materialism, which considers matter in constant motion and development from the simplest forms to more complex ones, has opened up the way to a solution of the problem.

Oparin believes that the entire history of the development of matter towards the appearance of life can be divided into three stages: the primary appearance of hydrocarbons and their derivatives, the appearance of numerous high-molecular organic compounds and finally the appearance of albumen systems capable of metabolism.

Oparin said that the possibility in principle of the second stage in the development of matter—from simplest hydrocarbons to extremely complex organic substances—resided in the primary hydrocarbons themselves. Under the action of radiant energy and specifically ultraviolet light, electric discharges and [illegible] radiation, hydrocarbons turned [illegible] complex organic systems. "We have substantiated this process experimentally," Oparin remarked. However, organic systems did not possess properties specific of life when they first appeared. It was only later when [illegible] new laws came into being that they developed into primary living organisms.

The data we have at our disposal today, Alexander Oparin continued, indicate that the primary organic polymers were educed from a homogeneous solution at a certain time in the form of multimolecular drops similar to coacervate drops we obtained in laboratory conditions. Each of them had its own particular structure.

Academician Oparin pointed to three stages in the evolution of coacervate systems into living organisms: development of an ability of self preservation in conditions of constant interaction with the environment; emergence of systems capable not only of self preservation but also of growth; emergence of systems producing themselves in recurring reactions of the same type. From that moment on, Oparin said, life can be said to have appeared.

• • •

MAN MADE "SUN" TO HARNESS HYDROGEN POWER

A promise made at the Atoms-For-Peace Conference in Geneva was carried out by the United States when the Atomic Energy Commission displayed plans to harness the power of the hydrogen bomb and use it to supply peacetime energy.

Reporters were allowed for the first time to inspect Project Matterhorn at the James Forrestal Research Center. The project was described to scientists at the Geneva Conference last month.

They saw a demonstration of a stellarator—a multi million-dollar machine for heating up hydrogen gas to a sun-like temperature (about 100 million degrees) and holding the heat long enough for fusion to occur.

Scientists are striving to control the energy which is then released—energy created by the fusing of the hearts of two atoms into a new and larger atom. If such control is achieved, the earth's power needs would be provided for thousands of millions of years to come.

This new tremendous power would be clean, officials pointed out. "There would be no atomic waste, no radioactive material to dispose of" as in the case of atomic reactors. The fuel would be one of the charged—heavy hydrogen or deuterium. Inexhaustible amounts of it are found in the seas."

The Princeton University set up [illegible] by Princeton and the AEC is one of [illegible] laboratories in the U.S. devoted to experiments in harnessing the hydrogen bomb for peaceful uses.

■■■

PEOPLE IN THE NEWS

POPE PIUS XII

Pope Pius XII supreme pontiff of the Catholic Church, died at Castel Gandolfo (Italy) on Thursday, October 9 1958 He was the 262nd to reign from the throne of Saint Peter

The spiritual leader of 450 million people he strove for peace from the moment he became Supreme Pontiff of the Catholic Church in March, 1939 For his papal coat of arms he chose a dove bearing an olive branch

Born on March 2 1876 into a distinguished family of the Papal nobility Eugenio Maria Giovanni Giuseppe Pacelli said at the age of five that he wanted to be a martyr but not with nails

He had a gift for languages which later enabled him to speak in six different tongues Within two years of his ordination he was taken into the Papal Secretariat of State, Chief office of the Church Government.

He spent the next 36 years including 12 years as Nuncio to Germany in the Papal diplomatic service

Called back to Rome in 1929 to be made a Cardinal he was appointed Secretary of State in 1930 and from that time he remained at the Vatican Palace

He had never been strong even as a youth, when he was preparing for the priesthood life at the seminary it proved too hard for him and he was allowed to continue his studies while living at home

His constant and fervent teaching against Communism—which he regarded as the arch enemy of the church and of peace—was translated into action when, in 1949 the holy office ex-communicated all active Communists youth organisations as well as their parents

He was the most widely travelled Pope in history Before his election to the papal throne he had visited the United States Britain, France Switzerland Hungary Argentina, Brazil and Uruguay apart from representing the Vatican in Germany from 1917 to 1929

For one revolutionary measure Pope Pius XII will for ever remain notable in the history of the church's constitution In 1946 he reversed the traditional majority of Italians in the college of cardinals and further increased the proportion of non Italians—among whom were a Chinese and an Indian—to nearly two-thirds in 1953

This was seen by many observers as heralding an eventual break in the 400 year old chain of Italian Popes

It was during his illness in December 1954 according to an Italian weekly that he had a vision of Christ standing by his bedside Of this the Vatican press service said We have been authorised to confirm the report The vision was said to have marked the beginning of the pontiff's slow recovery

Four years before according to Cardinal Frederico Tedeschini arch priest of the basilica of St. Peter Pius XII had another vision on the eve of the proclamation of the dogma of the Assumption of the blessed Virgin Mary Then he was reported to have seen the 'sun dancing in the sky' which recalled a similar occurrence observed by many people at Fatime in 1917, when three Portuguese children had visions of the Madona

The year 1957—19th of his reign saw the Pope give audience to nearly one millon people despite attempts by his associates to relieve him of many administrative burdens.

In July 1957 the Pope composed a special prayer to be recited by the world's Catholics for the church of silence —the Catholic church in Communist ruled countries

• • •

GEN MOHAMMED AYUB KHAN

General Mohammed Ayub Khan the New President of Pakistan has his home in the Frontier Province and was educated at the Muslim University Aligarh. After two years at Royal Military College Sandhurst he was Commissioned in 1928

He served with the Royal Fusiliers for a year Later he was posted to First Battalion of the 14th Punjab Regiment which on partition became part of Pakistan Army General Ayub Khan held several regimental appointments till World War II broke out, when he saw active Service in Burma He commanded the 3rd Battalion of the 14th Punjab Regiment for a year

Early in 1947 he was promoted Colonel and

was appointed President of a Services Selection Board.

Soon after the birth of Pakistan he was appointed a Brigade Commander—and commanded the Garadar Brigade in Waziristan till the troops were withdrawn from that area as a matter of general policy

General Ayub Khan was then appointed to command troops in East Pakistan. He was promoted Major General in December, 1948 and became the first Commander of East Pakistan Division

He was appointed Adjutant General of the Pakistan Army in the middle of 1950

On 17th January, 1951, he was appointed Commander in Chief of the Pakistan Army. He was the first Pakistani to hold that office. On October 24 1954 he was sworn in as a member of the Central Government and held the portfolio of Defence in addition to his duties as Commander in Chief. On the dissolution of the Mohammad Ali Bogra's Cabinet on October 24 1954, General Ayub Khan surrendered his portfolio of Defence in the Central Government.

General Ayub Khan has travelled widely and has been abroad on several liaison and goodwill missions. Amongst the countries he has visited are the USA, UK, Germany, France, Turkey, Iran, the Middle East and the Scandinavian countries

General Mohammed Ayub Khan is a keen tennis player. He is a very good shot and is interested in the study of literature.

* * *

MAJOR GENERAL ISKANDER MIRZA

Major-General Iskander Mirza who abrogated the Constitution *of Pakistan* and was later ousted by General Mohammed Ayub Khan, was born on November 13 1899. After early education, he joined the Elphinstone College, Bombay in 1916. While he was studying in B A., he was selected as a Cadet for Sandhurst (the British Military Academy). After a very successful course at Sandhurst, he returned to India in 1919. He has the distinction of being the first Cadet from the Indian Sub-continent to be granted [illegible] the Army from the Royal Military College

He joined the Cameronians (2nd Scottish Rifles) at Kohat in 1921 and took part in the [illegible] Khel operations from 1922-24 he was with the Poona Horse, a crack Indian Cavalry Regiment, at Jhansi and took part in the Waziristan operation in 19[illegible]

In 1926 he was selected for the Indian Political Service and served as Assistant Commissioner at Abbottabad, [illegible] and Tank. From 1931-3[illegible] he served as Deputy Commissioner at Hazara [illegible]. In 1938 he was appointed as Political Agent Khyber

On account of his administrative ability and understanding of the affairs of Tribal areas he served as Deputy Commissioner of Peshawar from 1940-45. Then he was transferred as Political Agent, Orissa States. In *1946* he was appointed Joint Secretary to the pre-Partition Government of India in the Ministry of Defence

On Partition when Pakistan first appeared on the map Major General Iskander Mirza became the First Defence Secretary in the Government of Pakistan.

On may 30 1954 he was appointed Governor of East Pakistan. The Province was suffering from one of the worst floods in its history. Major General Mirza reorganised and infused new life into the Administration. His services in East Pakistan during the floods in 1954 drew applause from every section of the public in the Province. He is the first Governor known to have donned shorts and gum boots to wade through water and reach supplies to the needy in the flood affected areas.

Major General Iskander Mirza was appointed a Minister in the Central Cabinet on October 24, 1954 with the portfolios of the Interior and of States and Frontier Regions which he held with great distinction and he ceased to be Governor of East Pakistan with effect from that date

Major General Mirza was appointed Acting *Governor General of Pakistan on August 6,* 1955 and permanent Governor General on October 6, 1955

Major General Mirza is a keen sportsman fond of riding, shooting, and horse racing. He was a Cricket Blue at Sandhurst. *He was elected President of the Islamic Republic of* Pakistan on March 5 1956, which office he held upto October 27 1958

* * *

GENERAL NE WIN

Gen. Ne Win took over office as Prime Minister of Burma on October 29 1958. Gen. Ne Win, 48 year-old Commander in Chief of the Burmese armed forces since 1949, fought against both the British and the Japanese during the Second World War

Lt Gen. Ne Win, the only Lieutenant General in the armed forces of Burma, holds that rank (There are no full-fledged Generals

in the Burmese Army) He began life as a post office clerk in a sub post office in Rangoon Born on May 14 1911, in Prome district he went to college and left it without taking a degree Active in politics under his original name Thakin Shu Maung, Gen Ne Win went to, Japan as one of the 30 Comrades' to take part in the struggle against the British The Japanese instructors marked him down for command appointments Then he returned to Burma ahead of the Burma Independence Army to start the war of independence

He took the name Ne Win (sun of glory) when he joined the thirty comrades who under Aung San the founder of independent Burma, were trained by the Japanese and co-operated with them when they invaded Burma at the end of 1941

Later the Burma National Army of which General Ne Win was Chief of Staff turned against the Japanese and co-operated with British troops which were reconquering the country in 1945

When the Burmese Army was reformed he was commissioned as Colonel in 1945 Brigadier in 1947 and Major General in the following year He became Lieutenant-General and Supreme Commander of the Armed Forces of Burma on February 1 1949

Soon afterwards Ne Win who had been elected to Parliament in 1947 was appointed Defence and Home Affairs Minister

He resigned these portfolios in September 1950 so that he could concentrate on increasing the efficiency of the armed forces which since Independence had been fighting on many fronts against rebel groups including the Communists and Karens and in the north east against Kuomintang troops who had retreated into Burma after the Communist victory in China

Since then from his headquarters at the Burmese War Office in the centre of Rangoon, General Ne Win has co-ordinated the campaigns of the Army assisted by a growing air force and a small naval coastal force

General Ne Win is a smiling quiet man with liking for English beer and a devotee of the race course He can be seen most Sunday afternoons at Rangoon's track, dressed in traditional longyi" (sarong), rather than uniform.

He said in an interview in 1954, "I could take power tomorrow if I wanted to But I don't because personal glory means little to me I am a soldier not a politician

* * *

U NU

U Nu relinquished the office of Prime Minister of Burma on October 28 1958

In this age of aggressive leaders and cunning statesmen a politician who is disciplined in the way of the compassionate Buddha is as rare on the political horizon as a star in the monsoon sky But such a one is U Nu who led Burma for more than ten years with a hand that did not lack firmness because it is gentle and with a heart that did not waver in taking action because it is pious His Bhikku like humility hides an abundant store of inner strength.

As in the case of many other ascetic men he acquired his serene outlook after a spell of wayward life Writing in the third person about himself in the preface to his novel, *Man the Wolf of Man* he says "By the age of twelve he was a heavy drinker His father deeply ashamed and hopeless of reclaiming him could only banish him to live as he would in a paddy godown outside the town The boy brewed his own liquor there But even such juvenile depravity suggested an intensity of character that harboured the capacity for reforming itself And when enlightenment came it came suddenly and forcefully making of him a new man His mind awakened to the higher things in life—beauty love, poetry He read avidly wrote plays and composed sonnets addressing them to the school board chairman's daughter whom he eventually married Despite his distaste for politics he became interested in the freedom movement when he was a Rangoon University student. It was then that he joined the Thakin Party and came into contact with ardent nationalists such as Aung San. Later under Japanese occupation he became a member of Dr Ba Maw's Government and after the war following the British offer of self government to the nation he was elected Speaker of the Constituent Assembly In 1947 when Aung San and six of his colleagues were assassinated, he reluctantly came forward to form a Government Since then unaided by any foreign power he has ... difficult problems such as ... and the Karen rebellion of 1949

WORLD BANK—IMF—IFC ANNUAL MEETINGS

The annual meetings of the World Bank, International Monetary Fund and the International Finance Corporation began in New Delhi on October 6. Over 1,000 delegates and observers from 60 countries attended. This was the first time that these world bodies were holding their annual meetings in Asia.

Addressing their joint inaugural meeting the Indian Prime Minister Mr Nehru appealed to industrialized nations to help the under developed countries "for the good of the world." He said he realized that no country could progress just by external help. If a nation wanted to make good progress it had to shoulder the burden itself. So far as India was concerned this effort is being made and will be made. It was however very difficult to progress without some help from others.

The Governor of the Bank of Belgium, Mr Jean Van Houtte who presided over the joint inaugural session, said in his presidential speech that the time had come to emphasize the role of private capital in the economy of under developed countries. He called for tax concessions and other incentives for investment.

Speaking after Mr Van Houtte the British Chancellor of the Exchequer, Mr Derick Heathcoat Amory said that the political and economic problems today were the advancement of the living standards of the people and development of resources under a democratic way of life.

This surely he said, was a challenge which faced them and "we shall not succeed unless we realise that we are all inter-dependent and shape our policies accordingly."

Mr Miguel Cuaderno, Governor of the Central Bank of the Philippines said that the three proposals to be taken up by the meeting to raise the [illegible] of member [illegible] in IMF to increase the subscribed capital of the World Bank and [illegible] an International Development Association [illegible] [illegible]. He [illegible] his delegation [illegible] to the two latter proposals.

Dr Ludwig Erhard, West German Minister for Economic Affairs said that his Government was prepared to make appropriate contributions to the Bank and Fund within its possibilities.

Mr Tse [illegible], chairman of the Board of the Bank of Formosa, said that his delegation would support the proposal to increase the Fund and Bank resources as it would help acceleration of economic development.

Mr Robert G Anderson, Secretary of the US Treasury said that the US Government found great encouragement in the increasingly effective way in which the Fund and the Bank had been performing their tasks. By increasing the capacity of both these institutions to operate throughout the free world, the member countries could greatly intensify their efforts to deal with the problems of economic development and financial and economic stability.

World Bank—Annual Report: The annual report of the World Bank showed that India had topped the list of borrowers both in terms of the total amount and the number of loans granted during the year ended June 30, 1958 and had received seven loans aggregating 165.5 million. Japan with $ 77 million and Italy with $ 75 million took the second and third positions respectively.

India received $ 165.5 million (Rs [illegible] crores) for the development of her railways (four loans Rs 45 crores) ports (two loans Rs 21 crores) and steel industry (one loan Rs. 16 crores).

During the year the Bank made 34 loans for a total of $ 711 million (Rs [illegible] crores) out of which more than half was lent to Asia.

An overwhelmingly large amount of World Bank loans to member countries was utilized in USA for the import of goods and machinery.

Out of the total loans of [illegible] granted by the World Bank so far, 1,342 million dollars or 55.5 per cent of the total was spent for imports from USA. [illegible] with [illegible] million dollars or 23 per cent and West Germany with 201 million dollars or [illegible] per cent took the second and third places respectively in this period.

[illegible] [illegible] suggested [illegible] [illegible] towards the [illegible] of important international [illegible] [illegible] estimated in the [illegible] [illegible] 1958 of the terms of the [illegible] to be

paid by the United Arab Republic for the nationalization of the Suez Canal

The Bank also collaborated in the discussions between India and Pakistan on the sharing of the waters of the Indus Basin. As part of the continuing search for agreement of the subject, meetings were held during the year in Washington, Rome and London, as well as in India and Pakistan

One of the year's largest loans, an amount of 66 dollars million, was for the Yanhee dam in Thailand. Other loans that would increase electric power supplies were made in Austria, Brazil, Ecuador, Italy, Japan, Mexico, Pakistan and the Philippines

Seven countries joined the Bank in 1957-58—Ghana, Ireland, Malaya, Morocco, Saudi Arabia, the Sudan and Tunisia. This brought the Bank's membership to 67 and its subscribed capital to 9,405 dollars million on June 30, 1958.

Mr Eugene Black's Speech Addressing the Bank's Board of Governors on October 7, the President of the Bank, Mr Eugene Black, emphasized the need for strengthening the financial resources of the World Bank in support of the expanding economic programmes of the under-developed countries of the world

He said that the ends of both economic development and reduction of international tensions would be served "by removing from the realm of short term political considerations as much as possible our long term concern with economic growth"

He also hoped that the Big Powers would see their way to reducing their expenditure on armament and diverting this to economic development

Mr Black referred to India's great development effort under her Second Five Year Plan and declared that the destiny of humanity would be profoundly influenced by the extent of India's success in effecting radical changes without sacrificing respect for individual liberty

Increase In Capital—Resolution Approved On October 9 the Bank's Board of Governors approved a resolution asking the Executive Directors of the Bank to promptly consider the question of increasing the capital of the Bank.

Mr C. Douglas Dillon, Under Secretary of State for Economic Affairs and alternate Governor for USA, who formally introduced the resolution, said that in any intensified effort to promote development certainly the Bank must continue to occupy a central position

The Board of Governors agreed to discuss the annual report of the Bank and the US proposal jointly

Mr Rodrigo Gomez (Mexico) who opened the discussion, said that the sharp trade and income per capita differences between the more developed nations and the less developed ones had persisted in widening since the burden of re-adjustment had been borne primarily by the countries economically less able to bear it. No lasting progress in world economic welfare could be possible without stepping up the rate of development in less advanced countries and, in this task the Bank had a key role to play

Mr Morarji Desai (India) welcomed the US proposal and said that all members of the Commonwealth who had discussed this question at the recent Montreal Commonwealth Finance Ministers Conference were of the view that the strengthening of the resources of this well trained and proven institution would make an important contribution to development at this stage

Mr Reginald Maudling (UK) stressed the need for increasing the Bank's resources and said "We see no reason why there should not be a larger percentage increase in the Bank's capital than the 50 per cent increase in Fund quotas which we are advocating. We should, therefore like to see the capital stock of the Bank doubled. But we would hope that the Bank's operations would be so managed that the additional capital would all remain uncalled.

IMF—Annual Report The annual report of the International Monetary Fund said that many primary producing countries had encountered greater difficulty than industrial economies in 1958 owing to the decline in raw material prices, a trend that could apply a depressive effect on world trade.

Taking a retrospective view of 12 years operation it found that considerable headway had been made toward the achievement of its objectives. To an increasing extent, the world had been moving toward exchange stability with orderly exchange arrangements among the Fund's members, the avoidance of competitive depreciation, the elimination of exchange restrictions and establishment of a multilateral system of payments. More and more countries were taking appropriate steps to deal with their problems by means of fiscal and credit policy. In the face of many diffi-

culties, the Fund's members were lending greater support to the promotion of freer transferability of currencies.

Drawings on the Fund since March 1947 now exceeded 3,000,000,000 dollar. The Fund had entered into exchange transactions with 35 countries, of which 28 had used IMF resources more than once. Total transactions at the April 30 end of the Fund's last fiscal year amounted to the equivalent of 3,016,200,000 dollar and unutilized drawing rights under standby arrangements represented potential additional claims equivalent to 884,300,000 dollar. Members repayments totalled 1,195,000,000 dollar on that date. Fund transactions during the past fiscal year amounted to 665,000,000 dollar and though less than the 1,114,000,000 dollar recorded the year before were greater than in any other previous year. The Fund's holdings of gold and US and Canadian dollars amounted on April 30, 1958 to the equivalent of 2,343,650,000 dollar.

Mr Per Jacobsson On Report. Presenting the report to the Board of Governors, the Managing Director, Mr Per Jacobsson, pointed out that though recent years had witnessed a series of critical situations—such as boom followed by recession, tensions in exchange markets and loss of reserves by many countries—the ultimate results were not too unfavourable.

He welcomed the five new members to the Fund—Malaya, Tunisia, Morocco, Spain and Libya—and said that membership in international organisations gave the smaller countries a greater opportunity not only to keep themselves better informed but also to make their influence felt as partners in the international economy.

Resolution to enlarge IMF Funds. On October 7, the IMF Board of Governors unanimously agreed to the US proposal asking the Executive Directors of the Fund to "promptly consider" the question of enlarging the resources of the Fund through an increase in the quotas of member countries.

Mr Robert G. Anderson, Secretary to the US Treasury, who moved the resolution, said that a strengthened Monetary Fund would give encouragement to the efforts which member-countries were making to maintain stability...

Shortly after the resolution was introduced, India announced that it "fully endorsed" the US proposal to study the question of increasing the resources of IMF.

Giving his reaction to the American proposal, the Indian Finance Minister, Mr Morarji Desai, said that there would be general agreement that an increase in Fund quotas was urgently called for. While the objective of the proposal was to strengthen the common international reserves, this should be achieved in a manner which does not put excessive strain on the position of countries with unduly low reserves.

In extending a somewhat equal-hand support for the move to raise IMF funds South Africa once again raised the controversial problem of the international price of gold.

The South African Finance Minister, Mr J.F. Naude, took particular exception to the verdict given against the case for an increase in the international price of gold (35 dollars per ounce) by the fund staff in their study entitled "International Reserves and Liquidity".

America however promptly opposed the South African proposition.

Mr Robert G. Anderson (USA) said: "In view of some of the comments which have been made with respect to the price of gold I should make it clear that my Government firmly adheres to the position that the price of gold in US dollars should remain unchanged. The assured interchangeability of gold and dollars at 35 dollars per ounce for the settlement of international accounts is a basic element of strength in the international financial structure."

Discussion of Report. Initiating the discussion on the report on October 7, Mr Hubert Ansiaux, Chairman of the Board of Governors of the Fund and Governor of the Fund for Belgium, said that an important fact revealed by an analysis of international economic developments during the year just ended was, as very well stated in the report, that the fear that the recession in the United States might spread to the rest of the world had not become a reality.

The British Chancellor of the Exchequer, Mr Derick Heathcoat Amory, said that he had to be taken in reminding that "we may not be confident that the present resources of the Fund are adequate to enable it to perform in the next decade as it has done its main task ... purpose in the past."

He, therefore, fully supported the request in the letter of the President of the United States to the Secretary of the US Treasury, Mr R.G. Anderson, that the present resources of the Fund be examined adequately ... and that prompt consideration be given to the...

advisability of a general increase in the quotas assigned to member Governments

The Japanese Finance Minister Mr Eisaku Sato said that the Fund's ability to provide a timely and adequate assistance to member-countries much depended upon its having adequate resources especially if an emergency arose as at the time of the Suez events

Mr Karl Blessing President of the Deutsche Bundesbank and Governor of the Fund for the Federal Republic of Germany endorsed the US resolution for remitting to the Executive Directors the proposal to increase the resources of the Fund

The Finance Minister of Canada, Mr Donald M. Fleming supported the proposal for an increase in the resources of the Fund and the World Bank We shall be prepared to give our warm support to a general increase in the Fund's quotas of at least 50 per cent of the present quotas

The US proposal received general support also from Thailand Philippines Pakistan Ceylon, Ghana, Israel Brazil Yugoslavia and Paraguay

IFC—Annual Report —According to the annual report of the International Finance Corporation presented to the IFC Board of Governors by the President, Mr Robert L Garner, on October 7, the Corporation in the two years of its existence, made 11 investment commitments for an aggregate amount of 10 417 000 dollars (Rs 5 crores)

Seven of these commitments it said were made last year for an aggregate amount of 6 097 000 dollars (Rs crores) including 630,000 dollars for the Steel Corporation of Pakistan and 750 000 dollars for Adamjee Industries also in Pakistan

On September 10 1958 IFC had disbursed a total of 3 397 000 dollars.

It said "The IFC has a capital of 93 664 000 dollars subscribed by 57 countries India's subscription is 4 431 000 dollars It is closely affiliated with the World Bank and its purpose is to further economic development in its less developed member countries by investing—without Government guarantee—in productive private enterprises in association with private capital and management.

Unlike the World Bank IFC deals directly with private business without Government intervention and finances only private enterprises It does not invest in undertakings which are Government-owned and operated or in the management of which the Government participates to any significant extent However, an enterprise in which some public funds have been invested is not necessarily precluded from being financed by IFC if the enterprise is essentially private in character IFC does not seek or accept any Government guarantee.

Since its capital is in US dollars IFC's investments to date have been generally expressed in US dollars but its investments to some extent may be expressed in other currencies if justified by their stability and by the terms of the investment"

IFC acts as a catalytic agent to encourage the flow of private capital into productive enterprises

IFC President's Address Addressing the Board of Governors on October 8 the President of the Corporation Mr Robert L. Garner declared that criticism against the Corporation's interest rate ignored the fact that its loans were intended to stimulate the flow of private capital and not to undercut it and that these criticisms were obviously based on comparisons with certain agencies of individual Governments.

Explaining the peculiar features of the Corporation's loans he said that the investments were usually of longer term than the loans secured from other sources

After Mr R.L. Garner's speech the Board of Governors had a brief discussion on the annual report.

The sessions of all the three world bodies ended on October 10

Most of the speeches at the concluding joint session were largely formal in character, except for those by the executive heads who had important observations to make on the two substantive resolutions adopted by their Boards

Mr Eugene Black President of the World Bank said that the scheme for stepping up the share capital of the Bank would "enable them to continue to raise money in the markets of the world at reasonable rates of interest and in amounts commensurate with the lending needs of our institution.

Mr Per Jacobsson Managing Director of the IMF disclosed that his staff had begun work on the legal economic and other aspects of an increase in the members' quotas to the Fund immediately after the publication of President Eisenhower's letter on the subject. This work was now being intensified As a result the Executive Directors would soon receive preliminary material useful for their

deliberations in furtherance of the resolution adopted by the Fund Governors.

Mr Morarji Desai (India) as the host was the last speaker being followed by the Chairman of the joint sessions Mr Jean Van Houtte (Belgium) with whose short valedictory remarks the meeting adjourned

Elections On October 10, the Governor for Peru was elected as the new Chairman of the Boards of Governors of the Bank and the Fund India is among the five Vice-Chairmen Elections for filling the temporary seats on the Boards of Executive Directors of the two bodies—World Bank and IMF—took place on October 9 Four new Directors were elected to each of the two institutions

The World Bank's new Executive Directors were Mr Ismail Bin Mohammed Ali (Malaya) Mr Carlos S Brignone (Argentina) Mr T L Hammerskjoeld (Sweden) and Mr Jose Aragones Vila (Spain)

Nine other Bank Executive Directors reelected were Mr Thomas Basyn (Belgium) Mr B.B. Callaghan (Australia) Mr Otto Donner (Germany) Mr Pieter Lieftinck (Netherlands) Mr Luis Machado (Cuba) Mr Jorge Mejia Palacio (Columbia) Mr Louis Rasminsky (Canada) Mr Mohamed Shoaib (Pakistan) and Mr Takeshi Watanabe (Japan)

The IMF's new Executive Directors were Mr Eero Asp (Finland) Mr Rodrigo Gomez (Mexico) Mr Felipe Herrera (Chile) and Mr Soemarno (Indonesia)

The re elected Executive Directors of IMF were B B Callaghan (Australia), Mr Otmar Emminger (Germany) Mr Carlo Gragnani (Italy) Mr Pieter Lieftinck (Netherland) Mr Octavio Paranagua (Brazil), Mr Ahmed Zaki Saad (UAR) Mr Andre Van Campenhout (Belgium) and Mr Takeshi Watanabe (Japan)

MR NEHRU'S VISIT TO BHUTAN

The Prime Minister, Mr Nehru, left Delhi for Bhutan on September 16 on his first visit to the country

Although a close neighbour Bhutan is so inaccessible that it took a days for Mr Nehru to reach there flying motoring and riding a mountain pony

Accompanying the Prime Minister on his journey were Mrs Indira Gandhi, Mr J S Mehta Deputy Secretary External Affairs Ministry and Mr Apa Pant Political Officer in Sikkim and Bhutan

Mr Nehru arrived at Paro on September [illegible] and received a great welcome The first leader of a foreign country to visit this remote Himalayan kingdom, Mr Nehru entered the [illegible] amid a colourful traditional pageant. He was received by the 29-year-old Maharaja, His Highness Jigmedorji Wangchuk the Maharani Her Highness Kesang Dorji, and the Dowager Maharani.

The summer capital of Bhutan is Trashichhu, but as it is another 11 hours pony ride from Paro Mr Nehru's stay was arranged in Paro on the bank of the river Paro.

The Prime Minister of Bhutan, Mr Jigme Dorji had met Mr Nehru and party near the Tibet Bhutan border on September 19 and accompanied them during the ride to Paro.

On September 25, Mr Nehru gave a buffet dinner in honour of the Maharaja and Maharani of Bhutan in the courtyard of the State Guest House in Paro.

Mr Nehru is understood to have assured the Maharaja of Bhutan of India's willingness to help the State in its development activities

The economic development of Bhutan was the main topic of two day discussions between Mr Nehru and the Maharaja which concluded on September 26

Mr Nehru is stated to have emphasised the need for development of road communications between India and Bhutan and within the State itself He expressed India's readiness to give technical and other assistance to Bhutan.

The Maharaja and the Maharani gave a farewell dinner in honour of Mr Nehru and Mrs Indira Gandhi on September 26

Mr Nehru left on September 27 on the return journey to India The Prime Minister of Bhutan Mr Jigme Dorji and other high officials of Bhutan accompanied the party for the first two days

Mr Nehru returned to New Delhi on October 2 He was full of spirits and [illegible] with what he saw on his way to Bhutan and inside that country The Prime Minister gave a graphic [illegible] the [illegible] of what he saw and [illegible] to the friendly country of Bhutan

Mr Nehru said "The main thing is that I have had a [illegible] time [illegible] to [illegible] and my stay in this country which is not like [illegible] any other [illegible]

[illegible]

bly are better off than those who have modern amenities They have fairly good housing no unemployment and mind you, no beggars at all in Bhutan though of course, they have not the knack of civilisation

When asked whether the Bhutanis were happy about the offer of help from India Mr Nehru replied There is no formal offer of help This offer has always been there But you will be surprised to hear that they are reluctant to have any help and are not happy to have any help from us, though if they had asked for it they could get it

Mr Nehru was full of praise for the Indian engineers who had built a magnificent road through the most difficult mountain terrain between Gangtok and Nathula Pass It was a fine example of engineering They had been building it for three years and had hurried up the work a month before he made his trip

DR RAJENDRA PRASAD S VISIT TO JAPAN

The Union President Dr Rajendra Prasad, left Calcutta on September 25 for a eight day goodwill visit of Japan by a chartered Super-Constellation the Rani of Bijapur He was accompanied by the Union Minister for Commerce, Mr Nityanand Kanungo and the foreign Secretary Mr S Dutt. This was the President s first visit overseas On his way back from Japan the President was to pay a three-day visit to Rangoon on the invitation of the Burmese President but the visit was cancel led on the advice of the Indian Embassy in Rangoon following the happenings in Burma

On September 26 the President s plane was held up in Hong Kong owing to bad weather in Tokyo. He was received at Hong Kong airport by the Governor of Hong Kong Sir Robert Black, and stayed at the Government House

President Rajendra Prasad was accorded a ceremonial reception on his arrival in Tokyo on the evening of September 27 He was received by Emperor Hirohito and Crown Prince Akihito and welcomed by a distinguished gathering at Haneda airport from where he drove to Geihankan the State Guest House in the heart of the city

The President was scheduled to arrive in Tokyo exactly 24 hours earlier but had to make an enforced halt at Hong Kong on account of the typhoon Ida, which hit Tokyo the previous night with a fury greater than the atom bombs that devastated Hiroshima and Nagasaki 10 years ago according to a description in one of the leading evening newspapers of Tokyo Buddhist monks beat welcome drums, and a smart detachment of the Japanese self defence force—the Constitution does not permit the raising of a standing army or other regular armed forces—presented a guard of honour The President was escorted down from the aircraft by the Indian Ambassador Mr C S Jha and the head of the Japanese Suite of Honour, Mr S Yoshizawa a former ambassador to India The Indian and Japanese flags flew over the airport terminal

The President Dr Rajendra Prasad, and Emperor Hirohito pledged continuing mutual friendship and co-operation between Japan and India at a banquet at the Imperial Palace on September 28

The President was served Japanese vegetarian dishes The toasts were drunk in soft drinks The Emperor referred to the great gift of Buddhism from India to Japan. The President in his turn spoke of the resurgence of Asia and Africa and expressed the hope that the technological advances of the atomic age would be used for the benefit of mankind

Earlier in the evening the President entered the homes of the Japanese people in a live three-minute television broadcast from the State Guest House where he was staying There are nearly a million and a half licensed television receivers in Japan.

Dr Prasad told his viewers of his deep sympathy for the suffering and damage caused by the devastating typhoon which swept large parts of the country the night before last. He also expressed his admiration of the New Japan dedicated to peace and democracy which had made such an inspiring economic recovery

At noon on September 28 the Governor of Tokyo Mr S Ichiro Yasui arrived at the Guest House and presented the President with the keys of the city at a brief informal ceremony

Representatives of the Japan Buddhist Association called on the President and presented him with an address and a number of beautiful silk and paper scrolls containing verses from the Buddhist scriptures They referred to Dr Prasad as a true disciple of Gandhi and an exponent of non violence which they described as the only doctrine which could save the world

President Rajendra Prasad was given a less formal and consequently more [illegible] welcome by the [illegible] [illegible] ancient and beautiful [illegible]

where he arrived by the imperial train from Tokyo on September 29. On September 30 Dr Rajendra Prasad was awarded honorary doctorates of Buddhology by the two Buddhist Universities of Otani and Ryukoku. The address of the President of Otani University, Mr Susumu Yamaguchi noted that the "spirit of the teaching of Buddha is the keynote of the national policy of the Indian Republic".

The doctorate scroll referred to Dr Prasad's "remarkable contributions to the development of human culture in the spirit of Buddhism". The Rector of Ryukoku (Buddhist) University, Kyoto at the presentation of an honorary doctorate to Dr Prasad, referred to Buddha's Indian origin and said that Buddhists everywhere regarded India as their second home. In Japan, the Rector told the President "you have come to the home of one of your children and we welcome you home".

This is the first time that this university has awarded an honorary doctorate to anybody since it was founded a little over 300 years ago.

In his addresses at both the universities Dr Prasad recalled India's ancient Buddhist traditions and the contacts these had brought with Japan for over 1,000 years. He hoped there would be closer cultural collaboration between Japan and India particularly in the field of Buddhist studies.

The President earlier in the day watched a game of ancient Japanese football kemari in the Omiya Palace grounds. About a dozen venerable old gentlemen dressed in colourful blouses with enormous sleeves, baggy trousers, boots and helmets spent 20 minutes kicking a soft ball into the air. The idea of the game appeared to be to keep the ball in the air. Age did not impair the nimbleness of foot displayed by the players. Everybody won.

In the evening, the President left Kyoto by special electric train for nearby Nara which was the first imperial capital of Japan.

On October 1 Dr Rajendra Prasad saw something of Japanese rural life when he visited the [illegible] of [illegible], some five miles out of Nara. He was given a [illegible] welcome by the [illegible] [illegible].

Dr Prasad [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] attended a reception by the 20 [illegible] [illegible] [illegible] [illegible] [illegible] attended a dinner in his honour given by the Governor and the Mayor of Osaka before boarding the Imperial train for a night journey back to Tokyo.

On October 2 the President celebrated Gandhi Jayanti in Japan with a period of spinning in the Imperial train carrying him back to Tokyo from Osaka. In the evening the Dr Prasad addressed a crowd of public meeting at the Tokyo metropolitan gymnasium arranged by the Governor of Tokyo. His theme was the example and message of Gandhiji to the world.

On October 3 Dr Prasad gave a banquet in honour of the Emperor and Empress of Japan. The President and the Emperor proposed toasts wishing prosperity and happiness for the people of Japan and India.

The President, Dr Rajendra Prasad, left Tokyo for Delhi on October 4 by a specially chartered plane at the conclusion of a highly successful eight day visit to Japan. En route, the President halted at Hong Kong for two hours where he enjoyed a Sukiyaki lunch accompanied by the Governor of Hong Kong.

He also halted at Bangkok for an hour where he met the Prime Minister and addressed a press conference.

The President Dr Rajendra Prasad was accorded a warm reception on his arrival at New Delhi on Sunday, October 5. He was received by the Vice President Dr Radhakrishnan and the Prime Minister Mr Nehru, and welcomed by a distinguished gathering at the airport.

Speaking to newsmen at Palam, the President said that he had extended an invitation to the Emperor of Japan to visit India. Paying a tribute to the Japanese people, he said that he was impressed by their courtesy, discipline, orderliness and the way of doing things with devotion. He said "We in this country can learn much from the Japanese people."

PEACE RETURNS TO LEBANON

General Fuad Chehab Commander in Chief of the Lebanese Army, was elected President of Lebanon by the Chamber of Deputies on July 31 with the support of both pro-Government and Opposition members he formally assumed office on Sept 23 when President Chamoun's term expired A new Cabinet was formed on the following day by M Rashid Karami (leader of the insurgent forces in Tripoli) and reached agreement with the U.S authorities on Sept. 27 whereby U S forces were to be withdrawn from Lebanon by the end of October The internal situation subsequently deteriorated once more and for a time, threatened to lead to a further outbreak of civil war This danger was averted however by the formation of a coalition Cabinet—also headed by M Karami—representing both Government and Opposition leaders

The Speaker of the Lebanese Chamber of Deputies (M Osseiran) announced on July 23 that a special session would be held on July 31 to elect a successor to President Chamoun and on July 28 General Chehab was proposed as a candidate by a group of deputies who included both Government and Opposition supporters At a Cabinet meeting on July 29 M Sami Solh (whose car had been ambushed near Beirut earlier in the day) demanded that the election should be postponed until General Chehab had 'cleaned up' the rebel areas in the capital President Chamoun, however won over the majority of the Government deputies to support General Chehab's candidature by threatening to resign and leave the country immediately unless they agreed to do so

A meeting of Opposition leaders decided on July 29 to support any candidate who accepted their programme, which included the immediate resignation of President Chamoun, the formation of a new Government the evacuation of foreign troops a foreign policy based on neutrality and collaboration with other Arab countries revision of the Constitution amendment of the electoral law, and a general amnesty for the insurgents

As a result of talks between General Chehab and M Karami, it was announced that the opposition deputies—whose immunity from arrest had been guaranteed by the general—would attend the election session of Parliament

The election session was accordingly attended by 56 of the 66 deputies among them M Karami M Solh and three other Ministers refused to attend on the ground that under the existing Constitution an officer in the armed forces could not accept the presidency within six months of holding a military post On the first ballot 42 votes were cast for General Chehab and 10 for M Raymond Edde (leader of the pro Government National Bloc) with four abstentions whilst on the second ballot General Chehab received 48 votes and M Edde seven one deputy abstaining (Under the Lebanese Constitution if no candidate is selected by a two thirds majority of the total membership of the Chamber on a first ballot a second ballot is held in which only a simple majority is required General Chehab actually obtained a two-thirds majority on the second ballot) Of the deputies voting for General Chehab in the Second ballot 31 were Government supporters and 17 Opposition supporters

An extremely confused situation followed General Chehab's election to the presidency Although the Opposition had demanded President Chamoun's immediate resignation and the formation of a new Government as conditions of their support for the general President Chamoun stated on July 31 that he would retain office until the expiry of his Constitutional term on Sept 23 He also denied reports that M Solh's Cabinet would resign or that Opposition representatives would be included in it. The rebel leaders on the other hand, refused to submit to Solh Government and proclaimed an "armed truce" maintaining their position in the Moslem quarter of Beirut in Tripoli and in the rural areas under their control

General Chehab took the oath as President on Sept 23 in the Chamber of Deputies in the presence of six of the 14 members of M. Solh's Cabinet, about 40 deputies and members of the Diplomatic Corps After the ceremony ex-president Chamoun left Beirut for his home in a mountain village about 20

miles away where he had announced his intention of staying for indefinite period.

The daytime curfew in Beirut was lifted at dawn on Sept. 24 although the night curfew remained in force. During the morning, however, reports that M. Karami had been asked to form a Government led to mass demonstrations by thousands of his supporters and counter demonstrations by armed Falangists, who proclaimed a general strike and compelled shopkeepers to lower their shutters. Repeated clashes occurred between the two sides in which about 20 people were killed and 40 wounded—the largest number of casualties in Beirut in any one day since the beginning of the disturbances. The army then moved in to restore order, and the Government radio repeatedly broadcast warnings that the troops had been ordered to shoot on sight any civilian found in possession of arms and to demolish by artillery fire any building from which shots were fired. Half an hour after this announcement the firing ceased and the streets were empty except for Army and police patrols. The 24-hour curfew was subsequently reimposed.

M. Karami formed a Cabinet drawn from the former Opposition and from neutral elements.

Great resentment was aroused among M. Chamoun's supporters by the appointment as Prime Minister of "a man from the barricades," and on Sept. 25 the Falangist Party called for the continuation of the general strike as a protest against the membership of the new Government. At a meeting of 32 deputies drawn from the National Liberal, Falangist, and National Bloc parties, held at M. Chamoun's country residence on Sept. 26 it was decided to form a united Opposition and to refuse the Government a vote of confidence. (The National Liberal Party was formed on Sept. 4 by a group of deputies supporting M. Chamoun, who assumed its leadership on relinquishing the presidency.)

Some progress was made in restoring order on Sept. 27 when the daytime curfew was lifted, the former rebels began dismantling the barricades in the Basta area of Beirut (which they had occupied since May) and the Falangist leader M. Pierre Gemayel agreed that his followers would remove their own barricades with the Army's assistance. When troops arrived for this purpose on Sept. 29, however, the Falangists refused to carry out their undertaking and [illegible] a three hour exchange of shots followed in which two civilians were killed. Following this incident the situation in the capital again deteriorated seriously and [illegible] by the Falangists of the general strike gave rise to renewed fears of civil war. Three persons were killed and 10 wounded in two incidents in Beirut on Oct. 3 when troops fired on rioting Falangist mobs, and 11 killed and about 50 injured in further clashes in Beirut and Tripoli on Oct. 6-7.

During the next two weeks President Chehab had a series of meetings with Government and Opposition leaders in an attempt to find a solution to the crisis. On Oct. 11 M. Gemayel was received by the President and also met M. Kemal Jumblatt (a leading Government supporter) who afterwards saw M. Karami and M. Salam. The meeting between M. Gemayel and M. Jumblatt, at which they were reported to have discussed the possible formation of a coalition government under Karami's leadership, was the first occasion on which Government and Opposition representatives had negotiated together direct instead of the President.

As a result of these discussions, and after further complicated negotiations, it was announced in the early hours of Oct. 15 that a coalition Cabinet had been formed consisting of two Government and two Opposition leaders. Mr. Rashid Karami retained the Premiership while the other members of the Cabinet were M. Pierre Gemayel (the Falangist leader), M. Raymond Edde (leader of the National Bloc) and M. Hussein Oweini, a supporter of M. Karami. Two members of the new Cabinet (M. Karami and M. Oweini) were Moslems, and two (M. Gemayel and M. Edde) Christians. Simultaneously with the formation of the new Government the general strike ordered by the Falangists was called off, and for the first time the country began to return to normality after nearly six months of civil strife.

The new Government was given a unanimous vote of confidence in the Chamber of Deputies on Oct. 17, with 53 of the 66 members present.

GEN. AYUB KHAN ASSUMES ALL POWERS IN PAKISTAN

General Mohammad Ayub Khan, Chief Martial Law Administrator and Supreme Commander of the Armed Forces of Pakistan, assumed the office of the President of Pakistan on the night of Oct. 27, 1958 by a proclamation

Earlier in the night Major General Iskander Mirza the then President of Pakistan, in a declaration said that he had decided to step aside and hand over all powers to General Ayub Khan

Gen. Mirza said ' Since the imposition of martial law I have done my best to assist Gen Ayub Khan and his administration in the chief task of arresting further deterioration and bringing order out of chaos In our efforts to evolve an effective structure for the future administration of the country and based on our experience of the last three weeks I have come to the conclusion that (a) any semblance of dual control is likely to hamper the effective performance of this immense task which is of emergent nature, (b) an unfortunate impression exists in the minds of a great many people both at home and abroad that Gen Ayub Khan and I may not always act in union Such an impression I cannot help feeling, if allowed to continue would be most dangerous to our cause I have, therefore decided to step aside and hand over all powers to Gen Ayub Khan I wish Gen Ayub Khan and his colleagues the best of luck

Earlier Developments : A twelve member Cabinet with General Ayub Khan as Prime Minister was constituted by the President, Major General Iskander Mirza on October 24

A communique issued in Karachi said that General Ayub Khan who would continue to be the Chief Martial Law Administrator, would hold the Portfolios of Defence and Kashmir Affairs The other members of General Ayub Khan s Cabinet were Lt Gen Mohammed Azam Khan Mr F M Khan, Lt. Gen Burki Mr Habibur Rehman, Lt Gen K M. Sheikh Mr A K Khan, Mr Hafizur Rehman, Mr Zulfiqar Bhutto Mr M Shoib and Moulvi Mohammed Ibrahim

Early in the morning of October 27 Gen. Ayub Khan was sworn in as Prime Minister by President Mirza Simultaneously, Gen Ayub Khan relinquished his post as Commander in Chief of the Pakistani Army and Lieut General Mohammed Musa, Chief of the Staff and Deputy Commander in Chief became the new C-in-C with the rank of *full General*

Eight other members of the Ayub Khan Cabinet were also sworn in

Since Pakistan is now without a constitution the usual oath of loyalty to the Constitution administered to ministers at the time of swearing-in had to be given up and a new one prescribed to members of the Ayub Khan Cabinet.

Apart from the oath of secrecy of office the Ministers swore to bear faith and one allegiance to Pakistan

General Ayub took this oath "I do solemnly affirm that in the office of Prime Minister I will faithfully discharge such duties as the *President* may assign to me that *I will* bear true faith and show allegiance to Pakistan and that I will do right to all manner of people according to the law without fear or favour affection or ill will "

New Cabinet According to a Cabinet order promulgated on October 28 by the President, General Mohammed Ayub Khan, he may appoint persons to hold charge of ministeries of the Government and advise him in the discharge of his functions Consequent on the promulgation of this order and the abrogation of the office of Prime Minister the Cabinet sworn in on Oct. 27 became defunct. Therefore, the Presidential Cabinet comprising the same members who took the oath of office on the morning of Oct. 27 was sworn in anew on Oct 28 The President Gen Ayub Khan, administered the oath of office With the exit of General Mirza the last link between the politicians who brought Pakistan into being and the new regime was snapped

General Ayub Khan is now President Chief Martial Law Administrator and the Supreme Commander of all Pakistani Armed Forces and enjoys practically unlimited legislative and executive powers

One of the first acts of President Ayub Khan was to appoint the three Service Chiefs Gen Musa, Commander in Chief of the Army Vice Admiral Chaudhari Commander in-Chief of the Navy Air Vice Marshal Asghar Khan Commander in-Chief of the Air Forces as Deputy Chief Martial Law Administrators and simultaneously Mr Aziz Ahmed Secretary-General to the Pakistani Government relinquished his post as Deputy Chief Martial Law Administrator

Two more members of the President Cabinet were sworn in on October 29 They are Mr Manzur Qadir and Mr Habibur Rehman.

Threats to India Pakistan s President, General Ayub Khan said on October 30 in a Press Conference in Karachi that he hoped to have friendly relations with India. But if India were to cut off the flow of canal waters to Pakistan before Pakistan made other arrangements for irrigation "we will have no recourse but to take whatever action is necessary" he declared.

"The people in Kashmir must have their choice," said the President. "They cannot be held forcibly as they are being held to-day. We have got to have a satisfactory solution. Should we have to resort to extreme measures, the responsibility will be that of India," he said.

Gen. Ayub Khan also indicated that the former President Gen. Iskander Mirza resigned under pressure from the Pakistan army. He said that there was a wide-spread feeling in Pakistan that Gen. Mirza was too much connected with politicians who were responsible for conditions in the country. Also similar feelings existed in the services that this was our last chance to save Pakistan from chaos."

Three army Generals went to see the former President on Monday (October 27) night and Gen. Mirza resigned less than two hours later.

President Ayub Khan did not say that he ordered Gen. Mirza's resignation but it was clear from his press conference that Gen. Mirza resigned under army pressure.

The new President indicated that there would be no change in Pakistan's pro-Western foreign policy.

Addressing a Press Conference in New Delhi on November 7, the Prime Minister said that nowhere in the wide world was there such a naked military dictatorship to-day as in Pakistan. Certain risks of individuals acting as the mood took them were inherent in such a dictatorship. Therefore India had to be wide-awake. He, however, declared that the threats uttered by Gen. Ayub Khan did not worry India very much.

Shri Nehru said India thought that the military help from America to Pakistan was a risk and a danger to India. Undoubtedly the risk increased when there was a military dictatorship in Pakistan. Expressing surprise over comments and developments in Pakistan in some British and American newspapers, the Prime Minister said that these papers had almost tried to say that what had happened in Pakistan was a way to freedom. It was extraordinary, he said, how one's wishes could alter the reading of facts.

FRENCH GUINEA ATTAINS FREEDOM

The new Republic of Guinea was proclaimed at Conakry on October 2, by the President of the Territorial Assembly after 60 years of French occupation.

In the French referendum on September 28, the former French West African semi-autonomous territory of French Guinea was the only one to produce a majority of "noes" to the new constitution.

The territorial Assembly which became the National Constituent Assembly of the sovereign people of Guinea also approved the appointment of M. Sekou Toure, 36-year-old Prime Minister of the former Government, as Prime Minister of the new State. He will also be Foreign and Defence Minister.

French Guinea on the west coast of Africa accepted France's offer to become an independent State. The little aluminium-rich country broke its ties with France by rejecting the new French Constitution by a landslide vote.

The vote in the territory was 572,[illegible] against the Constitution and 18,[illegible] for it. This represented nearly half of the 1,39[illegible] registered voters.

Guinea is the only one of France's territorial holdings abroad to take up the challenge of freedom. Even the Niger, which had been in the doubt column, and the Senegal which had given the French Premier, Gen. Charles de Gaulle, a hostile reception on his African tour, voted in favour of the Constitution.

French Guinea's move toward independence from France is no surprise. Its Premier, Mr Sekou Toure, and other leaders had come out strongly against the referendum.

Mr Toure, the 36-year-old Premier of Guinea, heads a government which leans far over to the left. Though the Government has no known official contacts with the Communist bloc, many of its second-level officials have attended Communist congresses as delegates abroad.

Russia and China have recognised Guinea as an "independent and sovereign State". It was officially announced in Accra (Ghana) on October 6 that Ghana would sponsor the admission of the Guinea Republic to the United Nations.

[illegible] is the [illegible] and [illegible] should be the centre, should be the [illegible] of the affections. —Mary Baker Eddy

DEVELOPMENT OF MULTI PURPOSE SCHOOLS

During the First Plan Period about 367 High and Higher Secondary schools in India were converted into multi purpose schools

Since the beginning of this important reform in the secondary education system about 880 schools have been so converted The target for the whole country is 1 187 multi purpose schools by the end of the Second Plan period

Although the unilateral and unsatisfactory nature of instructions imparted under the traditional secondary school system was recognised all these years, the first concrete steps to reorientate the system were only taken after independence.

The Secondary Education Commission, appointed by the Government of India in October 1952 recommended the introduction of the multi purpose school system as the most important measure to remove the defects in the secondary education system

The report of this Commission defines the concept of a multi purpose school in the following words. A multi purpose school seeks to provide varied types of courses for students with diversified aims interests and abilities It endeavours to provide for each individual pupil suitable opportunity to create and develop his natural aptitude and inclination in the special course of study chosen by him

(g) Salt water
(i) capillary
(k) Liquid Sulphuric Acid
(m) Aurora
(o) Siren
(h) Electrolysis.
(j) Gas amonia
(l) Spectroheliograph
(n) Hydrometer

Q (i) What is plastic surgery ?
(ii) What is transformer ? To what use is it put ?
(iii) What is the function in the body of
(a) Saliva. (b) The pancreas (c) The spleen
(d) The Larynx (e) The skeleton
(iv) Who is the astronomer who first stated that the orbit of each planet is an ellipse ?
(v) What do you understand by insulators ?

Ans. (i) This is the surgical amendment of such tissues as are badly damaged by certain accident. Experts have acquired success in restoring those destroyed faces by replacing burnt skins mending demaged nerves restoring lost parts and performing several surgical marvels

(ii) *Transformer* is an electromagnetic device which converts AC (alternating current) to a higher or lower voltage by induction

(iii) (a) *Saliva* It turns food into a semi liquid by moistening the inside of the mouth and throat. It contains ptyalin and the other enzymes which help to predigest food before passing into the stomach

(b) *The Pancreas* is a gland near the stomach secretes pancreatic juice alkaline necessary to the digestion of fats proteins and carbohydrates of the food It helps the proper utilisation of sugar in the blood stream by producing insulin

( ) *The Spleen* Its main function is to serve as a reservoir to supply the digestive system and mussle with life during increased activity and also helping in the destruction of waste red blood corpuscles producing fresh ones and the production of lymph.

(d) *The Larynx* This is the funnel shaped structure leading from throat to the windpipe It contains our vocal cords It is thus our organ of voice

(e) *The Skeleton* It serves many purposes in the body It supports the whole of our body It is a rest or a framework for containing our flesh fat and organs Certain of its bones serve as levers on which muscles act. To majority of the muscles it serves for attachment

(iv) Kepler

(a) *Insulators or non Conductors* Materials which offer such a high resistance that practically no electricity passes through them at all are called non conductors or insulators, such as rubber, silk glass, porcelain and mica

Q Who invented or discovered the following ?
(a) Penicillin.
(c) Periodic table
(e) Safety lamp
(g) Law of gravitation
(h) Vaccination
(j) Spining Mule
(b) Laws of electrolysis
(d) Telephone
(f) Moveable type printing
(i) Planet Uranus

Ans (a) Sir Alexander Fleming
(c) Mendeleeff
(e) Sir Humphrey Davy
(g) Sir Isaac Newton
(i) Sir William Herschel
(b) Faraday
(d) A G Bell
(f) Gutenberg
(h) Edward Jenner.
(j) Crompton

Q 14 Write short notes on the following —
(i) Glover Tower
(ii) Atomic weights.
(iii) Milky Way
(iv) Adrenalin
(v) Denudation
(vi) Latent heat of vaporisation
(vii) Carborundum
(viii) The law of multiple proportions
(ix) Blood Bank
(x) Blood Pressure

Ans (i) *Glover Tower* The place where the oxide of nitrogen prepared from nitric acid, is added to the gaseous mixture

(ii) *Atomic Weights* Atoms of different elements differ in their respective weights In chemistry the weight of an atom of hydrogen is taken as the standard the respective weights called the atomic weights of the atoms of all other elements being expressed in terms of it

Boiling It takes places at a certain temperature depending upon the nature of the liquid

(*f*) *Relative humidity:* is the ratio of the mass of water vapour actually present in a given volume of the air to the mass of water vapour required to saturate the same volume at the same temperature

Absolute humidity: The mass of water vapour actually present per unit volume of air

Q Test the correctness of the following by writing "Yes or No"? —

1 Potassium permaganate is a salt.
2. Caustic soda is an acid
3 Copper sulphate crystals contain copper sulphate and water molecules.
4 Neon can form compounds with other elements.
5 Sulphur dioxide bleaches colour by oxidation.
6 A plane mirror produces a real image of the object.
7 A coin dropped from a tower travels towards the earth with a uniform velocity
8 Air is heavier than carbon dioxide
9 Hydrofloune acid dissolves glass.
10 Thermometer is an instrument to measure heat.
11 A microphone converts sound into corresponding energy
12 It is easier to float in sea water than in fresh water
13 Sound can travel in vacuum.
14 When a fast moving car suddenly swerves to the right the passengers will be thrown to the left.
15. All the teeth on the upper jaw are broader than the corresponding ones on the lower jaw.

Ans (1) Yes (2) No (3) Yes. (4) No. (5) No. (6) No. (7) No. (8) No. (9) Yes. (10) No. (11) No. (12) Yes (13) No. (14) Yes. (15) Yes.

Q Fill up the blanks in the following sentences —

(*a*) The.. of an apple falling from a tree is 32 feet per second

(*b*) Some space is left between the rails on a rail way tract to allow for due to heat.

(*c*) A straight rod immersed in water appears to be bent when viewed from outside because

(*d*) The boiling point of salt solution is. than the boiling point of pure water

(*e*) The rainbow is produced by and of light in the air through the water droplets.

(*f*) gas is adminstered to patients suffering from pneumonia

(*g*) An acid reacts with a base to form and

(*h*) The process of decomposing water by electric current is colled.

(*i*) Water rises in a narrow tube as a result of .. action.

(*j*) The .. formed by the combination of three atoms of hydrogen and one atom of nitrogen is called.

(*k*) The. formed by the combination of two atoms of hydrogen, one atom of sulphur and four atoms of oxygen is called...

(*l*) The study of elements in the sun is done by means of apparatus called a

(*m*) An electrical phenomenon seen in high latitudes is called ..

(*n*) A special object employed to determine the specific gravity of liquid is called a.. ...

(*o*) That it is the frequency which determines the pitch of a note can be shown by means of an apparatus called a......

Ans. (*a*) Acceleration. (*b*) Expansion. (*c*) of refraction. (*d*) Higher (*e*) Refraction reflection. (*f*) oxygen.

(g) Salt water
(i) capillary
(k) Liquid, Sulphuric Acid
(m) Aurora
(o) Siren.
(h) Electrolysis.
(j) Gas amonia
(l) Spectroheliograph
(n) Hydrometer

Q (i) What is plastic surgery?
(ii) What is transformer? To what use is it put?
(iii) What is the function in the body of
(a) Saliva (b) The pancreas (c) The spleen
(d) The Larynx (e) The skeleton.
(iv) Who is the astronomer who first stated that the orbit of each planet is an ellipse?
(v) What do you understand by Insulators?

Ans (i) This is the surgical amendment of such tissues as are badly damaged by certain accident. Experts have acquired success in restoring those destroyed faces by replacing burnt skins mending demaged nerves restoring lost parts and performing several surgical marvels

(ii) *Transformer* is an electromagnetic device which converts AC (alternating current) to a higher or lower voltage by induction

(iii) (a) *Saliva* It turns food into a semi liquid by moistening the inside of the mouth and throat. It contains ptyalin and the other enzymes which help to predigest food before passing into the stomach

(b) *The Pancreas* is a gland near the stomach secretes both pancreatic juice alkaline necessary to the digestion of fats proteins and carbohydrates of the food It helps the proper utilisation of sugar in the blood stream by producing insulin

(c) *The Spleen* Its main function is to serve as a reservoir to supply the digestive system and mussele with bile during increased activity and also helping in the destruction of waste red blood corpuscles producing fresh ones and the production of lymph.

(d) *The Larynx* This is the funnel-shaped structure leading from throat to the windpipe It contains our vocal cords It is thus our organ of voice

(e) *The Skeleton* It serves many purposes in the body It supports the whole of our body It is a rest or a framework for containing our flesh fat and organs Certain of its bones serve as levers on which muscles act To majority of the muscles it serves for attachment

(iv) Kepler

(a) *Insulators or non Conductors* Materials which offer such a high resistance that practically no electricity passes through them at all are called non conductors or insulators, such as rubber, silk glass porcelain and mica

Q Who invented or discovered the following?
(a) Penicillin.
(b) Laws of electrolysis
(c) Periodic table
(d) Telephone
(e) Safety lamp
(f) Moveable type printing
(g) Law of gravitation
(i) Planet Uranus
(h) Vaccination
(j) Spining Mule

Ans (a) Sir Alexander Fleming
(b) Faraday
(c) Mendeleeff
(d) A G Bell
(e) Sir Humphrey Davy
(f) Gutenberg
(g) Sir Isaac Newton
(h) Edward Jenner.
(i) Sir William Herschel
(j) Crompton

Q 14 Write short notes on the following —
(i) Glover Tower
(ii) Atomic weights.
(iii) Milky Way
(iv) Adrenalin
(v) Denudation
(vi) Latent heat of vaporisation
(vii) Carborundum
(viii) The law of multiple proportions
(ix) Blood Bank
(x) Blood Pressure

Ans (i) *Glover Tower* The place where the oxide of nitrogen prepared from nitric acid, is added to the gaseous mixture

(ii) *Atomic Weights* Atoms of different elements differ in their respective weights. In chemistry the weight of an atom of hydrogen is taken as the standard the respective weights called the atomic weights of the atoms of all other elements being expressed in terms of it

(iii) *Milky Way* It is the belt of stars encircling the heavens and consisting of dense clouds of stars On clear nights a luminous track is seen in the heavens which is also called galaxy The solar system is a part of it There are many more galaxies in the heavens than the one we clearly see

([illegible]) *Adrenals* On the top of each kidney is a suprarenal gland secreting a hormone called adrenalin, which raises the blood pressure and exerts a beneficial influence upon the nerves of the sympathetic system.

([illegible]) *Denudation* Any form of rock destruction whether mechanical or chemical is called erosion or denudation

([illegible]) *Latent heat of vaporisation* When any liquid is changed to a gas, energy in the form of heat is used up without a change of temperature taking place Thus when water at 100°C becomes steam at the same temperature the heat absorbed in the conversion of water to steam is latent, is described as latent heat of vaporisation.

([illegible]) *Carborundum* This is dark grey lustrous carbide of silicon (SiC) and is extremely hard rivalling corundum or emery (aluminium oxide) in this respect. It is [illegible] used for the manufacturing of grinding wheels and abrasive purposes and is made by heating a mixture of sand and coke in an electric furnace having a temperature of about [illegible]

([illegible]) *The law of multiple proportions:* It states that when the same two or more elements combine to form more than one compound the relative proportions of each element in the various compounds are simple multiple of the lowest proportions of the same element and can be expressed by small whole numbers

([illegible]) *Blood Bank* It is a place where blood is kept under refrigeration having preservatives that contain [illegible] containers and refrigerators etc

([illegible]) *Blood Pressure* It is the force with which the blood is driven through the arteries by the pumping of heart It is normal when gauged by the sphygmomanometer it is found to be 100° plus half the age of the person When it is lower than the normal it is Low Blood Pressure when above it it is High Blood Pressure or hypertension

Q 15 What are the following famous for ?

(*a*) Galileo (*b*) Livingstone
(*c*) Dr Chaim Waizman
(*d*) Peary (*e*) Rontgen
(*f*) Copernicus (*g*) Darwin
(*h*) Bohr (*i*) Ronald Ross
(*j*) Freud

Ans (*a*) *Galileo* is famous for his laws of falling bodies and his invention of the astronomical telescope

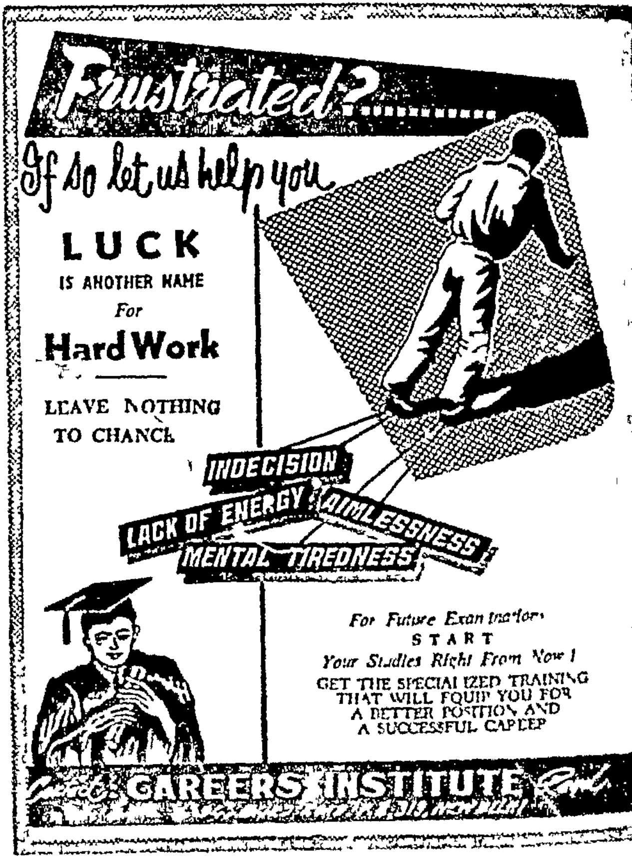
(*b*) *Livingstone* is famous for his making explorations in Central Africa specially the discovery of Victoria Falls Lake Shirva Nyasa etc.

(*c*) *Dr Chaim Waizman* was a scientist and Zionist leader first President of the newly born Republic of Israel

(*d*) *Peary:* He was the first explorer to reach the North Pole

(*e*) *Rontgen* He was the inventor of X rays

(*f*) *Copernicus:* He proved that the sun is the centre of the solar system and all the planets circle around it.



(*g*) *Darwin:* He founded the modern theory of Evolution.

(*h*) *Bohr* His contributions to atomic researches are well known

(*i*) *Ronald Ross* He discovered the cure for malaria

(*j*) *Freud* Founded Psycho-analysis.
